2200	Known to ancient Greeks. Introduced into China about 900. Cultivation begun in Virginia in 1721. First export in 1784.	The most valuable textile fiber plant. Crop commercially important in the United States, British India, Egypt, Russia, China, Brazil, Mexico, Peru, and Turkey, which usually rank in the order named, the United States producing two thirds and upwards of the world crop annually, with British India and Egypt next in importance, these three countries usually producing over nine tenths of the export crop. Grown on upwards of a million farms in America, the leading agricultural crop of the Southern States, Texas leading in production. Total crop second in value only to corn in the United States, of which about nine tenths is for fiber and about one tenth for cotton seed product, oil, stock food, etc.
500	Cultivation well established in West Indies, Mexico, Peru, and Brazil at time of earliest Spanish discovery.	Very valuable for its long fiber. Grown in the West Indies, tropical America, and the southern United States, particularly in Georgia, South Carolina, and Florida. Production limited in amount, constituting about one per cent. of the total cotton crop in the United States.
500	Cultivation widely diffused in tropical regions since establishment of European trade with the East following Spanish discovery. Introduced in S. United States about 1725.	Grown for food and forage in most tropical and subtropical countries. The most important fodder and soiling crop of the southern United States, corresponding in value to red clover in the Northeastern region and to alfalfa in the West.
100	Cultivation begun in Massachusetts about 1800. Now sparingly cultivated in England.	Cultivation important in certain limited areas in the United States. Massachusetts grows three fifths, New Jersey one fourth, and Wisconsin one tenth of the total crop of about 1,000,000 bushels.
4000	Cultivation prehistoric. Known to Greeks and Romans. Introduced into China about 150 B. C.	Widely grown throughout the world. Stands sixth in acreage devoted to garden vegetables in the United States.
1500	Cultivation begun in Europe during early Middle Ages.	Extensively grown in Continental Europe, Scotland, and Canada; sparingly in the United States. In France the *liqueur de cassis* is made from the fruit.
1200	Unknown to Greeks and Romans. Cultivation dates from the Middle Ages. Rare in England until after 1600.	Very widely grown in Europe and the United States, chiefly for jellies. New York and Michigan lead in production.
4000	Very ancient cultivation in Egypt and Babylonia. Mentioned by Herodotus. Is the palm of the Bible.	Furnishes the date of commerce, also oil, fiber, and wood. Much cultivated in southwestern Asia and northern Africa, and to some extent in China, France, and Italy. Chief source of wealth in Arabia.
4000	Anciently cultivated in India. Now extensively grown in East Indies; sparingly in temperate United States.	Important vegetable in the East Indies. Culture and use in the United States limited but increasing.

Common Name.	Scientific Name.	Plant Family.	Character.	Origin.
Endive	*Cichorium Endivia*	Sunflower Family *Compositae*	Annual	Mediterranean basin to Turkestan
Ervilla	*Ervum ervilia*	Pea Family *Leguminosae*	Annual	Mediterranean basin
Fenugreek	*Trigonella foenum-graecum*	Pea Family *Leguminosae*	Annual	W. Asia, N. E. India
Fig	*Ficus Carica*	Mulberry Family *Moraceae*	Small tree	Mediterranean basin to Afghanistan
Flax	*Linum usitatissimum*	Flax Family *Linaceae*	Annual	Western Asia
Garlic	*Allium sativum*	Lily Family *Liliaceae*	Perennial	Desert of the Kirghiz, W. Asia
Gooseberry	*Ribes Grossularia*	Gooseberry Family *Grossulariaceae*	Small shrub	Eur., N. Afr., W. Asia
Grape (American)	*Vitis Labrusca*	Grape Family *Vitaceae*	Shrub	N. E. United States
Grape (European) (The Vine)	*Vitis vinifera*	Grape Family *Vitaceae*	Shrub	W. Asia, Mediterranean basin
Grape Fruit	*Citrus decumana*	Orange Family *Aurantiaceae*	Tree	Pacific Isl., E. of Java
Guava	*Psidium Guayava*	Myrtle Family *Myrtaceae*	Small tree	Tropical America
Hemp	*Cannabis sativa*	Nettle Family *Urticaceae*	Annual	Siberia

Years of Known Cultivation.	Historical Notes.	Economic Importance.
2000	Probably cultivated by Greeks and Romans, but proof not fully clear.	Widely grown salad plant in Europe; sparingly in the United States.
3000	Cultivated by ancient Greeks and Romans. Seeds excavated on the site of Troy. Still grown by modern Greeks and also in Italy.	Useful fodder plant; seeds also of some value, but the formerly extensive cultivation in Europe now confined to forage growing in Greece and Italy.
2000	Cultivation common in ancient Greece and Italy. Now abandoned in Europe, but maintained in India, W. Asia, and the Nile valley since remote antiquity.	Spring fodder plant; seeds used in medicine.
4000	Cultivation prehistoric. Pictured in a pyramid in Egypt. Mentioned by Archilochus 700 B. C., also by Herodotus, Theophrastus, and Plato.	Valuable fruit; extensively cultivated in subtropical countries, particularly in Spain, Italy, and S. France, in Europe, and in southwestern Asia. Grown in the Gulf States and in California. Chiefly important as dried fruit. All dried figs in the United States are produced in California; commercial figs largely from Asiatic Turkey, though Smyrna figs are now established in California.
5000	Remotely ancient in cultivation. Egyptian mummy cloths are woven from flax fiber.	Second only to cotton as a fiber plant, and linseed oil production important. Chief fiber production is in Russia, Sweden, Germany, Austria, and Ireland, Russia leading. In the United States fiber production, once important, is practically abandoned. Chief seed production is in Russia, British India, United States, and Argentina, in average years ranking in order named, the United States producing about one fifth of the world crop, chiefly grown in North and South Dakota, Minnesota, Iowa, and Kansas.
2000	Moderately ancient cultivation in China. Herodotus affirms that the ancient Egyptians grew it, but no records remain.	Generally used as a condiment in southern Europe; not popular and only sparingly used in the United States. Oil of garlic used medicinally.
400	Cultivation may date to the Middle Ages. Became common in Germany and Holland about 1500 and was introduced into England during the sixteenth century.	Highly prized in northwestern Europe; not cultivated in southern Europe; reaches highest perfection in England. In the United States, while widely grown, is of minor importance, ranking sixth among small fruits, being preceded by the strawberry, raspberry, blackberry, cranberry, and currant.
300	First vineyard planted by Lord Delaware in 1610, but not extensively grown until after the introduction of the Concord grape during the last century. While the Concord, Catawba, Isabella, Hartford, and most of the cultivated varieties originated from the wild northern fox or plum grape, *Vitis Labrusca*, the Clinton grape was derived from the wild species, *Vitis riparia*, and most of the American wine grapes from the native summer grape, *Vitis aestivalis*.	Since 1860 culture has made remarkable progress, the last census showing crop exceeding $8,000,000 in value. New York produces one third of the American grape crop and is followed by Ohio, Pennsylvania, Michigan, Illinois, Indiana, Missouri, and Kansas, in order named. Notwithstanding the extensive culture of the European grape in the Pacific States, the American grape constitutes three fifths in value of all grape products of the United States. Millions of young vines have been shipped to Europe to be top grafted with the European vine. This procedure has protected the great vineyards of France, Italy, and Spain from the ravages of the *Phylloxera*, the American grape root successfully resisting the pest.
5000	Remotely ancient in Egypt. Used by Lake Dwellers of the Bronze Age in Italy. Cultivated by the Phoenicians, Hebrews, Greeks, and Romans. Introduced into China 120 B. C.	Shares leading rank with the apple among world fruits. Cultivation important in every continent. Chief products, raisins, currants, and wine of great commercial importance. Raisin production largest in Spain, but important in southwestern Asia, Australia, and California. Currants are small seedless raisins, mostly grown in Greece (name derived from Corinth). Wine is made throughout the world, total production estimated at 4,000,000,000 gallons, France, Italy, and Spain contributing about three fourths of this enormous amount. The European grape products of California,— wine, raisins, and table grapes,— amount in value to two fifths of all grape products of the United States.
2000	Long cultivated in India and Malay Archipelago. Cultivation established in Florida and California during last 25 years.	Anciently cultivated and much prized fruit in India, China, East Indies, and Pacific Islands. Also called shaddock from name of the captain who first introduced it into the West Indies. Now successfully established in Florida and California, and rapidly becoming popular table fruit in the United States.
400	Commonly grown from Mexico to Peru at date of Spanish discovery. Since widely diffused in East and West India Islands, India, and China. Recently established in Florida and California.	Valuable fruit, strictly tropical, chiefly grown in the East and West Indies, but now well established in Florida and to some extent in S. California.
4000	Anciently cultivated in China, central Asia, and Russia. Probably brought into Europe by Scythians about 1500 B. C. Mentioned by Theophrastus and in the Talmud.	Important fiber plant, ranking next to cotton and flax. Extensive cultivation in Europe, notably in S. Russia, for fiber, and in India for seed and narcotic products. Fiber production in the United States practically limited to Kentucky; was most important about 1860; now declined to less than one tenth of former yield, due to introduction of jute, manila, and sisal hemp for cordage.

Common Name.	Scientific Name.	Plant Family.	Character.	Origin.
Henna	*Lawsonia alba*	Loosestrife Family *Lythraceae*	Shrub	W. Tropical Asia
Hop	*Humulus Lupulus*	Nettle Family *Urticaceae*	Perennial	Europe, W. Asia, N. America
Horseradish	*Radicula Armoracia*	Mustard Family *Cruciferae*	Perennial	Eastern Europe
Indigo	*Indigofera tinctoria*	Pea Family *Leguminosae*	Shrub	India
Jujube	*Zizyphus vulgaris*	Buckthorn Family *Rhamnaceae*	Small tree	N. China
Jute	*Corchorus capsularis*	Linden Family *Tiliaceae*	Annual	India
Kafir Corn	*Sorghum saccharatum var.*	Grass Family *Gramineae*	Annual	Tropical Africa
Leek	*Allium ampeloprasum var. porrum*	Lily Family *Liliaceae*	Perennial	Mediterranean basin
Lemon	*Citrus medica*	Orange Family *Aurantiaceae*	Small tree	India
Lentil	*Ervum Lens*	Pea Family *Leguminosae*	Annual	W. Asia, Greece, Italy
Lettuce	*Lactuca Scariola*	Sunflower Family *Compositae*	Annual, Biennial	S. Europe, N. Africa, W. Asia
Lime	*Citrus medica var. acida*	Orange Family *Aurantiaceae*	Small tree	India
Lucerne (see Alfalfa)				
Lupine	*Lupinus albus*	Pea Family *Leguminosae*	Annual	Sicily, Macedonia
Lupine (Egyptian)	*Lupinus termis*	Pea Family *Leguminosae*	Annual	From Corsica to Syria
Madder	*Rubia tinctorum*	Madder Family *Rubiaceae*	Perennial	W. Asia, S. E. Europe
Maize (Indian Corn)	*Zea Mays*	Grass Family *Gramineae*	Annual	Plateaus of Tropical America

Years of Known Cultivation.	Historical Notes.	Economic Importance.
4000	Antiquity of use by women as dye for staining finger nails red shown by ancient Egyptian paintings and mummies. This custom persists in the East at the present day.	Commercially cultivated in India and Arabia for the dye. Flowers used in perfumery and embalming.
1200	Cultivation first mentioned by Pepin 768. Began in England about 1525. Introduced into the United States 1629.	Came into general use in brewing in the Middle Ages; now most extensively cultivated in Germany, England, and the United States, which rank in production in the order named. New York produces one third of the American crop, maintaining first rank since 1840, Oregon, California, and Washington growing practically all of the remainder.
1000	Extensively naturalized as a weed in the United States. Non-seed bearing.	Root widely used as a condiment in Europe and the United States, but cultivation unimportant in extent.
2000	Anciently cultivated in India. The dye was known to the Romans, who called it *indicum*, thus denoting its source in their commerce. Another species (*I. Anil*) is cultivated in Mexico.	Important dye plant, yielding valuable blue dye stuff; most extensively grown in India, but production also commercially important in Java and the Philippines. Large European imports from India since 1600, but culture now seriously threatened by increasing use of aniline dyes.
2500	According to Pliny was brought from Syria to Rome in the reign of Augustus.	Dried fruit an article of commerce in S. Europe, Syria, India, and China.
2000	Long cultivated in India; much more recently in Ceylon, Sunda Islands, Philippine Islands, and southern China; introduced into portions of tropical Africa; experimentally grown in Florida.	Exceedingly valuable coarse fiber plant. Commercial production practically limited to India, where it is of great importance, the development of the jute industry and export having been enormous during the last century, export of fiber exceeding 1,500,000,000 pounds and jute cloth (gunny) 300,000,000 yards in 1898. Is replacing hemp, flax, and other fibers.
4000	Non-saccharine *Sorghums* are of ancient cultivation in Asia and Africa. Introduced into the United States about 1885 by the United States Department of Agriculture. (See *Broom Corn, Sorghum.*)	Successfully grown as substitute crop for Indian corn in dry regions. Has become important crop in sections of Kansas, Oklahoma, Texas, and California. (See *Sorghum cane.*)
2000	Extensively cultivated in central and southern Europe, northern Africa, and Asia. Not now found in wild state.	Extensively grown in Europe for culinary purposes; not popular, and very sparingly cultivated, in the United States.
2500	Cultivation ancient in India, whence it spread very early into Mesopotamia and Media; became known to the Greeks through the Medes, giving rise to the specific name *medica*. Mentioned by Theophrastus and Dioscorides.	Important fruit; in world-wide use; much grown in subtropical and tropical countries; the most extensively used variety of the species; the other important varieties of *Citrus medica* being the citron, bergamot, lime, and sweet lime. Cultivation in the United States limited mostly to S. California.
5000	Prehistoric. Used by Lake Dwellers. Probably the "red pottage" of Esau mentioned in Genesis.	Valuable food plant, but less popular than peas or beans in Europe. Commercial crop grown in Egypt, but extensively cultivated in Europe and Asia, and to a small extent in New Mexico and Arizona.
2200	Cultivated by the Greeks and Romans.	Widely popular and much used salad plant. Cultivated wherever climate permits throughout the world.
2000	Ancient cultivation in India, from whence it has been widely diffused in tropical countries.	Much prized acid fruit in the tropics; widely imported in temperate regions, but sparingly used, being much less popular than the lemon. Now successfully grown in Florida, which produces a small crop.
2200	Anciently cultivated in Italy. Known to Theophrastus and Pliny.	Widespread cultivation for seeds and for green manuring in Europe. Rarely cultivated in the United States.
4000	Found in ancient Egyptian tombs. Still widely cultivated in Egypt.	Cultivated for seeds used for food in Egypt and Crete since ancient times.
2000	Culture becoming non-important on account of substitution by the artificial dye, alizarin.	Once furnished the most important red dye and was extensively cultivated in Europe, East Indies, and China, but practically abandoned in Europe and rapidly diminishing in the East, being replaced by the aniline dyes.
2000	Anciently cultivated in Peru even before the Incas, and by the Toltecs and Aztecs in Mexico. Found in the catacombs of Peru and in the remains of North American Mound Builders. Darwin found ears of Indian corn buried in soil that was formerly part of the shore in Peru, but now over eighty feet above sea level. Like wheat, maize is unknown in the wild state, and evidently has been so greatly modified by cultivation as to be incapable of maintaining itself from year to year independent of human agency.	A cereal of the first rank, the chief contribution of the American continent to the food plants of the world. Cultivated extensively in North and South America, southern Europe, and Asia, total production equaling in volume that of wheat, oats, or rye; the largest and most valuable grain crop of the United States, which produces fully three fourths of the world crop. Yield greatest in the Mississippi valley, where six states, Iowa, Illinois, Missouri, Kansas, Indiana, and Nebraska, grow one half of the crop. Staple food in Mexico and Central America, and increasingly used for food in S. Europe and Asia. Sweet corn is a garden variety which has assumed great importance since the development of the canning industry, ranking in acreage with the tomato and garden pea as a vegetable and canning crop. Pop corn has become a valuable local crop in certain sections, particularly in northwestern Iowa.

Common Name.	Scientific Name.	Plant Family.	Character.	Origin.
Mango	*Mangifera indica*	Sumac Family *Anacardiaceae*	Small tree	India, Malay Peninsula
Manila Hemp	*Musa textilis*	Banana Family *Musaceae*	Small tree	Philippine Islands
Maté	*Ilex paraguensis*	Holly Family *Aquifoliaceae*	Small tree	Paraguay, W. Brazil
Millet (Common)	*Setaria miliacea*	Grass Family *Gramineae*	Annual	Egypt, Arabia
Millet (Italian)	*Setaria italica*	Grass Family *Gramineae*	Annual	China, Japan, Indian Archipelago

Mulberry (White)	*Morus alba*	Nettle Family *Urticaceae*	Small tree	India, Mongolia
Mushroom (Common)	*Agaricus campestris*	Mushroom Family *Agaricaceae*	Perennial	Northern Hemisphere
Muskmelon	*Cucumis Melo*	Gourd Family *Cucurbitaceae*	Annual	India, Guinea
Mustard (Black)	*Brassica nigra*	Mustard Family *Cruciferae*	Annual	Eur., N. Afr., W. Asia
Mustard (White)	*Brassica alba*	Mustard Family *Cruciferae*	Annual	Eur., N. Afr., W. Asia
New Zealand Spinach	*Tetragonia expansa*	Carpetweed Family *Aizoaceae*	Annual	New Zealand
Nutmeg	*Myristica fragrans*	Nutmeg Family *Myristicaceae*	Small tree	Molucca Islands
Oats	*Avena sativa*	Grass Family *Gramineae*	Annual	E. Temperate Europe
Ochrus	*Lathyrus ochrus*	Pea Family *Leguminosae*	Annual	Italy, Spain
Oil Palm	*Elaeis guineensis*	Palm Family *Palmaceae*	Tree	Guinea
Okra (Gumbo)	*Hibiscus esculentus*	Mallow Family *Malvaceae*	Annual	Tropical Africa
Olive	*Olea europea*	Olive Family *Oleaceae*	Small tree	Syria, S. Asia Minor
Onion	*Allium Cepa*	Lily Family *Liliaceae*	Biennial	Persia, Afghanistan

Years of Known Cultivation.	Historical Notes.	Economic Importance.
4000	Ancient in India. Introduced into South America (Brazil) about 1750.	Valuable fruit; cultivated in many tropical and subtropical countries, over 150 varieties being grown in India.
500	Cultivation limited to the Philippine Islands, chiefly to Luzon, where it has been long cultivated.	Yields the standard fiber for rope making and cordage. Worn-out rope makes excellent manila paper. Native clothes in Philippines woven from manila fiber. Extensively cultivated and forms one of the chief exports of the Philippines.
1000	Use ancient in Brazil and Paraguay. Cultivation increasing.	Beverage plant. Collection and preparation of leaves important industry in Paraguay and Brazil.
5000	Cultivation prehistoric in S. Europe, Egypt, and Asia. Greatly used by Swiss Lake Dwellers of the Stone Age. Mentioned by Theophrastus and Cato.	Valuable forage plant; much used in Europe, W. Asia, and the United States. Grown in every state and territory; total crop about one half that of red clover or alfalfa, Kansas leading in production.
5000	Cultivation prehistoric in Asia. In China it is sown at a royal ceremony, dating back to 2700 B. C.	In wide cultivation in Europe and Asia as forage and food plant. Important food crop in China and Japan, the latter annually using 35,000,000 bushels for human food. Seeds formerly used for food in Europe, but now chiefly fed to birds.
2000	Mentioned by Greek and Latin authors. Naturalized in Greece, Italy, and Spain. Still much cultivated in Greece.	Much grown fruit in Europe for wine making and preserving; sparingly in the United States.
4000	Ancient cultivation in China in silk culture. Planted in S. Europe since 1540; in the United States since 1830.	Wide cultivation in India, China, and Japan. Bark used in paper making. Leaves form chief food for silkworms.
1000	In cultivation since Middle Ages. The only cryptogamous plant in extensive cultivation.	Extensively grown for market near large cities in Europe and the United States.
2000	Represented in a painting found in Herculaneum. Introduced into China 800. Fruit greatly improved during last 400 years.	Much prized in cultivation in the Old World. Widely cultivated in the United States, ranking fifth in acreage among vegetables. New Jersey leads in production, growing about one seventh of entire crop. Cultivation under irrigation much developed in Colorado. Often called cantaloupe in the markets.
2000	Cultivation ancient in the Mediterranean basin. Naturalized as a weed in the United States.	Cultivated in Europe for mustard oil.
2000	See Black Mustard above.	Cultivated in Europe and sparingly in the United States for salads, for seeds used as a condiment, and for oil.
130	Brought to England by Captain Cook in 1771 and put in cultivation by Sir Joseph Banks. Now sparingly diffused in gardens in Europe and the United States.	Use similar to that of spinach. Valuable in dry countries, but not yet widely known or cultivated.
2000	Ancient cultivation in East Indies. Recently introduced into West Indies and Brazil.	Valued spice plant; in cultivation in the East and West Indies and Brazil. Annual imports to United States exceed $500,000.
3800	Prehistoric in central Europe. Found in lake dwellings of the Bronze Age. Pliny states that the Germans lived on oatmeal Not cultivated by ancient Egyptians or Hebrews. First Chinese record later than 600. Still almost unknown in India.	A cereal of the first order, extensively grown in northern Europe, United States, and Canada. Russia and the United States lead in production. Third in importance among cereals in the United States, ranking next to corn and wheat, exceeding wheat in volume but not in value. Illinois and Iowa leading oat growing states, producing about one third of total crop.
2300	Mentioned by Theophrastus, but cultivation local in S. Europe in both ancient and modern times.	A fodder plant limited in cultivation to S. Europe and Asia Minor; chiefly grown in Spain and Greece.
400	In cultivation by negroes when Guinea was first visited by travelers early in the sixteenth century. Introduced into Brazil and West Indies by slave traders, where it has now become naturalized.	Source of palm oil used for food on west African coasts and exported in large quantities to Europe for candle and soap making. It is particularly valuable in the process of making tin plate.
1500	Anciently grown in tropical Africa. Was in cultivation in Egypt in 1216. Now diffused in tropical countries and in the S. United States.	A generally used food plant most commonly employed in soups in the East and West Indies and also in the southern United States.
4000	Cultivated by ancient Egyptians. Mentioned in Homer's *Iliad* and *Odyssey*, and in the earliest Hebrew books. According to Pliny cultivation began at Rome about 600 B. C.	Important in dry countries. In extensive cultivation in Mediterranean Europe, Syria, south Africa, Australia, and California. Chief products: olive oil, which takes the place of butter in Mediterranean countries, and the dried and pickled fruit, all of which are important commercially. Olive culture in the United States is confined to California.
4000	Cultivated by the ancient Egyptians; also by the Greeks and Romans.	Extensively cultivated throughout the world. Grown in every state in the United States, New York and Ohio leading in production. Bermuda and Spanish varieties now grown in California.

Common Name.	Scientific Name.	Plant Family.	Character.	Origin.
Orange	*Citrus Aurantium*	Orange Family *Aurantiaceae*	Small tree	China, Cochin China
Papaw	*Papaya vulgaris*	Papaya Family *Papayaceae*	Small tree	W. Indies, Cent. Am.
Parsley	*Petroselinum sativum*	Parsley Family *Umbelliferae*	Biennial	S. Europe, Algeria
Parsnip	*Pastinaca sativa*	Parsley Family *Umbelliferae*	Biennial	N. Asia, Central and Southern Europe
Pea (Field)	*Pisum arvense*	Pea Family *Leguminosae*	Annual	Italy

Plum (Prune)	*Prunus domestica*	Rose Family *Rosaceae*	Small tree	Asia Minor, Persia
Pomegranate	*Punica Granatum*	Myrtle Family *Myrtaceae*	Tree	Persia, Afghanistan

Years of Known Cultivation.	Historical Notes.	Economic Importance.
1500	Cultivation developed in Middle Ages. Unknown to Greeks and Romans. First planted in the United States by Spanish at St. Augustine, Florida, in 1562.	The most important subtropical fruit. Cultivated in India, Japan, East India Islands, Mediterranean countries, Brazil, and Jamaica. In the United States commercial production limited to California and Florida, California leading in production.
1000	Long cultivated in West Indies. Now diffused in all tropical regions.	Valuable fruit. Extensively cultivated in tropical countries: not exported to any extent. The wild papaw, *Asimina triloba* of the southern United States, is an entirely different plant.
1200	Cultivated by Charlemagne. Introduced into England in 1548.	Widely grown in Europe and the United States as a flavoring plant and for garnishings, but relatively an unimportant vegetable.
2000	Cultivation developed in central and southern Europe during Middle Ages.	Limited cultivation as a winter vegetable in the United States and in Europe, but little used in comparison with the leading vegetables.
2000	Cultivation appears to have begun with the Romans and Greeks. Now widely grown in Europe, North America, and Asia as far east as India.	Valuable for food and forage. Grown on a large scale in Europe for the seeds used for food and to a limited extent for fodder; also much grown in Canada, but cultivation less important in the United States, where it is not as popular for food as the bean.
2000	Long cultivated in southern Europe and diffused by modern cultivation in western Asia.	Esteemed fodder plant, but if seeds are used for food in quantities, becomes dangerous to health. Cultivation mostly in Italy and Spain.
3800	Cultivated by Lake Dwellers of Bronze Age and by ancient Greeks. Mentioned by Theophrastus.	Highly prized garden vegetable. Cultivated in Europe, Asia, and the United States. Chiefly used as green vegetable, but also for fodder. Ranks seventh in acreage among minor vegetables in the United States. Canning green peas has now become an important industry.
4000	Cultivation prehistoric in China. Introduced among Greeks and Romans about 100.	Extensively cultivated in Europe and Asia and second only to the apple as an orchard fruit in the United States. California, Michigan, Georgia, and Texas lead in production.
1000	Ancient cultivation in South America. Found in ancient Peruvian tombs. Introduced into Africa about 1500. Important in the United States since 1866.	Now grown in all warm regions, and in the last 40 years has become important crop in the United States. Yield, about 12,000,000 bushels, of which Virginia, North Carolina, Georgia, and Alabama produce three fourths, ranking in order named. In this country crop is largely eaten as roasted peanuts, but in Europe quantities of peanut oil are produced.
4000	Prehistorically cultivated by Lake Dwellers of Bronze Age. Mentioned by Homer, Theophrastus, and Pliny.	Wide cultivation in temperate regions, but chiefly in France and the United States. Ranks fourth among American orchard fruits, being preceded by the apple, peach, and plum. Chiefly grown in California, New York, and Michigan.
2300	Long cultivated. Used as a medicine by Hippocrates 400 B. C. In Middle Ages was one of the most prized and costly spices.	The most commonly and widely used spice. Extensively cultivated in East and West Indies, Siam, and Malay Peninsula, whence millions of pounds are exported.
500	Early cultivation in the West Indies. Introduced into Europe in sixteenth century.	Also known as cayenne pepper or chili. Much grown in tropical Africa and America, but less generally used than black pepper.
150	Commercial cultivation for oil began in Surrey, England, about 1750. Now extended to the United States. Also cultivated in Japan.	Essential oil very widely used in flavoring, in making menthol, and in medicine. Grown in England and Japan, but chiefly in the United States, about one half of the commercial crop being produced in Michigan, mostly in St. Joseph county. Japan's crop is next in importance and is largely used in making menthol.
500	In cultivation at time of Spanish discovery in tropical America. Introduced in sixteenth century into India and Guinea; recently into Florida, California, and Hawaii.	Highly prized and increasingly popular subtropical fruit until recently important in greenhouse cultivation in Europe, but culture under glass now relatively unimportant, the markets being supplied from increasing outdoor plantations in the Azores, northern Africa, Queensland, Bahamas, West Indies, and Florida, the latter cultivating upwards of 14,000,000 plants. Sparingly grown in California and Hawaii.
1900	Long cultivated in western Asia. Introduced into Italy about 30.	Nut highly prized for flavoring and for oil. Cultivated in S. Europe and N. Africa.
2000	Extensively cultivated by the Romans. Mentioned by Pliny. The prune is a variety that produces fruit containing a high percentage of sugar, which can be dried without removing the skins or stones.	Extensive cultivation throughout temperate regions. Third most important orchard fruit in the United States, exceeding 8,000,000 bushels, California growing two thirds. All prunes produced in the United States grown in the Pacific States; first prune orchard planted at San José, California, in 1870. Many eastern plums are cultivated varieties of the native species, *Prunus americana*.
4000	Cultivated throughout historic time. Represented in ancient Assyrian and Egyptian sculptures. Introduced into China 150 B. C. Cultivated in the United States in Florida and California.	Widely cultivated and highly prized fruit in S. Europe, N. Africa, and India; sparingly grown in Florida and California.

Common Name.	Scientific Name.	Plant Family.	Character.	Origin.
Poppy	*Papaver somniferum*	Poppy Family *Papaveraceae*	Annual	Mediterranean basin
Potato	*Solanum tuberosum*	Potato Family *Solanaceae*	Perennial	Mountains of Tropical America, Chile to Mexico
Prickly Pear	*Opuntia Ficus-indica*	Cactus Family *Cactaceae*	Small tree	Mexico
Pumpkin	*Cucurbita Pepo*	Gourd Family *Cucurbitaceae*	Annual	Temp. N. America
Purslane	*Portulaca oleracea*	Purslane Family *Portulacaceae*	Annual	Central and W. Asia, Greece
Quince	*Cydonia vulgaris*	Rose Family *Rosaceae*	Small tree	Persia, Asia Minor
Quinoa	*Chenopodium Quinoa*	Goosefoot Family *Chenopodiaceae*	Annual	Colombia, Peru
Radish	*Raphanus sativus*	Mustard Family *Cruciferae*	Annual	Temperate Asia
Rape	*Brassica Napus*	Mustard Family *Cruciferae*	Biennial	Europe
Raspberry (Black)	*Rubus occidentalis*	Rose Family *Rosaceae*	Small shrub	Eastern U. S., Canada
Raspberry (Red)	*Rubus idaeus*	Rose Family *Rosaceae*	Shrub	Temp. Europe, Asia
Rhubarb	*Rheum Rhaponticum*	Buckwheat Family *Polygonaceae*	Perennial	China
Rice	*Oryza sativa*	Grass Family *Gramineae*	Annual	India
Rye	*Secale cereale*	Grass Family *Gramineae*	Annual	Eastern Temperate Europe, north of the Danube
Safflower (see Carthamine)				

Years of Known Cultivation.	Historical Notes.	Economic Importance.
3000	Known to the Lake Dwellers. Used by Greeks and Romans. Mentioned by Homer.	Source of opium, which is the most important drug in commerce, and of poppy oil. Much cultivated, the Ganges region of India leading in production, but largely grown in China, Asiatic Turkey, and Egypt. Opium consumption greatest in China and Burma. Used in the United States and Europe chiefly in manufacture of morphine and codeine.
2000	Cultivation ancient in Peru. Widely diffused from Chile to Colombia at time of Spanish discovery but no evidences of culture in Mexico or by North American Indians. Introduced into what is now North Carolina and Virginia late in the sixteenth century. Brought to Europe first by the Spaniards early in the sixteenth century and to England by Sir Walter Raleigh in 1585.	Stands second only to corn as the most important contribution of America to the food plants of the world. Preëminently the most important vegetable grown in Europe and America. World crop enormous, exceeding 5,000,000,000 bushels; in bulk surpassing by about one half the world crop of wheat, corn, or oats. Germany, Russia, Austria-Hungary, France, the United States, and Great Britain chief producers in order named. Germany grows one third of the world crop, Russia one fifth. In the United States grown in every state and territory, also in Hawaii and Alaska.
500	Cultivated in Mexico before the Spanish conquest. One of first American plants taken to Old World. Introduced into S. Europe, Asia, and Africa. Now widely naturalized.	Grown for fruit in Mediterranean countries and Southwest Asia. Also used as hedge plant and as food plant for cochineal insect. The tuña, a closely related, perhaps identical, species, is highly valued for fruit in Mexico.
500	Cultivated by Indians at time of earliest discoveries in the United States.	Formerly much grown for table use in the United States, but now largely supplanted by improved varieties of squash. Still extensively planted, most frequently in corn fields, for stock feeding.
4000	Diffused in cultivation throughout the world since earliest times. Now extensively naturalized in the United States.	Cultivated as a pot herb in Europe. Is a common garden weed in the United States. Rarely used as a vegetable, though frequently fed to animals, particularly to pigs.
4000	Cultivation very ancient in W. Asia and in Greece. Mentioned by Plutarch and Pliny.	A minor orchard fruit not extensively grown though frequently used for flavoring, preserving, and jellies in Europe and the United States. Largest American orchards are in western New York.
1000	Extensive ancient cultivation in the Andean plateau, Colombia to Chile. Was staple food for natives of this region at date of Spanish conquest.	Meal made from seeds chief food of people inhabiting the high plateaus of Colombia, Peru, and Chile.
3000	Cultivated in gardens from China to Europe since ancient times. Mentioned in Chinese records 1100 B. C.	Cultivated in all temperate regions. Very common in gardens and universally used as table vegetable in the United States.
4000	Prehistoric cultivation in Europe.	Widely grown in Europe for oil from the seeds, for green manuring, and as green fodder for sheep. Sparingly grown in the United States for stock food.
75	Cultivation began in the United States in 1832. Now general in Eastern States.	Cultivated only in North America. The leading bush fruit of the United States and second only to the strawberry among small fruits. New York, Michigan, Ohio, and Pennsylvania, ranking in the order named, grow over one half of the total crop, which exceeds 75,000,000 quarts.
1000	Long and widely cultivated in northern Europe; sparingly in the United States.	Extensively cultivated in Europe. Both this species and a cultivated variety of the wild red raspberry (*Rubus idaeus* var. *aculeatissimus*) are widely grown in the United States, but production is small compared to that of the black raspberry.
2000	In Europe long grown as vegetable, foliage plant, and for medicinal properties of the root.	Generally grown in the United States as an early green vegetable. Cultivation, relatively, of minor importance.
5000	Mentioned in Chinese records dating back to 2800 B. C. Cultivation in S. United States began before 1700.	Grown in immense quantities in China, Japan, and India where it is the chief food, sustaining about one third of the human race; also grown in considerable quantities in S. Europe, Egypt, and the United States. Cultivation in the United States began in Georgia and the Carolinas in 1700. Louisiana now grows three fifths of the crop, South Carolina, Hawaii, and Georgia following in the order named.
2000	Least ancient of Old World cereals. Unknown to the ancient Greeks, but mentioned by Pliny. Cultivation probably did not antedate the Christian Era in Roman countries, but may have been more ancient in Russia and Thrace.	Fifth in importance among the great cereals; outranked only by wheat, corn, rice, and oats. Russia produces about one half of the world crop, Germany second, Austria third, altogether some seven eighths of the world crop. A leading food stuff in northern Europe; is made into "black bread." Unimportant crop in the United States, comprising in value only one per cent. of our cereals.

Common Name.	Scientific Name.	Plant Family.	Character.	Origin.
Saffron	*Crocus sativus*	Iris Family *Iridaceae*	Perennial	Asia Minor, Greece, Italy
Sainfoin	*Onobrychis sativa*	Pea Family *Leguminosae*	Perennial	Temp. Eur., W. Asia south of Caspian Sea
Sapodilla	*Achras Sapota*	Sapodilla Family *Sapotaceae*	Tree	Cent. Am., W. Indies
Sea Kale	*Crambe maritima*	Mustard Family *Cruciferae*	Perennial	Western Europe
Sesame	*Sesamum indicum*	Bignonia Family *Bignoniaceae*	Annual	Sunda Islands
Sisal Hemp	*Agave sisalina*	Amaryllis Family *Amaryllidaceae*	Small tree	Mexico, Central Am.
Sorghum Cane	*Sorghum saccharatum*	Grass Family *Gramineae*	Annual	Tropical Africa

Strawberry (European)	*Fragraria vesca.*	Rose Family *Rosaceae*	Perennial	Temp. Eur., W. Asia, E. North America
Sugar Cane	*Saccharum officinarum*	Grass Family *Gramineae*	Annual	East Indies
Sumac	*Rhus Coriaria*	Sumac Family *Anacardiaceae*	Small tree	Mediterranean basin, Southwest Asia
Sunflower	*Helianthus annuus*	Sunflower Family *Compositae*	Annual	West Central U. S.
Sweet Potato	*Ipomaea Batatas*	Convolvulus Family *Convolvulaceae*	Perennial	Trop. Am. E. Ind. (?)

Years of Known Cultivation.	Historical Notes.	Economic Importance.
4000	Cultivation remotely ancient in W. Asia.	The dried flower parts furnish a dye widely used in coloring and flavoring confectionery. Now most extensively cultivated in Spain.
500	Cultivation appears to have begun in France about 1400.	Much cultivated in Europe for pasturage and hay. Almost unknown in the United States.
500	Cultivation antedates Spanish discovery in tropical America. Since much diffused in tropical regions of India and East India Islands.	Sub-acid fruit much used for desserts in West Indies and other tropical countries where it is cultivated.
200	Cultivation developed in Europe in the eighteenth century.	Blanched sprouts, similar to asparagus, highly prized in England, where it is a widely grown vegetable. Cultivation limited elsewhere.
4000	Cultivation very ancient in Sunda Islands. Introduced into India about 1000 B. C.; Egypt, about 500 B. C.; in Brazil before 1650.	Seeds used for food and yield oil used similarly to olive oil as a food and cosmetic. Much cultivated in tropical and subtropical countries of the Old World, particularly in India, China, Japan, Egypt, and Central Africa.
500	Long cultivated to limited extent in Mexico and Central America. Greatly increased in Yucatan during last 25 years.	Valuable coarse fiber plant. Cultivation an important industry in Mexico, particularly in Yucatan, and in Central America; greatly increased in recent years by extensive use of fiber in making binding twine for American harvesting machines.
4700	Anciently cultivated in Egypt, India, and China. Many varieties now grown throughout the world.	Extensively grown throughout the world, especially in China, India, Egypt, and central Africa, for seeds, syrup, and fodder. Long cultivation has developed several important varieties. These are the non-saccharine, embracing Kafir corn, dourra, rice corn, Jerusalem corn, and broom corn, grown for the seeds and fodder; and the saccharine, embracing the well-known sorghum canes, grown for syrup and fodder. Sorghum cane, broom corn, and Kafir corn are extensively grown in the United States. Syrup production reached maximum about 1880; has rapidly declined owing to introduction of glucose syrups made from corn. Tennessee, Kentucky, Missouri, and Arkansas lead in syrup production. Fodder production increasing notably in Kansas, Oklahoma, and semi-arid districts. (See *Broom Corn and Kafir Corn.*)
2000	Cultivation ancient in W. Asia. Brought into China by Chang-kien about 150 B. C. Introduced into Europe in fifteenth century.	Cultivated in Europe and America for young leaves used as greens. In wide use as a minor vegetable.
300	Introduced into England in 1629. The principal strawberry grown in the United States, where culture became important with introduction of Hovey's strawberry in 1834.	Most important small fruit of the United States; grown in every state and territory; annual yield upwards of 250,000,000 quarts, Maryland, Michigan, Ohio, New York, Tennessee, New Jersey, Illinois, and Missouri leading in production.
300	Introduced into France from Chile in 1715. Now much crossed with the American and the European strawberry in cultivation.	Pure species not much cultivated, but valuable crosses with the other cultivated species are in extensive cultivation in Europe and America. Grows wild west of the Cordilleras in Chile, also in California.
500	Cultivation began in fifteenth century. Now much crossed with preceding, forming new varieties.	Widely grown in gardens in England and N. Europe.
2000	Brought to Europe by Crusaders. Introduced into Brazil, Mexico, and West Indies, 1500-1550.	Until within 50 years the chief source of sugar, but now second to the sugar beet. In cultivation throughout tropical regions. Grown extensively in East and West Indies, Hawaii, Brazil, Argentina, Peru, Mexico, and Louisiana. Cuba, Java, Hawaii, and Louisiana lead in production, growing over one half of the world crop of cane sugar.
500	Cultivated in Spain, Italy, and Sicily for the leaves, which are used in tanning.	Leaves valuable in tanning, subserving the same use as tan bark. Cultivation increasing in southern Europe, particularly in Sicily. The leaves of wild American sumacs have been gathered for export in considerable quantities, particularly in Virginia.
500	In cultivation by the Indians, who used seeds for food and hair oil, at period of early discoveries. Introduced into Europe about 1550. Mentioned by Champlain in his travels, 1610.	Grown in Egypt, India, and particularly in southern Russia for seeds, yielding a valuable oil. Seeds fed to poultry, the seed cake to stock. Sparingly cultivated in the United States, except for ornament, although Illinois, Iowa, Indiana, and Arizona report small crops of seeds.
2000	Widely cultivated in tropical countries. Ancient in China and antedating Spanish discovery in West Indies.	Most important vegetable in tropical and subtropical countries, where it is extensively cultivated. Second only to the potato in the United States; widely grown in the South, Georgia, North Carolina, Alabama, South Carolina, and Tennessee producing over half of the total crop, which in acreage and value is about one fifth that of the potato

Common Name.	Scientific Name.	Plant Family.	Character.	Origin.

Introduced Plants. A well populated region, where agriculture is extensive, contains in addition to the surviving native plants, a large number which have been introduced in various ways from other parts of the world. The ships of modern commerce have taken the rat and the cockroach to every seaport, and likewise have transported many plants which have become established in the vegetation of new regions. An introduced plant which maintains itself permanently is said to be naturalized; if it survives only temporarily and locally it is called adventitious. Colonization and trade have diffused hundreds of the plants of Europe in other continents. In turn, Europe has received many foreign plants, and there is a continuous interchange between various regions of the world. Nearly all these widely distributed plants are herbs,—a large number being the field, garden, and wayside weeds that accompany agriculture everywhere. The number of introduced shrubs and trees which have become thoroughly naturalized is small. Some plants, like the English sparrow and European rabbit among animals, have become pestiferous after gaining a foothold in a new region, such as the Canada thistle, Russian thistle, and other troublesome weeds.

In that portion of the United States and Canada lying east of the northwest corner of Minnesota and extending south to Kansas and Tennessee, containing three fifths of the population and the most extensive agriculture of North America, about 4,000 species of flowering plants are found. Of these, 666, or almost exactly one sixth, are naturalized plants, mostly introduced from Europe, although many other regions have contributed. Consequently, the flora of this area has been enriched by the addition of one foreign to each five native species. No other region in North America contains so large a

Years of Known Cultivation.	Historical Notes.	Economic Importance.
2000	Cultivation ancient in Polynesia. Reached China before 100 B. C. and long cultivated in India and Egypt. Mentioned by Pliny.	A leading food plant in the Pacific Islands, where it is widely cultivated. The starchy root is made into bread or poi.
4600	Mentioned in Chinese records dating 2700 B. C. Extensively grown in India since 1870. Experimentally grown in the southern United States.	Tea and coffee stand first among the world's beverage plants. Dried leaves produced in immense quantities for ages by cultivation in China and Japan. Cultivation becoming very extensive in India and Ceylon. Exports from India now exceed, and those from Ceylon almost equal, the export of China. Great Britain, Russia, and the United States chief consuming nations, England using about seven times as much tea as the United States, while the proportions are reversed in the consumption of coffee.
190 In U. S.	Named for Timothy Hanson, who introduced the seed in the Carolinas about 1720.	Most valuable cultivated grass in the United States; constitutes a large part of the hay crop in the North Central and North-eastern States.
2000	Almost universally used by Indians of North and South America since ancient times. Tobacco pipes abundant in Aztec tombs, also found among remains of the Mound Builders. Introduced into Europe by Oviedo about 1520. Cultivated by first colonists in Virginia.	Cultivation greatly diffused since Spanish discovery. The United States is the leading grower, production about equaling the total crop of Europe, which is mostly grown in Austria, Russia, Germany, and France. Cultivation, which began at first settlement of Jamestown, became great factor in growth of Virginia and Maryland. Kentucky, North Carolina, Virginia, Ohio, Tennessee, Wisconsin, Pennsylvania, and Connecticut lead in production. Cigars first made at South Windsor, Conn., in 1801; became commercially important after 1850. Use of tobacco now widespread among Oriental nations.
500	Cultivated in Peru at time of Spanish discovery. Formerly called "Love Apple" and considered poisonous, but during last century cultivation has become extensive in all temperate climates.	Highly prized and increasingly popular vegetable. Cultivation greatly enlarged in recent years by growth of the canning industry and locally is of much importance. Exceeded in acreage only by the watermelon and sweet corn among the minor vegetables. Crop exceeds 30,000,000 bushels, nearly half of which is grown in Maryland and New Jersey.
4000	Prehistoric in Europe, but not known to ancient Egyptians, Hebrews, or Chinese.	Much grown in England, northern Europe, and Canada for stock food. Widely, but sparingly, cultivated in the United States. Used extensively as table vegetable.
2000	In cultivation by the Romans at the time of Cato.	Valuable for seed and forage. Much cultivated in Europe, but rarely and not very successfully in the United States.
4000	Very anciently cultivated by Egyptians. Most extensive cultivation in the United States is in the Southern States; in Europe, in southern Russia.	The most popular melon in cultivation. Extensively grown in warm climates throughout the world, but most abundantly in S. Russia and the S. United States. Leads all minor vegetables in acreage, being surpassed only by the major vegetables potato and sweet potato. Texas, Georgia, North Carolina, and Missouri chief growers in the order named.
5000	Cultivation prehistoric in Asia. Grown by the Lake Dwellers, ancient Egyptians, and by the Chinese as early as 2700 B. C. Like maize, wheat is unknown in a wild state. Origin not established with certainty, but weight of evidence indicates the Euphrates region.	The most highly prized cereal in cultivation; the bread plant *par excellence* of western civilization. The world crop surpasses in value and commercial importance all other cereals, though the total yield in bushels is nearly the same as that of corn, oats, and rye. The leading wheat growing countries are the United States and Canada, Russia, France, India, Austria, Italy, Germany, and Argentina.
2000	Long cultivation in East Indies and Pacific islands. Now spread to many tropical countries.	The farinaceous roots, resembling but inferior to the sweet potato, are an important article of food in tropical Asia, Africa, and America, where it is much cultivated.

proportion of introduced plants. Of the naturalized plants, 89 are Compositae, including such common plants as the burdock, mayweed, ox-eye daisy, several thistles, and the dandelion; 66 are grasses, including foxtail grass, canary grass, beard grass, goose grass, darnel, cheat, and crab grass; 46 belong to the mustard family, containing peppergrass, shepherd's purse, mustards, and various cresses; 42 belong to the mint family, including hoarhound, motherwort, ground ivy, catnip, thyme, and various mints; 37 belong to the pulse or pea family, containing several clovers, sweet clovers, vetches, and vetchlings. A number of poisonous plants are included, among them celandine, foxglove, hellebore, henbane, jimson weed, and poison hemlock.

About four fifths of these introduced plants belong to twenty leading plant families, and this same group of families contains about two thirds of the native plants.

ANIMAL KINGDOM.

Table of the Principal Groups of Animals.

Protozoa The simplest animals		Rhizopoda { Foraminifera. Radiolaria.
		Flagellata.
		Infusoria.
		Gregarina.
Coelenterata Sponges, corals, and jellyfishes	Porifera	Spongiæ { Calcareous sponges. Siliceous sponges.
	Cnidaria	Anthozoa, coral polyps.
		Hydrozoa, hydroids and medusæ.
Echinodermata Crinoids, starfishes, and sea urchins	Pelmatozoa	Cystoidea, cystids.
		Crinoidea, stone lilies.
		Blastoidea, blastids.
	Asterozoa	Ophiuroidea, brittle-stars.
		Asterioidea, starfishes.
	Echinozoa	Echinoidea, sea urchins.
		Holothuroidea, sea cucumbers.
Vermes Worms		Platyhelminthes.
		Rotifera.
		Nemathelminthes.
		Gephyrea.
		Annelida, sea worms.
Molluscoidea Mollusk-like forms		Bryozoa, sea mosses.
		Brachiopoda, lamp shells.
Mollusca Mollusks		Pelecypoda, lamellibranchs, bivalves.
		Scaphopoda, tusk-shells.
		Amphineura, chiton.
		Gastropoda, univalves, snails.
		Cephalopoda, nautilus, cuttlefish.
Arthropoda Articulates	Branchiata	Crustacea
		Trilobita, trilobites.
		Gigantostraca, horseshoe crabs.
		Entomostraca, ostracoids, barnacles.
		Malacostraca, lobsters, crabs.
	Tracheata	Myriopoda, centipeds.
		Arachnoidea, spiders, scorpions.
		Insecta, insects.
Vertebrata		Cyclostomata, lampreys.
		Pisces, Fishes { Selachii, sharks. Holocephali, spook fishes. Dipnoi, lungfishes. Teleostomi, ganoids and teleosts, the common fishes.
		Amphibia, amphibians, batrachians.
		Reptilia, reptiles.
		Aves, birds.
		Mammalia or Mammals { Prototheria, monotremes. Metatheria, marsupials. Eutheria, placentals.

ZOOLOGY.

Zoölogy is the science of animal life. The study and knowledge of animals from different points of view give rise to special divisions of zoölogy. The study of their gross structure is Anatomy; of the form and origin of organs, Morphology; of the functions of organs, Physiology; of minute structure, Histology; of cell structure and development, Cytology; of classification, Taxonomy or Systematic Zoölogy; of extinct animals, Paleontology; of animals in relation to man, Economic Zoölogy. The study of certain groups of animals has been given special names: of mammals, Mammalogy; of birds, Ornithology; of reptiles, Herpetology; of fishes, Ichthyology; of insects, Entomology, etc.

Systematic Zoology or **Taxonomy** treats of the classification or orderly arrangement of animals according to their natural relationships. The animal kingdom is divided into great primary divisions called Branches or Phyla.

Branches are divided into Classes.
Classes are divided into Orders.
Orders are divided into Families.
Families are divided into Genera.
Genera are divided into Species.
Species are divided into Individuals.

Nomenclature is the naming of animals and the groups to which they belong so as to make the character of the animal and its place in nature clearly understood. Scientific nomenclature is concerned with the technical names uniformly used by scientists of all nations. The scientific name of an animal consists of two Latinized words. The first, the name of the genus, or the generic name, always begins with a capital letter; the second, the word denoting the species, or the specific name, is usually in the form of a Latin adjective, and begins with a small letter. For example: the scientific name of the puma, also called cougar, panther, and mountain lion, is *Felis concolor*—*Felis* being the Latin name of the cat, and *concolor*, a Latin adjective signifying uniform color. While this animal has many popular names in several languages, its name in scientific language is the same throughout the world. The further classification of the puma is as follows:—

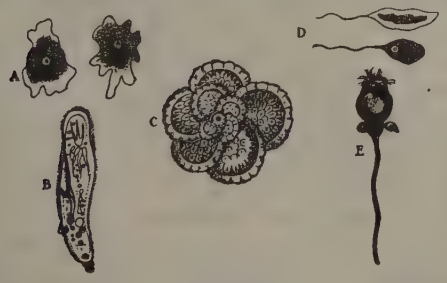
Branch: *Vertebrata*, Backboned animals.
Class: *Mammalia*, Mammals.
Order: *Carnivora*, Flesh-eaters.
Family: *Felidae*, Cat tribe.
Genus: *Felis*, True cats.
Species: *concolor*, uniformly colored.

A genus may contain many species or only one. There are numerous living species of

Felis, among which are the lion, *F. leo;* the tiger, *F. tigris;* the leopard, *F. pardalis;* and the jaguar, *F. onca*, but only one living species of giraffe, *Giraffa camelopardalis.* Likewise a family may consist of one or many genera, an order of one or many families, a class of one or several orders, and a branch of one or several classes.

Just as the buffalo is now disappearing, and as many species, such as the great auk, dodo, and quagga, have become extinct very recently, likewise not only an immense array of species, but whole genera, families, and orders of animals have perished in geologic times. A complete classification would include all of these. To approximate it is the vast task of paleontologists, who have already determined the relationships of thousands of fossil species. In general, the following outlines and descriptions take into account only living animals, and the classifications given are those usually followed by students of existent groups:—

Protozoa.—The lowest forms of animal life. They are all one-celled animals, and are usually of microscopic size. They move with a gliding motion, are constantly changing form, and have no organs or true tissues. Food is absorbed at all points of the surface, and is digested in all parts of the interior. The animals reproduce by self-division, one animal breaking up into two or more; or they multiply by spores or germs. The Rhizopoda (*ῥίζα, rhiza*, root, and *πούς pous*, foot), are the lowest class of Protozoa. They all have projections from the protoplasm, called pseudopodia. These projections are used both for locomotion and for taking food. The lower rhizopods have no shell or no constant shape. The only internal resemblance to organs are vacuoles. The rhizopods are grouped in two orders: the Foraminifera and the Radiolaria. The Foraminifera (*foramen*, a hole, and *ferre*, to bear) are distinguished by the form of their pseudopodia, which are long, and connected with one another in a beautiful network of proto-



PROTOZOA.

A. Amœba. *B.* Paramœcium. *C.* Globigerina. *D.* Euglena. *E.* Vorticella. All much magnified.

plasm. They have also a shell or "test" of calcium carbonate or silica, or made up of particles of sand, mud, sponge spicules, or other foreign matter glued together. The shells may be perforate or imperforate. The perforations, when present permit the pseudopodia to pass through. There are also one or more general openings in the shell to permit the body to come in contact with the surrounding water, from which food is drawn. They vary in size from microscopic up to one inch in diameter (the Nummulites). Though the shells are minute they have contributed to the building up of great deposits on the bed of the ocean, and have been important limestone builders in the past. There are four important families of Foraminifera: Gromidæ, Miliolidæ, Globiginidæ, and Nummulinidæ. Radiolaria, the second and higher group of rhizopodous Protozoa, are divided into 85 known families, comprising many thousands of species. They are distinguished from other Protozoa by complex and beautiful shells of silicon, and a peculiar membranous inner capsule. They supply food to countless minute crustaceans, which in turn feed fishes.

Coelenterata. This branch of the animal kingdom consists of the simplest groups of the many-celled animals or Metozoa, as distinguished from the one-celled animals or Protozoa. It

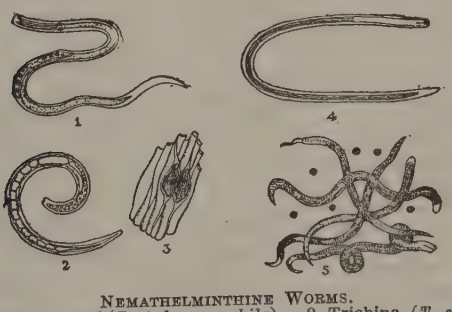
Red Coral. COELENTERATES. Sea Anemones.

includes two main groups, the Porifera, pore-bearing animals or sponges, and the Cnidaria, animals armed with stinging cells, corals, sea anemones, and hydroids. Some zoölogists consider the Porifera a distinct branch ranking between the Protozoa and the Cnidaria, which alone are regarded as the true Coelenterates. Sponges are usually attached like plants to rocks or similar substances and increase in size by a regular process of growth. The Cnidaria comprise the Anthozoa, or coral-polyps, and the Hydrozoa, or hydroids and medusae. The Anthozoa contain the sea anemones and all of the corals except the millepores. The name, Anthozoa, means flower animals in allusion to the arrangement of the rayed tentacles about the mouth in a form which suggests a composite flower. These tentacles vary in number from two to several hundred and are armed with batteries **of stinging** cells (*cnidae*). Sea anemones and most Cnidaria are gorgeously colored. The Hydrozoa (*ὕδωρ, hudor*, water, and *ζῷον, zoon*, animal) comprise the hydroids and medusae. The hydroids are noted for their delicacy and beauty. They live in communities or colonies; one group feeds the colony, another protects it, and a third is devoted to reproduction.

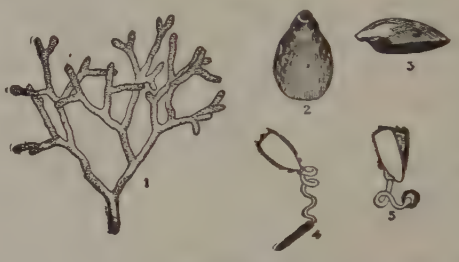
Echinodermata (*ἐχῖνος, echinos*, a hedgehog, and *δέρμα, derma*, the skin) are the highest group of radiate animals. They have a tough external covering, ranging from a leathery skin to a well-defined calcareous test. The radiating parts are usually five in number. Echinodermata are provided with a mouth, alimentary canal, and a digestive system. They move about by means of the tube-like feet with a sucking disc at the end by which they cling to rocks and draw themselves about. They are divided into three classes: the Pelmatozoa, the Asterozoa, and the Echinozoa. Pelmatozoa are with few exceptions

fixed to their dwelling places by stalks. They include the Cystoidea or cystids, the Crinoidea or stone-lilies, and the Blastoidea or blastids. The Cystoidea or cystids, and the Blastoidea or blastids, now extinct, were abundant in Paleozoic times. The Crinoidea or crinoids are flower-like in form. About 300 living species called sea lilies, and over 2,000 fossil species, called stone lilies, are known. The Asterozoa include the Ophiuroidea and the Asteroidea. The Ophiuroidea comprise the class of brittle stars or sand stars. They have a small, flat, roundish disc from which issue suddenly five slender, cylindrical arms. About 600 species are known. The Asteroidea are starfish. The body is five-sided and covered with short, small spines. The Echinozoa include the Echinoidea and the Holothuroidea. The Echinoidea include the sea urchins, cake urchins, sand dollars, and the heart urchins. The sea urchin has a spherical, heart-shaped or disc-shaped body covered with movable spines. The sand dollars have flat round bodies. The Holothuroidea are known as sea cucumbers, sea squirts, and sea slugs. The body is soft, worm-like in shape, and the mouth is surrounded by a circle of tentacles.

Vermes or Worms.—The animals in this group present so many differences of structure and habit that it is difficult to give in general terms a group of characteristics which will apply to all of this class. They have elongated bodies, no internal skeleton; both sides of a line drawn through the animal lengthwise are alike, and there are distinct dorsal and lateral sections. Nearly all have bodies composed of segments which are nearly alike. Almost all have powers of locomotion; they crawl; have not jointed or articulate legs, but fleshy, unjointed legs, or spines, or suckers, or bristles. Some are aquatic, some terrestrial, and some live as parasites in or on other animals. They are grouped as Platyhelminthes, Rotifera, Nemathelminthes, Gephyrea, and Annelida. The Platyhelminthes (*πλατύς, platys*, broad, and *ἕλμις, helmins*, worm), or flatworms, have no body cavity or blood system. The body is flat and often thin and leaf-like or ribbon-like. The fluke worm or fluke infesting the livers of ruminants, causing the destructive disease known as rot in sheep, and the tapeworms parasitic in the human body and in other animals, are well-known examples. The Rotifera (*rota*, a wheel, and *ferre*, to bear) or "wheel animalcules," are minute, often microscopic, and include the smallest of the many-celled animals. The Nemathelminthes (*νῆμα, nema*, a thread, and *ἕλμις, helmins*, a worm) are worms which do not occur in segmented form, have long, cylindrical bodies, and are known as "round worms." The skin is strong and often wrinkled. They are not known to possess any organs of special sense, except that of touch. All are parasitic except the marine forms and the paste and vinegar eels. The ascaris or roundworm and the pinworm (*Oxyurus vermiculatus*) infest the human intestines, and trichinæ, minute worms living in the muscles of the pig, when introduced into the human system cause the disease known as trichiniasis or trichinosis. The Gephyrea include many marine worms, once classed with the echinoderms as Apoda and Apedicellata. The Annelida or Annulata (*annulus*, a little ring) are composed of many segments or rings, have a head, and are covered with bristles or hairs which assist locomotion; the blood is generally red, but often green or yellow; they breathe by gills which, in some cases, open into the alimentary canal.



NEMATHELMINTHINE WORMS.
1. Vinegar Eel (*Leptodera oxophila*). 2. Trichina (*T. spiralis*). 3. Trichina encysted in muscle fibers. 4. Wheat worm or Smut worm (*Anguillula tritici*). 5. Human-blood Filaria (*F. sanguis-hominis*). All much magnified.



MOLLUSCOIDEA.
1. The Bryozoan Myriozoum. 2, 3. The Brachiopod Terebratulina, or Lamp-shell. 4, 5. The Brachiopod Lingula.

Molluscoidea. These are mollusk-like forms and include the Bryozoa or sea mosses and the Brachiopoda or lamp shells. The Bryozoa are minute marine animals growing in moss-like or coral-like colonies and secreting a calcareous zoarium. Each individual or zooid of the colony occupies a cell-like zoœcium. The mouth of each zooid is surrounded by a ring of tentacles known as the lophophore. There is no heart or circulating system; multiplication is by budding. English authorities call the group Polyzoa, but American authorities use the older term, Bryozoa. The Brachiopoda (*βραχίων, brachion*, arm, and *πούς, pous*, foot) have unequivalvate and equilateral bivalve shells. They have no organs of special sense; food, consisting of a number of floating organisms, is brought to the mouth by currents of water induced by the vibrations of cilia upon the two long spiral arms at the sides of the mouth, which also assist in respiration. Brachiopods adhere to solid bodies by a pedicel or by one of the valves of the shell. More than 4,000 species are known, of which 95 per cent. are extinct and known only in the fossil state.

Mollusca. The mollusks include the fresh-water mussels, clams, oysters, snails, slugs, cuttlefishes, squids, octopi, and all of the shellfish which have a one-valved shell. Instead of an internal bony skeleton, mollusks have a shell which both supports the soft tissues and pro-

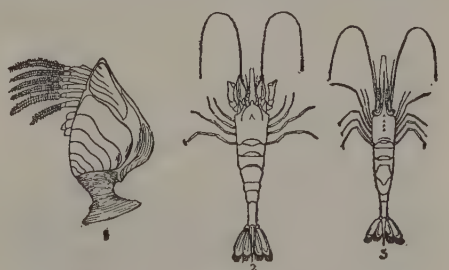
tects the delicate parts. The parts of a mollusk are the head, the trunk, a foot or muscular organ by which the animal moves about and burrows, and a mantle or tunic which enfolds the body and out of which the growth of the shell is produced. Shells are of two pieces, the bearers of which are called bivalves; or of one piece, univalves. Both land and water forms are known, but the latter are by far the more numerous. They feed on vegetable and animal matter. The order is divided into Pelecypoda (lamellibranchs and bivalves), Scaphopoda

Quahog Clam. Venus mercenaria. MOLLUSKS. Common Mussel. Mytilus edulis.

(tusk shells), Amphineura (chiton), Gastropoda (univalves, snails, etc.), and Cephalopoda (nautilus, cuttlefish). Pelecypoda (*πέλεκυς, pelekys*, ax, and *πούς pous*, foot) or Lamellibranchiata or Bivalves or Acephala or Conchifera: the shells of this group are of two pieces hinged together, such as those of oysters, clams, etc. The animals vary in size from that of the little fresh-water mollusk to that of the giant East Indian clam of three feet in length. Pelecypods have the senses of touch, smell, and hearing, while some have eyes. The ears are in the foot, and the eyes are either on the edges of the mantle or at the end of the siphon. The siphon is a double tube formed by the extension of the mantle posteriorly. One opening draws in water laden with minute animalcules, thus supplying food and at the same time oxygen-laden water for respiration by the gills; the other opening furnishes a passage through which the water depleted of its oxygen and food particles passes to the outside again.

The Scaphopoda (*σκάφη, scaphe*, a boat or bowl, and *πούς, pous*, foot) includes the tooth-shells or tusk-shells. They are common in deep water on muddy bottoms. They are shaped something like an elephant's tusk, and are open at each end. There are no head, eyes, or heart. The digging foot is small. The shells were used by the Indians on the Northwest coast as necklaces and other ornaments, and as "shell money," which they call *hi-qua*. The pieces of shell were ground down to a definite shape and carefully made. The Amphineura (*ἀμφί, amphi*, around, and *νεῦρον, neuron*, a nerve) are characterized by an arrangement of the nervous system, in which two lateral and two ventral nerve trunks are bound together and are furnished with ganglia throughout the entire length. The shell is either in eight pieces or absent. They are of small size and are found in the warmer seas. The chitons have an eight-piece shell, and can roll themselves up in balls for protection. They cling to rocks and adhere despite the heaviest surf. Over 200 species are known. The Gastropoda (*γαστήρ, gaster*, the stomach, and *πούς pous*, foot) include snails, slugs, limpets, periwinkles, whelks, and many other one-shelled or one-valved shell mollusks. They are by far the largest division of the Mollusca. They all move about by the pulling or pushing force of a single foot. Breathing is carried on in some by a single gill; in others, by a pair of gills; and in still others, by lungs. The head bears tentacles, on the tips of which are the eyes. In some cases the eyes are upon a pair of stalks which can be thrust or drawn in at will. The shells are in many cases beautifully marked and colored. The mode of breathing is made the basis of further classification. The Cephalopoda (*κεφαλή, kephale*, head, and *πούς, pous*, foot) are the highest group of mollusks. They have a circle of fleshy arms around the mouth in front of the head. These arms are tentacles or "feet." By these they catch and hold their prey and also creep about. Cephalopods can swim rapidly forward or backward, which they accomplish by ejecting spurts of water, and thus propel themselves. Only the nautilus has an external shell. The octopods or octopi have eight tentacles or arms around the mouth. They are often called "devilfish."

Arthropoda.—The Arthropoda (*ἄρθον, arthron*, a joint, and *πούς, pous*, a foot) include all of the invertebrates having jointed appendages. There are more species in this than in any other branch of the animal kingdom. The bodies consist of segments or rings covered with an outer body wall or hardened cuticle, called the exoskeleton. The eyes of all arthropods are compound, made up of a number of small eyes. The divisions are: **Crustacea** (trilobites, horseshoe crabs, ostracodes, barnacles, lobsters, and crabs), **Myriapoda** (centipeds), **Arachnoidea** (spiders and scorpions), and **Insecta** (insects). The **Crustacea** (*crusta*, a shell) include lobsters, crabs, crawfish, shrimps, prawns, barnacles, etc. All live in water, though a few are met with in damp places, such as the wood



CRUSTACEANS.
1. Barnacle. 2. Shrimp. 3. Prawn.

lice and water bugs. The crustaceans have gills and two pairs of antennæ or feelers. Sea spiders are a form of Crustacea having a long slender body with eight very long legs. They live at great depths of the sea. Lobsters, crabs, and shrimps have five pairs of legs, the first usually developed as pincers. The **Myriapoda** (*μυρίος, myrios*, numberless, and *πούς, pous*, foot) include centipeds, and millipeds or thousand-legged worms. These are land animals and breathe like insects through minute openings on each side of the body along its entire length. The **Arachnoidea** or **Arachnida** (*ἀράχνη, arachne*, a spider) include the mites, scorpions, and spiders. The head and thorax

are more or less united into one part, the cephalothorax; there are four pairs of legs borne by the thorax, no antennæ, their place being taken by the jaws. The eyes are simple and vary from two to twelve. In the case of spiders, the spinnerets are borne on the abdomen. The scorpions have poison-glands and a sting in the abdomen. The mites are the lowest of the articulated animals. They are usually parasites, living upon the bodies, under the skin, of higher animals. Spiders have a round abdomen attached by a slight stem to the cephalothorax. Their mandibles or jaws are powerful hooked fangs connected with a poison gland in the head, from which a poison exudes that is strong enough to kill flies and other insects, but is not, except in the case of one species (*Latroductus*) fatal to man.

Insecta (*insectum*, cut in two) are the most numerous of all groups of land animals. The most conservative estimate of the number of species of insects places this number at 5,000,000, while Riley, the famous entomologist, placed the number of species at 10,000,000. An insect is a member of the six-legged arthropods. The term is loosely applied in popular use to everything that is of the nature of a small crawling creature. But the term does not include even spiders, centipeds, or "thousand-leggers."

One very generally accepted classification divides insects into nineteen groups or orders:—

Thysanura, springtails and bristletails.
Ephemerida, May flies.
Odonata, dragon flies.
Plecoptera, stone flies.
Isoptera, white ants.
Corrodentia, psocids and book lice.
Mallophaga, bird lice.
Euplexoptera, earwigs.
Orthoptera, grasshoppers, crickets, etc.
Physopoda, thrips.
Hemiptera, true bugs, plant lice, scale insects.
Neuroptera, aphis lions, ant lions, etc.
Mecoptera, scorpion flies.
Tricoptera, caddice flies.
Lepidoptera, butterflies and moths.
Diptera, true flies.
Siphonaptera, fleas.
Coleoptera, beetles.
Hymenoptera, bees, wasps, ants, etc.

Another mode of classification of insects is that given by Dr. Sharp in the Cambridge Natural History Series (1901) in nine orders:—

1. *Aptera*, wingless insects.
2. *Orthoptera*, locusts, grasshoppers, crickets.
3. *Neuroptera*, dragon flies, June flies, caddice flies.
4. *Hymenoptera*, ants, bees, wasps, sawflies.
5. *Coleoptera*, beetles.
6. *Lepidoptera*, butterflies, moths.
7. *Diptera*, true flies.
8. *Thysanoptera*, thrips.
9. *Hemiptera*, bugs, cicadas, aphids.

FISHES or PISCES.

The class Fishes comprises the lowest grand division of the vertebrates and certain primitive and degenerate forms standing below the true vertebrates, the whole grouped in six subclasses according to the following table based on Jordan's classification:—

Subclass.	
PROTOCHORDATA.	
Enteropneusta	Balanoglossus.
Tunicata	Larvacea. Ascidiacea. Thaliacea.
VERTEBRATA.	
Leptocardii	Branchiostomidae: Lancelets.
Cyclostomi	Hyperotreti: Borers: hagfishes. Hyperoartii: Lampreys.
Elasmobranchi	Selachii: Sharks, rays, sawfishes. Holocephali: Chimæras.
Teleostomi	Crossopterygii: Bechirs. Dipneusti: Sirenoidea, barramundas. Actinopterygii: Ganoidei (Ganoids): Sturgeons, garpikes. Teleostei (Bony fishes): Salmon, perch, codfish.

Enteropneusta and **Tunicata** are unimportant groups of the fishes. The Enteropneusta strongly resemble worms and have no familiar names. "Sea squirts," "sea pears," and "sea peaches" describe some of the Tunicata.

Leptocardii or **Lancelets** have the simplest of vertebrate characters: a notochord, but no skull, no limbs, and no vertebræ; the heart only a long tube with the power of contracting and expanding; blood colorless, no brain; and respiration carried on by gill slits. They are from one half an inch to four inches long and lie buried in sand and mud at the bottom of shallow waters. They are very important to the scientist for the study of the development of the vertebrates from lower forms.

Cyclostomi or **Lampreys** have a brain, skull, heart, and other organs, which mark a long step in the development of vertebrate animals. Both the hagfishes and the lampreys are parasitic upon other fishes.

Elasmobranchii or **Shark-like Fishes** have pairs of fins, a lower jaw, teeth, separate vertebræ, gill arches and a covering of scales—all structures which are not found in any of the lower fishes. The skeleton is not bony but cartilaginous so that the whole body is very flexible. There are two groups, the Selachii, sharks and skates, and the Holocephali, chimæras. Sharks are the earliest fishes found among fossils. There are about 150 known species of sharks and this group includes also the rays and skates. The chimæras are a small group of ugly looking fishes sometimes called sea cats.

Teleostomi or **True Fishes** have a more or less complete bony skeleton, and include all of the higher forms of the three great primary divisions. The Crossopterygians, fringe-finned fishes, and the Dipneusti, lungfishes, are nearly all extinct and are of paleontological interest. The Actinopterygii include all fishes with fin jaws and fish fins, and comprise the Ganoidei, ganoids, and the Teleostei, bony fishes.

Ganoidei, Ganoids. In most ganoids the skeleton is cartilaginous, and in some it is very primitive in development. The body is covered with horny, enameled plates, and angular, shining scales. The number of living ganoids is small and their relationships puzzling.

Teleostei or **Bony Fishes** comprise all of the most highly developed fishes, embracing some 10,000 species. The skeleton is almost entirely bony, and there are many specializations

structure not found in the lower groups. The infinite variety of detail in structure divides this vast assemblage into many orders of very unequal size and value. Their relationships are extremely diverse and cannot be correctly indicated in a linear series.

AMPHIBIANS or AMPHIBIA.

This class is an interesting link between Fishes and Reptiles. It was formerly called Batrachians, but the name Amphibia has now come into more general use. But all amphibian animals are not Amphibia; for the seal and walrus, though equally at home on land or sea, are of a much higher class.

All Amphibians, like Fishes and Reptiles, are cold-blooded—that is, they adapt the temperature of the body to that of their surroundings. On this account they are able to endure extremes of heat and cold in a remarkable degree. They can withstand the solid freezing of the water of a marsh or pond, but do not so well bear the higher temperatures.

There are wonderful combinations of gills, lungs, and fins and legs in this class, affording interesting study in evolution, but this great diversity makes classification difficult.

Amphibians thrive in warm regions, being most numerous in tropical America and India; none occur in polar regions. There are about 1,000 existing species, of which about 100 are Tailed Amphibians (*Urodela*); some 60 of these are American, 40 are Coecilians (*Apoda*) mostly of tropical America, and the remainder are Tailless Amphibians (*Salientia*), Frogs, and Toads widely distributed throughout the world.

REPTILES or REPTILIA.

Reptiles are air-breathing vertebrates, with limbs generally ending in claws, and bodies usually protected by plates or horny scales. They are cold-blooded, breathe by lungs; some live on land and some in water; the latter come to the surface to breathe. The class includes turtles, snakes, lizards, crocodiles, etc. The three orders of living Reptiles are:—

Chelonia. Turtles, Tortoises, and Terrapins.
Crocodilia. Crocodiles, Alligators, Gavials.
Squamata. Lizards and Snakes.

Of the numerous species found in North America, there are 44 Turtles and Tortoises, 2 Crocodilians, 97 Lizards, and 111 Snakes.

Chelonia. Tortoises are strictly land animals; Terrapins are the edible, hard-shelled, fresh-water species, and Turtles is a name applied loosely to the entire order.

Crocodilia or Crocodilians. The two species of this order found in North America are the American Crocodile and the Alligator. There are about 23 species of crocodilians in the world, the largest of which are found in the Eastern Hemisphere.

Squamata or Lizards and Snakes. This is much the largest of the three living orders of reptiles grouped in two suborders, Lacertilia, Lizards, and Ophidia, Snakes, each embracing about 1,000 species, the North American representatives of which are classified in 11 families of lizards and 4 families of snakes.

BIRDS or AVES.

Birds were evolved from reptiles. The strongest evidence of this fact was the discovery among the lithographic slate of Solenhofen in Bavaria of the fossil remains of a reptile-like bird, the *Archaeopteryx lithographica*, which is the earliest known progenitor of the great class of Aves.

The birds of North America are classified into seventeen orders:—

Order I (*Pygopodes*)—Grebes, loons, and auks. Of the 30 species of grebes known, 6 are found in North America, 5 of the 5 species of loons, and 30 of the 30 known species of auks, murres, and puffins.

Order II (*Longipennes*)—Jaegers, skuas, gulls, and terns. Of the 6 known species of jaegers and skuas, all are found in North America, 40 of the 100 species of gulls and terns, and 1 of the 3 species of skimmers.

Order III (*Tubinares*)—Albatrosses, petrels, and fulmars. Four of the 10 species of albatrosses, and 30 of the 70 petrels and shearwaters are found in North America.

Order IV (*Steganopodes*)—Gannets, tropic birds, cormorants, and pelicans. Eight of the 8 gannets, 1 of the 4 darters, 10 of the 30 cormorants, 3 of the 12 pelicans, and 1 of the 2 frigate or man-o'-war birds are found in North America.

Order V (*Anseres*)—Ducks, geese, and swans. Sixty-five of the 200 known species are found in North America.

Order VI (*Odontoglossae*)—Flamingoes. Five of the 7 known species are North American.

Order VII (*Herodiones*)—Herons, storks, ibises, etc. One of the 6 spoonbills, 4 of the 30 ibises, 2 of the 25 storks, and 15 of the 75 herons and bitterns are found in North America.

Order VIII (*Paludicolae*)—Cranes, rails, etc. Three of the 18 cranes, 1 of the 2 courlans, and 15 of the 180 species of rails, gallinules, and coots are found in North America.

Order IX (*Limicolae*)—Phalaropes, snipes, plovers. All of the 3 phalaropes, 2 of the 11 avocets and stilts, 45 of the 100 snipes, sandpipers, 8 of the 100 plovers, and 3 of the 10 oyster catchers are found in North America.

Order X (*Gallinae*)—Turkeys, grouse, bobwhites, etc. Eighty-five of the 200 grouse and bobwhites, and 4 of the 90 pheasants are found in North America.

Order XI (*Columbae*)—Pigeons and doves. Of the 300 species, 12 are North American.

Order XII (*Raptores*)—Vultures, hawks, and owls. Three of the 8 vultures, 35 of the 350 falcons, hawks, and eagles, 1 of the 10 barn owls, and 20 of the 200 horned owls, hoot owls, etc., are found in North America.

Order XIII (*Psittaci*)—Parrots and paroquets. Only 1 of the 500 species of parrots, paroquets, and macaws is North American.

Order XIV (*Coccyges*)—Cuckoos and kingfishers. Thirty-five of the 175 cuckoos, and 8 of the 180 kingfishers are North American.

Order XV (*Pici*)—Woodpeckers. Twenty-five of the 350 woodpeckers are found in North America.

Order XVI (*Macrochires*)—Goatsuckers, swifts, and humming birds. Seven of the 85 nighthawks, 4 of the 75 swifts, 17 of the 500 humming birds are found in North America.

Order XVII (*Passeres*)—Perching birds, flycatchers, blackbirds, jays, orioles, sparrows, finches, swallows, vireos, warblers, wrens, thrushes, etc. Thirty-five of the 350 flycatchers, 2 of the 100 larks, 25 of the 200 crows and jays, 1 of the 200 starlings, 15 of the 150 blackbirds and orioles, 80 of the 550 finches and sparrows, 5 of the 350 tanagers, 10 of the 80 swallows, 2 of the 2 waxwings, 2 of the 200 shrikes, 15 of the 50 vireos, 70 of the 100 wood warblers, 3 of the 65 wagtails and pipits, 12 of the 200 thrashers and wrens, 79 of the 95 nuthatches and tits, 5 of the 122 warblers, kinglets, and gnatcatchers, and 12 of the 300 thrushes and bluebirds are found in North America.

From the foregoing number of species, given upon the authority of Frank M. Chapman of the Museum of Natural History in New York City, it would appear that the total number of species of birds found in North America is about 1,086. The total number of species in the world of those birds which are represented in North America is about 7,225. It is a fair estimate of the total number of species of birds in the world to place the figures at about 10,000.

MAMMALS or MAMMALIA.

While feathers are the distinctive badge of the great class of Birds, hair is characteristic of the Mammals. Even the young whales and some of the adults possess it. No other animals are provided with this covering. Mammals embrace about 3,300 species, and may be classified into 12 orders:—

1. **Primates** or **First Order**, including man, apes, and monkeys. About 260 species.
2. **Ferae, Carnivora** or **Flesh Eaters**, including cats, dogs, bears, weasels, sea lions, seals, walrus. About 300 species.
3. **Insectivora** or **Insect Eaters**, including moles and shrews. About 230 species.
4. **Cheiroptera** or **Wing-Handed Mammals**, including bats and flying foxes. Over 500 species.
5. **Glires, Rodentia** or **Gnawers**, including rats, squirrels, gophers, hares. About 1,400 species.
6. **Ungulata** or **Hoofed Mammals**, including cattle, deer, sheep, swine, tapirs. Over 300 species.
7. **Cetacea** or **Whales**, including whales, porpoises, dolphins. About 90 species.
8. **Sirenia or Sea Cows**, including only the manati and dugong; 2 species.
9. **Edentata** or **Toothless Mammals**, including armadillos, sloths, and ant-eaters, about 25 species.
10. **Effodientia or Diggers**, including only the pangolins and aardvarks, about 10 species.
11. **Marsupialia or Pouched Mammals**, including opossum, kangaroo. About 175 species.
12. **Monotremata or Egg Laying Mammals**, including the duckbill and echidna; 5 species.

DOMESTIC ANIMALS.

Origin.—The domestication of animals to provide food and for many of their most important uses was accomplished long before recorded history begins.

The subjugation and employment of wild creatures superior to himself in strength and speed was one of the supreme achievements of primitive man,—an acquisition of incalculable value in promoting his advance from savagery to civilization, ranking with the utilization of fire, the invention of tools, and the cultivation of plants among the great determining elements of human progress.

History.—Practically all domestic animals of primary importance appear to have been in age-long use at the dawn of history. This prehistoric period is indeterminable, but extends to a most remote antiquity. Parent wild species of the camel, sheep, and humped cattle seem to have perished from the earth before written history began, and the ancestry of the horse and dog is not positively referable to living forms.

In Egypt the most ancient monuments contain mummies of the cat, and delineations of the dog, goat, ox, goose, and pigeon occur in various sculptured records. The camel was also known, and less ancient monuments depict the horse.

In India monumental inscriptions and other records indicate a remotely ancient use of the horse, elephant, humped cattle, water buffalo, and a somewhat later introduction of the peacock, chicken, and cheetah.

In China the earliest records indicate the possession of domestic animals, among which were the pig, silkworm, duck, and cormorant.

In Switzerland remains of the dog, cat, horse, pig, goat, sheep, and ox have been found in the middens of the Lake Dwellers.

In Greece and **Rome** mention of the ox, sheep, horse, mule, pig, goat, dog, and goose occurs in Homer or in other early authors, while the pigeon, guinea fowl, peacock, and rabbit are recorded before the beginning of the Christian era.

In Peru mummies of the guinea pig and blankets woven of alpaca wool are found in the ancient tombs at Ancon.

Method of Distribution.—As Asia unquestionably was the cradle of the human race, the domestication of animals doubtless took place there. This achievement led to other conquests of nature, and in time to migrations of the primitive peoples from their focal areas of development. Such movements as the Aryan invasion of Europe undoubtedly brought with it the majority, if not all, of the animals then in use. The remains of the Lake Dwellers in Switzerland show that they possessed many of the most important. The wars between Assyria and Egypt, between Greece and Persia, Rome and Carthage, and the extension of Roman authority to northwest Europe, were important factors. The establishment of commercial relations with the western world by caravan through Bactriana by the Chinese, about 150 B. C., and continued for centuries, also greatly contributed. Mediæval land commerce between the Orient and Europe, and particularly the Crusades, completed the diffusion and exchange of useful animals, so that, at the beginning of the fifteenth century, the then civilized world, with a few minor exceptions, was in possession of the same economic animals as to-day, and distributed over the same area.

The establishment of the sea trade between western Europe and the Orient by way of the

Cape of Good Hope and the discovery, conquest, and settlement of the New World greatly extended the distribution of useful animals. During the past 400 years all of the most important domestic animals have been established in North and South America, in South Africa and Australia, a movement unparalleled in geographical range and economic significance in the history of the human race.

Order of Introduction. — Notwithstanding their comparatively small number, it is impossible to arrange domestic animals in the chronological order of their subjugation. As in case of cultivated plants, practically all economic species of the first rank have been in use upwards of 4,000 or 5,000 years. Age-long domestication of the dog, ox, humped cattle, sheep, goat, ass, horse, camel, elephant, cat, pigeon, goose, and honeybee is incontrovertible, but no evidence exists to determine beyond question which was first used.

It seems most probable that nearly all of these animals were first held in captivity by primitive peoples for surplus food supply, and that their other uses developed later. Among those which have come into use in the western world shortly before and since the beginning of the Christian era, but not belonging to the most ancient group, are: the chicken, which reached Greece and Rome from the East about 500 B. C.; the rabbit, brought from Spain to Rome during the period of the republic; the guinea fowl, brought to Rome from Africa about the same time; the swan, dating to the early Roman emperors; the carp, which had reached the Danube in the sixth century; and the water buffalo, which reached Italy at the same period. The Portuguese brought the canary to Europe about 1500; the turkey and guinea pig, from the New World, reached Europe in the sixteenth century, and the goldfish, which had been transferred by stages in ships trading with the Orient, reached England in 1691. From the foregoing it will be seen that no new domestic animals of great economic value have been developed during the last 2,000 years.

Zoological Rank.—The domestic animals of greatest value to man all belong to the highest groups, and are also, for the most part, if not invariably, the highest of their respective groups. Of the 41 more or less completely domesticated forms herein enumerated—37 vertebrates and 3 invertebrates—24 of the vertebrates belong to the highest class, mammals, and 12 to the next highest class, birds; 2 belong to the lowest class, fishes, while reptiles and amphibians are not represented.

Number of Species.—In comparison with the vast array of living wild species, the list of domestic animals bred for economic purposes is almost incredibly small. There are about 3,300 living mammals but only 23 are in domestication, or about 1 in each 150. There are upwards of 10,000 species of birds, of which only 12 are economically important, or about 1 in each 1,000 wild species. Of the great host of fishes, two only approach economic value, and of the hundreds of thousands of insects, only 3 attain economic significance, while the other groups of the animal kingdom are without representation. The total number which have become permanently valuable is about 40; over half of these are relatively unimportant, and only about 10 are of high economic value and world-wide use. This, of course, does not include merely captive animals, or those which have been temporarily or intermittently tamed, but embraces only those which are permanently established and economically important.

Geographical Distribution.—Not only were seven eighths of all domestic animals originally wild species of the Old World and first domesticated there, but this preponderant majority also includes every domestic species of preëminent rank and universal distribution.

Asia is by far the chief contributor, and, if physical instead of artificial boundaries be observed, then the list contributed by the natural continent of Asia and Europe, i. e., Eurasia, will be found to embrace three fourths of all, including practically every domestic species of the first order.

The preëminence of Asia is revealed by a mere catalogue of the native animals which have been domesticated within its confines. Six of the seven more or less completely domesticated species of cattle (*Bos*) viz.: the banteng, humped cattle, gaur, gayal, water buffalo, and yak, are distinctly Asiatic, while the seventh species, the ox, most important of all, originated from now extinct ancestors formerly wild in Europe and western Asia, and was doubtless first tamed by ancient Asiatic peoples. While the origin of the Arabian camel may be north African as well as west Asian, the Bactrian camel is clearly Asiatic, as is the horse, goat, domesticated elephant, cheetah, chicken, peacock, cormorant, honeybee, silkworm, carp, and goldfish.

Parent wild species of the pig, reindeer, goose, duck, and pigeon are of Eurasian distribution, and it is highly probable that the most ancient domestication of at least the pig, reindeer, and duck took place in Asia, and perhaps this is true of the goose and pigeon. While the parent species of the sheep is undetermined, its earliest domestic use was doubtless established in western Asia.

The vast continent of Africa with adjacent islands, possessing a rich and varied fauna, has contributed only a minor fraction,—the ass and cat alone being of high economic rank, while the guinea fowl, canary, parrot, and ostrich are relatively unimportant.

The contribution of the New World does not include a domestic animal of the first rank,—North America adding only the turkey and the cochineal insect, and South America the alpaca, llama, and guinea pig. The fauna of Australia has no representative in domestication.

Effects of Domestication.—Some animals have been profoundly modified in form, size, and habits, by domestication, such as the dog, sheep, pig, donkey, pigeon, and chicken, so that very numerous breeds, strains, or varieties have been developed. Many kinds of dogs are incapable of existence apart from human agency. The donkey does not run wild, and chickens are never found at a great distance from human habitations. Others have varied much in form and size, but are still capable of independent existence, such as the horse, goat, ox, cat, and goose, while a group like the cheetah, water buffalo, and swan are only partially domesticated, and but little altered by association with man.

Common and Scientific Name.	Order and Family.	Parent Wild Species and Region of Origin.	Years of Known Domestication.
Alpaca (*Lama pacos*)	*Ungulata* (Hoofed Mammals) *Camelidae* (Camels)	The Guanaco (*Lama guanacus*) Andean region, Peru to Patagonia	1000
Ass Donkey Burro (*Equus asinus*)	*Ungulata* (Hoofed Mammals) *Equidae* (Horses)	Wild Ass (*Equus asinus*) Northern Africa, Abyssinia	5000
Banteng (Javan Ox) (*Bos sondaicus*)	*Ungulata* (Hoofed Mammals) *Bovidae* (Ox, Sheep, Goat)	Wild Banteng (*Bos sondaicus*) Burma, Malay Peninsula, Java, Borneo, Bali	Data uncertain
Bee, Honey (*Apis mellifica*)	*Hymenoptera* (Ants, Bees, Wasps) *Apidae* (Bees)	Unknown. Probably western Asia	5000
Camel (Arabian) (One humped) (*Camelus dromedarius*)	*Ungulata* (Hoofed Mammals) *Camelidae* (Camels)	No existing wild species, and none known to history Probably Arabia	5000
Camel (Bactrian) (Two humped) (*Camelus bactrianus*)	*Ungulata* (Hoofed Mammals) *Camelidae* (Camels)	None living or remembered Probably deserts of central Asia	5000
Canary (*Carduelis canaria*)	*Passeres* (Perching Birds) *Fringillidae* (Finches)	Wild Finch (*Carduelis canaria*) Canary Islands	400
Carp (*Cyprinus carpio*)	*Eventognathi* (Carp Tribe) *Cyprinidae* (Carp, Minnows)	Wild Carp (*Cyprinus carpio*) China	2000
Cat (*Felis domestica*)	*Carnivora* (Flesh-Eating Mammals) *Felidae* (Cats)	Present domestic form now believed to be a permanently established mixed strain derived from the Egyptian wild cat (*Felis caffra*) and the common wild cat (*Felis catus*), of central Europe and England. The ancient Egyptian cat was probably *F. caffra*	5000

Historical Notes.	Economic Importance.
Domestication by Peruvian Indians far antedates Spanish discovery. Blankets woven from alpaca wool have been found in ancient tombs dating back to the Incas. Alpaca wool was first exported to Europe in 1836.	Important in domestication in the Peruvian Andes, where it is raised in flocks for wool, which possesses a fiber of peculiar excellence, well adapted to many finer grades of cloth, so that it has become an important article of export. The alpaca does not acclimatize in other regions of the world, and all attempts to introduce and establish it as a wool-bearing animal in Europe and the United States have failed.
Probably first domesticated in the valley of the Nile. Long preceded the horse in ancient Egypt. Came into Greece by way of Asia Minor and Syria. Not common in early Greece. Mentioned only once in Homer's *Iliad*; not at all in the *Odyssey* nor in Hesiod, though Homer frequently mentions mules. The ass accompanied the spread of vine and olive culture through Italy and Spain to France. Known in England in reign of Ethelred; reintroduced during reign of Elizabeth. Brought to Mexico and South America by the Spaniards.	A most valuable beast of burden, particularly in subtropical, dry, and mountainous regions. It is invaluable for mountain transportation in Spain, Italy, southern France, Mexico, South America, and in arid mining regions of the western United States. It does not thrive in cold or damp regions, and is not suited to the climate of the eastern United States. Varies greatly in size, from dwarf forms only 20 to 30 inches high in the West Indies to fine Spanish and American breeds 16 hands high. The burro, used almost exclusively as a pack animal by miners and prospectors in the mountain regions of the Western States, is a small form.
Long tamed and esteemed by native peoples of Java and Bali, but historical references meager and period of domestication imperfectly known.	Large herds, forming considerable wealth, are kept by the Malays of Java and of Bali. In domestication the banteng freely intermixes with humped cattle, so that there are numerous intermediate strains.
Domestication dates back to the dawn of history in the Mediterranean region, Syria, Greece, and Egypt. Spread through Europe by Romans. Introduced into America by early colonists.	Honey and beeswax have long been common articles of commerce in many countries, but were relatively much more important in ancient times before the introduction of sugar. In the United States over 700,000 farms, or one in every eight, keep a total of 4,000,000 swarms, valued at $10,000,000.
Subjugation and domestication prehistoric: probably by primitive man in Arabian and Saharan deserts. Well known in Egypt in 1300 B. C., though not recorded on their monuments. Mentioned by Diodorus, Strabo, and many ancient authors, and frequently in the Bible. Introduced into Italy in 1622, and into Texas, New Mexico, and Arizona by the United States government in 1856 and used by Confederates during the Civil War for carrying mails. The experiment, however, did not prove successful, though remnants of the herds persisted for some time in Arizona and California, and possibly a few may still survive in remote portions of the desert. Introduced into Australia in 1860.	For ages the most useful animal in domestication in the arid regions from northern India and lower Afghanistan, south through Arabia to the Red Sea and Somaliland, and westward throughout the Sudan deserts; invaluable as a beast of burden and as a means of travel, especially adapted to deserts. Its flesh is good food, the milk is excellent, and the hair is made into cloth and cordage. The more slender forms, called dromedaries, bred especially for speed, will traverse 100 miles or more of desert in a single day. Introduction in other countries unsuccessful, except in very dry regions. In southern Europe attempts were unsatisfactory on the whole, although the camel thrives in Spain. In Australia it has become valuable for interior expeditions, and since 1880 camel corps have been formed by European troops in the Sudan, and are a permanent branch of the Egyptian army.
Domestication in central Asia remotely ancient, but historical references are meager when compared to the wealth of allusion concerning the Arabian camel and the prominence given to it by the historians of antiquity. While the railway is replacing both species of camels wherever it penetrates the desert, these stolid beasts of burden have been factors of incalculable influence in founding commerce and promoting civilization in regions isolated by otherwise insuperable barriers of mountain and desert.	Equally valuable throughout central Asian deserts, from northern Turkestan to Mongolia, as the Arabian camel is in more southern climates, being especially adapted to rocky and cooler regions. It endures the fierce summer heat and the severe winter cold of the Tibetan plateau while bringing tea from Peking to Lake Baikal, and it hauls wagons over the lofty passes of the Hindu Kush across Afghanistan to Persia at all seasons. The ability of this animal to withstand terrible extremes of heat and cold, and to travel long distances without water, conditions absolutely unendurable by horses or cattle, made possible the establishment of the commerce which has existed for centuries between China and western Asia.
When the Portuguese conquered the Canary Islands in 1478, these finches, now called canaries, were taken to Spain in great numbers, and thence distributed throughout Europe. In size and color they have been greatly modified by domestication.	The use of canaries as cage song birds and household pets is much more extensive in Europe than in the United States. They are now found throughout the world wherever European colonization has been established. The rearing of canaries for the market has become an industry of considerable local importance in Germany, Belgium, Scotland, and northern England.
Long domesticated in China; reached eastern Europe early in Christian era: grown in France and Germany since the thirteenth century; established in the United States about 1870.	The only fish widely domesticated for food; now acclimatized throughout the world; very hardy and prolific but coarse fleshed and inferiorly flavored; very popular in Germany but sparingly in favor in the United States
Like the dog, was a member of the domestic circle when history began. Apparently first domesticated by the Egyptians, being depicted upon their first monuments. Held sacred and highly esteemed, mummies of cats being found coeval with the earliest human remains. Mentioned in Sanskrit manuscripts 2000 B. C., but not known to Chinese until about 500. Known to Europeans of the Bronze Age, but not generally known to the ancient Assyrians, Hebrews, or Greeks.	Reared and prized throughout the world as a household pet, and of true economic importance as an exterminator of rats, mice, and other small animal pests. Second only to the dog as a hearth animal, but far inferior to it in range of usefulness. It possesses intelligence of a high order, but has never developed or manifested so great an amount of attachment, affection, and devotion to man as the dog, although it becomes attached to places to a remarkable degree. It has been less modified by human agency than the dog, the varieties being rather few and the variations in size comparatively insignificant, and it readily returns to a wild or semi-wild state.

Common and Scientific Name.	Order and Family.	Parent Wild Species and Region of Origin.	Years of Known Domestication
Cheetah Hunting Leopard (*Cynaelurus jubatus*)	*Carnivora* (Flesh-Eating Mammals) *Felidae* (The Cat Tribe)	Hunting Leopard (*Cynaelurus jubatus*) India, Africa	4000
Cochineal (*Coccus cacti*)	*Hemiptera* (Bugs) *Coccidae* (Scale Bugs)	Scale Bugs (*Coccus cacti*) Mexico, Central America	400
Cormorant (*Phalacrocorax carbo*)	*Steganopodes* (Totipalmate Fishing Bird) *Phalacrocoracidae* (Cormorants)	Black cormorant (*Phalacrocorax carbo*) Europe, Asia, Africa	2000
Dog (*Canis familiaris*)	*Carnivora* (Flesh-Eating Mammals) *Canidae* (The Dog Tribe)	Unknown, probably indeterminable, but either from wolves or jackals, or from both together	5000
Duck (*Anas boschas*)	*Anseres* (Duck Tribe) *Anatidae* (Ducks)	Wild Mallard (*Anas boschas*) Europe, Asia, and North America	Data uncertain
Elephant (*Elephas indica*)	*Ungulata* (Hoofed Mammals) Suborder: *Proboscidea* Family: *Elephantidae*	Wild Elephant (*Elephas indica*) India and East India Islands	5000
Fowl, Domestic Cock, Hen Chicken (*Gallus domestica*)	*Gallinae* (Gallinaceous or Game Birds) *Phasianidae* (Pheasants)	Wild Jungle Fowl (*Gallus bankiva*) India, Cochin China, and Malay Islands	4000

Historical Notes.	Economic Importance.
Depicted on ancient Assyrian and Egyptian monuments. Anciently trained for hunting in India and established as a part of the royal state, the custom being maintained by many native princes at the present day. Brought to Europe by returning Crusaders, and flourished in France and Italy for about two hundred years.	This large cat-like animal, although about equal to the true leopard and the jaguar in size, does not share their tiger-like ferocity, but in disposition is more like a dog, and is readily tamed. While it occurs wild over large areas in Asia and Africa, its domestication, which is only partial, is now restricted to India, where its chief use is to hunt the black-buck, a species of antelope. Upon approaching within about 200 yards, the cheetah is unloosed, and, by a burst of its superior speed, which, for short distances, greatly exceeds that of a race horse or greyhound, and is probably greater than that of any other mammal, it overtakes and throttles the strongest buck within a few hundred yards.
Long grown in Mexico. In use as a dye when the Spanish under Cortes entered in 1519, and immediately introduced into Europe. Successfully naturalized in Mediterranean countries and in the Canary Islands. It feeds upon a species of prickly pear, *Opuntia coccinellifera*. The brilliant dye carmine, derived from the dried insect, was discovered by a Franciscan monk of Pisa and manufacture began in 1650.	Source of cochineal and carmine dyes; at one time exceedingly valuable, and stimulated culture of the insect in many dry, semi-tropical regions. Grown in Mexico, Central America, Java, Algeria, and the Canary Islands. Exported in considerable quantity from Honduras. The discovery of aniline dyes and the great extension of their use in the last quarter century have rendered the culture of cochineal unimportant except locally.
Trained to fish since ancient times by Chinese and Japanese. In Europe fishing with native cormorants began about 1625 in Holland, where it still prevails to some extent, whence it spread to England, where it was much used for a time and then abandoned. Now being revived to some extent as a sport in England.	While fishing with cormorants has been practically limited to the field of sport in Europe, the use of these birds, which are trained in great numbers, to catch fish for food in China and Japan, has long been of economic importance. A ring is placed about the neck of the bird so that the fish when caught is not swallowed, but simply pouched, and when removed the bird proceeds to catch another in the same way.
Domestication dates to primitive man, and far precedes the dawn of history; many important varieties being portrayed in the earliest sculptures. Ancient forms of the greyhound are pictured on Egyptian monuments dating to 3400 B. C., while the mastiffs, hounds, lapdogs, and turnspits carved in stone 4,000 years ago closely resemble the breeds of to-day. Remains found in the kitchen middens of Denmark, and in the lake dwellings of both the Stone Age and Bronze Age in Switzerland. Depicted on the oldest monuments in the valleys of the Euphrates and Indus, and worshiped as Anubis, the genius of the Nile, by ancient Egyptians. Mentioned in the Bible. Highly prized by the Greeks and Romans.	The most intelligent, affectionate, and devoted of domestic animals; in use by all peoples, and accompanying man throughout a wider range than any other animal, greatly exceeding the cat, donkey, or horse in this respect; varying in adaptation to climate from the hairless forms of the tropics to the heavily fur-coated Eskimo breeds, and in size from tiny lapdogs no larger than kittens to great Danes standing three feet high at the shoulder, thus presenting forms which are at once larger and smaller than any wild member of the dog tribe, there being some 200 varieties which have resulted from the intercrossing of about six leading types, namely: wolf-like dogs, greyhounds, spaniels, hounds, mastiffs, and terriers. Exceedingly susceptible to human influence; bred and trained for an infinite variety of purposes, from merely curious and pampered household pets to powerful hunters and even beasts of burden, providing food for some peoples and sharing with the reindeer the labor of transportation in Arctic regions. Most varieties have become so modified by domestication that they are unable to sustain themselves independently of man.
Domestication ancient, but evidence scanty and indefinite. The white or Pekin duck was introduced into the United States from China in 1870.	Duck raising extensive in Europe both for flesh and eggs, which are more generally used than in the United States. In eastern Asia, notably in China, ducks are grown in enormous numbers. Duck raising has become a profitable industry in the United States, particularly since the introduction of the Pekin duck.
Very anciently tamed in India, there being over 100 different names for the elephant in Sanskrit. Earliest use was in war, and they were first made known in Europe through employment in military operations. Alexander the Great captured 15 at the battle of Arbela. Pyrrhus led elephants against the Romans. In the Punic wars the Carthaginians used the African elephant, 37 of them crossing the Alps with Hannibal's army. The ancient Egyptians knew both species, though the African elephant is the only one depicted on Egyptian and Assyrian monuments. At the battle of Raphia, 217 B. C., 73 African elephants fought disastrously against 104 Asiatic. Domestication for draught and baggage animals now limited to India and the East India islands.	The largest and, when properly trained, the most docile of domestic animals, exhibiting a high degree of intelligence, which is often overestimated on account of a remarkable willingness to obey instructions; endowed with unusual powers of memory and becoming greatly attached to its keepers. However, it lacks initiative and reasoning powers, being far inferior to the dog in this regard. It will not voluntarily go to the assistance of a human friend in trouble, or to the rescue of its own master even when attacked at its feet, though it will act instantly when directed. It is also helpless in the face of a new danger or unexpected emergency. A most valuable draught and baggage animal, employed in hauling and handling timbers and in transporting heavy loads over rough ground in the absence of roads in India and the East India Islands. The largest specimens, particularly those with long tusks, are considered of high caste, and are kept for state pageants.
Ancient domestication in India, but not figured on Egyptian monuments or mentioned in the Old Testament. Apparently reached Europe in a domesticated state about 500 B. C. Caesar found it in Britain upon his arrival. It is now diffused throughout the world, except in polar regions, accompanying man throughout a wider range than any other bird, and ranking with the dog, cat, donkey, horse, ox, sheep, and pig among the most universal companions of man.	The most thoroughly domesticated, widely distributed, and generally useful of birds, being readily adaptive to a wide range of climatic and food conditions and consequently more easily reared than any other fowl. Greatly modified by ages of breeding in many lands into numerous races which exhibit wide variations in size, form, and color, from diminutive Bantams to giant Brahmas nearly as large as a turkey, and from pure white to pure black breeds, with numberless intergrades, together with red, brown, and vari-colored races. On account of immense numbers their aggregate value for food and eggs reaches a vast total, ranking high among the animal productions of the world.

Common and Scientific Name.	Order and Family.	Parent Wild Species and Region of Origin.	Years of Known Domestication
Gaur (*Bos gaurus*)	*Ungulata* (Hoofed Mammals) *Bovidae* (Ox, Sheep, Goat)	Wild Gaur (*Bos gaurus*) India	Data uncertain
Gayal Mithian (*Bos frontalis*)	*Ungulata* (Hoofed Mammals) *Bovidae* (Ox, Sheep, Goats)	Wild Gayal (*Bos frontalis*) Northeastern India	Data uncertain
Goat (*Capra hircus*)	*Ungulata* (Hoofed Mammals) *Bovidae* (Oxen, Sheep, Goats)	Benzoar goat or Persian pasang (*Capra aegagrus*) As main stock Greece to Persia, Afghanistan, and western India	5000
Goldfish Golden Carp (*Carassius auratus*)	*Eventognathi* (Carp Tribe) *Cyprinidae* (Carp Minnow)	Wild Carp (*Carassius auratus*) Fresh water China, Azores, Madeira, St. Helena, Java, and the Philippines	1400
Guinea Fowl (*Numida meleagris*)	*Gallinae* (Gallinaceous or Game Birds) *Phasianidae* (Pheasants)	Wild Fowl of Guinea (*Numida meleagris*) Western Africa	2500
Guinea Pig (*Cavia cutleri*)	*Rodentia* (Rodents) *Caviidae* (Cavies)	Wild Cavia (*Cavia cutleri*) Peru	1000
Goose (*Anser domesticus*)	*Anseres* (Duck Tribe) *Anatidae* (Ducks, Geese)	Wild Goose (*Anser ferus*) Central Europe Asia and north Africa	5000
Humped Cattle Indian Ox Zebu (*Bos indicus*)	*Ungulata* (Hoofed Mammals) *Bovidae* (Ox, Sheep, Goats)	No known wild form Probably southeastern Asia	5000

Historical Notes.	Economic Importance.
Tamed by the hill tribes of northeastern India, but historical data as to when this domestication began are wanting.	The domestication of this magnificent wild ox, the handsomest representative of the genus Bos, is only partial and is confined to native tribes inhabiting a limited area in northeastern India, who keep it in herds for its flesh.
In semi-domestication by native tribes of northeastern India evidently for a considerable period of time, but definite historical data are unavailable.	Kept in large herds for food by the peoples of the hill regions of northeastern India; not employed as a beast of burden and probably no attempt is made to use its milk.
Domesticated by the ancient Egyptians and by prehistoric Lake Dwellers in Switzerland. Figured on ancient monuments in Egypt; mentioned in the Bible. Ages of domestic breeding have developed numerous varieties, the chief of which are the Angora, Kashmir, Syrian, Egyptian, and Sudan goats. Domestic goats have run wild in many regions, sometimes mixing with other species. According to Garcilasso, goats were brought to Peru from Spain in 1544.	Valuable for flesh, milk, wool, and skins, particularly in warm, dry regions, the greater part of the world's goats being grown in southern Europe, northern Africa, and Syria. The fleece of the Angora goat is called mohair and is much used in fabrics. The fine underwool combed in summer from Kashmir goats is woven into the well-known Kashmir shawls. Goat's leather is employed for innumerable uses, some of the chief of which are glove making, shoemaking, and bookbinding. In the United States goats have never attained importance as farm animals. The Angora goat introduced in 1849 by gift of the sultan of Turkey was little bred or noticed for fifty years. Since 1900 numerous flocks have been established in the Pacific States, notably in Oregon, and considerable numbers have been raised in Iowa and Missouri.
First domesticated in China, Basilewsky placing the date of their development in Chinese springs about 450. After the establishment of maritime trade with western Europe goldfish were transported first to Batavia, thence to Mauritius and St. Helena, and were brought from St. Helena to England in 1691. Now domesticated and naturalized in many parts of the world. The golden color is the result of artificial selection. Those which have become naturalized in the Potomac river have assumed an olive-green color similar to that of the parent wild species.	The most widely distributed ornamental fish, being more highly prized and more extensively used for aquariums than any other species. No fish available for like purposes equals it in beauty and the ease with which it may be reared and maintained. Like other merely ornamental animals it does not attain economic importance, although the rearing and handling of goldfish is a matter of considerable consequence in the trade of aquarium furnishers, and dealers in small animals.
Domesticated by Greeks and Romans. Disappeared with the fall of Roman civilization and was reintroduced from Africa by the Portuguese in the sixteenth century. It was first taken to the Cape Verde Islands and West Indies and thence slowly spread to Europe and around the world.	Valuable for food and eggs, but not popular in Europe or America on account of their constant noisy cries, and the difficulty experienced in rearing them. Originating from a wild species accustomed to very dry regions, the domesticated forms cannot endure wet situations or moist climate, rendering unusual precautions necessary for the protection of the young chicks.
Domestication in Peru long antedates the period of Spanish conquest. Mummies of the guinea pig have been found in the ancient tombs at Ancon. Since the Spanish occupation of South American countries it has become widely distributed in other parts of the world, being introduced into Europe by the Dutch during the sixteenth century. The name guinea pig is a double misnomer. It is not a pig but a rabbit-like rodent related to the rats; neither does it come from Guinea, but is exclusively South American. However, Guinea is probably a corruption of Guiana, and the peculiar grunting sound emitted by it undoubtedly gave rise to the name pig.	According to Nehring the ancient Peruvians used this animal not only for food but for sacrifices. It is now eaten for food from Ecuador to Chile, especially in Peru, and it is sometimes made use of for food in Europe. This animal has been apparently but little modified by domestication. Its intelligence is limited, being stupid and manifesting no affection. However, it never bites, and on that account has long been kept as a safe pet for children, both in Europe and in the United States. It is immensely prolific and easy to rear. Now extensively employed in biological laboratories for experimental purposes, particularly in the study of germ diseases.
Domestication very ancient in Egypt and Asia. Figured on oldest Egyptian monuments. Known to Greeks of Homer's time, and the geese kept in the Capitol are said to have saved Rome. Great herds of geese were driven from central Europe to the ancient Roman markets. The goose has been but slightly changed from the parent wild stock by domestication.	Valuable for eggs, quills, feathers, and for food. In southern Europe culture was formerly much more important, but it is still a great industry in Holland and Germany. Livers from geese artificially fattened, in districts near Strassburg, are made into the celebrated delicacy known as paté-de-fois-gras. In the United States, goose raising is of minor importance, there being forty times as many chickens as geese, the total number of geese being about 5,600,000, somewhat exceeding the ducks, but falling below turkeys—chickens, turkeys, geese, and ducks ranking in the order named. Most extensively grown in the southern states: Kentucky, Missouri, Texas, Tennessee, and Arkansas leading in the order named.
Domestication prehistoric, being exceedingly ancient in Egypt and India. Forms considered as the ancestors of the present Indian breeds, depicted on ancient Egyptian monuments. White bulls long held sacred by the Hindus. Recently introduced into Jamaica for use on plantations.	Very valuable as a draught animal and beast of burden throughout its range in India, China, the Asiatic Islands, Madagascar, and the eastern coast of Africa. It can travel twenty to thirty miles per day, and is very docile. Age-long breeding has resulted in greater variations in size than in the case of any other domestic cattle, some forms exceeding the largest ox in height, while the smallest breeds are no taller than a large dog.

Common and Scientific Name.	Order and Family.	Parent Wild Species and Region of Origin.	Years of Known Domestication
Horse (*Equus caballus*)	*Ungulata* (Hoofed Mammals) *Equidae* (Horses)	The Wild Mongolian Horse (*Equus przevalskii*) Of central Asia More closely resembles the domestic horse than any other living species, and the domestic form was undoubtedly derived from it or a closely related species now extinct	5000
Llama (*Lama glama*)	*Ungulata* (Hoofed Mammals) *Camelidae* (Camels)	The Guanaco (*Lama guanacus*) Andes, Peru to Patagonia	1000
Mule Hinny (*Mulus, Hinnus*)	*Ungulata* (Hoofed Mammals) *Equidae* (Horses)	These hybrids between the domestic horse and the domestic ass do not occur in a wild state, but have been developed by domestic breeding	3000
Ostrich (*Struthio camelus*)	*Struthiones* (Flightless Birds) Suborder: *Ratitae* (Struthious Birds) *Struthionidae* (Ostriches)	Wild Ostrich (*Struthio camelus*) Africa	50
Ox, Cow, Steer, Cattle (*Bos taurus*)	*Ungulata* (Hoofed Mammals) *Bovidae* (Ox, Sheep, Goats)	The Aurochs (*Bos primigenius*) Of Europe and western Asia Abundant at the time of Julius Caesar but supposed to have become extinct about the twelfth century, though some regard the wild Chillingham cattle of England as unmixed descendants of the aurochs	5000

Historical Notes.	Economic Importance.
Probably first domesticated in central Asia, anciently used in India in war and sacrifices. Appears in ancient sculptures at Persepolis in Persia. Horse heads adorn columns of ancient Assyrian palaces. Came into use much later than the ass in Egypt, the monuments indicating introduction during period of the Shepherd Kings about 2000 B. C., attached to the war chariots of Pharaoh. Frequently mentioned in the Bible. Highly treasured by Greeks and prominent in their mythology; drew the sun chariot of Apollo and the sea chariot of Poseidon; appears as the sea horse Hippocampus, and as the winged horse Pegasus, and as the centaur. Used by Lake Dwellers of the Bronze Age. The gods of German mythology are horsemen. Introduced into the Americas by the Spanish. The horsemen accompanying Pizarro in Peru and Cortes in Mexico struck terror through the native armies and made possible seemingly miraculous victories over immensely superior numbers.	Economically the most valuable as well as historically the most important animal domesticated by man. While doubtless kept by the most primitive peoples chiefly for food, its strength and speed soon gave it a higher value to barbaric races for purposes of war and the chase, and its adaptability to innumerable conditions and uses has rendered it indispensable to the most highly civilized nations. The horse has accompanied man in his conquest of every continent throughout a climatic range exceeded only by the dog and is of inestimable importance in carrying on the work of the world. Although inferior in intelligence and mental power to the elephant and the dog, the horse is the most spirited, trustworthy, and affectionate of the large working animals, and has become such an intimate companion of man that sentiment practically forbids the use of its excellent flesh for food among civilized peoples. Prolonged domestication, while producing many varieties ranging in size from the small Shetland pony to the Norman draft horse, has modified it less profoundly than the donkey or the dog, and it readily maintains itself apart from human agency, as witness the vast herds of so called wild horses in Texas and South America which were derived from small groups introduced by early Spanish explorers. Counting young as well as mature horses there are upwards of 21,000,000 in the United States valued at nearly $2,000,000,000, being nearly one half the total value of all domestic animals; employed on over 4,500,000 farms, or four out of each five.
Domesticated by ancient Peruvians, who had long used both the llama and the alpaca at the time of the Spanish conquests. Attempts to introduce the llama into other regions of the world have been unsuccessful.	Very valuable for food and as a beast of burden before the Spanish occupation of the Andean region, particularly in Peru and Chile. Used in immense numbers for transporting silver and other products during the early period of the conquest, but since the introduction of horses and mules the llama has been gradually displaced as a beast of burden. Previous to the acquirement of European domestic animals the llama and alpaca were as serviceable to the Peruvians as the reindeer is to the Laplanders, providing wool and flesh, and carrying on the work of the country.
The breeding of mules began in remotely ancient times, probably in Asia Minor, whence they were brought to Greece at a very early period, being frequently mentioned by Homer, also by Theognis, Hesiod, and other early Greek writers, and held in high esteem for their superior strength. Nausiccaa's car was drawn to the seashore and back by mules. From Greece they were introduced into ancient Italy, where they became popular, hauling carts on the highways in Varro's time much as they do in that region to-day. From Rome they became widely diffused in Europe, and the Latin names *mulus* and *hinnus* were adopted into the languages of most peoples who made use of these hybrids, persisting in the English names mule and hinny at the present day. Mentioned in the Bible, though the Israelites were forbidden by law to rear them.	The only hybrid among domestic animals which has risen to true economic importance and world-wide use. While of sullen disposition and much less affectionate than the horse, it possesses a high degree of intelligence. In adaptability to severe or unfavorable conditions it is superior in some respects to both the horse and the donkey, being able to withstand rough usage, inferior food, and extremes of heat better than the horse, and far exceeding the donkey in strength, particularly for draught, and in suitability to moist climates, while it is far inferior to the horse in speed, gracefulness, and spirit, and to the donkey in docility, The finest mules are reared in Spain and the United States, large breeds attaining a height of 16 hands. Mules are especially well adapted to conditions of general and farm labor in the southern states, where the great majority are bred and used. In the United States the ratio of mules to horses is about one fifth both in number and value.
Partially domesticated for centuries by native tribes in central Africa. Since 1860 complete domestication on a large scale has been undertaken in south Africa, particularly in Cape Colony, whence it has spread to Algiers and the southern United States. Unless completely established in domestication the ostrich will soon become extinct.	Chiefly valuable for certain of its large feathers called plumes, which are an important article of trade in Cape Colony, where upwards of 250,000 ostriches are reared for plume production. Ostriches are grown in limited numbers for the same purpose in Florida, California, and Arizona.
Domestication prehistoric, apparently first accomplished by Aryan peoples in western Asia. As a beast of burden and draught animal considerably antedates the horse, which, among the more ancient peoples, was used chiefly in war. Appears on ancient Egyptian monuments; early mentioned in the Bible; frequently named by ancient classical writers, such as Herodotus and Hippocrates among the Greeks, and Tacitus, Varro, Strabo, and Pliny among the Romans. Butter seems to have been unknown to Greeks and Romans in their most flourishing period; but was extensively used by more northern peoples. Brought to the West Indies by Columbus, 1493: to Mexico by Spanish about 1525; from England to Virginia 1610, and to Massachusetts 1624; from Holland to New York 1627; and from Denmark to New Hampshire in 1631.	The chief source of wealth in many regions. Just as the horse is preëminent as a labor animal, the ox stands first as the food producing animal, par excellence, in modern civilization. The aggregate value of cattle products—beef, milk, butter, cheese, hides, etc.—far exceeds that of any other animal. While still employed as a draught animal, it is so inferior to the horse for general purposes, that its use among the most advanced peoples is comparatively limited. In intelligence it ranks far below animals relatively of little value to man, and ages of domestication have not resulted in such extremes of variation as are met with in the donkey, dog, horse, or its near relative, the humped ox of India. Yet many well marked varieties have been developed, particularly during the last century in England, when valuable breeds for special purposes, such as the Shorthorn, Hereford, Alderney, and Jersey, became established. In the United States there are upwards of 71,000,000 cattle, of which 21,000,000 are milch cows, with a total value of $1,500,000,000.

Common and Scientific Name.	Order and Family.	Parent Wild Species and Region of Origin.	Years of Known Domestication
Parrot (*Psittacus erithacus*)	*Psittaci* (Scansorial Birds) *Psittidae* (Parrots)	Wild Parrot (*Psittacus erithacus*) Central Africa	2500
Peacock (*Gallipavo cristatus*)	*Gallinae* (Gallinaceous or Game Birds) *Phasianidae* (Pheasants)	Wild Peacock (*Gallipavo cristatus*) India, Siam	4000
Pig (*Sus scrofa domestica*)	*Ungulata* (Hoofed Mammals) *Suidae* (Swine)	European stock from Wild Boar of Europe (*Sus scrofa*) Asiatic stock from Wild Boar of India (*Sus cristatus*) Some authorities consider these two wild forms specifically identical	5000
Pigeon (*Columba livia*)	*Columbae* (Pigeon Tribe) *Columbidae* (Pigeons)	Wild Blue Pigeon or Rock Dove (*Columba livia*) Europe and Asia	5000
Rabbit Belgian Hare (*Lepus cuniculus*)	*Rodentia* (Rodents, Gnawing Mammals) *Leporidae* (Hares, Rabbits)	Wild Rabbit (*Lepus cuniculus*) Europe, Africa	3000
Reindeer (*Rangifer tarandus*)	*Ungulata* (Hoofed Mammals) *Cervidae* (Deer)	Wild Reindeer (*Rangifer tarandus*) Northern Europe and Asia	Data uncertain

Historical Notes.	Economic Importance.
The first record of the parrot is in an account of a feast in Alexandria, Egypt, 284 B. C. Prized as a food by the ancients, being esteemed a delicacy. Long tamed by native peoples of central Africa, and taken to Europe in considerable numbers soon after the establishment of the slave trade, being first seen in England in 1504, and thence carried to many parts of the world.	Highly regarded by natives of central Africa as a household pet; also used for food and its feathers for ornaments. The best talking birds are all of this species, though they lack the brilliancy of plumage possessed by many other parrots. Its chief use among civilized peoples is as an ornamental bird and household pet, developing under training the most remarkable powers of imitating human speech displayed by any animal.
The domestication of the peacock dates to remote antiquity in India. It is first mentioned in western literature in the plays of Aristophanes and became well known to the Greeks after the expedition of Alexander the Great to India. It became very common among both the Greeks and Romans, who reared it in great numbers for the table.	Valuable for food, the flesh and eggs being of good quality though inferior to the domestic fowl, and reared still extensively in southeastern Asia for food. While the range of the peacock in domestication has been greatly extended in modern times, it has been entirely replaced by domestic fowls for food and eggs, and its use in most regions of the world is now restricted to ornamental purposes,—the splendor of its plumage being unequaled by any other large bird.
The domestication of the pig is remotely ancient, having been established among the Chinese for some thousands of years. Mentioned in the Bible, though held unclean by Mosiac law. Remains are found in the ancient lake dwellings of Switzerland. Used for food by the Greeks and Romans. Brought to America by the early colonists. However, it is only during the last 200 years that the pig has reached its present highly modified state of domestication, and only during the last century has selective breeding been carried on to secure rapid growth and much fat. The Chester White breed was evolved in Chester county, Pennsylvania, between 1818 and 1830; the Berkshire was introduced from England about 1830; and the Poland China originated in southwestern Ohio, 1839-1840.	Remarkable as the only domestic mammal reared primarily and exclusively for food, the use of its bristles for brushes and its hide for leather being insignificant and not considered by the breeder. Its rapidity of growth and propagation gives it a peculiar value in the food supply of the world. While the flesh of the pig is inferior to that of the ox, the quickness and certainty with which it can be produced, and the ease with which it can be cured and marketed, render it the cheapest and most widely available of meats. The distribution of the pig is world-wide, being found on every continent, throughout a range of latitude about equaling that of the horse, but not in high altitudes though it ascends to 9,000 feet in Spain. Long domestication, and particularly modern selective breeding, have greatly altered some of the prominent characteristics of the wild pig. The domestic pig is omnivorous, not herbivorous only, and has largely lost its tusks and the inclination to use them. The wild pig is a notably alert and sagacious animal and while the conditions surrounding its domesticated descendants all tend to degrade rather than to improve intelligence, animal trainers have found it to possess surprising powers and to receive instruction with a readiness equaled by few if any animals lower than the apes.
Very anciently tamed and prized in Egypt and Assyria. According to Lepsius, the earliest mention is during the third dynasty in Egypt about 3000 B. C. The pigeon entered Greece by way of Syria and became common about 400 B. C.; thence was transported to Rome and spread to Europe. Frequent in the mythology of various peoples. Mentioned in the Mosaic law concerning sacrifices and frequently throughout the Bible; adopted as a symbol of the Holy Spirit by the early Christians; also held in high regard by the Mohammedans. Homing pigeons very ancient in the Orient, where they were first seen by Europeans during the Crusades; became conspicuous again in the Franco-Prussian War and now maintained by the leading armies.	Valuable particularly for its flesh and easy to rear in many regions of the world. While more ancient than the domestic fowl, it is not so generally useful, and at present is of small economic importance compared to the leading domestic birds, consequently pigeons are now kept as pets and ornamental birds rather than for food. Ages of domestication have produced some 250 varieties, such as pouters, tumblers, fantails, rough-footed, black nun, and homing pigeons. In the United States during recent years considerable attention has been given to rearing young pigeons for the table, especially near large cities, where squabs now have an established place in the poultry markets.
According to Hehn the rabbit was anciently domesticated by Iberian peoples in Spain, who may have brought it from northern Africa. Established among the Romans about the time of the Republic. Varro, Strabo, and Pliny describe it. Thence it spread throughout Europe. Now reared in the United States and in many other regions of the world. In Australia its introduction proved a most unfortunate experiment as it multiplied in such numbers as to become a destructive pest.	Much prized for its flesh in many European countries, particularly in France and Belgium, where it is reared in great numbers. Recently it has become popular in England, and, on account of cheapness, occupies a place very similar to the chicken in American markets. While grown to a limited extent in the United States it has not become popular, and its use is insignificant even when compared to such minor fowls as the duck or goose. Much modified by long domestication, particularly in size, adaptation to climate, and character of fur.
Long domesticated in Lapland, Scandinavia, and Russia. Introduced into Iceland in 1870, and into Alaska in 1892. While many authorities consider both the barren ground caribou and the woodland caribou of North America merely varieties of the European reindeer, it does not appear that either of these American forms has ever been domesticated by the Indians of Canada or Alaska.	Invaluable to the Laplanders as a beast of burden, as a means of travel and for food, clothing, and other useful purposes. It is maintained in considerable numbers in Siberia, northern Scandinavia, and in several Permian districts in Russia. The Lapland draught animal is smaller than the wild form, but in Siberia a large domestic reindeer is kept for riding. Shares with the dog the labor of transportation in far northern regions.

Common and Scientific Name.	Order and Family.	Parent Wild Species and Region of Origin.	Years of Known Domestication
Silkworm Moth Silkworm (*Bombyx mori*)	*Lepidoptera* (Butterflies and Moths) *Bombycidae* (Silkworm Moths)	Silkworm Moth (*Bombyx mori*) Northern China, Bengal	4500
Swan (*Cygnus olor*)	*Anseres* (Duck Tribe) *Anatidae* (Ducks, Geese, Swans)	Wild Swan (*Cygnus olor*) Europe	2000
Sheep (*Ovis aries*)	*Ungulata* (Hoofed Mammals) *Bovidae* (Ox, Sheep, Goats)	Unknown and probably indeterminable, but is most closely allied to the wild mouflon, *Ovis musimon*, of Sardinia and Corsica, the Armenian Wild Sheep, *Ovis gmelini*, of Persia and Anatolia, and the Asiatic Wild Sheep or Oorial, *Ovis vignei*, of Central Asia, and may be a mixed strain derived from some or all of them or from similar wild species now extinct	5000

Yak (*Bos grunniens*)	*Ungulata* (Hoofed Mammals) *Bovidae* (Ox, Sheep, Goats)	Wild Yak (*Bos grunniens*) Of the Tibetan plateaus	2000

HISTORICAL NOTES.

According to Chinese authorities, silk culture was begun by Si-Ling, wife of the emperor Hoang-ti, 2600 B. C. Silk cloth first mentioned among the Greeks by Aristotle. Silkworms brought to Constantinople from China by Greek missionaries 530, and introduced into Italy in the twelfth century. Cultivation has become important in Italy, Turkey, and Greece, and established to some extent in France, Spain, and Portugal. Begun in Georgia in 1732, later in the same century in Connecticut and Pennsylvania, and in 1821 extensively undertaken under encouragement of the United States government, but finally resulted disastrously and abandoned in 1846. Numerous subsequent attempts have been made, but as yet silk culture is not upon a commercial footing in the United States.

Semi-domestication dates to the period of the Roman emperors, when it was eaten for food, as it was also to some extent in mediaeval times. However, during the Middle Ages, swans became part of the regalia of European courts, only royalty being permitted to keep them. By English law they were declared birds royal and the position of king's swanherd was once an important office.

Domestication prehistoric, probably first effected in western Asia, and well established when the earliest records begin. A form was used by the Lake Dwellers of Switzerland. Early and frequently mentioned in the Bible. Possessed by the Greeks and Romans and alluded to in their early literature. Jason and the Argonauts sailed in search of the Golden Fleece. Used for its flesh, wool, and milk since time immemorial in large areas in Asia and Europe, and now diffused throughout the world. Introduced into Florida by the Spanish in 1565; into Virginia in 1609; into Massachusetts in 1624; into New York in 1625; into New Jersey and Delaware by the Swedes in 1634; into Pennsylvania in 1684; and into California by the Spanish missions from Mexico in 1773. The fine wool breeds are derived from the Spanish merino, which antedates the Christian era. The long wooled breeds, Cotswolds, Leicesters, and Lincolns, as well as the medium wooled Southdowns, Shropshire, Hampshire, and Oxfordshire Downs, have been developed in England.

The turkey was taken from the West Indies to Europe by the Spanish early in the sixteenth century, where it became established in domestication and thence was returned to America. It is the only domestic animal contributed by the New World in wide and valuable use, the llama and alpaca being confined to a narrow region in the Andes, and the guinea pig being insignificant in comparison. Its name is a contraction of the curious misnomer turkey cock given to it by the English, just as the French wrongly called Indian corn turkey wheat, though both the bird and the grain were American.

Long domesticated in India, Burma, and the Malaysian region. It spread westward during the Middle Ages, appearing in Italy about 600, where it became permanently established, and somewhat later was introduced into Gascony in France, into portions of Hungary, and other regions. In a truly wild state it is now found only in India though domesticated water buffaloes have frequently become wild again in various regions.

Domesticated since immemorial times by the inhabitants of the Tibetan plateaus. Yak tails are suspended as streamers from poles placed in front of Tibetan monasteries, and in China yak tails dyed red are mounted as pendants from the roofs of houses.

ECONOMIC IMPORTANCE.

The source of the finest and most valuable textile fiber known, no other animal or vegetable substance capable of extensive production equaling its peculiar qualities, which have been held in high esteem since remote antiquity. Silkworm culture and the preparation of raw silk have been of age-long importance in China, Japan, and India, and since the Middle Ages of much consequence in western Asia and southern Europe.

The raw silk production of the world is approximately 40,000,000 pounds annually, of which the far East contributes two thirds, China exporting 17,000,000, Japan 8,000,000, and India 1,000,000 pounds respectively; western Europe over one fifth, of which Italy produces 7,000,000 pounds and France, Austria-Hungary, and Spain the remainder in the order named; while the remaining one tenth is produced in the Levant and western Asia, mainly by Syria, Anatolia, the Caucasus, Turkey, and Greece.

Now reared almost exclusively as an ornamental bird, adorning ponds, lakes, and rivers in many regions of the world. Although noted for its beauty and gracefulness, the swan is inferior to most tamed birds in intelligence and adaptability, and its domestication, which at most is only partial, has resulted in but slight changes of form and habits. So, while it is one of the most conspicuous and striking of birds, it is relatively of very little value to mankind.

The leading fiber producing animal of the world; very valuable also for flesh, milk, and leather. The production of sheep's wool immensely exceeds that of the goat, alpaca, and camel combined, and ranks far above silk culture in general economic importance. Sheep's milk is unimportant in countries supplied with milch cattle, but its flesh is highly esteemed and very widely used.

The sheep is the least intelligent member of the bovine family in full domestication, and it is the only one widely kept which does practically no labor for man.

Sheep are now reared throughout the world but are especially adapted to arid, desert, and mountainous regions, being notably abundant in Australia, Argentina, the western United States, Russia, South Africa, and Spain, and they also thrive in the cool, moist climates of England and France.

Domestication and selective breeding have greatly modified the sheep as to bodily size, length and quality of wool, presence and character of horns, and in the case of the so-called fat-tailed sheep, the tail has become enormously developed.

In the United States there are about 60,000,000 sheep, reported from over 750,000 farms, or from one out of each eight, with a total value of upwards of $200,000,000.

The largest domestic fowl, valuable and much prized for food, though neither its eggs nor feathers are used to an important extent. Notwithstanding it is a stupid bird, ranking low in intelligence, it is easily domesticated and the tame birds readily intermingle with the wild ones. While it needs considerable range and is inclined to wander, and therefore is not suited to small farms, it is comparatively easy to rear and stands second to the chicken in the United States, ranking above geese and ducks both in number and value, there being upwards of 6,500,000 turkeys, Texas reporting the largest number, and followed in order by Missouri, Illinois, Iowa, and Ohio.

Valuable for its flesh, milk, and as a beast of burden, being peculiarly suited to warm, moist countries, delighting in water and marshy situations. For centuries it has been employed for plowing and hauling wagons in the malarial plains of Italy. Now domesticated throughout India, Burma, the Malay Peninsula, and East India Islands, particularly Java, also in Asia Minor and Egypt. The buffalo ox is as well adapted for labor as the common ox; the buffalo cow gives more milk, but the flesh is considered inferior. The water buffalo has been but little modified in form, size, or habits by domestication, retaining its fondness for water, and during hot days it will lie almost completely immersed.

The chief wealth of the native peoples of high Tibet. As a beast of burden the yak is indispensable to commerce in that region, being strong, sure-footed, and able to withstand the rigorous climate. Its flesh is excellent in quality, the milk rich, and the curd is much used both fresh and when dried and made into a kind of meal. The butter is good, and in the cold climate is kept in bladders, forming an article of trade. The coarse hair of the yak is twisted into ropes and the fine hair is made into cloth.

BOTANICAL TERMS

AKENE: a one-seeded fruit which ripens dry and seed-like.

ALTERNATION OF GENERATIONS: the alternation of gametophyte and sporophyte in a life history.

ANEMOPHILOUS: applied to flowers or plants which use the wind as agent of pollination.

ANTHER: the sporangium-bearing part of a stamen.

APETALOUS: applied to a flower with no petals.

ARCHESPORIUM: the first cell or group of cells in the spore-producing series.

ASEXUAL SPORE: one produced usually by cell-division at least not by cell-union.

CALYX: the outer set of floral leaves.

CAPSULE: in Bryophytes the spore-vessel; in Angiosperms a dry fruit which opens to discharge its seeds.

CARPEL: the Megasporophyll of Spermatophytes.

CELL: the elementary structure which is the foundation of all vegetable tissue.

CHLOROPHYLL: the green coloring matter of plants.

CHOLOROPLAST: the protoplasmic body within the cell which is stained green by chlorophyll.

CONJUGATION: the union of similar gametes.

COROLLA: the inner set of floral leaves.

COTYLEDON: the first leaf developed by an embryo sporophyte.

CYCLIC: applied to an arrangement of leaves or floral parts in which two or more appear upon the axis at the same level, forming a cycle, or whorl, or verticil.

DICHOTOMOUS: applied to a style of branching in which the tip of the axis forks.

DIOECIOUS: applied to plants in which the two sex-organs are upon different individuals.

EGG: the female gamete.

EMBRYO: a plant in the earliest stages of its development from the spore.

EMBRYO-SAC: the megaspore of Spermatophytes, which later contains the embryo.

ENDOSPERM: the nourishing tissue developed within the embryo-sac, and thought to represent the female gametophyte.

EPIDERMIS: the outside or protective covering of the plant. It is to the plant what the skin is to the human body.

FAMILY: a group of related plants, usually comprising several genera.

FERTILIZATION: the union of sperm and egg.

FILAMENT: the stalk-like part of a stamen.

FISSION: cell-division which includes the wall of the old cell.

GAMETANGIUM: the organ within which gametes are produced.

GAMETE: a sexual cell, which by union with another produces a sexual spore.

GAMETOPHORE: a special branch which bears sex organs.

GENERATIVE CELL: in Spermatophytes the cell of the male gametophyte, within the pollen grain, which gives rise to the male cells.

GENUS: a group of very closely related plants, usually comprising several species.

HETEROGAMOUS: applied to those higher plants whose sporophyte produces two forms of asexual spores.

HOMOSPOROUS: applied to those plants whose sporophyte produces similar asexual spore.

HOST: a plant or animal attacked by a parasite.

HYPHA: an individual filament of a mycelium.

HYPOCOTYL: the axis of the embryo sporophyte between the root-tip and the cotyledons.

HYPOGYNOUS: applied to a flower whose outer parts arise from beneath the ovary.

MEGASPORANGIUM: a sporangium which produces only megaspores.

MEGASPORE: in heterosporous plants the large spore which produces a female gametophyte.

MICROSPORE: in hetereosporous plants the small spore which produces a male gametophyte.

MICROPYLE: the passageway to the nucellus left by the integument.

MONOPODIAL: applied to a style of branching in which the branches arise from the side of the axis.

MOTHER CELL: usually a cell which produces new cells by internal division.

NUTRITION: the support and care of the plant body. These functions are carried on by the root, stem and leaves.

OOGONIUM: the female, egg-producing organ of Thallophytes.

OOSPHERE: the female gamete, or egg.

OOSPORE: the sexual spore resulting from fertilization.

OVARY: in Anglosperms the bulbous part of the pistil, which contains the ovules.

PENTACYCLIC: applied to a flower whose four floral organs are in five cycles, the stamens being in two cycles.

PETAL: one of the floral leaves which make up the corolla.

PISTIL: the central organ of the flower, composed of one or more carpels.

PISTILLATE: applied to flowers with carpels but no stamens.

POLLEN: the microspores of Spermatophytes.

POLLEN-TUBE: the tube developed from the wall of the pollen grain which penetrates to the egg and conducts the male cells.

POLLINATION: the transfer of pollen from anther to ovule (in Gymnosperms) or stigma (in Angiosperms).

PROTOPLASM: the essential living portion of the cell. Lines the interior of the cell-wall.

RADIAL: applied to a body with uniform exposure of surface, and producing similar organs about a common center.

RECEPTACLE: in Angiosperms that part of the stem which is more or less modified to support the parts of the flower.

SAPROPHYTE: a plant which obtains food from the dead bodies or body products of plants or animals.

SCALE: a leaf without chlorophyll, and usually reduced in size.

SEPAL: one of the floral leaves which make up the calyx.

SEXUAL SPORE: one produced by the union of gametes.

SPECIES: plants so nearly alike that they all might have come from a single parent.

SPERM: the male gamete.

SPIRAL: applied to an arrangement of leaves or floral parts in which no two appear upon the axis at the same level; often called alternate.

SPORE: a cell set apart for reproduction.

SPOROPHORE: a special branch bearing asexual spores.

SPOROPHYLL: a leaf set apart to produce sporangia.

SPOROPHYTE: in alternation of generations, the generation which produces the asexual spores.

STAMEN: the microscoporophyll of Spermatophytes.

STAMINATE: applied to a flower with stamens but no carpels.

STIGMA: in Angiosperms that portion of the carpel, usually of the style, prepared to receive pollen.

STOMATA: (mouths) organs of the epidermis whose functions are to communicate between the green matter and the air.

STYLE: the stalk-like prolongation from the ovary which bears the stigma.

SYMBIOSIS: usually applied to the condition in which two organisms live together in intimate and mutually helpful relations.

TESTS: the hard coat of the seed.

TETRAD: a group of four spores produced by a mother-cell.

ZOOSPORE: a motile asexual spore.

DICTIONARY OF NATURAL HISTORY.

DIVISION OF PLANTS.

Abutilon (*Flowering Maple*). A genus of mostly shrubby tropical or semi-tropical plants containing about 90 species. A number are cultivated as pot and border plants. Leaves maple-like or vine-like; flowers one to two inches or more long, red, yellow, white, or variegated. *Abutilon Theophrasti*, known as velvet-leaf, introduced from India, is a troublesome weed, widely diffused in the United States.

Acacia. A large genus of plants of the Pea family (*Leguminosae*) containing about 450 species. Three hundred are native to Australia and Polynesia, the remainder are distributed in warm regions of the other continents except Europe, 17 occurring in the southern United States. All are shrubs or trees with finely divided leaves, and small flowers

ACACIA.

arranged usually in globular clusters. Many are of great value, yielding gums, timber, tan bark, and food products. Several species in Asia and Africa produce gum arabic. Gum senegal is the product of *Acacia verek* and the drug catechu of *Acacia catechu*. The tan bark known as the Black Wattle, four times as strong as oak bark, is obtained from the Australian *Acacia decurrens*. The most valuable timber acacia is the Australian blackwood (*A. melanoxylon*). Several acacias thrive in cultivation.

Acanthus Family (*Acanthaceae*). A large family of flowering plants containing about 175 genera and 1,800 species, mostly tropical herbs and shrubs, with but few representatives in the United States and Europe. Certain species of justicia and ruellia are fine hothouse plants. The wild, spiny acanthus (*A. spinosus*) and the cultivated acanthus (*A. mollis*) were known to the Greeks and Romans, who conventionalized the leaves extensively in architectural decoration of columns, friezes, and cornices.

Ailanthus (*Tree of Heaven*). A tall spreading tree (*Ailanthus glandulosus*) of the Quassia family (*Simarubaceae*), native of China, but now extensively planted for shade and ornament in Europe and the United States. The tree resembles the ash in foliage; thrives on light soils and is quite hardy, but the disgusting odor of the staminate flowers has caused it to be prohibited on public grounds of the United States government and to be regarded with increasing disfavor.

Alder. A genus (*Alnus*) of 18 or 20 trees and shrubs of the Birch family (*Betulaceae*), nine of which are North American, growing in cold and temperate climates. The best known species are: **Green** or **Mountain Alder** (*A. crispa* and *A. mollis*), shrubs 2 to 10 feet high, growing from Newfoundland to Virginia and northwest to Alaska. **Speckled** or **Hoary Alder** (*A. incana*), a shrub or a small tree, 8 to 25 feet high, in wet soil, eastern United States and Canada, also Europe and Asia. **Smooth Alder** (*A. rugosa*), 5 to 25 feet high, streams and swamps, eastern and southern United States. **Seaside Alder**, small tree sometimes 30 feet high, coast of Delaware and Maryland, and in Oklahoma. **Red Alder** (*A. oregona*), tree 30 to 80 feet high, California to Alaska. **White Alder** (*A. rhombifolia*), small tree 20 to 35 feet high, Pacific States. **Black Alder** (*A. glutinosa*) of Europe, tree 30 to 60 feet high, often planted and locally naturalized in the United States. Wood, light, inferior for fuel, but valuable in use under water for piles, pumps, and sluices.

Algae. The lowest and most primitive forms of plant life, the fungi being regarded as having been derived from various groups of algæ; bacteria, for example, probably originated in the lowly blue-green algae, and molds from a higher algae group. The algae and fungi are thus closely interrelated and the distinction between them founded upon the presence or absence of chlorophyll is largely one of convenience.

Fucus. SEAWEEDS. Sargassum.

Four classes of algae are readily distinguished: *Cyanophyceae*, blue-green algae; *Chlorophyceae*, green algae; *Phaeophyceae*, brown algae; *Rhodophyceae*, red algae.

Cyanophyceae, Blue-green Algae, characterized by extreme simplicity of cell structure, and reproducing only by fission, are most abundant in warm shallow waters and moist places. Highly colored growths occur in the warm springs of the Yellowstone region, and the tint which gives the name to the Red Sea is due to the immense abundance of floating filaments of Trichodesmium.

Chlorophyceae, Green Algae. In this class the clear green of the chlorophyll is not masked by various colored pigments as in the other classes. There are one-celled groups such as protococcus and the beautiful desmids and diatoms and a wide range of the more complex forms, including the confervae and pondscums, terminating in conspicuous types, such as the sea-lettuce (*Ulva*) and stoneworts (*Chara*). Sexual reproduction and alternation of generations are exhibited in the higher types of this class.

Phaeophyceae, Brown Algae, so called because a brown pigment masks the green chlorophyll, are almost exclusively marine and embrace a vast array of the larger seaweeds, mostly of cold waters. Great kelps (*Macrocystis*) in the Pacific are said to grow 900 feet long. The Gulf weeds (*Sargassum*) and the rock weeds (*Fucus*) are immensely abundant, some of the latter being the most highly complex of the algae.

Rhodophyceae, Red Algae, so named by reason of a reddish pigment which obscures their chlorophyll, comprise the red seaweeds, the most beautiful of all algae, varying in form from delicate filaments to broad, membranous, or cartilaginous structures, the most striking being the corallines, which resemble corals on account of incrusted lime deposits.

Alkanet (*Anchusa*). A genus of the Borage family (*Boraginaceae*), some species of which yield valuable dyes. The most important, *Anchusa tinctoria*, the true alkanet, is a native of southern Europe and the Levant, and yields the beautiful red coloring matter known as alkanet.

Aloe. A large genus of plants of the Lily family (*Liliaceae*), native to warm regions, particularly South Africa and the island of Socotra, where vast hilly tracts are entirely covered by various species. All have permanent, fleshy leaves, often strongly resembling those of the agave or century plant, which is sometimes wrongly called American Aloe, and range from a few inches to over twenty-five feet in height. Some species yield fiber and dyestuffs but their greatest value lies in medicinal properties, the important drug, aloes, being the dried juice of the leaves of a number of large tree-like kinds, notably *Aloe socotrina* and *Aloe Perryi*, yielding socotrine aloes; several South African species yielding Cape aloes; and *Aloe vera* of the East and West Indies, also grown in Europe, yielding Hepatic or Barbados aloes. The juice was anciently used in embalming.

Alpine Plants. The flora of mountains which approach the line of perpetual snow, or of high latitudes where similar conditions prevail. These conditions produce dwarfed or stunted plants characterized by large, bright-colored flowers strongly attractive to the restricted insect life of the region, and by a habit of growth in close tufts, forming mats or carpets. Saxifrages, arenarias, heath forms, particularly azaleas and rhododendrons, primroses, gentians, and small ferns, are prominent in alpine vegetation, which is essentially Arctic vegetation, as it results from practically identical conditions.

Alternation of Generations. The alternate occurrence in the life history of a plant of two or more forms differently produced. In ferns, for example, there are two distinct generations. One is asexual, that is, producing not male or female elements but spores. This is the ordinary form of these plants with which we are familiar. The other is a minute flattened leaf-like organism which grows from the fallen spore on damp soil, stones, and wood. But this inconspicuous form is sexual, developing organs which produce egg cells and spermatozoids which fertilize and by their growth again give rise to the asexual generation, which we recognize anew as the fern. Neither the sexual nor the asexual form of these plants can reproduce itself directly. It must first pass through the other form, i. e., there must be an alternation of generations. Botanists now recognize a like alternation in the higher or flowering plants, although the sexual generation is microscopic and lies concealed within the asexual or spore-bearing plants, so that the law of alternation of generations has been demonstrated to prevail throughout the plant world.

Alyssum. A genus of the Mustard family (*Cruciferae*), consisting of about 100 species, natives of the Old World, mostly small perennials, many of which are called madwort. A number of European species and varieties have been developed in cultivation as ornamental plants. The well known sweet alyssum (*Lobularia maritima*) is annual; widely grown as a border plant.

Amaranth (*Amaranthus*). The principal genus of the Amaranth family, embracing some 300 species, mostly tropical herbs. About 30 species grow in the United States, chiefly coarse weeds such as pigweed and tumbleweed. *Amaranthus blitum* and *Amaranthus oleraceus* are used as pot herbs in Europe. The seeds of *Amaranthus frumaceus*, called kiery, are used as food in India. The flowering heads of several species assume monstrous forms in cultivation, such as love-lies-bleeding (*Amaranthus gangeticus*) and prince's feather (*Amaranthus caudatus*).

Amaryllis. The typical genus of the Amaryllis family, containing many species, natives of warm regions, which possess flowers of great beauty. The South American species, *Amaryllis formosissima*, was brought to Europe about 1700 and has become commonly cultivated in gardens.

Amaryllis Family (*Amaryllidaceae*). A natural order of monocotyledonous plants, embracing nearly 1,000 species, mostly tropical, and adapted to dry regions, usually bulbous, leafing and flowering only in the wet season. The most important type economically considered is the strictly American genus Agave, including 140 species, among which are the century plant, or maguey, and sisal hemp. Narcissus, amaryllis, and galanthus are extensively cultivated ornamental plants. Only a few are native to the eastern United States; the most common is the small yellow-flowered stargrass (*Hypoxis hirsuta*).

Andropogon. A genus of grasses (*Gramineae*) of 150 species of world-wide distribution, a number of which are of great value. Johnson grass (*Andropogon halepense*), cultivated in southern United States since 1830, is highly prized for hay. The blue-stem grasses (*Andropogon nutans, A. provincialis*, and *A. scoparius*) are valued for hay in the prairie regions of the Mississippi valley and the great plains. An Indian species (*A. squarrosus*) yields the perfume vetiver, from its roots, and the tropical species (*A. schoenanthus* and *A. nardus*) yield lemon oil and citronella used in perfumery.

Anemone (*Windflower*). A genus of the Crowfoot family (*Ranunculaceae*). There are about 90 species, mostly natives of cold and temperate northern regions, generally with beautiful flowers, blossoming in early spring. The **Wood Anemone** of Europe (*Anemone nemorosa*) and a very similar species of North America (*A. quinquefolia*) are delicately beautiful woodland plants flowering in April and May. The **Pasque Flower** (*Anemone pulsatilla* or *Pulsatilla vulgaris*) blossoms on English chalk hills about the same time. The **American Pasque Flower** (*Anemone patens var. Nuttalliana*, or *Pulsatilla hirsutissima*) during March and April adorns the prairies from Illinois to Saskatchewan and south to Nebraska and Texas. The **Garden Anemone**, with very numerous varieties long in cultivation, probably developed from two wild species of the Levant, *Anemone coronaria* and *Anemone stellata*, is a great favorite with florists. About 18 species grow wild in North America.

Angiosperms. A name, signifying "seeds in vessels," given to the greater group of the Spermatophytes, or seed plants, in contradistinction to the smaller group called gymnosperms, having "naked seeds." There are over 150,000 known living species of angiosperms, while the gymnosperms, though immensely more abundant in earlier geologic ages, number only about 400 living species, so that the far greater part of the conspicuous vegetation of the earth belongs to the angiosperms, which are called the true flowering plants, for no others bear conspicuous flowers. There are two great natural divisions of the angiosperms, monocotyledons and dicotyledons, the former having one seed leaf or cotyledon and the latter two seed leaves or cotyledons.

Anise (*Pimpinella anisum*). An annual plant of the Parsley family (*Umbelliferae*), native of Egypt and other Mediterranean countries, much cultivated in southern Europe and particularly in Germany, for the seeds and oil; used as a condiment and in making liqueurs.

Annuals. Plants which flower during the first year of growth, and completely die after ripening seeds, are called annuals. The first plants brought into cultivation by the human race were almost exclusively of this group, and to-day it includes the most important economic plants, embracing all of the cereals, wheat, maize, rice, rye, barley, oats; the sorghums and millets, and many other valuable grasses; all fiber plants of the first order: cotton, flax, hemp, jute; the most valuable legumes, such as peas, beans, lupine, lentil, peanut, and many clovers and fodder plants; all of the common cucurbitaceous plants: watermelon, muskmelon, pumpkin, squash, and gourds; and many important vegetables: tomato, radish, mustard, lettuce, endive, okra, eggplant, and spinach; also carthamine, quinoa, sesame, and tobacco.

Aquatic Plants, or Hydrophytes, grow partly or wholly submerged in water. They do not, however, embrace the marsh plants. Among the lower forms, seaweeds and fresh water algae are noteworthy aquatics. Among flowering plants, the water buttercup (*Ranunculus*), the water lilies (*Castalia* and *Nymphaea*), and the pondweeds (*Potamogeton*) are widely distributed and conspicuous examples. Most aquatics are perennial, growing from roots fixed in the soil beneath the water, but some, like the duckweed (*Lemna*), float on the surface. Only rarely do aquatic plants produce flowers beneath the surface, as in the sea wrack (*Zostera*). In nearly all cases the flowers are developed above the water, and are fertilized by the wind and by insects like most flowering plants.

Aralia Family (*Araliaceae*). A natural order of plants closely related to the Parsley family (*Umbelliferae*), containing about 450 species, consisting of trees, shrubs, and herbs, growing in all climates, generally aromatic and possessing stimulant properties. The most important are the Aralias, Ginseng (*Panax*), and the English Ivy (*Hedera*).

Arbutus (*Madroña*). A genus of the Heath family (*Ericaceae*), comprising about 20 species of shrubs and small trees, mostly natives of Europe and North America. The branches are usually smooth and red, and the leaves evergreen and shining. The **Strawberry Tree** (*Arbutus unedo*), a native of southern Europe, is grown in California, but is not hardy in colder parts of the United States. The edible fruit resembles a strawberry, and is often made into sugar. The native **California Madroña** (*Arbutus Menziesii*) is often 80 to 100 feet in height. The Arizona Madroña (*Arbutus arizonica*), a tree 40 to 50 feet high, grows in high altitudes in California, southern Arizona, and Mexico. The **Texas Madroña** (*Madroña xalapensia*) is rarely more than 18 to 20 feet in height.

Arbutus, Trailing (*Epigaea repens*). A trailing plant of the Heath family, with branches 6 to 15 feet long and evergreen leaves, called Mayflower in New England and Ground Laurel in the Southern States. It grows in sandy or rocky soils, especially in the shade of evergreen trees, from Canada to Texas. Prized for its early blooming, delicate flowers, now gathered in considerable quantities for city flower markets.

Arctic Plants. On land within the Arctic zone, mosses and lichens are noteworthy for their great abundance and value as food for the reindeer and musk ox. The bog moss (*Sphagnum*) covers great areas, while species of *Hypnum* and *Polytrichum* are immensely abundant. There are many flowering plants, but the number of species is small compared to those existing in equal areas in warmer regions. Prominent examples are various rushes, sedges, saxifrages, heath forms, and rosaceous plants. Exactly speaking, trees do not occur, the Arctic species of the birch and willow being low-growing forms which are more nearly herbs than shrubs. A large proportion are xerophytic in character, with erect leaves which catch and make use of light from every direction. However, growth is actually retarded and stunted by the very continuity of light during the summer season, so that most Arctic plants are dwarfed and tufted in habit. Insects are abundant but limited in variety, being mostly short-tongued flies. Consequently, while Arctic flowers develop brilliant colors to attract insects, most of them are short tubed and of simple structure from the standpoint of fertilization. The plant life of the Arctic seas is inconspicuous but important as food for lower marine animals.

Artemisia. A genus of the Sunflower family (*Compositae*). There are about 200 species, natives of the northern hemisphere and southern South America. The flower heads are small and numerous and the leaves are generally much divided. The **Wormwood** (*Artemisia Absinthium*), and a number of other species, are used in the manufacture of absinthe. The dried flowers of *Artemisia santonica* and several other species are valued as a vermicide, known as wormseed. The young leaves of **Mugwort** (*Artemisia vulgaris*) are used in Germany for seasoning and for cleansing and healing wounds. **Southernwood** (*Artemisia Abrotanum*), a shrubby plant, native of southern Europe and Asia, is used in the manufacture of beer and to drive away moths. Many shrubby species, known as sage brush, grow in the western parts of the United States.

Arum Family (*Araceae*). A natural order of monocotyledonous plants, consisting of about 100 genera and 1,000 species, mostly natives of the tropics, usually stemless perennials with tuberous roots. Representations are few in number in temperate regions, there being only 10 species in temperate North America, of which the Jack-in-the-pulpit (*Arisaema triphyllum*), skunk cabbage (*Symplocarpus foetidus*), and the sweet flag (*Acorus Calamus*) are well known. The taro (*Colocasia antiquorum*), widely cultivated in the tropics, is the most valuable economic plant of the family. Many are greenhouse foliage plants, and the calla (*Richardia aethiopica*) is a very common house plant.

Ash (*Fraxinus*). A genus of the Olive family (*Oleaceae*) of about 40 species, mostly natives of Europe and eastern Asia, and about 12 are natives of North America. The best known species are: **Common Ash** (*F. excelsior*), a large tree 100 to 150 feet high, growing wild in southern Europe and northern Asia. The wood is tough, hard, and much used in carriage building, manufacture of agricultural implements, turnery, cabinet making, and for fuel. **White Ash** (*F. americana*), a large tree 45 to 90 feet high; Nova Scotia to Florida, westward to Minnesota and Texas. Used much the same as Common Ash. **Green Ash** (*F. lanceolata*), 40 to 50 feet high, Vermont to Florida, intermittently to Utah and Arizona. Used for same purposes as White Ash but less valuable. **Red Ash** (*F. pennsylvanica*), a small tree, rarely more than 40 feet high, growing in moist soil from New Brunswick to South Dakota, Florida, Alabama, and Missouri. Used the same as White Ash. **Blue Ash** (*F. quadrangulata*), 50 to 75 feet high, Ontario, Minnesota, and Michigan to Alabama, west to Iowa and Arkansas. Used in carriage building, for flooring and tool handles. **Black** or **Hoop Ash** (*F. nigra*), a large tree, 70 to 80 feet high, Newfoundland to Manitoba, south to Virginia and Arkansas.

Aspen. A name applied to two species of the genus *Populus* of the Willow family (*Salicaceae*), one a native of the United States, the other growing in Europe and Siberia. The **American Aspen** (*Populus tremuloides*), called **Quaking Aspen** or **Quaking Asp**, is one of the most widely distributed trees of North America, growing from Alaska and Newfoundland to lower California. A slender tree with light green bark, maximum height 100 feet. Wood soft, light, and largely used for manufacture of wood pulp. The **European Aspen** (*Populus tremula*) is a quick growing tree, 50 to 80 feet high. The wood is soft and porous, and is used in turnery and in interior finish for houses. The bark contains considerable salicin.

Asphodel (*Narthecium ossifragum*). A small plant of the Lily family (*Liliaceae*) with orange colored flowers blossoming abundantly in summer in European peat bogs. The specific name, *ossifragum*, signifying "bone-breaking," arose from the mythical belief that if eaten by sheep their bones would become brittle. In the United States the name bog asphodel is given to plants of the genus *Abama*.

Aster. A genus of the Sunflower family (*Compositae*) containing not less than 250 species, most abundant in North America. A number of perennial species are in cultivation as garden flowers. They bloom from July to November and are among the most valuable plants for border and roadside planting. The **New England Aster** (*Aster novae angliae*) is one of the most showy native American asters. The **China Aster** (*Aster chinensis*), a summer annual having more than 250 varieties, is the best known and most valued. It is a native of China and has been greatly improved by cultivation. It has a great variation in form and color.

Astragalus. A genus of the Pea family (*Leguminosae*) containing about 1,000 species, some 200 of which grow in the United States. They are shrubby or herbaceous plants commonly found in dry soils. *Astragalus gummifer*, which grows in western Asia, and a number of other species yield gum tragacanth. *Astragalus mollissimus* and several species called loco weeds, found on the western plains, have poisonous properties. Cattle and horses which eat them are said to lose all appetite for anything else, become deranged, and finally die.

Azalea. A genus of the Heath family (*Ericaceae*). There are about 40 species natives of North America and Asia. Mostly tall, branching shrubs with flowers of various colors. The *Azalea pontica*, a native of countries around the Black Sea and covering many mountain slopes, is a common garden flower in Great Britain. It varies with orange, red, and almost white flowers. The **Wild Honeysuckle** (*Azalea nudiflora*) grows in sandy or rocky woods from Canada to the southern part of the United States, and has long been cultivated in Great Britain. The flowers are pink to nearly white. The **Swamp Pink** or **Honeysuckle** (*Azalea viscosa*) abounds in swamps from Maine to Ohio, south to Florida and Texas, and is also cultivated in Great Britain. The flowers are large, white, and very fragrant. There are many hybrids of the Azalea.

Bacteria. Exceedingly minute, one-celled plants, the smallest known organisms, constituting one of the great groups of fungi known as *Schizomycetes* or fission-fungi. Bacteria are almost omnipresent, being found in the air, water, soil, nearly all foods and drink; are constantly present in the mouth, stomach, intestines, and in the external layers of the skin. The air of cities contains vast numbers, but they also exist in great numbers in country and even in mountain air. Water ordinarily called pure contains bacteria in abundance, spring water, artesian well water, and even sulphur spring water being abundantly

BACTERIA.

1. Hay Bacillus. 2. Spirillum. 3. Typhoid-fever Bacillus. 4. Butyric-acid Bacillus. 5. Planococcus. 6. Anthrax Bacillus among blood corpuscles.

supplied. There are two groups: Those which live upon dead animal or vegetable matter, **Saprophytes**; and those which subsist upon living animals or plants, **Parasites**. Saprophytic bacteria are beneficent in their action, being the cause of decomposition and decay, thus returning dead matter to its inorganic elements, so that it may again become food for plants. Parasitic bacteria include all of the harmful forms. Those which produce disease are called pathogenic, and are known to be the cause of many infectious diseases, such as diphtheria, influenza, tuberculosis, and probably all infectious diseases are due to their agency.

Ballast Plants. Plants growing on ballast, or distributed by ballast, the seeds being contained in it when loaded or falling upon it in transit. The study of the transportation of plants from one region to another in this manner has become of much interest to botanists.

Bamboo (*Bambusa*). A genus of about 25 arborescent grasses natives of southern and eastern Asia, one of which, the common bamboo (*B. vulgaris*), is not known growing wild although it is widely cultivated in the Old World, West Indies, and South America. The species range in height from 20 to 100 or even 120 feet, and sometimes attain a diameter of four to eight inches. The stem and leaves, particularly the wood, are put to innumerable uses in the East Indies and eastern Asia; nearly all articles of ordinary use, from houses and furniture to fences, carts, water pipes, cordage, matting, paper, boxes, and baskets, being wholly or largely made from bamboo products.

Banyan (*Ficus bengalensis*). A tree of the genus Fig (*Ficus*) of the Nettle family (*Urticaceae*), native of India and remarkable for its vast rooting branches. It grows 70 to 100 feet high and spreads over a great surface. The branches send shoots downward, which take root and become stems. The tree is extensively planted but grows wild only in the lower Himalayas and the Dekkan hills. The wood is light and of no value, but the white glutinous juice is used as an ointment, and bird lime is made from it. Gum lac is also a product of the Banyan.

Baobab (*Adansonia digitata*). An African tree of the Mallow family now naturalized in the East and West Indies. It is one of the largest trees known, often 30 feet in diameter, though only 40 to 70 feet high. It produces leaves resembling those of the horse-chestnut, white flowers about five inches broad, and a gourd-like fruit a foot in length, which is eaten by monkeys and called monkey-bread. The juice of the fruit is made into a beverage; the powdered bark is used like pepper, and the bark fiber is made into ropes and cloth. The only other species are the Australian cream-of-tartar tree (*A. Gregorii*) and the Madagascar baobob (*A. madagascariensis*).

Barberry (*Berberis*). A genus of 75 low shrubs, natives of temperate regions, the type of the Barberry family (*Berberidaceae*). They are chiefly used as ornamentals, but a few species produce an edible, currant-like fruit. The bark is used in dyeing and sometimes in tanning, and malic acid is extensively made from the berries in France. Of the 13 native species, the best known are the **American Barberry** (*Berberis canadensis*) of the Alleghany and Ozark mountains, and the so-called **Oregon Grape** (*Berberis Aquifolium*) of the Rocky Mountains and westward. The **Common Barberry** (*Berberis vulgaris*), introduced from Europe for border shrubbery, now grows wild in eastern New England.

Beech (*Fagus*). A genus of the Beech family (*Fagaceae*), containing about 16 species, four in the northern hemisphere and 12 in the southern. The **American Beech** (*Fagus americana*) is the only North American species. It is a beautiful tree 70 to 80 and sometimes 100 feet high, and is one of the most widely distributed trees of eastern North America. The wood is tough, close grained, and is largely used in the manufacture of tool handles, chairs, and for fuel. The small sweet nuts are sold in the markets of Canada and in some of the Western and Middle States. The **Common Beech** (*Fagus sylvatica*), forming pure forests in many parts of Europe, is a large tree 100 to 120 feet high. The wood is dark colored, solid, and very durable under water and is much used in cabinet making, for weirs, and for fuel. The bark is sometimes used in tanning. The nuts are used for the manufacture of beech oil and for feeding swine. The beech is often planted for hedges.

BAMBOO. Bambusa.

Begonia. A genus of plants of the Begonia family (*Begoniaceae*). There are about 350 species found in the tropics of both hemispheres, especially in Mexico and Central and South America. The cultivation of begonias was begun in 1777 and there are now hundreds of varieties of recognized merit. Some of the species are very popular house plants, known as Begonia, Elephant-Ears, Beefsteak Geranium, etc., grown for their handsome flowers and beautiful foliage.

Belladonna or Deadly Nightshade (*Atropa Belladonna*). A tall, bushy herb of the Potato family (*Solanaceae*), native of central and southern Europe, extending into Asia. The entire plant is poisonous, containing the alkaloid atropin. The leaves and roots are largely used in medicine.

Bergamot (*Citrus medica*). A variety of lemon, from the fruit of which oil of bergamot is extracted, much prized in perfumery.

Biennials are plants which require two seasons of growth to produce flowers and ripen seeds or fruit, usually growing the first year to store up surplus food in enlarged portions of the root, stem, or leaves for use the next year in maturing seeds and

fruit, after which the plant dies. While they are relatively few in number when compared to annuals or perennials among both cultivated and wild plants, several important vegetables are biennials such as the beet, cabbage, carrot, celery, parsley, parsnip, rape, turnip, and onion, although some forms of the cabbage are annual and some perennial and some forms of the beet and other biennials are sometimes perennial.

Big Trees. A term applied in America to the genus *Sequoia* of the Pine family (*Coniferae*), containing two species, both natives of California. The **Big Tree** (*Sequoia gigantea*) is the largest American tree, having an average height of 275 feet with a trunk 20 feet in diameter at the base. It sometimes attains a height of 320 feet with a trunk measuring 30 to 35 feet in diameter. The bark is often two feet thick. The Big Tree grows on the west side of the Sierra Nevadas at an elevation between 5,000 and 7,000 feet, from Placer to Tulare county, California. The **Redwood** (*Sequoia sempervirens*) is a tree 200 to 340 feet high and 10 to 15 feet in diameter, growing from the south border of Oregon to Monterey county, California. Rarely found more than 30 miles from the coast or over 3,000 feet above sea level. It is often cultivated as an ornamental tree in Europe. The wood is soft, light, and much used in building.

Birch (*Betula*). A genus of the Birch family (*Betulaceae*). There are about 28 species, natives of north temperate zones; 13 are North Americans. **Common Birch** (*Betula alba*), abounding in northern Europe, is a beautiful tree 60 to 70 feet

BIRCH. Betula. Flowering Branches.

high. The bark is used in medicine and dyeing, and it yields the birch tar employed in the preparation of Russia leather. **Red** or **River Birch** (*Betula nigra*) grows in the United States from Massachusetts to Iowa and Kansas, south to Florida and Texas. It is a slender tree, 70 to 90 feet high, which produces a hard, valuable timber. **Cherry, Black,** or **Sweet Birch** (*Betula lenta*) is a large tree, sometimes 80 feet high. Wood fine grained and valuable for making furniture, etc. The bark yields an oil identical with the oil of wintergreen. It grows from Newfoundland to western Ontario, Florida, and Tennessee. **Yellow Birch** (*Betula lutea*), a large tree, maximum height 100 feet. The timber is used in shipbuilding. From Newfoundland to Manitoba, south to Carolina and Tennessee. **Paper** or **Canoe Birch** (*Betula papyrifera*), a large tree, maximum height 80 feet. The bark on the young trees is of a beautiful white color, and is capable of division into thin sheets, used for making canoes, baskets, and ornaments. Newfoundland to Alaska, northern Pennsylvania, Michigan, and Washington.

Bittersweet or **Woody Nightshade** (*Solanum Dulcamara*). A plant with a long, climbing, shrubby stem, found in most parts of Europe and in Asia and introduced into the United States. A fluid extracted from the twigs is used in medicine. The woody vine (*Celastrus scandens*) is called bittersweet in the United States. The opening orange-colored pods, displaying the scarlet covering of the seeds, are very ornamental in autumn.

Bladdernut. A genus of the Bladdernut family (*Staphyleaceae*), natives of the north temperate zone, mostly small trees. The seeds contain a fixed oil which is slightly purgative. The wood is well suited for the purpose of the turner. The American Bladdernut (*Staphylea trifolia*) is a branching shrub 6 to 15 feet high.

Bloodroot (*Sanguinaria canadensis*). The only species of the genus *Sanguinaria* of the Poppy family (*Papaveraceae*). It has large handsome white flowers which bloom in April and May in rich woods in eastern North America; one of the earliest and most conspicuous spring flowers. The stem and root contain a red juice, and are poisonous when eaten.

Boneset (*Eupatorium perfoliatum*). A perennial herb of the Sunflower family, native of the United States, growing in moist soil. The leaves and flowering tops are much used in household medicine as a tonic.

Borage Family (*Boraginaceae*). A large order of dicotyledonous plants, containing some 85 genera and 1,500 species, mostly natives of northern temperate regions. They are usually herbs and shrubs. Some tropical species are timber trees, and some species are dye plants, but most are of slight economic importance, although the forget-me-not (*Myosotis*) and heliotrope (*Heliotropium*) are widely grown and highly prized for their flowers.

Box Elder or **Ash-leaved Maple** (*Acer Negundo*). A species of the Maple family (*Aceraceae*). One of the hardiest and most widely distributed trees of the United States, growing from Vermont to Florida, and westward to the Rocky Mountains. It grows rapidly and often reaches a height of 60 feet. The wood is soft, light, and is used for wooden ware and wood pulp. The sap is sometimes made into sugar.

Box Tree (*Buxus*). A genus of evergreen shrubs and small trees of the Box family (*Buxaceae*), sometimes treated as a part of the Spurge family (*Euphorbiaceae*). The Common Box, a native of Europe and Asia, sometimes attains a height of 20 feet. Numerous cultivated varieties bear trimming remarkably well and are much used for borders of walks and gardens. The hard, fine grained wood is exceedingly valuable, being much used in engraving and in the manufacture of mathematical instruments.

Brake. A name given to several species of ferns of the genus *Pteris*. The Common Brake or Bracken (*Pteris aquilina*) is very abundant in most parts of Europe and America and in parts of Asia and Africa. The leaves and stems are employed in dressing kid, and the root is used as a substitute for hops. It is sometimes fed to cattle.

Brazil Wood. A dyewood, the product of different species of *Caesalpinia* of the Pea family (*Leguminosae*), and forming a considerable export from Brazil. Much of the Brazil Wood of commerce is obtained from *Caesalpinia braziliensis*, a small tree about 30 feet high, native of the West Indies. The heart wood alone is valuable and is generally sent to the market in the form of sawdust. It yields a red coloring matter called brazilin, which is used by the dyer and calico printer and in the manufacture of red ink.

Bromelia Family (*Bromeliaceae*). A natural order of monocotyledonous plants, allied to the Amaryllis family, embracing some 35 genera and about 900 species, all tropical or subtropical, many of them epiphytic, and usually with spiny or scurfy leaves. The pineapple (*Ananas sativa*) and the Spanish moss (*Tillandsia*), which hangs in festoons on trees in the Southern States, are important representatives. Many species are in hothouse cultivation for their curious manner of growth and showy flowers.

Broom. A name given to a number of species of shrubs of the closely allied genera *Cytisus*, *Genista*, and *Spartium* of the Pea family (*Leguminosae*). Common Broom (*Cytisus scoparius*), a native of Europe, has been introduced into the United States. It grows in dry soils, ornamenting hedges and bushy places with its large yellow

flowers. The branches are very tough and much used for making besoms, and the young tops and seeds are used in medicine. The leaves are used in tanning and dyeing, and cloth is sometimes made from the fiber.

Buckthorn (*Rhamnus*). A genus of the Buckthorn family (*Rhamnaceae*), containing about 75 species, natives of warm and temperate regions. Five are natives of the United States. The fruit and bark yield yellow and green dyes. The **Common Buckthorn** (*Rhamnus catharticus*), a shrub or small tree 6 to 20 feet high, is a native of Europe and northern Asia and introduced into the United States. The bark affords a beautiful yellow dye, and the berries yield the sap green used in painting. The **Alder Buckthorn** (*Rhamnus Frangula*) is a native of Great Britain, and introduced into the United States. It is a shrub rarely more than 8 feet high. The bark, leaves, and berries are much used for dyeing. *Rhamnus Purshianus*, known as Cascara Sagrada, is a native of the Pacific States. It is a tree 15 to 20 feet high, and the bark is extensively used in medicine.

BUCKTHORN. Rhamnus.

Buckwheat Family (*Polygonaceae*). A well marked, natural family of dicotyledonous plants, embracing about 30 genera and 800 species, universally diffused in temperate climates. The foliage of these plants often contains an acid juice as in rhubarb (*Rheum*) and sorrel (*Rumex*) and sometimes acid blistering properties as in smartweed or water pepper (*Polygonum Hydropiper*). Leading genera are *Rumex*, containing the docks, sorrels, and canaigre; *Polygonum*, comprising the smartweeds, bindweeds, and bistort; *Fagopyrum*, buckwheat; and *Eriogonum*, embracing a large number of desert plants of the western United States known as wool-joints.

Buffalo Berry (*Shepherdia argentea*). A shrub of the Oleaster family (*Eleagnaceae*), a native of northwestern North America, which has recently begun to take rank as a fruit plant, the currant-like berries being used for jellies in the Rocky mountain regions.

Buffalo Grass (*Bulbilis dactyloides*). A common grass of the high western plains of the United States, ranging from Manitoba to Texas, where it is one of the best pasture grasses, but rapidly disappearing in many sections, due to overfeeding on the ranges.

Burdock (*Arctium*). A genus of plants of the Thistle family (*Compositae*), containing about six species, natives of Europe. Common Burdock (*Arctium Lappa*) is a native of Europe naturalized in the United States, where it has become a troublesome weed. The root is sometimes used in medicine.

Burgrass or **Sandbur** (*Cenchrus*). A genus of about 12 species of grasses growing in sandy soils in temperate and tropical regions. They bear sharp pointed burs which frequently cause trouble with sheep, their wool becoming matted with them.

Cactus Family (*Cactaceae*). A very distinct natural order of plants numbering about 1,000 species grouped in about twenty genera. With a few exceptions, practically all are natives of America, the great majority growing in Mexico and

CACTUS GROVE. California.
Opuntia.

adjoining regions. They are fleshy, juicy plants, usually completely beset with sharp spines, with flat or cylindrical stem joints which resemble leaves, while the true leaves are small and scale-like. The flowers, which are produced upon the angles of the stems, are large and vividly colored; and in some of the night-blooming forms, such as the cereus, are remarkable for their fragrance. By reason of their peculiar structure they are especially adapted to arid regions, where a number are of economic importance. The tuña or prickly pear (*Opuntia*) is not only in wide use in Mexico and among the Indians of the southwestern United States, but is also a prized fruit in Mediterranean countries, where it has become thoroughly naturalized. When stripped of thorns, *Opuntias* make excellent fodder, and a thornless form developed by Burbank promises to be of value as a vegetable. Many forms of *Cereus*, *Mamillaria*, and *Echinopsis* are easily cultivated.

Calabar Bean. The seed of a twining, half shrubby plant (*Physostigma venenosum*) of the Pea family (*Leguminosae*), native of western Africa. It is highly poisonous and is used to produce contraction of the pupils of the eye, and for other purposes in medicine.

Calla. A genus of plants of the Arum family (*Araceae*). The only species, *Calla palustris*, is found in swamps in Europe, Siberia, and North America. The rootstock is sometimes made into bread.

Camellia. A genus of evergreen shrubs and small trees of the Camellia family (*Ternstroemiaceae*), natives of China, Japan, and northern India and extensively cultivated in greenhouses in Europe and the United States. The Japanese Camellia (*Camellia Japonica*), the best known species, has large rose-like flowers of various colors.

Camphor Tree (*Cinnamomum camphora*). A large evergreen tree of the Laurel family, from which camphor is made. It is probably a native of China but is cultivated in nearly all warm climates, being highly prized for timber as well as for the production of gum camphor.

Canaigre (*Rumex hymenosepalus*). A tannin producing plant of the Buckwheat family (*Polygonaceae*) resembling the sour dock. Its roots contain a larger percentage of tannin than any other plant. The rapid decrease in the supply of wild Canaigre has caused its cultivation to be undertaken and extensive plantations have recently been established in the southwestern United States.

Canna. A genus of reed-like plants of the Arrowroot family (*Marantaceae*) natives of tropical regions, noted for their showy flowers and ornamental foliage. Many forms are in cultivation, among them the common garden Indian Shot (*C. indica*) and the West Indian *Canna edulis*, which yields a starch or arrowroot called *tous-les-mois*.

Caper (*Capparis*). The true caper bush (*C. spinosa*), whose pickled flower buds are the capers of commerce, grows in Mediterranean countries, and is now cultivated in the Southern States. There are about 150 species of capparis, natives of warm countries, several of which are used like the true caper.

Capsicum. A genus of the Potato family (*Solanaceae*), containing about 90 species, natives of tropical America. They are in very general cultivation for their fruit, which is extremely pungent. Common Capsicum, often called Chile or Red Pepper (*Capsicum annuum*), is the most common species in cultivation. *Capsicum fructum* has great pungency and is the true Cayenne pepper.

Caraway. A plant of the Parsley family (*Umbelliferae*) growing wild in Europe and parts of Asia. It is cultivated for its aromatic seeds, which are used as medicine and as a condiment.

Carnation. A double flowering variety of the clove pink (*Dianthus Caryophyllus*), and one of the most popular flowers in cultivation. It is a native of southern Europe, where it has been in cultivation for 2,000 years. There are many varieties with various forms and colors, but the red, white, pink, and yellow varieties predominate.

Catalpa. A genus of trees of the Trumpet Creeper family (*Bignoniaceae*), containing about seven species, natives of eastern Asia, the West Indies, and two of the eastern United States. The Catalpa or Indian Bean (*Catalpa bignonioides*) has thin silvery gray bark, and reaches a maximum height of 60 feet. It is a native of the Southern States and is cultivated as an ornamental shade tree. The wood is light and of a fine texture, useful in cabinet work. The Western Catalpa or Catawba Tree (*Catalpa speciosa*) has thick rough bark and reaches a maximum height of 120 feet, growing wild from Indiana to Tennessee, and west through Arkansas and Missouri. It grows rapidly and is often planted as a timber tree as well as an ornamental tree in parks. The wood is soft and light, largely used for fence posts, railway ties, and occasionally for furniture.

Catmint or **Catnip** (*Nepeta Cataria*). A plant of the Mint family (*Labiatae*), native of Europe and Asia, and naturalized in the United States. So named because cats are fond of it. Occasionally used in medicine.

Cattail. A name given to two North American species of *Typha*, which grow in swamps and have their flowers in a close cylindrical spike at the top of the stem. The roots are sometimes eaten and the leaves are used in cooperage, being placed between the staves.

Cedar. A common name applied to a number of coniferous evergreen trees, properly, however, to species of *Cedrus*, the **Cedar of Lebanon** (*C. Libani*), the **Deodar** of India (*C. deodara*), and a north African species (*C. Atlantea*). Certain true pines are called cedar, also certain cypress trees. The **White Cedar** of the United States is more nearly a cypress (*Chamaecyparis thyoides*) and the so-called **Red Cedar** is a juniper (*Juniperus virginiana*).

Celandine (*Chelidonium majus*). A plant of the Poppy family (*Papaveraceae*) frequent in Great Britain and Europe, and introduced into the United States. All parts of the plant contain a yellow juice which is very acrid and burning to the skin. It is used to some extent in medicine, being a drastic purgative and in large doses an active poison.

Cereals. Those grasses which produce starchy, mealy seeds used for food, the name being derived from cerealia, or offerings to Ceres, the goddess of agriculture. The principal cereals are wheat, corn, rice, rye, oats, and barley, which, since time immemorial, have been grown more extensively than all other crops, constituting the chief source of food for man and domestic animals. The millets and sorghums, also coracan and Job's tears, are classed as cereals, and sometimes, though incorrectly, buckwheat is also included.

Cereus. A genus of the Cactus family and including some of its largest members, native to the arid regions of the southwestern United States and Mexico. A number are cultivated for their flowers. Those of the night-blooming species (*C. grandiflorus*) sometimes attain a diameter of eight inches, and are noted for their beauty and fragrance. The Great Cereus (*C. giganteus*) is frequent on the arid plains of Arizona and Sonora, where it grows 60 feet high, the fruit forming a staple food for the Indians.

Cherry, Wild (*Prunus*). Several North American trees and shrubs of the Rose family (*Rosaceae*). The **Wild Red Cherry** (*P. pennsylvanica*), a small tree 20 to 30 feet high, is common in rocky woods, in the Northern States. The fruit is small, with a thin pulp, and is often used domestically and in the preparation of cough mixtures. The **Wild Black** or **Rum Cherry** (*P. serotina*) is a large tree, often 80 feet high, very common east of the Rocky Mountains. The dark colored wood is valuable for cabinet making and the bark is used in medicine. The **Choke Cherry** (*P. virginiana*) is a shrub 8 to 15 feet high, rarely a small tree, growing from Newfoundland to British Columbia, south to Georgia and Texas. The **Western Wild Cherry** (*P. demissa*) is a shrub or small tree reaching a maximum height of 30 feet, found from Dakota to New Mexico, west to British Columbia and California.

Chrysanthemum. A genus of plants of the Sunflower family (*Compositae*) containing about 150 species, natives of northern Europe, the Canary Islands, East Africa, and Asia. The Chinese and Japanese chrysanthemums (*C. indicum* and *C. sinense*) are the parents of many forms now in cultivation in the United States. The flowers are of nearly all colors and shades. The **Oxeye Daisy** (*C. Leucanthemum*) is a common weed in pastures in the Atlantic States. The French chrysanthemum or **Marguerite** (*C. frutescens*) is extensively cultivated in France for ornamental purposes.

Clover or **Trefoil** (*Trifolium*). A large genus of plants of the Pea family (*Leguminosae*) containing about 250 species, most abundant in Europe, though about 60 are natives of the United States, being most numerous in California. A number are very valuable, being widely cultivated for fodder, pasturage, and as means of enriching the soil.

Club Mosses (*Lycopodiaceae*). A group of pteridophytes closely allied to the ferns, giant forms of which were immensely abundant in the Carboniferous Age, but sparingly represented among living plants, chiefly by species of *Psilotum* and *Lycopodium*, most abundant in the tropics. In temperate regions the club mosses have the aspect of large trailing true mosses and some have arbor-vitae-like leaves. A few species are used in medicine, and the dust-like spores of a true club moss form the well-known lycopodium powder.

Colocynth Gourd or **Bitter Apple** (*Citrullus vulgaris*). A plant of the Gourd family, growing chiefly in the Mediterranean region. The drug colocynth, extensively used in medicine, is obtained from the dried pulp of the fruit. While the fleshy portions are exceedingly bitter and drastic, the seeds are bland and much prized for food in North Africa.

Compositae (Composite, Sunflower, or Thistle family). The largest natural family of flowering plants containing some 800 genera and over 12,000 known species and estimated to embrace more than one tenth of all flowering plants. It is represented in all parts of the world, and in some regions constitutes a remarkably high percentage of the flora, in central Europe over one eighth, in California and Mexico over one sixth, in Chile over one fifth, and in southern Argentina one fourth, while in exceptional localities the proportion reaches one third as in the Andes of Chile. This family is now considered the most highly developed and specialized of all plants and is of recent geologic appearance, the earliest fossil composites being found in the upper Miocene.

There are three well-marked divisions: the tubular flowered composites (*Tubuliflorae*) of which the aster, golden-rod, and sunflower are familiar types; the ligulate flowered composites (*Liguliflorae* or *Cichoraceae*) rep-

resented by the dandelion, chicory, and lettuce; and the labiate flowered composites (*Labiatiflorae*) confined to the tropics and southern hemisphere. Important representatives are the true and Jerusalem artichokes, carthamine, endive, salsify, scorzonera, wormwood, southernwood, camomile, tansy, arnica, coltsfoot, pyrethrum, elecampane, and a large number of ornamental plants in cultivation such as the dahlia, chrysanthemum, China aster, immortelle, marigold, cornflower, coreopsis, cineraria. The economic value of this vast order is comparatively slight, not a single plant of prime importance having yet been developed in cultivation.

CYCAD. Cycas revoluta.

Conifers (*Coniferae*). The largest group of living gymnosperms; all trees and shrubs of temperate regions, rare in the tropics; mostly with evergreen, resinous, needle-shaped or scale-like leaves and producing a cone-like strobile containing the seeds, whence the name, conifer. There are some 32 genera and 300 species whose combined timber and resin products exceed in value that of every other order of plants, grouped in two families: the **Pines** (*Pinaceae*) and the **Yews** (*Taxaceae*). To the former belong the pines, spruces, hemlocks, firs, larches, cypresses, cedars, redwoods, and araucarias, and to the latter the yews, and the numerous species of *Podocarpus* of the southern hemisphere. The whole group was much more numerous in earlier geologic times.

Cork Oak or Cork Tree (*Quercus suber*). A species of oak, native of southern Europe and northern Africa, the spongy bark of which is the common cork of commerce. It ranges from 20 to 40 feet in height, attains a diameter of 5 feet, and sometimes lives 300 to 400 years, producing crops of bark for 150 years.

Cornflower or Bluebottle (*Centaurea Cyanus*). A popular garden flower in Europe and the United States, there being many varieties with flowers ranging from a beautiful deep blue to white. Native of Mediterranean countries and a common weed in European grain fields.

Cress. A name given to many plants the foliage of which has a pungent mustard-like taste and is used as a salad. The name is commonly confined to species of *Lepidium* of the Mustard family (*Cruciferae*).

Crowfoot Family (*Ranunculaceae*). A natural family of dicotyledonous herbs and climbing shrubs, consisting of about 40 genera and 600 species, natives of temperate and cool regions, often acrid and drastic and some are virulent poisons. Many **Buttercups** or **Crowfoots** (*Ranunculus*) are acrid when fresh, particularly the **Cursed Crowfoot** (*R. sceleratus*). The most poisonous are the **Aconites** (*Aconitum*), **Hellebores** (*Helleborus*), the **Larkspurs** (*Delphinium*), and the **Baneberry** (*Actaea*), while the **Yellow Root** (*Hydrastis canadensis*) and **Goldthread** (*Coptis trifolia*) contain powerful medicinal properties. The remaining plants of this family are mostly harmless, and embrace some of the most prized garden flowers, such as the **Virgin's Bower** (*Clematis*), **Anemone**, **Peony** (*Paeonia*), and **Columbine** (*Aquilegia*).

Custard Apple. A name commonly given to the fruits of certain trees of the genus **Anona** of the Custard Apple family (*Anonaceae*). Some of the fruits are among the most delicious produced in tropical countries.

Cycads (*Cycadaceae*). A family of gymnosperms, consisting of about 10 genera and 80 species of dwarf, palm-like trees, of limited distribution, chiefly in the tropics; economically valuable as the source of a kind of sago obtained from the interior of the trunk and from the mealy portion of the seeds. **Cycas revoluta** and **C. circinalis**, frequently met with in conservatories, are sago plants in Japan and in the Moluccs Islands. The seeds of the **Mexican Cycad** (*Dioon edule*) yield a starch food. The cycads first appeared in the Carboniferous Age and became immensely abundant in Cretaceous time. The present species are merely remnants of a dying race, the scattered survivors of a great ancient group of plants.

Cyclamen. A small genus of plants of the Primrose family (*Primulaceae*), several species of which are cultivated in flower gardens on account of the beauty and fragrance of their flowers.

Cypress (*Cupressus*). Evergreen trees and shrubs of the Pine family, with small, imbricated leaves and globular cones, comprising about 12 species, in northern regions of the world. The **Common Cypress** (*C. sempervirens*) of Europe, now introduced, is famous for its durable wood, believed to be the cedar or gopher wood of the Bible. The **Monterey Cypress** (*C. macrocarpa*), a beautiful tree sometimes 150 feet high and 8 or ten feet in diameter, grows near the sea in California and three others occur on the Pacific Coast. The so-called **Cypress** or **White Cedar** (*Chamaecyparis thyoides*) of the Eastern States, and the **Bald Cypress** (*Taxodium distichum*) of southern swamps, well known and valued for timber, are strictly not true cypresses.

Cytisus. A genus of the Pea family (*Leguminosae*), natives of the Old World. There are about 35 species, all small trees or shrubs with yellow, white, or purple flowers, many of which are very beautiful. They are common in shrubberies and greenhouses and several species are cultivated as forage plants. Some are called broom, others laburnum, but most are known as cytisus.

MONTEREY CYPRESS.

Dahlia. A genus of the Sunflower family (*Compositae*), natives of Mexico. *Dahlia variabilis* and *Dahlia Juarezii* are the parents of most of the varieties in cultivation, of which there are now nearly 3,000, possessing a wide range of sizes and colors.

Dandelion (*Taraxacum officinale*). A perennial plant of the Sunflower family (*Compositae*), native of the old world, and possibly indigenous in western North America; now practically cosmopolitan by naturalization, being immensely abundant in pastures, meadows, and roadsides, throughout large areas of the United States. Formerly it was often employed in medicine, is still an ingredient in bitters and domestic remedies, and is used to some extent as

a pot herb. **The Fall Dandelion** (*Leontodon*), a related plant, readily distinguished by its more slender solid stipe, is also of European origin but widely naturalized in northeastern temperate North America.

Desert Plants are climatic groups especially adapted by many peculiarities of structure to withstand the excessive transpiration that would otherwise occur in an intensely dry atmosphere. Some, like the cactus, have succulent, fleshy leaves and stems, others are densely clothed with hairs, small scales or wax or having special structures guarding the pores; still others are bulbous, dying down after a brief period of rapid growth. The majority are shrubby and very woody throughout. A considerable number are either thorny or contain acrid and poisonous juices protecting them against the attacks of herbivorous animals.

Desmids. A large group of fresh water algæ, closely related to the diatoms; usually one-celled, bright green, and beautifully symmetrical in form, growing on plants and mud in ponds.

Diatoms (*Diatomaceae*). A family of one-celled, microscopic algae, existing in immense numbers at the bottom of the sea, lakes, ponds, upon submerged plants, and in damp places, numbering over 1,500 known species, characterized by great variety in form and markings of the silicious cell walls, being exceedingly beautiful objects and used to test the highest powers of microscopes, the fine lines of some species exceeding 100,000 to the inch. Fossil deposits occur in Bohemia, Virginia, Nevada, and California, known as diatomaceous earths, which are used as polishing powder.

Dicotyledons. The larger of the two natural groups of *Angiosperms*. They differ from the other group, Monocotyledons, most conspicuously as follows: The growing seed develops two seed leaves or cotyledons, whence the name; the stems increase in thickness by new growths of tissue on the outside of the woody portion between it and the bark; the leaves have open venation, i. e., are net-veined or reticulated; and the flower parts are usually in fours or fives. There are two groups of dicotyledons:—

Archichlamydeae, in which the corolla, if present, is composed of separate petals. The group includes the simpler and more primitive dicotyledons (often destitute of corolla and sometimes of the calyx also), numbering over 40,000 species, prominent families being: the tree groups, oak, walnut, elm, and willow, and allied families; the buttercups and their numerous allies, the poppies, mustards, water lilies, magnolias, the rose and saxifrage families, with their useful fruits, the pea family, largest of the group, numbering with its allies 10,000 species, and the parsley family, which is the highest of the archichlamydeae. **Metachlamydeae**, a group evidently developed from the preceding; distinguished by having petals united—i. e., sympetalous; the group contains the most highly organized plants, also numbering over 40,000 species. The leading alliances are the heath, convolvulus, gentian, polemonium, mint, nightshade, vervain, plantain, and related families, together with the Compositae, the largest family of angiosperms containing probably over 12,000 species and standing at the head of the whole plant kingdom in organic development.

Digitalis. A genus of plants of the Figwort family (*Scrophulariaceae*), natives chiefly of Europe and Asia. Purple Foxglove (*D. purpurea*), a native of Great Britain and naturalized in the United States, is much valued in medicine. Purple, white, and yellow flowered varieties are cultivated. The whole plant is poisonous.

Dogwood (*Cornus*). A genus chiefly of shrubs and small trees, the wood of which is exceedingly hard and is used for many purposes. The astringent bark and sometimes the leaves are used in medicine. There are about 25 species, some 18 of which occur in the United States. The **Flowering Dogwood** (*C. florida*) is a small tree, native of the Eastern States and frequent in cultivation. It has showy white petal-like bracts surrounding its clusters of small flowers.

Dutchman's Pipe (*Aristolochia macrophylla*). A twining vine of the Birthwort family (*Aristolochiaceae*) growing in rich woods from Pennsylvania to Georgia, west to Minnesota and Kansas, and often planted to form shady bowers.

Ebony. The hard, dark colored heartwood of a number of species of trees. Tropical species of the genus *Diospyros* of the Ebony family (*Ebenaceae*) are the source of most of the ebony of commerce. *D. ebenum*, a large tree of India, Ceylon, and other tropical countries, furnishes the best quality.

Edelweiss (*Leontopodium alpinum*). A small perennial of the Sunflower family (*Compositae*) growing at high elevations in the Alps and often cultivated in gardens in the United States and Europe. It is famous because of its scarcity in the mountains and the supposed difficulty of obtaining it.

Eglantine. A name given to two species of rose: *Rosa rubiginosa* or *Sweet Brier*, a native of Europe and naturalized in the United States, which has sweet-scented pink flowers, and *Rosa eglanteria*, a West Asian species with yellow flowers which have an offensive odor.

Elder (*Sambucus*). A genus of the Honeysuckle family (*Caprifoliaceae*) containing about 20 species of shrubs or trees. The **American Elder** or **Elderberry** (*S. canadensis*) is a shrub 4 to 10 feet high, growing along fences and roadsides. The purplish black berries are sometimes used for making wine and other preparations. The **Mexican Elder** (*S. mexicana*), native of the southwestern part of the United States and Mexico, is a tree 25 to 30 feet high. The flowers are used in medicine. The **Western Elder** (*S. glauca*), a tree 30 to 50 feet high, very abundant in the Pacific coast region, is occasionally planted as an ornamental tree. The **European Elder** (*S. nigra*) is a large shrub or small tree with hard, tough wood, used as a substitute for boxwood. The berries are largely manufactured into wine.

Elecampane. A genus of the Sunflower family (*Compositae*).—The Common Elecampane (*Inula Helenium*), a native of Europe and naturalized in the United States, is the only important species. It was formerly extensively cultivated for its root, which is used in medicine.

Elm (*Ulmus*). A genus of the Nettle family (*Urticaceae*). There are about 16 species, 6 of which are natives of the United States. The **English Elm** (*U. campestris*), a tree 60 to 80 feet high, is one of the most important species. It is found in Europe, western Asia, northern Africa, and is naturalized in the United States. The wood is compact and very durable under water, much used in shipbuilding and wagon making. The **American White Elm** (*U. americana*) is a large tree 90 to 100 feet high, growing from Newfoundland to Florida and Texas. The wood is tough, strong, and largely used for wheel hubs, in cooperage, and for shipbuilding. It is a fine street and park tree. The **Cork Elm** (*U. racemosa*) is a tree 70 to 90 feet high, growing from Quebec and Vermont westward to Nebraska and Tennessee. The wood is considered the best of American elms, and is much used for agricultural implements and bridge timbers. The **Slippery** or **Red Elm** (*U. fulva*) is a tree 60 to 70 feet high, growing from Ontario to Florida, westward to Nebraska and Texas. The wood is durable in contact with the soil and is much used for fence posts and railway ties. The mucilaginous inner bark is used in medicine.

Epiphytes. Plants which grow upon the stems or other portions of larger plants for mechanical support, but do not to any important extent derive their food therefrom. They possess chlorophyll and are capable of creating their own food from inorganic elements. Illustrative examples are the **Long Moss** (*Tillandsia*) and various tropical orchids.

Everlasting. A name given to various plants whose flowers may be dried without losing their form or color, particularly to certain species of amaranth and *Helichrysum*. In the United States the name **Pearly Everlasting** is given to *Anaphalis margaritacea*, which grows in dry woodlands from Maine to Washington and Oregon and northward.

Ferns (*Filices*). The most important group of pteridophytes, comprising about 200 genera and over 4,000 species, widely diffused in moist regions, though most abundant in the tropics; ranging

in size from minute moss-like forms to the giant tree ferns of hot climates. Ferns are the most highly organized of non-seed-bearing or flowerless plants, possessing root, stem, and leaf structures with vascular tissues very similar to those of higher plants. The most striking difference is in their mode of reproduction. There is complete alternation of generations, the leafy plant being non-sexual and producing dust-like spores from modified portions of the leaf-like fronds. The spores germinate, and grow into minute flattened structures called prothallia, which are sexual, producing egg

TREE FERN.

cells and antherozoids; these by fertilization develop a new organism, which becomes the asexual, leafy fern. Although embracing some of the most striking and beautiful plants, ferns are of small economic importance. There are six families of true ferns (*Filices*):—

Osmundaceae, embracing the large royal ferns, often called flowering ferns, represented in the United States by three species of Osmunda. **Gleicheniaceae**, all tropical ferns. **Schizaeaceae**, climbing ferns, about 100 species, mostly tropical. The beautiful climbing fern or **Hartford Fern** (*Lygodium*) and the rare and curious **Curly Grass** (*Schizaea*) of the Eastern States are examples. **Hymenophyllaceae**, filmy ferns, 200 species, exceedingly abundant in the tropics, a few occurring in the Southern States. **Cyatheaceae**, a tropical group which includes the great tree ferns. **Polypodiaceae**, the largest and most highly developed family, numbering over 3,000 species, and including nearly all the true ferns of temperate regions.

Feverbush or Spicebush (*Benzoin aestivale*). A graceful shrub of the Laurel family (*Lauraceae*) with beautiful leaves and scarlet berries, common in the eastern United States. The bark is sometimes used in treating fevers, and the seeds are occasionally substituted for allspice.

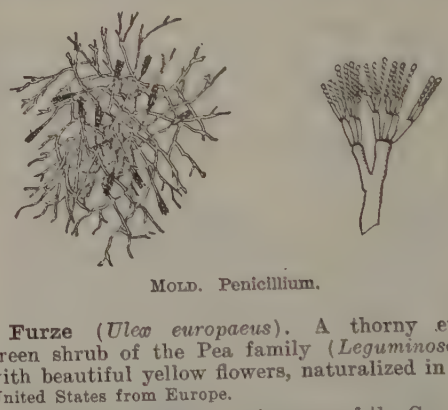
Fir (*Abies*). A genus of the Pine family (*Coniferae*) containing about 25 species, natives of the cooler portions of the north temperate zone. The **Silver Fir** (*A. picea*), a common tree in central Europe, attaining a height of 150 to 200 feet, is the source of the Strassburg turpentine. The **Balsam Fir** (*A. balsamea*) is a tree 50 to 80 feet high, growing from Virginia northward. Canada balsam is made from the sap. The **White Fir** or **Great Silver Fir** (*A. grandis*) is a large tree, often 300 feet high and 10 feet in diameter, growing from British Columbia to lower California. The wood is soft and extensively used for cooperage and boxes. The **Red Fir** (*A. nobilis*) is a large tree 150 to 200 feet high, found in the same regions as the white fir. It is often planted in Europe as an ornamental tree. The **Mexican Fir** (*A. religiosa*) is a magnificent silver-leaved tree 150 feet high.

Forget-me-not (*Myosotis*). A genus of the Borage family (*Boraginaceae*) with small, usually blue flowers. A number of species are common in America. The flower is esteemed for its delicate beauty, and is widely regarded as an emblem of friendship.

Foxtail Grass. A name applied to certain species of two very dissimilar genera of grasses, *Alopecurus* and *Setaria*. There are about 20 species, natives of both hemispheres. **Meadow Foxtail** (*A. pratensis*) is one of the best meadow and pasture grasses of Europe and has become established in the United States. **Jointed Foxtail** or **Water Foxtail** (*A. geniculatus*) is very common in moist places in many parts of the United States and cattle are very fond of it. The common **Yellow Foxtail** (*S. glauca*) and the **Green Foxtail** (*S. viridis*) are exceedingly abundant weeds growing everywhere in cultivated ground. The true millets, which are also species of *Setaria*, are sometimes called foxtail grass.

Fuchsia. A genus of the Evening Primrose family (*Onagraceae*), named in honor of Leonard Fuchs, containing about 70 species, mostly natives of tropical America. Some are climbers, some small trees, but the majority are shrubs. Several species are largely cultivated in greenhouses because of the beauty and fragrance of their flowers. A great many varieties have been developed, mostly from *Fuchsia macrostemma*, which first became popular about 1790.

Fungi. A great group of thallophytes, of which there are upwards of 35,000 known species, some 8,000 being North American, ranging in size from the minutest organisms known to thread-like masses several feet long, some of which develop reproductive bodies a foot in diameter (puff balls) and in color from white to yellow, blue, red, and black. All derive their sustenance either directly from living plants and animals (parasitic) or from dead or decomposing organisms (saprophytic). There are six classes: **Schizomycetes**, Bacteria; **Myxomycetes**, Slime molds; **Phycomycetes**, algae-like fungi, molds; **Ascomycetes**, sac fungi, lichen fungi; **Basidiomycetes**, Basidium fungi, Mushrooms; **Saccharomycetes**, Yeasts.



MOLD. Penicillium.

Furze (*Ulex europaeus*). A thorny evergreen shrub of the Pea family (*Leguminosae*), with beautiful yellow flowers, naturalized in the United States from Europe.

Gentian (*Gentiana*). A genus of the Gentian family (*Gentianaceae*) containing about 300 species, mostly natives of the North Temperate and Arctic zones and the Andes of South America. The **Common** or **Yellow Gentian** (*G. lutea*) which is abundant in meadows of the Alps and Pyrenees, is valued for its seed which is used in medicine. The **Soapwort Gentian** (*G. Saponaria*) is extensively used in the United States as a substitute for Common Gentian. It grows in wet soil from Ontario to Minnesota, Florida, and Texas. **Fringed Gentian** (*G. crinita*) celebrated for the beauty of its flowers, which are large, blue, and fringed on the margins, occurs from Quebec and Minnesota south to Georgia and Iowa. The **Downy Gentian** (*G. puberula*), with blue funnel-shaped flowers is a common garden plant.

Geranium. A genus of the Geranium family (*Geraniaceae*), containing about 150 widely distributed species, 10 of which are natives of the United States. The **Herb Robert** (*G. Robertianum*) is a low-spreading herb with small red-purple flowers,

found in eastern North America, Europe, Asia, and northern Africa. It has astringent properties and is used in medicine. The **Alumroot** or **Wild Cranesbill** (*G. maculatum*), which has beautiful rose-purple flowers, is the most valuable, medicinally, of all the species. It grows from Manitoba south to Georgia, Alabama, and Missouri. The name cranesbill is given to a number of species. The plants commonly cultivated in gardens and greenhouses under the name of Geraniums are species of *Pelargonium*. There are about 125 species mostly natives of the Cape of Good Hope, prized on account of the brilliant colors of the flowers and the shape and markings of the leaves.

Gillyflower. A name applied to a number of plants of the Mustard family (*Cruciferae*), prized for the beauty and fragrance of their flowers. The name is used mostly to denote species of *Chieranthus* and *Matthiola*.

Ginger (*Zingiber*). A genus of the Ginger family (*Zingiberaceae*). The species, of which there are about 20, are perennial herbs, natives of the East Indies. The root stock of most species is used in medicine and as a condiment. The most valuable is the Common or Narrow-leaved Ginger (*Z. officinale*), which is cultivated in most tropical countries. Zerumbet, or Broad-leaved Ginger (*Z. zerumbet*), cultivated in Java, has a rootstock less pungent than that of Common Ginger. Mioga (*Z. mioga*) is much used in Japan. *Asarum canadensis* of North America, called Wild or Indian Ginger, is sometimes used as a substitute for true ginger.

Ginkgo or **Maidenhair Tree** (*Ginkgo biloba*). The only living representative of a geologically important group of gymnosperms, long cultivated for ornament and only recently discovered in the wild state in western China. It is a beautiful tree sometimes 100 feet high, with thickish, veiny deciduous leaves, in contour strongly resembling those of the maidenhair fern.

Ginseng. A name given to two species of Panax of the Ginseng family (*Araliaceae*), the roots of which are highly esteemed as a medicine by the Chinese. The Chinese Ginseng (*Panax ginseng*) is a perennial herb one to two feet high, cultivated in China and Korea. The American Ginseng (*P. quinquefolium*) grows from the Mississippi river eastward. On account of the great demand for the root in China, where it commands a high price, numerous attempts have been made to establish it profitably in cultivation in the United States, but so far without marked success.

Gladiolus. A genus of the Iris family (*Iridaceae*), and largely native of South Africa. Most of the species have flowers of great beauty, some of them being among the finest ornaments for borders and greenhouses.

Golden-rod (*Solidago*). A large genus of the Composite family, closely related to the aster, and containing upwards of 75 species, most of which are North American, some 50 different gelden-rods occurring in the eastern United States. On account of its abundance, wide distribution, and richness of color the golden-rod has been called the national flower.

Grasses (*Gramineae*). An immense well-defined family of monocotyledonous plants, consisting of some 3,500 species, universally diffused and abundant, forming a very considerable portion of the vegetation of most regions and including the most valuable plants used by man. Grasses are mostly herbaceous though a few, like the bamboo, are woody; usually with round or slightly flattened stems, solid at the joints; possessing alternate leaves, with tubular sheaths having free overlapping edges, and a ligule on the side opposite to the sheath; and the grain (commonly called the seed but in reality the fruit) grooved on one side, with the embryo on the outside of the starchy perisperm; being thus distinguished from their nearest very numerous, but comparatively valueless relatives, the sedges, which have solid, often angular, stems, and leaves with tubular, closed sheaths, lacking ligules and with the embryo within the perisperm.

In cool temperate and cold regions the true stems of perennial grasses usually grow in an interlacing protective network below the surface of the soil, forming a more or less dense turf or sod from which are sent up annual growths or culms, commonly but inaccurately called stems. In the tropics perennial grasses grow individually erect, similarly to annual species; consequently there is no true turf in hot countries and only partial turf in warm temperate regions—it being difficult to establish it even by artificial means in the southern United States—and such regions are largely dependent upon annual grasses for pasturage and hay. Grasses are of inestimable value: first, by reason of their starchy, mealy seeds—all of the cereal grains being grasses—and, second, on account of their stems and leaves, which constitute the chief pasturage, fodder, and forage for domestic animals, thus directly and indirectly providing man with the greater part of his food both vegetable and animal.

Greasewood (*Sarcobatus vermiculatus*). A somewhat shrubby and spiny plant, 2 to 10 feet high, of the Goosefoot family, very abundant in alkali soils of the interior plateau region from Montana to Mexico and west to the Sierra Nevada.

Ground Cherry (*Physalis*). A genus of herbs of the Potato family (*Solanaceae*) having an inflated calyx which incloses a small, many-seeded berry. There are nearly 50 species, about 35 occurring in the United States, some of which are sparingly cultivated for the sweetish fruit used in preserving, and one species, the **Chinese Lantern Plant** (*P. Francheti*), for ornament, owing to its showy scarlet or crimson bladder-like calyx.

GINKGO.

Gymnosperms. The smaller of the two groups of seed plants, *Spermatophytes*, distinguished by bearing naked seeds, while the other group, the Angiosperms, bears seeds, which are covered, that is, inclosed in an ovary. Gymnosperms constituted a large part of the forest vegetation of the Coal Measures, but the living representatives of that vast ancient array are few in number. Two groups are extinct, and the existing species, of which there are about 400 (as compared to upwards of 100,000 Angiosperms), belong to four groups: (1) **Coniferae**, the largest and most important of the living forms, containing the valuable timber trees, pine, fir, spruce, cedar, hemlock, redwood, cypress, and yew. (2) **Cycads**, fern-like tropical forms, very limited in distribution, containing some 80 species. (3) **Gnetums**, very remarkable in form, peculiar to arid regions and certain portions of the tropics comprising only about 30 species of Ephedra, Tumboa, and Gnetum. (4) The **Ginkgo**, which is the only living representative of a formerly important group.

Halophytes. Plants which grow naturally in salty or alkaline soils or waters. The greater portion grow in the ocean and along its shores, but there are large areas of halophytic plants in dry regions where salt lakes formerly existed.

Hazelnut (*Corylus*). A genus of shrubs or small trees of the Birch family (*Betulaceae*), of about 7 species, natives of the Northern Hemisphere. The **American Hazelnut** (*C. americana*) is a shrub 3 to 8 feet high, growing in thickets from

New England to Ontario and Dakota and southward. The **Beaked Hazelnut** (*C. rostrata*), a shrub similar to the preceding, is found in the Pacific Coast region and also in the Eastern and Middle States. The **Common Hazel** or **Filbert** (*C. Avellana*), an Old World species with numerous varieties, is extensively cultivated in Europe.

Heath Family (*Ericaceae*). A large, well-marked natural family of dicotyledonous plants, consisting of about 55 genera and 1,050 species, mostly small shrubs, natives of heathy and boggy tracts, especially in subalpine and alpine localities throughout the world. The foliage is usually astringent and in many species of **Rhododendron, Azalea, Andromeda,** and **Kalmia** it is dangerously poisonous. The fruits of **Gaultheria** are edible and also yield the oil of wintergreen. Many species are highly prized in cultivation for their flowers. To this family belong **Blueberries, Huckleberries,** and **Cranberries.**

Heliotrope (*Heliotropium*). A genus of the Borage family (*Boragineae*) containing about 115 species, many of which have fragrant flowers used by perfumers. The **Peruvian Heliotrope** (*H. peruvianum*), a small shrub seldom more than two feet high, with lilac-blue flowers, is in almost universal cultivation for its fragrance, which resembles that of vanilla. The **European Heliotrope** (*H. europaeum*), a native of Europe and naturalized in the United States, has small white or rarely pale red flowers. The **Seaside Heliotrope** (*H. curassavicum*), a white-flowered species, is found in the southern, central, and western part of the United States. Many hybrid heliotropes, which exhibit great variety in size and color of the flowers, are cultivated in flower gardens and greenhouses.

Hemlock Tree (*Tsuga*). A genus of the Pine family (*Coniferae*), containing about seven species, four of which are natives of North America. The **Common Hemlock** (*Tsuga canadensis*) is a large tree sometimes attaining a height of 110 feet, and growing from Nova Scotia to Alabama and west to Wisconsin and Minnesota. The wood is light and soft and is extensively used in building. The bark is largely used in tanning and hemlock oil is distilled from the branches and leaves. There are many cultivated varieties which are very ornamental. The **Carolina Hemlock** (*T. caroliniana*) is a tree attaining a maximum height of 80 feet, and growing in Virginia, North Carolina, and Georgia.

Hickory (*Carya*). A genus of the Walnut family (*Juglandaceae*), containing 10 species, natives, exclusively of North America. Their timber is very heavy, strong, and tough, and is much used in the manufacture of agricultural implements, carriages, and hoops for casks. The fruit is a hard-shelled nut, which in some species has an excellent flavor. The **Pecan** (*C. illinoensis*) is a large, slender tree reaching a maximum height of 170 feet and a diameter of 6 feet. It grows in moist soil, especially along streams, from Indiana to Iowa and Missouri, south to Kentucky and Texas. It is cultivated in the Southern States for its sweet, edible nut, which forms an important article of commerce. The **Shagbark** or **Shellbark Hickory** (*C. ovata*) is a large tree, sometimes 120 feet high, growing in rich soils from Ontario and Minnesota south to Florida, Kansas, and Texas. The nuts form an important article of commerce, though less used than the pecan. The **Whiteheart Hickory** or **Mockernut** (*C. alba*) is a large tree 75 to 100 feet high, growing from Ontario to Florida, occasionally to Missouri and Texas. It has a thick-shelled, edible nut. The **Pignut Hickory** (*C. glabra*), a tree 75 to 100 and sometimes 120 feet high, ranges from Ontario to Florida, westward to Nebraska and Texas. The nuts are bitter and not edible.

Holly (*Ilex*). A genus of trees and shrubs of the Holly family (*Aquifoliaceae*). There are about 160 species, mostly natives of America and about 12 are natives of the United States. The **American Holly** (*I. opaca*), a slow-growing tree, sometimes 50 feet high, is found from Maine to Florida, west to Missouri and Texas; occasionally cultivated as an ornament in parks. The wood is white, hard, and much used in cabinet making, interior finish for houses, and in turnery. The branches are used in large quantities for Christmas decorations. The **Dahoon Holly** (*I. Cassine*) is a small tree about 25 feet high, growing in low woods from southern Virginia to Florida, west to Louisiana. The leaves are sometimes used for tea. The **Common Holly** (*I. Aquifolium*), the only European species, is grown in parks and shrubberies in Great Britain and is occasionally planted in the southern and middle portions of the United States. It sometimes attains a height of 50 feet.

Hollyhock. A plant of the Mallow family (*Malvaceae*), common in gardens throughout the world. It has a tall stem with large flowers which vary exceedingly in color, and double and semi-double varieties are common.

Holy Grass (*Hierochloe borealis*). A sweet smelling grass about a foot high, found in the northern United States, Canada, and northern Europe. It is of little value as forage, but in Iceland it is used for scenting apartments and clothes. Its use in scenting churches gave rise to the name holy grass.

Honey Locust (*Gleditsia triacanthos*). A beautiful thorny tree, 70 to 80 feet in height, belonging to the Pea family (*Leguminosae*), and native of rich valleys from Ontario through the basin of the Mississippi. Sometimes the trunk is almost completely covered with bunches of branching thorns. It derives its name from the sweet, jelly-like pulp that surrounds the seeds, which are borne in conspicuous bean-like pods.

Honeysuckle (*Lonicera*). A genus of the Honeysuckle family (*Caprifoliaceae*), containing about 100 species; erect or twining shrubs, about half of which are in cultivation. The **Trumpet** or **Coral Honeysuckle** (*L. sempervirens*) is a twining green shrub, native of the United States, and often planted on account of its beautiful scented flowers, red on the outside and yellowish within. The **Common Honeysuckle** or **Woodbine** (*L. periclymenum*), an English species with fragrant cream-colored flowers, is frequently planted in shrubberies. The **Italian** or **Perfoliate Honeysuckle** (*L. Caprifolium*), a native of Europe and naturalized in the United States, is very similar to the English honeysuckle. The **Japanese Honeysuckle** (*L. japonica*) is common in the eastern United States, having escaped from cultivation.

Horehound (*Marrubium*). A genus of the Mint family (*Labiatae*). The **White Horehound** (*M. vulgare*) is much used in medicine. The name **Black** or **Fetid Horehound** is applied to *Ballota nigra*, another plant of the Mint family, closely resembling the white horehound and having similar medicinal properties. Both are natives of Europe and now widely naturalized in the United States, especially the white horehound.

Hornbeam (*Carpinus*). A genus of the Birch family (*Betulaceae*), containing about 12 species. The **Common Hornbeam** (*C. Betulus*) is a beautiful tree 60 to 100 feet high, very frequent in many parts of Europe. The wood is white, hard, and strong, and is much used by carpenters and wheelwrights. The **American Hornbeam, Blue Beech,** or **Water Beech** (*C. caroliniana*) is a small tree 35 to 40 feet high which grows from Quebec to Florida and west to Minnesota and Texas. The wood is very hard and heavy and is one of the toughest woods of the northern states. The **Hop Hornbeam** (*Ostrya virginiana*) has much the same habit, range, and properties.

Horse-Chestnut (*Aesculus*). A genus of the Buckeye family (*Hippocastanaceae*), containing about 11 species, natives of North America and Asia. The seeds are large and somewhat resemble chestnuts. The **Common Horse-chestnut** (*A. Hippocastanum*) is a large tree, sometimes 100 feet high, native of Asia and escaped from cultivation in the eastern United States. It is largely planted as an ornamental tree in all countries with temperate climates. The **Ohio** or **Fetid Buckeye** (*A. glabra*) is a tree reaching a height of about 50 feet, growing from Pennsylvania to Alabama, west to Michigan and Oklahoma. The wood is used for making artificial limbs and wooden ware. The **Sweet** or **Big Buckeye** (*A. octandra*) is a large tree 80 to 90 feet high, growing from Pennsylvania to Georgia, west to Iowa and Texas, and often planted as an ornamental tree. The **California Buckeye** (*A. californica*) is a small tree 30 to 40 feet high, native of California, sparingly planted for ornament.

Horsetails (called also Scouring Rushes). An order and family of pteridophytes, ranking next to the ferns, now consisting of the single genus Equisetum, containing about 25 species of world-wide distribution in wet places, several occurring in the United States. They range in height from a few inches to 12 or 15 feet, and outwardly resemble certain gymnosperms, but are entirely different from them in structure as well as from all other pteridophytes. Some contain so much silex that a polishing powder is made from the ashes of the stems. The fossil **Calamites** appears to have been a giant horsetail form of the Carboniferous Age.

COMMON HORSETAIL.
Equisetum arvense.

Huckleberry. A name properly applied to the genus *Gaylussacia*, but (especially westward) indiscriminately given to several species of *Vaccinium*, growing in the northern regions of Europe and America. The species range in height from a few inches to ten feet, and the berries vary greatly in form and color from one eighth to five eighths of an inch in diameter, and from black to blue, and white, and one species is red. Some are called **Blueberries** and others have various local names. None has yet been successfully cultivated, though large quantities of fruit from wild plants are marketed.

Hydrangea. A genus of about 25 species of ornamental shrubs of the Saxifrage family (*Saxifragaceae*), natives of North and South America, China, and Japan. The flowers are small and white, pink, or bluish in color. *Hydrangea Hortensia*, a dwarf variety, is extensively grown in greenhouses.

Hyssop (*Hyssopus officinalis*). An evergreen plant of the Mint family (*Labiatae*), with beautiful blue flowers. It is cultivated for its aromatic leaves, young shoots, and roots, which are used in medicine and for seasoning.

Ice Plant (*Mesembryanthemum crystallinum*). A tender greenhouse herb, native of Africa and southern Europe, remarkable for the glistening bladder-shaped hairs with which its surface is covered, and which sparkle in the sun like granules of ice.

Immortelle. A name applied to various species of *Helichrysum*, especially *H. arenarium*, grown extensively in France, which retain their form and to a considerable extent their color for a long time after gathering. Widely used in Europe and America for funeral decorations. (See EVERLASTING.)

Ipecacuanha (*Cephaelis ipecacuanha*). The name applied to a shrubby plant of the Madder family (*Rubiaceae*) growing in Brazilian forests, the roots of which are much used in medicine.

Ipomoea. A genus of the Morning Glory family (*Convolvulaceae*) containing about 400 species, mostly twining or trailing herbs. Many are cultivated for their beautiful flowers, as the morning glory and moonflowers; others for their thick fleshy roots, as the well-known sweet potato (*I. batatas*) and jalap (*I. purga*), much used in medicine. The **Cypress Vine** (*I. Quamoclit*), native of tropical America but now very common in the southern United States, has beautiful flowers and foliage. The **Common Morning Glory** (*I. purpurea*) is a native of Mexico but has escaped from gardens, becoming a weed in many parts of the United States. The **Moonflowers** are derived from *I. Bona-nox* and *I. grandiflora*. The flowers are pure white, striped with green and very fragrant. The **Wild Potato** (*I. pandurata*) is a troublesome weed, difficult to exterminate on account of its huge roots. *I. fastigiata* and *I. leptophylla*, both growing in the western United States, are noted for their immense roots, specimens of the latter often weighing 100 pounds.

Iris (*Flower-de-Luce, Fleur-de-Lis*). A genus of the Iris family, comprising about 100 species, most numerous in North America and Europe, with conspicuous, beautiful flowers, many of which are in wide cultivation. Others are prized for their roots, **Orris Root** being produced by three European species. The rootstocks in some species are edible. The **Blue Flag** (*I. versicolor*) is common in wet places throughout the Eastern States.

Ivy. A name given to a number of climbing, creeping, and twining plants. The true **English Ivy** (*Hedera Helix*), held in high esteem by the Greeks and Romans, grows throughout a large part of Europe and is cultivated as an ornamental vine for walls and rocks in the United States. It belongs to the Ginseng family, while the **Virginia Creeper** (*Psedera quinquefolia*), often called ivy, belongs to the Grape family, as does the **Japanese** or **Boston Ivy** (*Psedera tricuspidata*); the **Ground Ivy** (*Nepeta Glechoma*) is a mint, and the **Poison Ivy** (*Rhus*) belongs to the Sumach family.

Jack-in-the-Pulpit or **Indian Turnip** (*Arisaema triphyllum*). A common American herb of swampy woodlands belonging to the Arum family (*Araceae*), noted for its acrid bulbs, sometimes used in domestic medicine, and for the peculiar shape of the flower parts, giving rise to the name.

Jasmine (*Jasminium*). A genus of the Olive family (*Oleaceae*) containing about 100 species of shrubs or climbers, natives of the warmer parts of Asia. The **Common Jasmine** (*J. officinale*) is much cultivated in gardens for its fragrant white flowers, which are used in preparing oil of jasmine, a delicate perfume. It blooms from June to October. The **Spanish Jasmine** (*J. grandiflorum*), which has flowers still more fragrant than the common jasmine, is also used in preparing oil of jasmine. The **Italian Yellow Flowered Jasmine** (*J. humile*), a very common greenhouse variety, is hardy in open air as far north as Maryland.

Jessamine or Jasmine, Yellow or Carolina (*Gelsemium sempervirens*). A beautiful climbing vine of the Logania family (*Loganiaceae*), which grows in woods and thickets from Virginia southward. Its yellow funnel-shaped flowers have a fragrance similar to that of true jasmine. The plant is extremely poisonous like many others of the family, which includes the deadly *Strychnos Nux-vomica*, and furnishes a powerful drug used in medicine.

Job's Tears (*Coix Lachryma-Jobi*). A cereal of the East Indies closely related to maize, deriving its name from the hard, shining, tear-like seeds, sometimes used similarly to beads in necklaces and rosaries. While cultivated for food in India, and sometimes made into flour in Spain, where it is now naturalized, it is grown only as a curiosity in the United States.

Judas Tree (*Cercis*). A genus of trees of the Pea family (*Leguminosae*). There are about five species, natives of North America, Europe, and temperate Asia. The **American Judas Tree** or **Red Bud** (*C. canadensis*) is a hardy tree, sometimes reaching a height of 40 to 50 feet. It has beautiful rose colored flowers and is frequently planted as an ornamental tree. The **European Judas Tree** (*C. siliquastrum*) is very similar to the American species.

Juniper (*Juniperus*). A genus of some 30 trees and shrubs of the Pine family, mostly natives of northern cool regions, about 10 occurring in North America. The **Common Juniper** (*J. communis*), in its typical form a small tree 6 to 14 feet high, is more common in its dwarf sprawling forms, 1 to 3 feet in height. The so-called **White Cedar** of the Eastern States and the **Bermuda Cedar**, much prized for timber, are junipers. Many varieties are in cultivation.

Kalmia. A genus of the Heath family (*Ericaceae*). There are about six species, five North American and one Cuban. **The Mountain Laurel** (*K. latifolia*) is a shrub or occasionally a small tree reaching a height of 30 or 40 feet, growing from New Brunswick to Florida and Louisiana. It is narcotic and dangerous, the leaves being poisonous to many animals. The wood is hard and is used in turnery. **The Sheep Laurel** (*K. angustifolia*) is a small shrub growing from Newfoundland to Georgia. It has the same properties as the mountain laurel.

Kelp. A name given to any dark brown or blackish seaweed (*alga*), particularly to those species of *Fucus* and *Laminaria* which are extensively burned on the shores of northern Europe for their ashes, also known as kelp, once the chief and still an important source of iodin.

Knotweed (*Polygonum*). A large, widely diffused genus of herbs of the Buckwheat family, so named on account of the swollen joints of many forms, consisting of some 200 species, about 60 North American, and including many well-known plants, such as the **Knotgrass** or **Doorweed** (*P. aviculare*), the **Smartweed** (*P. hydropiper*), the **Bindweed** (*P. Convolvulus*) and various others. The **Prince's Feather** (*P. orientale*) of gardens was introduced from India.

Lady's Slipper (*Cypripedium*). A genus of the Orchid family (*Orchidaceae*), containing about 40 species and numerous hybrids, some of which have flowers of great beauty, and are easily and extensively cultivated. The **Showy Lady's Slipper** (*C. reginae*) is a plant two feet high, growing from Nova Scotia to Minnesota, southwest to Georgia; it is the most conspicuous North American species. Much more common is the **Large Yellow Lady's Slipper** (*C. pubescens*) frequent in swampy thickets and damp prairies in the eastern United States. The earliest bloomer is the pink **Stemless Lady's Slipper** or **Moccasin Flower** (*C. acaule*) of dry woods, while the **White Lady's Slipper** abounds in bogs.

Larch (*Larix*). A genus of trees of the Pine family (*Coniferae*), containing about nine species. The **American Larch** or **Tamarack** (*L. laricina*) is a slender tree 50 to 60 feet high, growing from Virginia to Hudson Bay. It is often planted as an ornamental tree and the wood is highly valued for shipbuilding and for telegraph poles.

Larkspur (*Delphinium*). A genus of the Crowfoot family (*Ranunculaceae*), containing about 60 species, beautiful plants with large, showy, irregular flowers, many of which are in cultivation. The **Field Larkspur** (*D. consolida*), a popular garden flower, grows in waste places, being naturalized from Europe in southern New Jersey and Pennsylvania and southward. The **Dwarf Larkspur** (*D. tricorne*) with blue or white flowers, grows native from Pennsylvania to Georgia, west to Minnesota and Arkansas. Many beautiful wild larkspurs, several of which are poisonous, particularly to sheep and cattle, grow in the Rocky Mountain region and westward. *D. Staphisagria*, a species cultivated in Europe, is used in medicine.

Laurel (*Laurus*). A genus of the Laurel family (*Lauraceae*). There are but a few species, the principal ones being **the Noble Laurel** or **Victor's Laurel** (*L. nobilis*) **and Sweet Bay** (*L. canariensis*), natives of Asia Minor, but widely diffused in the Mediterranean region. They are often only shrubs 15 feet or less, but sometimes trees 30 to 60 feet high. The leaves and fruit, which are bitter, astringent, and aromatic, were formerly used in medicine. The leaves are sometimes used in seasoning and they yield the volatile oil of sweet bay.

Lavender (*Lavandula*). A genus of plants of the Mint family (*Labiatae*). A few European species are used in medicine and the flowers are used in perfumery.

Leguminosae (Pulse, or Pea family). The second largest natural family of flowering plants, ranking next to the Compositae in number of species, and far above it in economic importance, embracing upwards of 7,000 species, widely distributed but most abundant in the tropics, containing many very useful plants, such as peas, beans, **clovers**, alfalfa, peanut, numerous dye plants: indigo, logwood, Brazil Wood: gum plants: gum Arabic, gum Acacia, and gum Senegal; numerous timber trees and many powerful poisons and drugs: laburnum, Calabar bean (*Physostigma*), cassia, copal, balsam of Copaiba, and balsam of Tolu.

Lichens. A large group of thallophytes, exceedingly interesting in their structure and manner of life and growth. Every lichen is composed of two plants living together in a special nutritive relation known as symbiosis. One is a colorless, thread-like structure, which is a fungus. The other consists of green or blue-green cells, which are algae; the latter possessing chlorophyll create, by photosynthesis, the food used by both plants, while the fruit of lichens is that of a fungus. In this relation the fungus is truly parasitic, as it does nothing in return for its food, and the algae may be considered as plants held in slavery for its benefit. Lichens are usually flat, membranous, or crustaceous, though some are branching

Reindeer Moss.

Old Man's Beard.

LICHENS.

in habit. Nearly all grow on exposed trees, rocks, or barren grounds, and derive their sustenance entirely from the air and water. They are exceedingly abundant in northern regions, continuing to the extreme limit of vegetation. The **Reindeer Moss** (*Cladonia rangiferina*) covers vast tracts in northern Europe and is the chief food of the reindeer. The **Iceland Moss** (*Cetraria islandica*) is a northern lichen used for human food. Numerous species occur in moist temperate regions and some are found in the tropics.

Licorice (*Glycyrrhiza*). A genus of perennial herbs of the Pea family (*Leguminosae*), the roots of which are used in medicine. The **Common Licorice** (*G. glabra*) is cultivated in Europe and to a limited extent in Louisiana and California. The roots are extensively employed by porter brewers, and the concentrated extract from them is the common stick licorice of confectionery stores.

Lilac (*Syringa*). A genus of trees of the Olive family (*Oleaceae*). The **Common Lilac** (*S. vulgaris*), a shrub 6 to 15 feet high, is one of the most widely diffused ornamental shrubs cultivated in North America and Europe. There are many fine single and double flowered varieties. The lilac was introduced into Europe by the Turks, who brought it from west central Asia.

Lily (*Lilium*). A genus of plants of the Lily family (*Liliaceae*), containing about 45 species, natives of the North Temperate zone, many of which are prized for the size and beauty of the flowers. The **White Lily** (*L. candidum*), a native of the Levant, with large white flowers, has long been in cultivation in gardens. The **European Orange Lily** (*L. bulbiferum*), with large, orange-colored flowers, is a well-known and very showy ornament in flower gardens. The **Tiger Lily** (*L. tigrinum*) has a stout stem two to five feet high with beautiful orange-colored

flowers, spotted with purple. It is a native of China but has escaped from cultivation in many parts of the United States.

Lily-of-the-Valley (*Convallaria majalis*), the only representative of the genus, is a highly prized ornamental plant of the Lily family (*Liliaceae*). It grows wild in bushy places and woods in Europe, Asia, and the southern Alleghany region of North America, and is very extensively cultivated. The flowers, which are small, bell-shaped, and sweet scented, are used in France in the manufacture of eau d'or, an esteemed French perfume. All parts, leaves, stem, and flowers, are exceedingly poisonous if eaten, but the acrid, burning taste greatly lessens the danger of poisoning from this plant.

Linden or **Basswood** (*Tilia*). A genus of the Linden family (*Tiliaceae*), containing about 12 species, natives of North America, Europe, and Asia. The lindens produce a soft, straight grained wood which is much used for the interior finish of buildings, cabinet making, sounding boards for pianos, and in the manufacture of paper. The tough inner bark is largely made into mats, cords, and fishing nets, and the flowers of the European species are used in perfumery. Many are planted for shade and ornamental trees. The **American Linden** or **Basswood** (*T. americana*) is a large tree 70 to 125 feet high, growing from New Brunswick to Georgia, west to Nebraska and Texas. The wood is extensively used for making cheap furniture and paper pulp. The **Southern Basswood** or **Whitewood** (*T. pubescens*) is a small tree 40 to 50 feet high, growing from Long Island to Florida, west to Texas. The **White Basswood** or **Bee Tree** (*T. heterophylla*) is a forest tree 45 to 70 feet high, Pennsylvania to Florida, west to Illinois and Tennessee. The **European Linden** or **Lime Tree** (*T. europaea*) is planted as an ornamental tree in parks and streets.

LINDEN OR BASSWOOD.

Live-forever or **Houseleek** (*Sempervivum*). A genus of the Orpine family (*Crassulaceae*), perennial, fleshy herbs, natives of the Old World. The **Common Houseleek** (*S. tectorum*), a native of the Alps but escaped from cultivation in the United States, is frequently planted in gardens. The leaves afford immediate relief for burns and insect bites. Broken portions of the stem and leaves are remarkably tenacious of life, rooting and growing after long exposure, whence the popular name.

Liverworts (*Hepaticae*). The lower of the two groups of bryophytes, the other including the mosses; all are moisture-loving, growing on trees, damp soils, and rocks, or floating on the water, and consist of a green thallus body, attached to its support by holdfasts and root-like absorbing structures. There are three groups: the **Marchantiales**, in which the thallus is a flat green disc, often reproducing by gemmae—the true sex organs being produced on different plants; **Jungermanniales**, the most numerous, the prostrate thallus bearing on either side a row of foliage leaves, so that they strongly resemble mosses, and are called the leafy liverworts. The **Anthocerotales** have a single, undivided thallus but the spore case is elongated, green, grows continuously, and splits into two valve-like portions.

Locust Tree. A name applied to various trees of the Pea family (*Leguminosae*). The **American Locust Tree** or the **False Acacia** (*Robinia pseudacacia*) is a large tree 70 to 80 feet high, growing from Pennsylvania to Georgia and now widely naturalized in most states east to the Rocky Mountains. The wood is compact and hard and is extensively used for shipbuilding and all purposes where great strength and toughness are required.

Lotus. A name applied to several different plants. The lotus tree and fruit of the Libyan lotus eaters encountered by the wandering Ulysses, was the **Jujube** (*Zizyphus*). The **Lotus of the Nile** is a water lily (*Nelumbo*). The name is also applied to a large genus of the Pea family, allied to the clovers.

LIVERWORT. Marchantia.

Lupine (*Lupinus*). A genus of the Pea family (*Leguminosae*), containing about 100 species of herbs and half shrubs, about 70 of which occur in the United States, principally in the Rocky Mountain and Pacific coast regions. Lupines were known to the ancient Greeks, who cultivated them for their seeds and for green manuring. The most important cultivated species are the **White Lupine** (*L. albus*), the **Yellow Lupine** (*L. luteus*), and the **Blue Lupine** (*L. angustifolius*). The **Wild Lupine** (*L. perennis*), a perennial one to two feet in height with purple-blue flowers, grows in sandy soils from Maine and Ontario to Minnesota, Florida, Missouri, and Louisiana. The **Low Lupine** (*L. pusillus*), four to eight inches high, grows on dry plains in Dakota and Kansas and westward.

Madder Family (*Rubiaceae*). One of the largest families of flowering plants, embracing an array of upwards of 350 genera and 5,500 species distributed widely from cool regions north to mountain regions south of the equator, and very abundant in the tropics. Coffee, madder, ipecacuanha, and cinchona or calisaya bark, the source of quinine, are contributed by this family, which also abounds in fragrant, showy flowers, many of which, such as the Gardenias, are favorites in cultivation.

Magnolia. A genus of the Magnolia family (*Magnoliaceae*), containing about 15 species of large-leaved, beautiful trees, natives of eastern North America and Asia. The **Great Leaved Magnolia** or **Large Leaved Cucumber Tree** (*M. macrophylla*) is 30 to 50 feet high, rendered conspicuous by its large white flowers, sometimes a foot in diameter. It grows from Kentucky to Florida, west to Arkansas and Louisiana. The **Umbrella Tree** (*M. tripetala*) is 20 to 40 feet high with large white flowers. Found from Pennsylvania to Alabama, west to Arkansas and Mississippi. The **Cucumber Tree** or **Mountain Magnolia** (*M. acuminata*) is 60 to 90 feet high with greenish yellow flowers, which are less admired than those of other species; grows from New York to Illinois and south to Kentucky and Alabama, west to Arkansas. Often planted as an ornamental tree. The **Laurel Magnolia** or **Sweet Bay** (*M. virginiana*) is a slender tree 50 to 70 feet high with beautiful fragrant flowers; Pennsylvania to Florida, west to Arkansas and Texas.

Mahogany. A name applied to the timber of a number of trees, the most highly esteemed being that of *Swietenia Mahogani*, a large tree, native of the West Indies and tropical South America.

Maidenhair (*Adiantum*). A delicate, graceful fern, with black, shining leaf stalks. Two species occur in the Eastern States, the **Common Maidenhair** (*A. pedatum*) very abundantly, and the **Venus' Hair** (*A. Capillus-Veneris*) more sparingly. There are about 80 species in all, several of which are much prized in cultivation.

Mandrake (*Mandragora*). A genus of plants of the Potato family (*Solanaceae*), natives of Europe, since ancient times superstitiously reputed to possess many evil powers. In the United States the name is applied to the May apple (*Podophyllum*), the rootstock of which is used in medicine.

Mangosteen. A highly prized fruit, said to be the most delicious grown in the tropics, produced by the evergreen tree, *Garcinia mangostana*, of the natural order *Guttiferae*, native of the Molucca Islands but now cultivated in Java and other tropical countries.

Mangrove (*Rhizophora*). A genus of the Mangrove family (*Mangrophoraceae*), containing three species of trees and shrubs, all tropical and natives of coasts, particularly about the mouths of rivers, where they grow in the mud. The seeds grow while still attached to the parent tree, and the young trees are provided with roots and branches when they drop off into the water or mud. The coast and keys of southern Florida abound in mangroves. The fruit of the **Common Mangrove** (*R. Mangle*) is sweet and edible and its juice yields a light wine.

Manna. A sweet substance which exudes from incisions in the stems of the flowering ash (*Fraxinus ornus*) and the round leaved ash (*Fraxinus rotundifolia*), natives of Sicily, used extensively in medicine. See *Tamarisk*.

Maple (*Acer*). A genus of trees of the Maple family (*Aceraceae*), containing nearly 100 species, natives of north temperate regions, especially North America and eastern Asia. The **Sugar Maple** (*A. saccharum*) is a large tree 90 to 120 feet high, growing from Newfoundland to Georgia, west to eastern Nebraska and Kansas. The wood is extensively used in cabinet work and finishing houses. Large quantities of sugar and syrup are made from the sap. The **Silver** or **Soft Maple** (*A. saccharinum*) is a rapid growing tree 100 to 120 feet high, found from New Brunswick to Florida, west to Ontario, Nebraska, and Oklahoma. It is often planted as a shade tree. The **Scarlet** or **Red Maple** (*A. rubrum*) is a large tree reaching a maximum height of 120 feet, and growing in swamps and low ground from New Brunswick to Manitoba, south to Florida and Texas. The close-grained wood is largely used for furniture, and in turnery. The **Oregon Maple** (*A. macrophyllum*) is a beautiful tree 80 to 100 feet high, growing from Alaska to California. It is often planted as an ornamental tree.

Marigold. A name given to several very different flowering plants. The old marigold (*Calendula officinalis*) of the English poets, is a hardy annual with leaves and bright flowers that last nearly throughout the year. The French and African marigolds belong to the genus *Tagetes*, and have yellow to brown flowers of a rank odor. The foregoing belong to the Sunflower family, while the wild marsh marigold, common in wet meadows in Europe and America, belongs to the Crowfoot family.

Marsh Mallow. A name applied to *Althaea officinalis*, a plant of the Mallow family (*Malvaceae*), native of Great Britain and naturalized in the United States. The mucilaginous roots are used in confectionery and in medicine.

Marsh Marigold (*Caltha palustris*). A marsh plant of the Crowfoot family, with striking bright yellow flowers and shining, kidney-shaped leaves, common in America and Europe, often called **Cowslips** in the United States, and sometimes used as a potherb.

May Apple (*Podophyllum peltatum*). A well known perennial woodland plant of the Barberry family (*Berberidaceae*), common throughout the eastern United States except in New England, where rare. The large, fleshy berry is edible though insipid; the roots contain a purgative resin much used in medicine. Sometimes incorrectly called mandrake.

Medlar (*Mespilus*). A genus of trees or shrubs of the Rose family (*Rosaceae*). The **Common Medlar** (*M. germanica*), a small tree, bearing an astringent edible fruit, is a native of and largely cultivated in southern Europe and temperate parts of Asia; seldom seen in America.

Melilot (*Melilotus*). A genus of plants of the Pea family (*Leguminosae*), many species of which are in cultivation for pasturage, hay, and green manuring. The flowers of the **Common Melilot** or **Yellow Sweet Clover** (*M. officinalis*), which is cultivated in the United States, are used in the manufacture of perfumery.

Mesophytes. Plants which grow naturally in medium conditions of soil moisture, being intermediate between xerophytes and hydrophytes, embracing the plants of forests, prairies, meadows, and of most cultivated areas.

MAY APPLE.

Mesquite (*Prosopis*). A genus of trees or shrubs of the Pea family (*Leguminosae*), containing about 16 species, natives of America, Asia, and Africa, three of which grow in the United States. The **Mesquite** (*P. juliflora*) varies from a straggling shrub to a widely-branched tree 50 feet high. It occurs from central Texas to eastern California, and southward to Chile and Argentina. The very heavy wood is used for fuel and fence posts, while the pods and leaves are much eaten by stock. The **Screwpod Mesquite** (*P. pubescens*) is a tree 25 to 30 feet high with similar range and uses, both species being valuable in arid regions.

Mint Family (*Labiatae*). A large, distinctly marked family of dicotyledonous plants, chiefly herbs with square stems and opposite, aromatic leaves, numbering 150 genera and 3,000 species, principally natives of temperate climates. The striking qualities of the mints depend upon the presence of aromatic or fragrant essential oils, making them valuable as stimulants, flavoring herbs, and in perfumery. Of the aromatics peppermint, spearmint, and pennyroyal are best known; lavender and spike also furnish well-known oils, while thyme, marjoram, basil, savory and sage are frequently used. Lavender, patchouli, and rosemary are employed in the manufacture of perfumery. Horehound, ground ivy, balm, and dittany are used as household remedies.

Mistletoe (*Viscum*). A genus of small, mostly tropical and parasitic shrubs of the Mistletoe family (*Loranthaceae*) containing upwards of 400 species. The **Common Mistletoe** (*V. album*), a native of the greater part of Europe, grows on many kinds of trees, particularly the apple and hawthorn. It was intimately connected with many of the superstitions of the ancient Germans and Britons. The **American Mistletoe** (*Phoradendron flavescens*) closely related and very similar, grows upon tupelo, maple, and many other trees from New Jersey to Minnesota southward to Florida and Texas.

Monocotyledons. The smaller of the two primary groups of Angiosperms, distinguished by having only one seed leaf, while the dicotyledons have two seed-leaves. The flower parts are in threes, never in fours or fives, the leaves are usually parallel-veined, and the woody fibers are scattered throughout the stem, never forming a cylinder between the bark and pith as in dicotyledons. The group embraces about 20,000 species, containing the cereals and many other useful plants, prominent families being the grasses, sedges, palms, arums, pond-weeds, irises, lilies, and orchids.

Mountain Ash (*Sorbus*). A genus of small trees of the Rose family (*Rosaceae*), containing about 7 species, natives of the north temperate zone. The **American Mountain Ash** (*S. americana*) is a small tree, sometimes 30 feet high, growing from Newfoundland to Manitoba south to North Carolina and Michigan, and often planted for ornament. The fruit is a small astringent red berry, frequently used in home remedies.

Mosses (*Musci*). The higher of the two groups of bryophytes, the other including the liverworts; all small green plants with structures resembling and corresponding to the true roots, stems and leaves of higher plants, adapted to a great variety of situations from semi-aquatic to semi-arid, most abundant in cool temperate and arctic regions. There are two main groups: the **Sphagnum** forms, the peat or bog mosses, and the **Bryum** forms, or true mosses. While the peat is formed from accumulations of bog mosses, the group on the whole is of little value to man. (See BRYOPHYTES, LIVERWORTS.)

Mushrooms. Edible fungi, particularly agarics and morels. The **Common Mushroom** (*Agaricus campestris*), one of more than 1,000 species of *Agaricus*, grows in fields and pastures, and is extensively cultivated. The **Morel** (*Morchella esculenta*) common in America and Europe is highly prized. There are many other edible fungi, among them the ink cap, parasol, and fairy ring fungus, the chanterelle, and several puff balls. Umbrella-shaped fungi are popularly called **Toadstools**, but the prevalent idea that all such are poisonous is wrong. There are, however, several extremely poisonous fungi, some of which rather closely resemble edible species, so that the inexperienced should never eat them indiscriminately.

Morel.

Common Mushroom.

MUSHROOMS.

Mustard Family (*Cruciferae*). A well defined, natural group of dicotyledonous plants, comprising 185 genera and 1,500 species, natives of cool and temperate regions, occurring only on mountains in the tropics; all herbs with a pungent, watery juice and cruciform flowers, many of which have risen to economic rank in cultivation, such as the turnip, cabbage, rape, sea kale, radish, horseradish, garden cress, water cress, mustards, scurvy grass, and wood. The **Stock** or **Gillyflower**, **Wall Flower**, **Candytuft**, and **Sweet Alyssum** are cultivated for their flowers.

Narcissus. A genus of the Amaryllis family (*Amaryllidaceae*), with narrow leaves and usually white or yellow flowers. The species are native of Europe, Asia, and Africa, and many are cultivated in gardens for their beautiful and often highly-scented flowers. The **Poet's Narcissus** (*N. poeticus*) with white fragrant flowers is one of the most popular. The **Jonquil** (*N. Jonquilla*) bears fragrant golden yellow flowers which are employed in the manufacture of perfumes.

Nettle Family (*Urticaceae*). A group of dicotyledonous plants of wide distribution, but most numerous in the tropics, chiefly herbs or shrubs, a number of which have important economic uses. Here belong the **Hop**, **Hemp**, and **China Grass**, which are highly valuable, while related species furnish fiber and cordage and also the narcotic resin called Indian hemp. The true nettles (*Urtica*) are armed with stinging hairs containing a very irritant juice. Interpreted in a broad sense the family includes the **Elm**, **Hackberry**, **Osage Orange**, and **Mulberry**.

Oak (*Quercus*). A genus of about 200 trees and shrubs, most numerous in temperate climates, though some are tropical; fully 50 species occurring in the United States, with many intermediate forms or hybrids. The **European Oak** (*Q. robur*), the most important Old World timber oak, is sparingly planted in the United States. The **White Oak** (*Q. alba*), the most valuable American timber oak, occurs from Texas to Minnesota and eastward. With similar range, but less valuable for timber, are **Bur Oak** or **Mossy Cup Oak** (*Q. macrocarpa*), the **Scarlet Oak** (*Q. coccinea*), and the **Red Oak** (*Q. rubra*). The **Cow Oak** or **Basket Oak** (*Q. Michauxii*) and the **Yellow** or **Chestnut Oak** (*Q. acuminata*) produce edible acorns. The bark of the **Quercitron** (*Q. velutina*) is made use of in tanning, as a yellow dye, quercitron, and in medicine. The **Live Oak** (*Q. virens*) once famous for shipbuilding, is a sturdy species with entire evergreen leaves occurring in the Southern States and Cuba, and there are live oaks in the Pacific states.

Orchids (*Orchidaceae*). An immense family of monocotyledonous plants, numbering about 400 genera and 5,000 species, all herbs, occurring throughout the world except in very cold or dry regions, and reaching their greatest development and profusion in the tropics. It is a well-marked group, usually with showy flowers of strikingly irregular form and peculiar structure. In temperate climates orchids are terrestrial, but in the tropics many species are epiphytic. While a vast number are highly prized in hothouse cultivation, few have any known value, the **Vanilla** (*Vanilla planifolia*) used for flavoring being the most important.

Osage Orange or Bow Wood (*Maclura pomifera*). A tree of the Nettle family (*Urticaceae*), native of the southwestern United States, attaining a height of 20 to 60 feet, extensively planted for hedges, while the wood, of orange color and of great hardness, is valuable for fence posts, mallet heads, and to some extent in cabinet work.

Livingstonia. PALMS. Phoenix.

Palm Family (*Palmaceae*). A very distinct natural family of monocotyledonous trees and shrubs, chiefly tropical and subtropical, embracing about 1,000 species which are second in economic importance only to the cereal grasses. Palms are usually unbranched trees, with large terminal clusters of long stalked leaves. The flowers are often exceedingly numerous, a date palm bearing 12,000 in a cluster, while in a species of Alphonsia over 200,000 flowers have been counted in a single spadix, or 600,000 in one plant! Sugar, starch, oil, wax, resins, and spirituous liquors are obtained from their juices; many

yield esteemed fruits, others produce fiber for clothing, cordage, and also valuable timber. Among the most important are the date palm, cocoanut palm, arecanut palm, oil palm, cabbage palm, vegetable ivory, and coquilla nut palms.

Pampas Grass (*Gynerium argenteum*). A very tall grass with a silvery white silky panicle, common in Brazil and Argentina, now introduced into the United States and other countries as an ornamental plant.

Parasitic Plants. True plant parasites live partly or wholly within other plants or animals and derive their sustenance wholly therefrom, in contradistinction to epiphytes or perching plants, which are attached to other plants merely for mechanical support. A vast number of fungi are parasitic upon other plants, such as rusts smuts, mildews, blights, and leaf curl. Certain fungi (*Trichophyton*) grow in the human skin, producing ringworm, barber's itch, and similar diseases, while bacteria are constantly present in the skin and digestive tract of many animals. The Dodder and Rafflesia are examples of seed plants which are true parasites. Many other seed plants are so-called half parasites, retaining their green color but deriving at least a part of their food from other living plants. Half parasites commonly blacken in drying.

Parsley Family (*Umbelliferae*). Also called Carrot family. A large, distinct group of herbs, comprising 170 genera and 1,600 species, nearly all natives of north temperate regions, usually with fistulous stems, flowers in umbels, acro-narcotic juices, and aromatic seeds. The vegetables, celery, parsley, parsnip, carrot; and the flavoring plants, caraway, dill, coriander, anise, and cummin belong here. The medicinal gum-resins, asafoetida, ammoniacum, opoponax, and galbanum, are derived from species of this family, which also contains a number of virulently poisonous plants, such as the hemlock (*Conium*) and water hemlock (*Cicuta*).

PASSION FLOWER.

Passion Flower (*Passiflora*). A genus of climbing vines of the Passion Flower family (*Passifloraceae*), containing about 250 species natives mostly of tropical America. Twelve are natives of the United States. Many species are cultivated in greenhouses for their large, beautiful flowers. The Passio. Flower or Passion Vine (*P. incarnata*), with showy, white flowers and an edible fruit, grows from Virginia to Missouri, south to Florida and Oklahoma. The Yellow Passion Flower (*P. lutea*), with greenish yellow flowers, is found in thickets from Pennsylvania and Missouri southward. *Passiflora caerulea*, a native of Peru and Brazil, is extensively grown for its white, pale blue, or rose-colored flowers.

Perennials. Plants whose duration of life is more than two years, contrasted with annuals and biennials.

Petunia. A genus of plants of the Potato family (*Solanaceae*). There are about 12 species, natives of South America and introduced into other countries for their beautiful flowers. The Violet Petunia (*P. violacea*) is a trailing plant with purple-violet flowers, a native of Brazil and escaped from cultivation in southern New York and Pennsylvania. There are many varieties, including single and double flowered forms with innumerable variations in color. The common garden petunias are mostly hybrids of *P. violacea* and the White Petunia (*P. axillaris*).

Phlox. A genus of the Polemonium family, containing 40 species, well distributed in North America, many of which are prized in cultivation for their showy flowers, hardiness, and ease of growth.

Pine (*Pinus*). A genus of trees of the Pine family (*Coniferae*), containing about 80 species, nearly two thirds of which occur in the northern part of the western hemisphere. The White Pine (*P. Strobus*), a tree 75 to 100 feet high, is one of the most important timber trees of North America. It extends from Newfoundland to Minnesota, south to Georgia. The wood is soft, straight grained, and is much used for building and cabinet work. The Yellow Pine or Long-leaved Pine (*P. palustris*) is a large tree, sometimes attaining a height of 100 feet and growing in sandy soil from Virginia to Florida and Texas. The wood is heavier and stronger than that of any other pine, and is used in all kinds of building. The tree is the chief source of turpentine, tar, resin, etc. The Western Yellow Pine or Bull Pine (*P. ponderosa*) is a large tree, sometimes 150 to 250 feet high and 5 to 8 feet in diameter. It is found from the Rocky Mountains to the Pacific coast and is one of the most important lumber trees of the West. The Sugar Pine (*P. Lambertiana*), which grows in Oregon and California, is one of the largest trees of the genus, attaining a height of 150 to 300 feet and a diameter of more than 10 feet. The timber is strong, straight grained, and is much used for a finishing lumber and cabinet work.

Pink (*Dianthus*). A genus of plants of the Pink family (*Caryophyllaceae*), including the Carnation, Sweet William, etc., chiefly natives of Europe and Asia. Some of the species have long been in cultivation on account of their beautiful and often fragrant flowers. There are many varieties, including single and double forms of many different colors.

Pitcher Plants (*Sarracenia*). Curious insectivorous bog plants, not rare in the Atlantic states. The leaves, which are urn-shaped or tubular, secrete a liquid in which insects are caught and decomposed. The most widely distributed species (*S. purpurea*) is the Sidesaddle Flower or Huntsman's Cup. The pitcher plants of greenhouse cultivation (*Nepenthes*) are herbs or half shrubby plants, natives of China, India, and Malaysia. Some of the species have their leaves prolonged into a kind of tendril, which ends in a cup or pitcher-like organ. Many species are commonly grown in hothouses.

PITCHER PLANT.
Sarracenia purpurea.

Plane Tree (*Platanus*). The only genus of the Plane Tree family (*Platanaceae*), containing 6 or 7 species, natives of the north temperate zone. The Sycamore, Plane Tree, or Buttonwood (*P.*

occidentalis) is a large tree, reaching a maximum height of 130 feet with a trunk diameter of 14 feet. It is found from Quebec to Georgia, west to Manitoba and Kansas. The wood is a favorite material for tobacco boxes and butcher blocks and is largely used for furniture. There are two other species in the United States; the **California Sycamore** (*R. racemosa*) and the **Arizona Sycamore** (*P. Wrightii*), both large trees.

Plum, Wild. Small trees or shrubs belonging to the genus *Prunus*. The **Wild Yellow** or **Red Plum** (*Prunus americana*) is a small tree reaching a maximum height of 35 feet, found from New York to Montana, Florida, and Colorado. It is often cultivated in the Eastern States as an ornamental or fruit tree. The **Chickasaw Plum** (*P. angustifolia*) is a small tree 15 to 20 feet high high, growing in dry soil from New York to Florida, west to the Rocky Mountains. The fruit is often sold in the markets. A number of varieties are cultivated as fruit trees. The **Wild Goose Plum** (*P. hortulana*) is a tree 20 to 30 feet high, growing on low banks of streams from Maryland and Virginia to southeastern Kansas and Texas. The **Canada Plum** (*P. nigra*), a tree reaching a height of 20 to 30 feet, grows near streams from Newfoundland to Manitoba, Massachusetts, and Wisconsin. Often cultivated in the Northern States and Canada as a fruit tree or for the beauty of its flowers.

Poplar (*Populus*). A genus of about 20 trees of the Willow family (*Salicaceae*), natives of temperate and cold regions, persisting to the limit of trees on mountains and in high latitudes. Half of the species occur in the United States, all of soft wood and rapid growth. The **American Aspen** or **Quaking Asp** (*P. tremuloides*), usually a small tree, occurring almost throughout the continent, has the widest range of any North American tree. The **Cottonwood** (*P. deltoides*), common along streams from the Rocky Mountains eastward, sometimes attaining 150 feet in height and a diameter of 7 feet, is much planted for ornament. The **Balsam Poplar** (*P. balsamifera*), sometimes 100 feet high, occurs northward and in Siberia. The **European White Poplar** (*P. alba*) and **Black Poplar** (*P. nigra*), much-planted ornamentals, have become naturalized in the Eastern States. The **Lombardy Poplar** (*P. nigra, var. italica*) is very widely grown in Asia, Europe, and America.

Poppy Family (*Papaveraceae*). A small group of dicotyledonous plants, containing about 25 genera and 200 species, of world-wide distribution, but most numerous in Europe, consisting of herbs with a milky or colored juice, which is generally powerfully-narcotic, and sometimes acrid. The widely-cultivated opium poppy is the most important. In the United States the **Bloodroot** (*Sanguinaria*) is common in the eastern portion. **Argemone** is a characteristic genus of the Rocky Mountain regions; the **California Poppy** (*Eschscholtzia*) is a striking representative on the Pacific coast, while the poisonous **Celandine** (*Chelidonium majus*) of Europe has been naturalized in many localities.

Potato Family (*Solanaceae*). Also called Nightshade family. An important dicotyledonous family, mostly herbs, numbering about 70 genera and 1,600 species, most abundant in the tropics, many of which are powerful poisons while others are of the highest usefulness. Among the poisonous species are the **Deadly Nightshade** (*Atropa Belladonna*), **Black Nightshade** (*Solanum nigrum*), the **Bittersweet** or **Woody Nightshade** (*Solanum Dulcamara*), the **Jimson Weed** or **Thorn Apple** (*Datura*), **Henbane** (*Hyoscyamus*), the **Mandrake** (*Mandragora*), **Tobacco** (*Nicotiana*), and even the leaves and stems of the **Potato**. The most valuable economic plants are the potato, tomato, eggplant, and red pepper.

Primrose (*Primula*). A genus of plants of the Primrose family (*Primulaceae*), natives of Europe and Asia. Some of the species are extensively cultivated on account of their fine color and delicate beauty. The **Common Primrose** (*P. vulgaris*), a native of Europe, is the parent of many cultivated varieties.

Quaking Grass (*Briza*). A small genus of European grasses with slender stalks and large spikelets, which quake in the slightest wind. Several species, naturalized in the United States, are considered valuable pasture grasses for dry situations.

Quassia. A genus of trees and shrubs of the Quassia family (*Simarubaceae*). *Quassia amara*, the wood and root of which are extremely bitter, was formerly much used in medicine.

Quercitron. A species of oak and also the dye obtained from it. See OAK.

Rafflesia. A small genus of extraordinary parasitic plants of the Rafflesia family (*Rafflesiaceae*). They attack grapevines, and the only visible part consists of a flower. *Rafflesia Arnoldi*, a native of Sumatra, has a flower three feet in diameter. The flower bud is about as large as a cabbage and bursts directly from the woody stem of the host plant. The flower, which is of livid color and mottled in the manner of decaying flesh, has a strong and fetid odor which attracts carrion insects by which pollen is carried from flower to flower.

Resin Weed or **Compass Plant** (*Silphium laciniatum*). A large plant, native of the United States, with a very resinous stem. It grows on prairies and has nearly vertical root leaves, the edges of a majority of which when growing in places equally exposed to the sunlight on all sides, point nearly north and south, whence the name compass plant. This property of the leaves is mentioned in Longfellow's Hiawatha.

RESURRECTION PLANT.
Anastatica hierochuntica.

Resurrection Plant (*Anastatica hierochuntica*). A small Arabian herb, the branches of which roll up when dry so that the plant becomes almost globular, but which expand again when moist. The name is also applied to several species of Selaginella; small flowerless plants which when dry close up so as to resemble a bird's nest, but revive again in wet weather. While in their contracted, globular state these plants are often blown about the sterile plains where they grow, thus widely scattering their seeds or spores.

Rose (*Rosa*). A genus of usually more or less climbing or trailing, shrubby plants of the Rose family, containing many of the most beautiful and highly prized flowers. There are numerous wild species, exceedingly variable and difficult to distinguish, some botanists recognizing only 30 or 40, others nearly 200, all natives of north temperate regions. Centuries of cultivation of various species in Asia, Europe, and America have produced innumerable varieties.

Rose Family (*Rosaceae*). An important family of dicotyledons, comprising some 90 genera and 1,500 species of herbs, shrubs, and trees, widely diffused throughout the world, and embracing a number of the most highly-prized fruits in cultivation as well as many beautiful flowering plants and ornamental shrubs and trees. Among the fruits of the group are the almond, peach, nectarine, apricot, plum, pear, apple, quince, raspberry, blackberry, and

strawberry. Among the ornamentals are the mountain ash, hawthorns, medlar, cherry laurel, spiraea, flowering almond, and numerous roses.

Russian Thistle (*Salsola kali, var. tenuifolia*). An annual herb of the Goosefoot family (*Chenopodiaceae*), naturalized from northern Europe, which has become a very troublesome weed in the United States and Canada, particularly in the wheat-growing regions of the northwest. It is not a true thistle, but the mature leaves are tipped with short, sharp spines.

Sage Brush. Certain shrubby species of *Artemisia* of the Composite family, with silvery or hoary leaves containing a bitter juice. The characteristic **Sage Brush** or **Sage Wood** (*A. tridentata*) of the plains from Montana to Colorado and westward, immensely abundant over vast areas at 4,000 to 6,000 feet altitude, usually grows from two to six feet high, though it sometimes exceeds 12 feet.

Salad Plants. Vegetables whose green parts are served uncooked for human food, as celery, lettuce, chicory, endive, and water cress.

Sandalwood (*Santalum album*). A small tree, native of India and the Indian archipelago; producing a compact, fine-grained wood which is used for making small ornamental articles and possesses a remarkable fragrance which persists long after it has become thoroughly seasoned.

Sassafras. A genus of trees of the Laurel family (*Lauraceae*), containing but two known species, one in North America and the other in China. The **Sassafras** or **Ague Tree** (*Sassafras variifolium*) is a large tree 80 to 90 feet high, found from Canada to Florida west to Kansas and Texas. Oil of sassafras, used for flavoring confectionery, is distilled from the roots, and the bark is frequently employed in household medicine.

Screw Pine (*Pandanus*). A genus of the Screw Pine family of southern Asia and the South Sea Islands, resembling huge pineapple plants, having long sharp-pointed, spiny-edged leaves arranged in a three-ranked spiral, whence the name, and many have remarkable prop roots. Several species are of great utility, yielding fiber, fodder, perfumes, and food products.

SCREW PINE.

Sedge Family (*Cyperaceae*). A large, distinct, natural group of monocotyledons, numbering some 65 genera and 3,000 species of grass-like or rush-like herbs with solid, often three-angled stems, and fibrous roots, universally diffused in marshes and along streams throughout the world. Sedges are devoid of active principles, are far less nutritious than grasses, yield no seeds or grains, and are consequently of comparatively little value. The tuberous rootstocks of two species of Cyperus are used for food, and another yields an aromatic oil. The stems of some species are woven into mats and hats. The cotton grass is used to stuff cushions, while species of Carex furnish a substitute for sarsaparilla. The **Papyrus** (*Papyrus antiquorum*) is celebrated for having furnished a sort of paper made by the ancient Egyptians from its pith.

Sensitive Plant. The common name given to certain species of Mimosa of the Pea family, whose finely divided leaves display remarkable irritability. When touched the leaflets close in pairs; upon more vigorous handling near-by leaflets also close and finally the leafstalk drops and the whole leaf appears withered. After a brief interval the leafstalk rises and the leaflets unfold again. The **Sensitive Brier** (*Schrankia*) of the Southern States also possesses this peculiar property.

Service Berry. The common name of several distinctly different trees of the Rose family (*Rosaceae*). The American **Service Berry** or **Shad Bush** (*Amelanchier canadensis*) is a small tree which bears a sweet red or purple berry. The **European Service Berry** (*Pyrus Sorbus*), a tree sometimes 50 feet high, is cultivated for its small pear-shaped fruit.

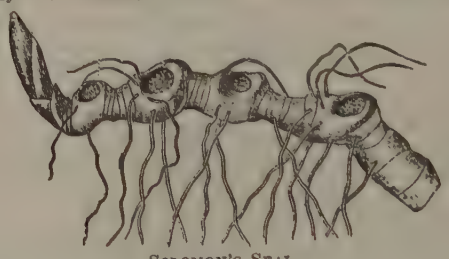
Shamrock. The **Hop Clover** (*Trifolium*) is usually considered the true shamrock or national badge of Ireland, though the **White** or **Small-Leaved Clover** (*T. repens*), the **Bird's Foot Clover** (*Lotus corniculatus*), and the **Wood Sorrel** (*Oxalis*) are also associated with the national emblem.

Shepherd's Purse (*Capsella Bursa-pastoris*). An annual plant of the Mustard family (*Cruciferae*), native of the Old World, but now cosmopolitan by naturalization, bearing small white flowers and a pouch-like pod; often a troublesome weed.

Skunk Cabbage (*Symplocarpos foetidus*). A North American plant of the Arum family (*Araceae*) which emits a fetid odor, especially when bruised. Common in wooded marshes in the eastern United States, where it is one of the earliest flowers to appear in spring.

Smilax. A genus of the Lily family (*Liliaceae*), containing about 200 species, usually climbing vines, most abundant in tropical America and Asia. About 17 species are natives of the United States. The **Carrion-flower** (*S. herbacea*) is found in woods and thickets from the Atlantic to Minnesota and Texas. The **Long-stalked Greenbrier** (*S. pseudo-china*), growing from Maryland to Nebraska, south to Florida and Texas, has tuberous rootstocks sometimes used in medicine. The roots of a number of species, particularly *Smilax medica* and *S. papyracea* of Central and South America, yield sarsaparilla. The delicate twiner called **Smilax** by florists is a South African plant (*Myrsiphyllum*).

Snapdragon (*Antirrhinum*). A genus of plants of the Figwort family (*Scrophulariaceae*). The flowers have a peculiar corolla, the lower lip of which, if parted, shuts with a spring or snap. The **Great Snapdragon** (*A. majus*), a favorite plant with many fine varieties, is the most frequently cultivated.



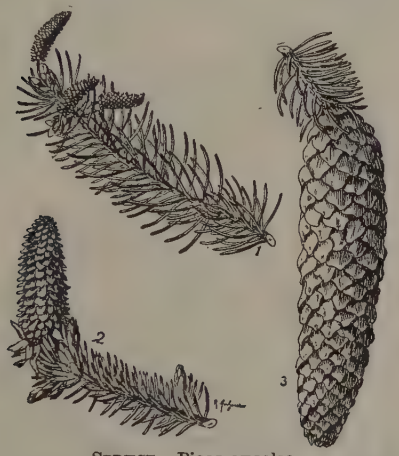
SOLOMON'S SEAL.

Solomon's Seal (*Polygonatum*). Perennial herbs of the Lily family, so-called because the scar left on the creeping rootstock after the death of each annual growth was thought to resemble the imprint of a seal.

Sorrel. A name given to several species of *Rumex* of the Buckwheat family, which have sour leaves, sparingly cultivated, chiefly in Europe for use in soups and sauces. The **Sheep Sor-**

rel (*R. Acetosella*) widely naturalized in America is frequently a very troublesome weed in meadows and pastures in the Eastern States. The **Wood Sorrel** (*Oxalis*) is often called **Sheep Sorrel.**

Spruce (*Picea*). A genus of trees of the Pine family (*Pinaceae*), containing about 18 species, native of the Northern Hemisphere. The **White Spruce** (*P. canadensis*) is a slender tree 50 to 150 feet high, found from New York to British Columbia, north to Newfoundland, Hudson Bay, and Alaska. The wood is light and soft and is largely used for construction and for paper pulp. It also yields some of the spruce gum of commerce. The **Black Spruce** (*P. mariana*) is a tree 20 to 30 and very rarely 100 feet high; growing from Newfoundland and Hudson Bay and Alberta south to North Carolina, Michigan, and Minnesota. It is largely used for wood pulp and paper. The **Red Spruce** (*P. rubra*), a tree 70 to 80 feet high growing from Nova Scotia to Virginia, is largely manufactured into lumber. The **Tideland** or **Sitka Spruce** (*P. sitchensis*) is a large tree usually 100 feet, sometimes 200 feet high, occurring abundantly from northern California to Alaska. Its valuable timber is used for all kinds of building purposes. The **Norway Spruce** (*P. Abies*) is largely planted in the Eastern States as an ornamental tree.



SPRUCE. Picea excelsa.
1. Male flowers. 2. Female flowers. 3. Fruiting cone.

Spurge Family (*Euphorbiaceae*). One of the largest families of dicotyledonous flowering plants, embracing over 200 genera and 4,000 species; herbs, shrubs, and trees, very widely diffused throughout the world, but notably numerous in tropical America. Nearly all possess a milky juice which contains more or less caoutchouc, while the watery sap is generally acrid, purgative, emetic, or poisonous. The most important economic plants of the family are cassava, the source of tapioca, the castor-oil plant, the tallow tree of China, the African teak tree, and the Brazilian caoutchouc tree, and noteworthy medicinal contributions are croton, cascarilla, and mercurialis.

Sumach (*Rhus*). A genus of about 100 species of trees and shrubs, widely distributed except in cold regions. About 15 occur in the United States, among them **Staghorn Sumach** (*R. typhina*) sometimes 30 feet high, and the much smaller **Smooth Sumach** (*R. glabra*) and **Dwarf Sumach** (*R. Copallina*) of the Eastern States; also the dangerous species: **Poison Sumach** or **Dogwood** (*R. Vernix*), **Poison Ivy** (*R. Toxicodendron*), and **Poison Oak** (*R. quercifolia*) of the East and South, and the **Western Poison Oak** (*R. diversiloba*) of the Pacific coast. Foreign species yield valuable dyestuffs, such as fustic, tanning materials, and varnish. Here also belongs the **Smoke Tree** (*R. Cotinus*), frequent in cultivation.

Sumach Family (*Anacardiaceae*). An important group of trees and shrubs, mostly tropical, numbering 50 genera and 400 species, characterized by a resinous or milky-acrid juice and dotless, alternate leaves. Here belong the **Cashew Nut** (*Anacardium*), the **Pistachio Nut** (*Pistachia vera*), **Mango** (*Mangifera*), **Hog Plum** (*Spondias*), and other valued fruits, as well as the **Poison Sumachs** and the astringent **Sumachs** used in tanning. Mastic and Chian Turpentine are obtained from species of *Pistachia*. A number are ornamental plants, such as the beautiful **Pepper Tree** (*Schinus*) now much planted in California.

Sundew (*Drosera*). A genus of inconspicuous but beautiful plants of the Sundew family (*Droseraceae*). Several species are natives of American bogs. The leaves are clothed with glandular hairs which secrete a viscid and digestive fluid that entraps and dissolves insects.

Sunflower (*Helianthus*). A genus of the *Compositae* containing about 60 species, all American, and nearly all occurring in the United States; large, erect, mostly perennial herbs, bearing showy flowers with brown or purple discs and conspicuous yellow rays. The **Common Sunflower** (*H. annuus*), native of the great plains, has become much larger in cultivation, sometimes growing 20 feet high with huge, flowering heads one to two feet in diameter.

Sweet Pea (*Lathyrus odoratus*). An ancient garden flower of the Pea family, which has been greatly developed in form, color, and fragrance during the last half century, there now being upwards of 100 varieties in cultivation.

Sycamore. Certain trees of the genus *Ficus* of the Mulberry tribe of the Nettle family (*Urticaceae*), mostly natives of Asia and Africa, are properly called sycamores. The **Egyptian Sycamore** (*F. sycamorus*), supposed to be the sycamore of the Bible, is a large spreading tree often planted for shade in Egypt and western Asia. In northern Europe this name is also given to a species of maple (*Acer pseudo-platanus*) and in the United States the **American Plane Tree** (*Platanus occidentalis*) is most commonly called sycamore.

Tallow Tree. A name given to various trees which produce a thick oil or resinous-like substance which may be used for making candles. The most important are the **Tallow Tree** of Malabar (*Vateria indica*) and the **Chinese Tallow Tree** (*Sapium sebiferum*).

Tamarind (*Tamarindus indica*). A beautiful spreading tree of the Pea family (*Leguminosae*); a native of India and often cultivated in warm climates for shade and for its fruit, which consists of a pod filled with an acidulous pulp.

Tamarisk (*Tamarix*). A genus of shrubs or trees of the Tamarisk family (*Tamaricaceae*). The Common Tamarisk (*T. gallica*), a native of the Mediterranean region, is often planted in the United States and Europe for ornament. Some authorities consider that the manna of the Bible was derived from Tamarisk (*T. mannifera*).

Teasel (*Dipsacus*). A genus of herbs of the Teasel family (*Dipsacaceae*), natives of the Old World. The Fuller's Teasel (*D. fullonum*), the only important species, has long been cultivated for its spiny heads which are used for raising the nap of cloth. The closely related *D. sylvestris* has become naturalized as a weed in many parts of the United States.

Thistle. A name applied to various Compositae, especially to species of *Cnicus, Cirsium, Carduus, Onopordon, Centaurea,* and *Sonchus,* which are widely distributed, mostly as weeds. The **Canada Thistle** (*Cirsium arvensis*), a slender perennial 1 to 3 feet high with rather small rose-colored flowers, is one of the most troublesome weeds, being extremely difficult to eradicate. The **Scotch Thistle** (*Onopordon Acanthium*), recognized by its cottony or woody leaves, is common in the Atlantic states. It is said to be the emblem of Scotland. The **American Star Thistle** (*Centaurea americana*) is common on dry plains from Missouri to Louisiana and Arizona.

Thyme (*Thymus*). A genus of half shrubby plants of the Mint family (*Labiatae*). The Garden Thyme (*T. vulgaris*), a native of southern Europe, is cultivated in gardens on account of its fragrance and as a culinary herb.

Trillium. A small genus of the Lily family (*Liliaceae*), growing in moist soil from Maine to Georgia, and Minnesota. They have three beautiful, netted veined leaves which arise from the same point near the summit of the stem and are surmounted by a large solitary flower.

Truffle (*Tuber*). A genus of globose, subterranean sac-fungi, comprising some of the most prized of edible fungi. The Common Truffle (*T. cibarum*) and several other species are much sought in southern Europe, where dogs and pigs are trained to locate them by scent. Edible truffles are scarcely found in the United States.

Tuberose (*Polianthes tuberosa*). A plant of the Amaryllis family (*Amaryllidaceae*), native of Mexico, is extensively cultivated for its beautiful and fragrant white flowers.

Tulip (*Tulipa*). A genus of the Lily family (*Liliaceae*), containing about 45 species, native mostly of the warmer parts of southern Europe. The tulip has been a popular ornamental plant for several centuries. *T. Gesneriana*, a native of Asia Minor, is the species from which most of the cultivated varieties, which exceed 1,800 in number, have been produced.

Upas (*Antiaris toxicaria*). A tree of the Mulberry tribe of the Nettle family (*Urticaceae*), found in the Philippine Islands. The fiber of the bark is sometimes made into cloth and the juice of the roots is used by the Malays for poisoning their arrows. The stories concerning the poisonous exhalations of the leaves, "the deadly upas-shade," are purely mythical.

Vanilla. A genus of orchids, natives of tropical America and Asia. The vanilla of commerce is chiefly the fruit of *V. planifolia*, a native of eastern Mexico, but largely cultivated in several tropical countries. This plant has a long fleshy stem and attaches itself to trees by means of aerial rootlets.

VANILLA.

Varnish Tree. A name given to several trees of the Sumach family (*Anacardiaceae*), the juice of which is used for making varnishes. The **Black Varnish Tree** (*Melanorrhoea usitata*), of Burma, and the **Japan Varnish Tree** (*Rhus vernicifera*) are among the more important.

Venus Fly Trap (*Dionaea muscipula*). An insectivorous plant, growing in North Carolina, whose trap-like leaves close suddenly upon insects that alight on them.

Verbena. A genus of the Vervain family (*Verbenaceae*), comprising about 80 species, mostly natives of America, some of which, usually called vervains, are common weeds in the Eastern States. The cultivated verbenas have been mostly derived from *V. canadensis* of the eastern United States and from *V. teucrioides* and *V. venosa* of Brazil.

Virginia Creeper or **American Ivy** (*Psedera quinquefolia*). A common North American woody vine of the Grape family (*Vitaceae*), climbing extensively by means of tendrils. It is distinguished from the **Poison Ivy** by having five leaflets at the end of a single leaf stalk, while the latter has but three. The foliage turns a brilliant crimson in autumn. Of the same genus is the attractive **Japanese** or **Boston Ivy** (*G. tricuspidata*) extensively cultivated in the Eastern States.

Violet (*Viola*). A genus of about 175 species of small, often stemless, mostly perennial, herbs of the Violet family, widely diffused in temperate regions, over 40 wild species occurring in the eastern United States. Wild violets frequently hybridize and many forms are cultivated, the most common being the **Pansy** (*V. tricolor*) and the **Sweet Violet** (*V. odorata*) from European species. Handsome garden varieties have been developed from our native **Bird's Foot Violet** (*V. pedata*) and strains from the **Canada Violet** (*V. canadensis*) are frequently cultivated.

Walnut (*Juglans*). A genus of beautiful trees of the Walnut family (*Juglandaceae*), containing about 10 species, mostly natives of North America and Asia. The **Black Walnut** (*J. nigra*) is a large tree sometimes 100 to 125 feet high, growing from Ontario to Florida, west to Nebraska and Texas. The dark brown wood is largely used for cabinet making and gunstocks. The **White Walnut** or **Butternut** (*J. cinerea*) resembles the black walnut, but is seldom over 100 feet high. The wood is largely used in the interior finish of houses and for furniture. New Brunswick to Georgia and westward to Dakota and Arkansas. The **California Walnut** (*J. californica*), a tree sometimes 65 feet high, is often cultivated in California for shade and as a stock on which to graft the English walnut. The **English Walnut** (*J. regia*) is a tree 60 to 90 feet high, native of Persia and has long been cultivated for its edible nuts, which are an important article of commerce.

WATER LILY. Castalia.

Water Lily (*Castalia*). A striking genus of plants of the Water Lily family (*Nymphaeaceae*), mostly tropical but widely diffused throughout the world, with tuberous roots embedded in the bottom of streams or ponds, large floating leaves, and showy flowers of various colors from white to red, yellow, and blue. A number are favorite water garden plants by reason of their beauty and fragrance. The starchy seeds and rootstocks are used for food in some countries.

Willow (*Salix*). A genus of the Willow family, containing over 150 species, mostly of cool, northern regions, fully one half occurring within the United States. Many hybridize freely, making determination of true species extremely difficult. Most willows are shrubs, some are trees, while Arctic and Alpine forms are dwarf, and herb-like. *S. herbacea* of northern Europe and America is seldom two inches high. *S. arctica* and *S. polaris* are the northernmost woody plants. The largest is the widely cultivated **White Willow** (*S. alba*) introduced from Europe, which

exceeds 80 feet in height. The **Weeping Willow** (*S. babylonica*), also from Europe, is much planted for ornament. The **European Osier** (*S. viminalis*) is cultivated for its twigs. Of the native species, the shrubby **Shining Willow** (*S. lucida*), the **Black Willow** (*S. viara*) sometimes 40 feet high, and the **Heart-leaved Willow** (*S. cordata*) are among the best known.

Wintergreen (*Gaultheria*). A genus of low or trailing shrubs of the Heath family (*Ericacae*). Several species contain the oil of wintergreen, widely used in flavoring and in medicine.

Wistaria. A genus of climbing shrubs of the Pea family (*Leguminosae*) of China and the southeastern United States. Some of the species are often grown on walls of houses and over arbors on account of their beautiful racemes of bluish flowers.

Witch Hazel (*Hamamelis virginiana*). A North American shrub or sometimes a small tree, reaching a maximum height of 25 feet, with clusters of showy yellow flowers. An extract made from the leaves is much used in medicine.

Witch Hazel.

Wood Sorrel (*Oxalis*). A genus of the Wood Sorrel family (*Oxalidaceae*), containing about 250 species, mostly tropical, all herbs, with a sour juice, often bulbous. Some 20 species are North American; among the most common are: the **Common Wood Sorrel** (*O. Acetosella*), white flowered with rosy veins; the **Violet Wood Sorrel** (*O. violacea*) with violet flowers, and the **Yellow Wood Sorrel** (*O. stricta*), with pale yellow flowers and the **Lady's Sorrel** (*O. corniculata*), yellow flowered. All our species have clover-like, trifoliate leaves.

Xerophytes. Plants adapted by modifications of structure to withstand the excessive transpiration of arid regions. Usually there is great reduction in the leaf surface, as in cacti and desert shrubs, or the leaf surface is specially protected by hairs, scales, or waxy deposits.

Yarrow (*Achillea Millefolium*). A perennial herb of the Sunflower family (*Compositae*), with finely divided leaves, strong odor, and a bitter taste, occurring almost throughout northern Europe and America, used to some extent in medicine.

Yeasts (*Saccharomycetes*). One-celled fungi, with a peculiar method of reproduction called budding. There are numerous species, which live chiefly in plant juices or solutions containing sugar, in which they secrete an enzyme, which induces alcoholic fermentation. Yeasts have been cultivated for centuries in the production of beer and other fermented liquors, and in making bread.

Yew (*Taxus*). A genus of some six trees and shrubs of the Yew family (*Taxaceae*), widely distributed in the Northern Hemisphere, three species occurring in the United States. The **American Yew** (*T. canadensis*) is a low, straggling shrub seldom over 5 feet high growing in woods from Newfoundland to Manitoba and south to Virginia and Iowa. The **Florida Yew** (*T. floridana*) is a bushy tree rarely 25 feet high. The **California Yew** (*T. brevifolia*) is a tree 40 to 50 feet high occurring from British Columbia to California, sometimes cultivated in gardens in Europe. The hard wood is used for fence posts. The **European Yew** (*T. baccata*) is a native of Europe and Siberia reaching a height of 40 feet, many varieties of which are cultivated in the United States. The leaves of yews are more or less poisonous.

Yucca. A well-marked genus of the Lily family, containing about 15 species, mostly of the southwestern United States and Mexico, usually with a short, unbranched stem, crowned with a tuft of sword-shaped leaves, tipped with a sharp spine. **Adam's Needle** (*Y. filamentosa*) a showy species, with a huge panicle of flowers, 6 or 8 feet high, occurs near the coast from Maryland to Florida. The much smaller **Bear Grass** (*Y. glauca*) grows on the plains from South Dakota to Texas. The **Spanish Bayonet**, usually almost stemless, with reflexed leaves and purple, edible fruit, ranges from Texas to California and Mexico. The **Joshua Tree** (*Y. arborescens*) is a huge, weirdly branching, woody species, characteristic of the Mohave Desert. Other species form a conspicuous part of the vegetation in the arid regions from Texas to Arizona and Mexico.

Yuccas or Joshua Trees. On the Mojave Desert.

Zamia. A genus of cycads, containing about 30 species, all tropical American, several of which yield sago-like food products.

Zanthoxylum. A genus of over 100 trees and shrubs of the Rue family (*Rutaceae*), four occurring in the United States, the best known being the **Prickly Ash** or **Toothache Tree** (*Z. Americanum*) and the **Southern Prickly Ash** or **Pepper Tree** (*Z. Clava-Herculis*), both small trees with prickly twigs, the bark of which is much used in medicine.

Prickly Ash.

Zauschneria (*Zauschneria californica*), Balsamea. A beautiful low perennial with bright scarlet fuchsia-like flowers, native of the coast ranges of California. First collected at Monterey in 1792 by Haenke, the first botanist to visit the region.

Zinnia. A genus of plants of the Sunflower family (*Compositae*), natives of Mexico and the southwestern United States. Several species are commonly cultivated in gardens for their showy flowers.

DICTIONARY OF NATURAL HISTORY.

DIVISION OF ANIMALS.

Comprising Descriptions of Wild Animals. For Domestic Animals, see Index.

Abalone. The Spanish name, generally used in California, for several species of ear shells, marine gastropods of the family *Haliotidae*, which are abundant on rocks near the shore, where they feed upon seaweed. Vast quantities of the animals are dried for food by the Chinese, while the richly colored mother-of-pearl lining the shell makes it highly prized for inlaid work, buttons, and ornaments.

Adder. A common name of the viper or of any venomous snake of the viper family. In the United States, the name is popularly given to both the copperhead and moccasin and also to the harmless hognose snake which is called spreading or blowing "adder." In English literature the term signifies the common viper, which is the only venomous snake of the British Isles.

Agouti. The name given to several small South American rodent mammals of the genus *Dasyprocta*. The common agouti of Brazil is about the size of a rabbit, with long hind legs and short tail, which, together with the rump and thighs, is covered with coarse, bristly hair. It was formerly immensely abundant but, owing to its destructiveness to crops, has been largely exterminated.

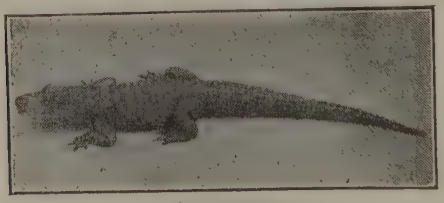
Albatross. The popular name for the large sea birds of the genus *Diomedea*, closely related to the petrels, and the most exclusively oceanic birds known, rarely visiting land except during the nesting season. They gather their food, which consists largely of fishes and mollusks, from the surface of the ocean, never diving beneath it, and will follow a ship for days without resting in order to pick up refuse thrown overboard.

The **Wandering Albatross** (*Diomedea exulans*), of the southern oceans, one of the largest of birds, having a length of 4 or 5 feet and an extent of wing of 10 to 12 feet or more, is justly noted for its powerful and graceful flight.

The superstitious affection and regard in which the albatross is held by sailors was strikingly introduced into literature in Coleridge's "Rime of the Ancient Mariner."

Alewife (*Pomolobus pseudoharengus*). A small fish, 8 to 10 inches long, closely related to the herring and shad, abundant on the east coast of the United States, entering the bays and rivers in vast numbers to spawn. While inferior in quality to the shad, immense quantities are caught for food, upwards of 60,000,000 pounds being reported in a single year.

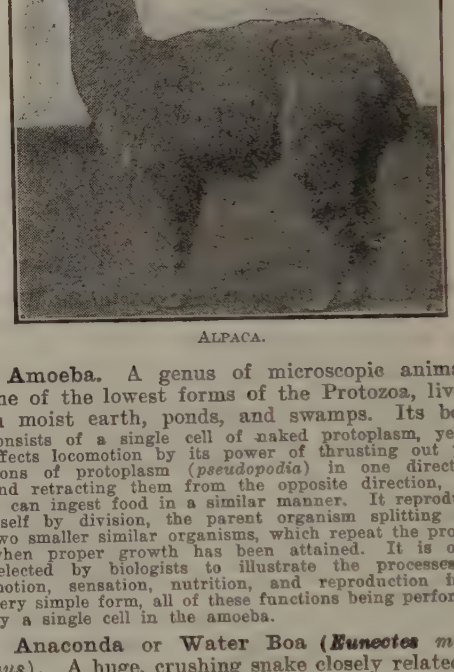
Alligator. A genus of reptiles of the crocodile family (*Crocodilidae*). The American alligator (*A. mississippiensis*), formerly very abundant in the rivers and swamps of the Southern States is now rarely seen north of Florida and Louisiana, where it is being rapidly exterminated for its hide,



ALLIGATOR.

ivory teeth, and eggs. It is estimated that 3,000,000 alligators were killed in Florida alone, from 1880 to 1900. Like the crocodile, the alligator is active at night, emits bellowing sounds, uses its tail as a weapon, carries its prey to the bottom before eating, but spends more time on land, lying in the sun on swampy shores. During colder months it hibernates in swamp mud. The female alligator deposits from 100 to 200 eggs in a mound of mud and vegetable matter, where they hatch by the heat of the sun aided by the decomposition of the vegetable matter. The young grow slowly and many years are required for maturity. While the alligator is reputed dangerous in the water, it is practically harmless on land, and Hornaday maintains that there is no well authenticated instance of loss of life by alligators.

Alpaca (*Lama pacos*). A domesticated form of the guanaco, raised in herds in Peru and Bolivia for its fine wool and excellent flesh. It feeds upon the scant vegetation of the higher Andes, and is brought down to the native villages at shearing time. (See DOMESTIC ANIMALS.)



ALPACA.

Amoeba. A genus of microscopic animals, one of the lowest forms of the Protozoa, living in moist earth, ponds, and swamps. Its body consists of a single cell of naked protoplasm, yet it effects locomotion by its power of thrusting out portions of protoplasm (*pseudopodia*) in one direction, and retracting them from the opposite direction, and it can ingest food in a similar manner. It reproduces itself by division, the parent organism splitting into two smaller similar organisms, which repeat the process when proper growth has been attained. It is often selected by biologists to illustrate the processes of motion, sensation, nutrition, and reproduction in a very simple form, all of these functions being performed by a single cell in the amoeba.

Anaconda or Water Boa (*Eunectes murinus*). A huge, crushing snake closely related to the boa constrictor, native of the Amazon and Orinoco valleys, sometimes attaining a length of 30 feet. Its nostrils, which open vertically, are provided with valves which can be closed when under water, and its eyes are elevated so that it can see not only ahead, but downward into the water. Although, like other boas, it hangs from trees or coils on banks to catch animals unawares, the anaconda frequently conceals its body in water near shore and grips drinking animals by the neck or nose. While it is strong enough to crush a deer its food consists chiefly of small rodents, peccaries, birds and their eggs, fish, and reptiles, including even its own kind.

Anchovy (*Engraulis encrasicholus*). A small fish about 3 inches long, closely related to the herring, abundant in Mediterranean waters, also in Holland. Large quantities are salted for export, particularly at Leghorn. Anchovies have been used for sauces since ancient times. Some of the American species also are valuable for food preparations.

Ant-Eater (*Myrmecophaga*). A large, edentate mammal, so named because its food consists entirely of ants. The **Great Ant-Eater** (*M. ju-*

bata), native of the tropics of Central and South America, is an animal of remarkable appearance. It has a narrow head, with the jaws and nose prolonged into a sort of a tube, and a small, round mouth without teeth, through which it thrusts its long tongue covered with a glutinous secretion to gather its insect food. It is 4 feet in length exclusive of a bushy tail 2½ feet long. It lives wholly upon the ground, sleeping in its lair during the day and going forth at night in search of ant-hills, devouring the insects and their larvae with great rapidity. Though possessing much strength, the ant-eater is timid and harmless and easily falls a prey to the jaguar and other enemies. The **Two-Toed Ant-Eater** (*Cyclothurus didactylus*) of northern Brazil, so named because only two toes possess claws, is about the size of a squirrel, with a long prehensile tail, lives in trees, and is nocturnal in its habits.

Antelope, American, or Pronghorn (*Antilocapra americana*). A graceful animal, peculiar to western North America, ranking between the antelopes and the deer, and the only member of its family (*Antilocapridae*). It differs from true antelopes in having a branch to its horns and in shedding them periodically like the deer, but, unlike the deer, its horns are hollow and do not break off at the base, only the

AMERICAN ANTELOPE (*Antilocapra americana*).

outside horny portion being shed. It is a timid animal about three feet high, grazing in open plains and relying upon its sharp eyesight and speed for safety. For short distances it is the fleetest of American animals. The pronghorn was formerly immensely abundant from the Mississippi westward to the Pacific, ranging from Mexico to Canada, but now only a meager fraction remains, chiefly in or near the Rocky Mountains.

Antelopes (*Antilopinae*). A subfamily of hollow-horned ruminant mammals, standing between the ox and the goat among the *Bovidae*, and containing some of the most beautiful, graceful, and fleet-footed animals known. They are mostly slender, and deer-like, with short hair, and more or less spirally twisted horns, numbering about 150 species, of which 135 occur in Africa and the remainder in Europe and Asia, no true antelope being found in America or Australia, the so-called American antelope or pronghorn belonging to a different family. They range in size from delicate gazelles, less than two feet high, to ox-like species such as the nilghau and the eland, the latter sometimes weighing 1,500 pounds. Among the more prominent African antelopes are the addax, bushbuck, eland, gnu, gazelle, hartbeest, klip springer, kudu, oryx, rietbok, steinbok, and waterbuck; Asian antelopes include the Siberian saiga, a gazelle, the nilghau, and the Indian antelope, sasin, or blackbuck. Various species were formerly immensely abundant in Africa, but as nearly all are extensively hunted for food, their numbers are rapidly diminishing.

Ant Lion. The larva of a neuropterous insect of the genus *Myrmeleon* noted for its peculiar habit of making funnel-shaped pitfalls in fine sand, at the bottom of which it lies concealed, waiting to seize and devour the insects, usually ants, which fall into its ingeniously constructed trap.

Ants (Order *Hymenoptera*, family *Formicidae*). Well known, common insects, closely related to the bees, abundant in temperate and tropical regions, numbering over 2,000 species, most of which live in communities and construct more or less

Male. Worker. Female.

ANTS.

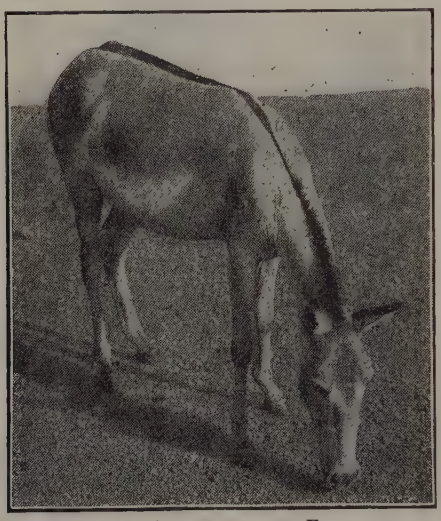
elaborate dwellings in the ground, in wood, or out of clay, fiber, or leaves. A society of ants consists of three classes, males, females, and neuters or workers. The males and females have wings; the workers are wingless. The females are the largest, the males intermediate, and the workers smallest and most numerous. In the warm sunshine of midsummer swarms of males and females may be seen in their wedding flights. The males soon die; the females descend, tear off their own wings, and enter their dwellings or ant-hills to lay eggs. The eggs are placed in special chambers by the workers, where, in about two weeks, they develop into larvae. The nursing workers care for and feed them until they surround themselves with a silky cocoon and become pupae. The pupae lie motionless until ready to appear as ants, when the attendant workers remove their fibrous coverings and feed them until they are able to take care of themselves. In time the winged males and females among them rise in a wedding flight, and a new colony is produced as before. Ants live upon both animal and vegetable food; a favorite with many being the honey secreted by various scale insects and plant lice (*Aphis*) which are kept and fed in the dwellings of some ants for their sweet secretions, so that the Aphis has been called the ant's "cow." Ants display remarkable social instincts in providing for and defending their own colonies but are warlike and wage vicious battles with their neighbors, and many enslave smaller species and live by their enforced labor.

Armadillo. An edentate mammal, closely related to the sloth and ant-eater, which takes its name from the shields of defensive armor with which its skin is provided. The Texas species, called also **Peeba** (*Tatusia peeba*) ranging from Texas to Argentina, is 16 inches long with a tail slightly longer, has claws for burrowing, pointed snout, long tongue, small eyes, and erect pointed ears, and is mostly nocturnal in habit, feeding upon fruits, roots, worms, ants, and carrion.

Asp. A name given to a number of poisonous serpents. The venomous *Naia haie*, which was the sacred serpent often represented in the art of ancient Egypt, and still abundant in the Nile region, is commonly called an asp. It attains a length of 4 to 5 feet and has a dilatable neck resembling that of its near relative, the dreaded Indian cobra. The common viper or adder of Europe is also frequently called an asp. The asp associated with the story of Cleopatra's suicide was in all probability the horned viper (*Cerastes*), a small but very venomous Egyptian snake about two feet long.

Ass, Wild (*Equus*). An equine mammal differing from the horse by longer ears, more shaggy coat, tail only partly covered with long hair, and by absence of callosities on the fore legs. Wild asses occur in dry regions of central and western Asia and in northeastern Africa, usually in small herds of from 5 to 20. In Asia they have been hunted since ancient times for their flesh, which is as highly esteemed as venison. The **Kiang** (*E. hemionus*) of the high plains of Tibet is the largest species, and is extremely

wild and swift. It is light yellowish brown in color with dark mane and tail and a brownish black stripe along the spine. The **Onager** (*E. onager*) of west Asian deserts is smaller, much lighter in color, with a white stripe down the withers and another with a brown stripe in the center along the backbone. The **African Wild Ass** (*E. asinus*), parent of the domestic ass, has longer ears, shorter mane, and more scanty tail. It is creamy gray or blue gray in color with a dark stripe down the back and across the shoulders. It is easy and graceful of movement, very swift, and difficult to approach, and, like the Asiatic species, is hunted for its flesh.



PERSIAN WILD ASS OR ONAGER. Equus onager.

Auk (*Alca torda*). A diving bird having small, short wings and tail, and webbed, three-toed feet, frequently called the razor-billed auk. The name was formerly applied to the great auk (*Alca impennis*), which became extinct about 1844,—a peculiar bird, which was unable to fly owing to the disproportionate smallness of its otherwise perfectly formed wings.

Avocet (*Recurvirostra*). A wading bird of the family *Recurvirostridae* with a very slender upwardly curved bill, exceedingly long legs, and, unlike other waders, webbed toes. There are a number of species. The **American Avocet** (*R. americana*) differs from the European avocet (*R. avocetta*) in the chestnut brown colors of the head, the predominant colors being black and white with blue legs.

Axolotl (*Amblystoma*). A tailed amphibian frequenting ponds and lakes in Mexico just as other species of *Amblystoma*, popularly known as mud puppies or water dogs, do in similar situations in the United States. It is of peculiar interest on account of the fact that it does not usually undergo metamorphosis, but remains in the larval or tadpole stage, keeping its gills throughout life. The axolotl has the aspect of a giant tadpole, 6 to 9 inches long, about to turn into a frog, and is abundant in many localities, sometimes being marketed for food.

Babirussa (*Babirusa alfurus*). An East Indian wild hog inhabiting Celebes, Buru, and other adjacent islands of the Malay archipelago. It is nearly naked, slender legged, and feeds upon fallen fruits instead of rooting in the ground. The male has two pairs of remarkable tusks, both growing upward and curving backward. The upper tusks, instead of protruding from the side of the mouth, grow out of long sockets through the skin on each side of the mouth, and in old animals often reach 8 or 10 inches in length.

Baboon (*Cynocephalus*). An Old World monkey, ranking below the apes, with arms and legs nearly equal, a short tail, and a long, dog-like nose. There are about 16 species, practically all confined to rocky districts in Africa, where they roam in bands, living chiefly upon fruits, roots, insects, and eggs. They are among the strongest and fiercest of monkeys, with ugly dispositions and disgusting habits. (See MANDRILL and MONKEYS.)

Barnacle. A popular name for crustaceans of the order *Cirripedia*, which fasten themselves in great numbers on rocks, wharf piles, and bottoms of ships. They are usually inclosed in a shell composed of several parts, with an opening through which several pairs of long, many jointed, hairy feet are thrust out.

Bass. A name applied to many fishes, chiefly to the perciform families, *Serranidae* and *Centrarchidae*. The former family includes the Salt-water Bass, represented by the **Striped Bass** or **Rock Fish** (*Monroe lineata*), one of the most important of American food fishes, which inhabits the entire eastern coast of the United States, where it is very abundant. It enters fresh water streams to spawn. It is a gamy fish, reaching a length of 3 to 5 feet, and is very popular with anglers. The **Fresh-water Bass** belong to the Sunfish family (*Centrarchidae*) and are represented by the two black basses of sportsmen—the small mouthed (*Micropterus dolomieu*), and the large mouthed (*M. salmoides*).

Bats (*Cheiroptera*). A numerous order of small mammals distinguished by possessing true powers of flight, usually spending the day in caves or dark places, hanging head downward, and flying forth at night in search of food. There are about 500 species, divided into six families, found everywhere except in the frigid zones. They comprise two main groups: the small, numerous, mostly insect-eating bats of temperate and warm regions (*Microcheiroptera*), and the large fruit-eating, or fox, bats of the Old World tropics (*Megacheiroptera*). To the former belong the leaf-nosed bats, the false vampires of Africa and India, the true vampires of South America, the smooth-nosed bats, and the common bats of Europe and America. Our common bats are from 3 to 5 inches long with a wing spread of 9 to 14 inches. The great fruit bats or flying foxes of the East Indies are sometimes 15 inches long with a wing spread approaching 5 feet, and are hunted by natives for their flesh.

Bears (*Ursidae*). A group of carnivorous mammals, most abundant in cool northern regions, only two species occurring south of the equator. Bears are largest and strongest in cold climates, and smallest and weakest in warm regions, being exactly opposite to the cat tribe in this regard. They are large and clumsy but usually good climbers and swimmers and, although flesh eaters, feed largely upon roots, fruits, nuts, honey, and other non-animal food. The **Polar Bear** (*Thalarctos maritimus*), the largest and strongest, and, excepting the grizzly, the most savage of all, occurs throughout the Arctic regions. The **Grizzly Bear** (*Ursus horribilis*), next to the polar in size and strength and the most ferocious and dangerous member of the bear tribe, is found throughout the Rocky Mountains region from Mexico to Alaska. The **Brown Bear** (*Ursus americanus*), the best known species, and formerly abundant in forests throughout the continent, is now limited to remote regions. The **Cinnamon Bear** is a brown phase of the black bear, found in the Rocky Mountains, where it is about as numerous as the true black species.

Beaver (*Castor*). A large aquatic rodent found in North America and parts of Europe and Asia. The beaver, when full grown, measures about 2 feet from tip of nose to root of tail and weighs 30 to 60 pounds, has a palmated hind foot and a broad, flat tail. It is remarkable for its ingenuity in constructing lodges and dams across streams and is highly valued for its fur.

Bee. A name given to a large number of insects of the order *Hymenoptera*. The true bees (*Apoidea*) are divided into 14 families: comprising the social bees, such as the honeybee and bumblebee; and the solitary bees, such as the cuckoo bee, carpenter bee, mason bee, and leaf-cutting bee. Honeybees live in large communities, which consist of a queen, a few hundred drones or males, and between 10,000 and 40,000 workers, or infertile females. The queen is the mother of the whole society, the drones do no work and, after the eggs are fertilized, die or are killed and thrown out; while the workers make the wax, construct the comb, gather the honey, care for the eggs, and nurse the young to maturity. Although the work

of a society goes on continuously, the life of a worker bee is limited to a few months. A queen, however, may live several years and produce hundreds of thousands of eggs each season.

Drone. Worker. Queen.
BEES.

Beetles (*Coleoptera*). One of the largest and best known orders of insects, estimated to contain 200,000 species, of which over 11,000, grouped in 80 families, occur in North America north of Mexico, or about equal in number to the species of flowering plants in the same region. Beetles are distinguished by a pair of horny wing covers meeting in a straight median line down the back; have mouth parts adapted to biting; no tail appendages; and all undergo complete metamorphosis. A few are directly valuable, such as the blister beetle; and others, like the ladybug, destroy harmful insects; but many are injurious to crops, fruit, grain, hides, leather, and fabrics. Important families are Blister Beetles (*Meloidae*), Carrion Beetles (*Silphidae*), Dermestids (*Dermestidae*); Fireflies (*Lampyridae*), Ladybug (*Coccinellidae*), Scarabids (*Scarabidae*), Tiger Beetles (*Cicindelidae*), and Water Beetles (*Gyrinidae, Hydrophilidae*).

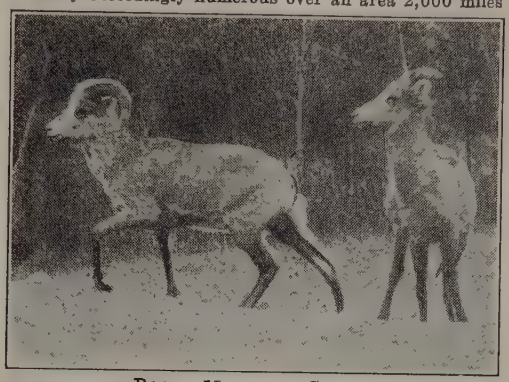
TIGER BEETLE.

Bighorn, or Rocky Mountain Sheep (*Ovis canadensis*). A large, horned mountain sheep, inhabiting the most inaccessible parts of the Rocky Mountains and the country west of them. Adult rams attain a length of 6 feet and a height of 40 inches, and the enormous horns, measured along the curvature, sometimes reach a length of 28 inches. The bighorn was once abundant but now exists only in small bands in widely separated localities.

Bird-Catching Spider. A name applied to species of large spiders of the family *Theraphosidae*. Their food consists chiefly of beetles and other insects, but they will attack and eat humming birds and other small creatures. The bird spider (*Mygale avicularia*) of South America has a body about 3 inches long and its legs extend over a space of 8 or 10 inches.

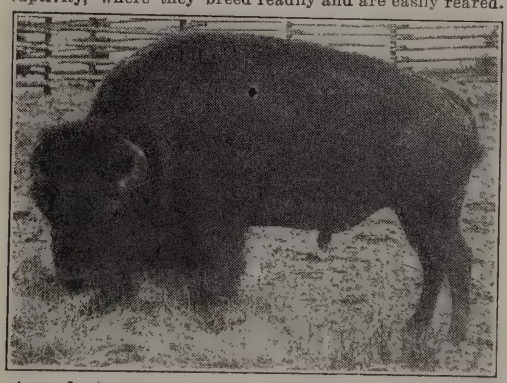
Bird of Paradise. A name applied to a number of cone-billed birds (*Paradisea, Cincinnurus*), natives of the Malay archipelago, which are remarkable for their unusual development of plumage, and the strikingly brilliant colors of the males. Their feathers are highly prized ornaments for headdresses in eastern countries.

Bison, American, or Buffalo (*Bos americanus*). The largest, most imposing, and most widely celebrated of North American animals; formerly exceedingly numerous over an area 2,000 miles



ROCKY MOUNTAIN SHEEP.

wide from the Appalachian forests across the interior plains and the Rocky Mountains to Utah, and 3,000 miles long from Mexico to northern Canada, being immensely abundant east of the Rocky Mountains, occurring in vast herds sometimes miles in extent, and numbering hundreds of thousands. Large specimens stood 5½ feet high, were 10 feet long, and weighed about 2,000 pounds. From 1870 to 1885 the buffalo was systematically slaughtered, being almost exterminated; and unless special efforts are made for their preservation, these remarkable animals, the only wild cattle in the New World, will become extinct. There are now estimated to be less than 350 wild buffaloes in the United States and Canada, and there are only about 1,700 in captivity, where they breed readily and are easily reared.



A good portrait of a buffalo bull in Yellowstone Park.

Bittern (*Botaurus*). A large bird allied to the heron with long bill and toes, found in parts of North America, Europe, Asia, and Africa. It inhabits sloughs and marshes of tall, rank grass, in which it hides by standing erect and pointing its beak upward. The bittern is sometimes called Stake Driver on account of its peculiar call.

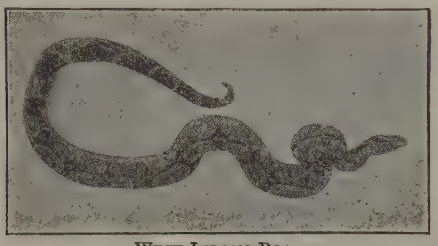
Blackbird. In the United States, the name is given to members of the family *Icteridae*, near relatives of the European starlings. The best known are the **Red-Winged Blackbird** (*Agelaius phoeniceus*), frequenting marshes and cattail swamps throughout most of temperate North America, and the **Yellow-Headed Blackbird** (*Xanthocephalus*), ranging in similar situations from Indiana to the Pacific coast. The **European Blackbird** is a species of thrush (*Turdus merula*), called merle in France, and formerly called ouzel in England.

Blackfish. The name given to a number of dark-colored fishes. In the United States the name is applied mostly to the tautog (*Tautoga onitis*), a common food fish found from Maine to South Carolina.

Blacksnake, or Blueracer (*Bascanium constrictor*). A common colubrine serpent found throughout the United States. It has a slender body of 50 to 80 inches long, and is usually pitch black above and pale green below, but in some states it is bright olive green above. The black snake is active in movement, an excellent climber, and a swift and powerful swimmer. It is useful to the farmer in destroying great number of moles and mice, and it will attack and kill rattlesnakes and copperheads.

Bluefish (*Pomatomus saltatrix*). A well known food and game fish with an average weight of 3 to 5 pounds, of wide distribution, common along the eastern coast of the United States. It feeds upon other fish, swimming in large schools and destroying everything before it.

Boa. A large non-poisonous snake of tropical America of the family *Boidae*, closely related to the python. It feeds upon living animals, which it kills by constriction and swallows whole. The Boa Constrictor of Guiana and Brazil, one of the smaller of the boas, about 12 feet long, is an exceedingly handsome serpent, brownish with a series of complicated, connected blotches.



West Indian Boa.

Boar, Wild (*Sus scrofa*). The wild boar of Europe, Asia, and Africa, parent species of the domestic pig, formerly widely diffused and abundant, is now confined mainly to mountain forests and remote, uncultivated districts. A full grown wild boar stands 3 feet high, weighs over 300 pounds, and has sharp tusks 3 to 4 inches long, capable of inflicting terrible wounds.

Bobolink, Reed Bird, or Rice Bird (*Dolichonyx oryzivorus*). An American song and game bird nesting in New England and Canada, when its song is prominent, and wintering in Central America and the West Indies, becoming fat en route in Southern grain fields, where vast numbers are shot for the city markets.

Bovidae. The largest family of the order *Ungulata* or hoofed mammals, comprising about 200 species, with paired, hollow horns, chiefly of the Old World, the Asian forms being the most important, and the African the most numerous. It includes the well known bovine animals, ox, sheep, goat, and antelope.

Buffalo. True buffaloes are bovine ruminants of the Old World, with flattened, angular horns, and lack the hump and mane characteristic of the American bison commonly but incorrectly called buffalo. The **Cape Buffalo** (*Bos caffer*) is a large, fierce, untamable African species living in herds from Abyssinia to Cape Colony. The **Indian Buffalo** (*Bos bubalus*) occurs wild in India, Ceylon, and the Philippines, attaining a height of 5½ feet. It loves water and lives in swampy jungles and marsh lands. It has long been tamed and is a widely used beast of burden.

Bullhead, Bullpout, or Horned Pout (*Amiurus nebulosus*). The best known of the smaller catfishes, abundant in muddy streams and ponds from Maine to North Dakota and south to Florida and Texas, and now introduced into California. It is yellowish brown in color, clouded with darker, and attains a length of 12 to 18 inches.

Bumblebee, or Humblebee (*Bombus*). A large, hairy-bodied, burly bee, similar in habits to the honeybee but much less highly developed socially, building nests on the ground, often in clumps of grass. About 50 species occur in North America.

Butterflies, together with moths, constitute the well-marked natural order of *Lepidoptera* or scale-winged insects. Butterflies are readily distinguished from moths by having slender antennae knobbed at the ends, by holding their wing erect over the back when at rest, and by their diurnal habits. They occur throughout the world but are most numerous and beautiful in the tropics, some species having a wing spread of 6 inches. Over 7,000 species have been described, of which about 1,000 are North American.

Buzzard (*Buteo*). A large bird of prey closely related to the eagle and hawk, occurring throughout the world except Australia. In the United States there are several species which are commonly called hawks, such as the **Red-Tailed Buzzard** (*B. borealis*) and the **Red-Shouldered Buzzard** (*B. lineatus*). In the Southern States the name is generally given to the turkey vulture, or turkey buzzard (*Cathartes*).

Camelidae. A family of ungulate mammals having teeth of peculiar formation and feet with broad, cushion-like pads. There are six living representatives: the Arabian and Bactrian camels, the guanaco, vicuña, alpaca, and llama, the last two being domesticated varieties of the guanaco.

Bactrian Camel.

Canidae. The Dog family; a group of carnivorous mammals, with digitigrade feet, usually having five toes on the fore feet and four toes on the hind feet, with claws that are not retractile. It includes dogs, wolves, jackals, and foxes.

Canvasback (*Aythya vallisneria*). The most highly esteemed American food duck, ranging throughout North America. When fattened upon its favorite food, the water celery, its flesh is of peculiar excellence and the demand of the game markets has led almost to the extermination of the species in the Eastern States.

Capybara (*Hydrochaerus capybara*). A large American aquatic mammal of the family *Caviidae*, the largest known rodent, reaching a length of about 4 feet and weighing 100 pounds. It resembles a gigantic guinea pig with a long flat head, small ears and eyes, and bristly brown hair.

Cardinal Bird (*Cardinalis cardinalis*). A beautiful bird of the Finch family, the male of which is deep red in color, with the forehead and upper throat black, and with dusky wings. It occurs from the Bermudas north to Massachusetts and west to Wisconsin, and is a brilliant songster and favorite cage bird.

Caribou (*Rangifer*). The North American reindeer, considered by some only a variety of the European reindeer. Two distinct series of forms occur, the woodland caribou and the barren ground caribou. The **Woodland Caribou** is the larger, is darker in color, and has heavier antlers with more numerous points. It frequents woodlands from Newfoundland and Labrador to the Rocky Mountains and

never occurs north of latitude 60 degrees. The **Barren-ground Caribou** occurs in vast numbers on the great arctic plains north of latitude 60 degrees, lives upon lichens, moss, and swamp grass, and is exceedingly useful to the Eskimo for food, leather, and other purposes.

WOODLAND CARIBOU.

Cassowary (*Casuarius*). A large, ostrich-like bird found in Australia and the Papuan Islands. It is more than 5 feet high, has a heavy massive body, and the legs are shorter and stouter than those of the ostrich. The plumage is loose, coarse, and hair-like, and black in color. Both head and neck are bare and the head is surmounted by a horny helmet.

BARREN-GROUND CARIBOU.

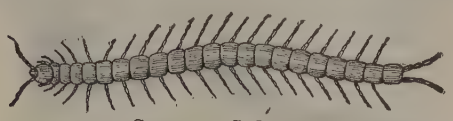
Catbird (*Galeoscoptes carolinensis*). A common song bird closely related to the mocking bird, found in most parts of North America. It is about 9 inches long, slate gray with crown and tail black. Its call resembles the mewing of a cat but in the spring its song is varied and brilliant.

Catfish. A name given both salt and fresh water fishes of the family *Siluridae*, inhabiting chiefly the rivers, ponds, and stagnant waters of warm regions. They have no scales and are provided with beard-like appendages resembling the whiskers of a cat.

Caviidae. A family of South American rodents containing about 14 species, the best known of which is the domesticated guinea pig.

Centiped (*Scolopendra*). A worm-like arthropod with a many-segmented body, having a pair of jointed legs on each segment. The first pair are developed as poison claws, the wounds of which are fatal to insects and small animals, and sometimes dangerous to man. Small species are only an inch long, but large forms reach a foot in length.

Cervidae. An important family of ungulate mammals, the males of which shed their solid horns or antlers annually. There are over 60 species including the deer, moose, elk, reindeer, and musk deer.



CENTIPED *Scolopendra*.

Chameleon. An African arboreal lizard of the family *Chamaeleontidae*, with a worm-like extensile tongue and peculiar globular eyes, capable of moving independently of one another. It is able to change its color rapidly and thus simulate to a certain extent the colors of the surrounding objects. The name is sometimes incorrectly applied to certain American lizards.

Chamois (*Rupicapra tragus*). A goat-like antelope of southern Europe, about the size of a large goat. It is dark brown in color, with horns 6 to 7 inches in length recurving at the tips. Chamois associate in flocks, are skillful climbers, and can jump ravines 20 feet wide. The skin is made into leather much prized for its softness.

Chewink (*Pipilo erythrophthalmus*). A North American finch, a little smaller than the robin, common in the eastern United States. The male is black above, with a white breast, chestnut sides, and wings marked with white. The female is brown where the male is black.

Chigoe (*Sarcopsylla penetrans*). A small flea found in the West Indies and the tropical parts of South America. It buries itself under the skin, usually of the feet, often causing a painful and dangerous ulceration. In the southern and central United States the name chigoe, chigger, or jigger is applied to minute scarlet mites which penetrate the skin and cause intense itching.

Chimpanzee (*Anthropopithecus troglodytes*). An anthropoid ape of central and western Africa, attaining a height of 5 feet at most. The chimpanzee has arms reaching just below the knees, long hands and feet; a pale face with distinct eyebrows, eyelashes, and whiskers, which together with its tractability make it seem the most man-like of apes.

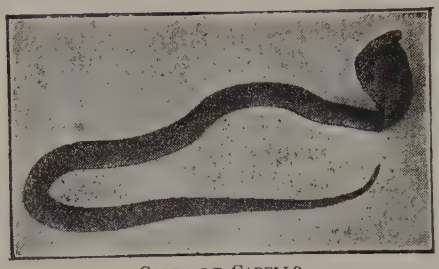
Chinch Bug (*Blissus leucopterus*). A well-known injurious bug, occurring in immense numbers in the Mississippi valley, where it inflicts great damage, particularly to crops of wheat and corn. The female lays about 500 eggs, which mature in about 15 days, and there are two broods during the season.

Chipmunk (*Tamias*). A genus of squirrel-like rodents; also called ground squirrel. It differs from true squirrels in having internal cheek pouches and by stripes along its back and sides. There are about 30 species, widely distributed in North America, Europe, and Asia.

Civet. A carnivorous mammal of the genus *Viverra*, allied to the cat, but having a longer body and shorter legs. It is found chiefly in Africa, southern Asia, and the East Indies. Both sexes have under the tail a double pouch, which secretes an odoriferous, fatty substance much used in perfumery. The name civet cat is sometimes incorrectly applied to the cacomistle (*Bassaris*) of the southwest.

Clam (*Mya arenaria*). A bivalve mollusk found on the Atlantic coast from Florida northward, occurring abundantly in soft bottoms, near low water mark, extensively used for food. The fleshy, edible body of the **Giant Clam** (*Tridacna gigas*) of the East Indies sometimes weighs 20 pounds, while the combined weight of the two valves of the shell may exceed 500 pounds.

Climbing Fish (*Anabas scandens*). A small East Indian fish possessing the ability to live for some time out of water, and to make journeys on moist earth from pond to pond. It is reputed to be able to climb trees.



COBRA DE CAPELLO.

Cobra (*Naia*). The common name of six or seven species of very venomous Old World snakes which possess the power of widening and flattening the neck just behind the head when alarmed or about to strike. The **Cobra de Capello** (*N. tripudians*), very abundant in India and Ceylon, is a slender, active, vicious snake about 4 feet long. Its bite, usually inflicted without warning, is almost always fatal, and causes the death of about 20,000 people annually in India. The **King Cobra** (*N. bungarus*) of the Malay Peninsula, the largest of venomous serpents, attaining a length of 10 feet, is powerfully muscled, and can erect its head 3 feet perpendicularly, and strike an equal distance. It lives exclusively upon other snakes and lizards.

Cockroach (*Blatta orientalis*). A common orthopterous insect, living in houses and ships; originally from the East, now widely distributed, especially in seaport towns. While it is a pest, destroying much food, and even cotton, wool, and leather, it is also of service in ridding ships and houses of bedbugs. The **Croton Bug** or **German Cockroach** (*Blatella germanica*), now abundant in houses in New York, Chicago, and other cities, was quite recently introduced from Europe. Native cockroaches live in the woods under sticks and stones, and sometimes venture into houses.

CONDOR.

Condor (*Sarcorhamphus gryphus*). A large vulture found in the Andes of South America, usually from 9,000 to 16,000 feet above sea level. It is probably the largest living bird of prey, reaching a length of about 48 inches with a wing expanse of 9 to 10½ feet. The condor feeds mostly on carrion but, when hungry, will attack young goats and lambs.

Coot or **Mud Hen** (*Fulica americana*). A wading bird of the rail family, 14 inches long, sooty-colored with a white bill, frequenting swamps from Alaska and Greenland south to Central America, used for food by the poorer classes in southern cities.

Copperhead (*Ancistrodon contortrix*). A vicious, venomous, woodland snake, which strikes without warning, closely related to the rattlesnake, occurring sparingly from New England to Kansas and more abundantly southward. It is about 3 feet long, hazelnut brown or old copper color, with the top of the head coppery red.

Coral. Coral polyps are coelenterate animals, which usually live together in enormous colonies, though a few are solitary. They take in carbonate of lime with sea water or with food, and deposit the coral substance which both supports and protects the body. The forms of corals are numerous and include the star coral, brain coral, organ-pipe coral, feather coral, stag-horn coral, sea-pens, sea-feathers, and sea fans. The coral polyps are of brilliant colors, and many of the skeletons are highly colored. Red coral used in jewelry comes from the Mediterranean and Red seas; pink coral from Italy; yellow from Sardinia; and black from the Red Sea. The madrepore is a large, branching coral found on the reefs of Florida growing in masses nearly 2 feet high, and 3 to 4 feet in diameter. There is no such thing as a "coral insect," and coral is not built cell by cell as the bee builds honeycomb. Some 2,000 species are known.

Coral Snake or **Harlequin Snake** (*Elaps fulvius*). A small, beautifully colored venomous snake, about 2½ feet long, frequenting woods from South Carolina to western Texas and ranging northward to southern Indiana. It feeds chiefly upon other snakes, lizards, and insects.

Cowbird (*Molothrus ater*). A North American bird, related to the bobolink, breeding from Texas to Manitoba and eastward, feeding around cattle and, like the cuckoo of Europe, laying its eggs to be hatched in the nests of other birds.

Crab. A group of short-tailed crustaceans, containing over 1,000 species, mostly living in shallow sea water. The **Blue Crab** (*Callinectes hastatus*) of the Atlantic coast is a highly-prized edible species both in hard shell and soft shell stage. The **Fiddler Crab** (*Gelasimus vocans*), so named from the manner in which it carries its largest claw, ranges from Cape Cod southward. The **Hermit Crab** (*Pagurus*) thrusts its soft body into a cast-off snail shell and carries it around for protection.

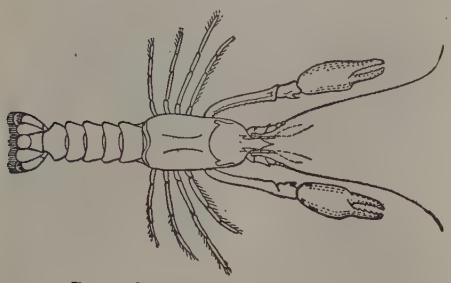
HERMIT CRAB.

MUD CRAB.

Crane (*Grus*). A large wading bird, frequenting marshes, living upon fish, small animals, roots, and seeds, breeding northward but migrating southward in winter, most numerous in the Old World. The **Whooping Crane** (*G. americana*), pure white and black, 50 inches long, and the slate colored **Sand-hill Crane** (*F. mexicana*) occur in the United States.

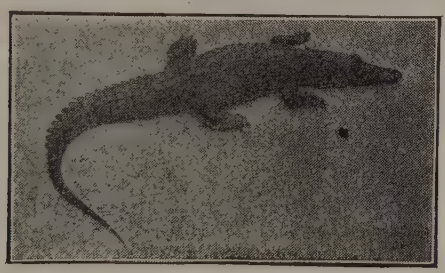
Crawfish, Crayfish (*Cambarus*). A fresh water crustacean resembling a small lobster, living in lakes, ponds, and streams, feeding upon worms, insects, small animals, and plants. While rarely eaten in America, crawfish are esteemed a great delicacy in Europe, particularly in France.

Cricket (*Gryllidae*). An orthopterous insect closely related to the grasshopper and locust. The **House Cricket** (*Gryllus domesticus*) of Europe, the "cricket on the hearth," has been introduced in the eastern United States. American crickets are nocturnal and solitary and rarely enter houses.



BLIND CRAWFISH. Mammoth Cave. Cambarus pellucidus.

Crocodile (*Crocodilus*). A large amphibious flesh-eating reptile distinguished from the alligator usually by a narrower, more pointed snout, and differences in the teeth. There are a number of species, all natives of warm regions, two or three of which are dangerous to man. The great **Estuarine Crocodile** (*C. porosus*), sometimes 16 feet long, is a fierce man-eating species of southern Asia and the East India Islands. The **Egyptian Crocodile** (*C. vulgaris*) immensely abundant in the upper Nile, and widely distributed in African rivers, is bold and dangerous. The **American Crocodile** (*C. americanus*) found in tropical America, the West Indies and sparingly in Florida, exceeding 14 feet in length, like the alligator is practically harmless.



AMERICAN CROCODILE.

Crow (*Corvus*). A passerine bird allied to the raven and jay. The **American Crow** (*C. americanus*), occurring throughout North America and assembling in enormous flocks, is one of the most intelligent of birds. The very similar, slightly smaller **Fish Crow** (*C. ossifragus*) of the lower Atlantic and Gulf coasts is readily distinguished by its different call. The **Carrion Crow** (*C. corone*) of Europe, living solitary in pairs instead of flocks, is readily tamed and taught to imitate the human voice.

Cuckoo (*Coccyzus*). A genus of 200 species of strictly insect-eating birds occurring throughout the world. The celebrated **European Cuckoo** (*C. canorus*) is a summer visitor from Africa, which lays its eggs in the nests of other birds. The **Yellow Billed Cuckoo** (*C. americanus*) and the **Black Billed Cuckoo** (*C. erythrophthalmus*) of the eastern United States, build nests, and hatch their own eggs.

Cuttlefish (*Sepia*). A cephalopod mollusk, rarely over 18 inches long, with an oval body and a large head, surrounded by 10 arm-like feet. There are about 60 species living near shore in the open sea, discharging, when pursued, an ink-like fluid, used for writing by the ancients and the source of sepia ink. The shell or bone is fed to canary birds and the whole animal is used for food in India, China, and Japan.

Daddy Longlegs or Harvestman (*Phalangium*). A long-legged, small-bodied, wingless insect, resembling and related to the spiders. There are about 15 North American species, all of which feed largely upon plant lice (*Aphis*) and are beneficial to man. In England the name daddy longlegs is applied to two-winged flies of the family *Tipulidae* (Crane flies).

DADDY LONGLEGS OR HARVESTMAN.

Deer (*Cervus*). A group of ruminant mammals, the males of which usually possess solid bony outgrowths of the skull called antlers, shed and grown anew each year, found in all continents except Australia, valued for their flesh, hides, and horns. The **Red Deer** or **Stag** (*C. elaphus*) of Europe, now rare except in game preserves, is 4 feet high, and weighs 300 to 400 pounds. The small **Fallow Deer** (*C. dama*) of Mediterranean countries, only 3 feet high, is kept in parks for ornament and highly prized for venison. The **Wapiti** or **American Elk** (*C. canadensis*), usually, though improperly, called elk, now mostly confined to the Rocky Mountains, sometimes measures 5½ feet high and weighs 800 pounds. This large deer thrives wherever protected and is easily reared in captivity. The **White Tailed** or **Virginia Deer** (*Dama virginiana*), a most graceful and elegant species, once abundant nearly throughout the continent, is now rare except locally in the United States. The **Mule Deer** (*Dama hemionus*), so named on account of its long ears, is a somewhat larger Rocky Mountain species. The **Black Tailed Deer** (*Dama columbiana*), with a distinctly black tail, smaller and more graceful than the mule deer, occurs from California to Alaska.

Dingo (*Canis dingo*). The wild dog of Australia. It is smaller than the wolf, usually about 2 feet high, and varies in color from brown to black. Dingos are abundant in the woods of Australia, where they hunt in large droves.

Dodo (*Didus ineptus*). A large extinct bird, related to the pigeon, formerly inhabiting the island of Mauritius. It was larger than the swan, with a clumsy body, short legs, and a large bill and was unable to fly. It became extinct about the end of the seventeenth century.

Dolphin (*Delphinus*). A fish-shaped aquatic mammal related to the whales, usually less than 10 feet in length, with a horizontal tail. The **Common Dolphin** (*D. delphis*), occurring in all except polar seas, 6 to 8 feet long, feeding largely upon squids, was formerly valued for food. It was sacred to Apollo, and the Delphic oracle was named for it.

Dove, Mourning or Turtle (*Zenaidura macroura*). A common and very widely distributed bird in the United States, about 1 foot long, with a characteristic mournful note. It is usually seen in pairs, lives on seeds and fruits, and is prized for its excellent flesh.

Dragon Fly. Several families of insects (order *Odonata*) with long, cylindrical bodies, large head and eyes, and four membranous wings, very voracious feeders upon other insects, but harmless to man. Also called **Spindle, Snake Feeder,** and **Devil's Darning-needle.**

Duck. The common name for birds of two divisions of the duck family, the River and Pond ducks (*Anatinae*), including the **Mallard, Teal, Shoveler, Widgeon,** the **Baldpate, Pintail,** and **Wood ducks,** and the **Sea** and **Bay ducks** (*Fuligulinae*), which include the **Red-head, Canvasback, Golden-eye, Scoter, Eider,** and **Harlequin ducks.** The **Mergansers** (*Merginae*) are sometimes called fish ducks.

Duckbill (*Ornithorhyncus anatinus*). An aquatic egg-laying mammal of the order *Monotremata,* found in Australia, Papua, and Tasmania. It is about 18 inches long, with a duck-like bill, webbed feet, and a short, flat tail. It inhabits rivers, burrowing in the banks and feeding largely upon mollusks and aquatic insects.

Eagle. A large diurnal bird of prey of the Falcon family (*Falconidae*). The **Golden Eagle** (*Aquila chrysaetus*), occurring throughout Europe, northern Asia, and northern Africa, also in North America, though rare east of the Mississippi, is a dark brown bird, 3 feet long with a wing spread of 7½ feet, usually nesting in cliffs or trees, and feeding upon small animals. The **Bald Eagle** (*Haliaetus leucocephalus*), the emblem of the United States, ranging throughout North America, is a dark brown sea eagle, with white head, neck, and tail, about equal to the golden eagle in size, living near water, and subsisting mainly upon fish and small land animals.

Earthworm, Angleworm (*Lumbricus*). A burrowing worm, common throughout the world except in deserts, living upon vegetable matter in the soil, which is greatly improved by its workings. In South America, Africa, and Australia giant species occur, sometimes 6 feet long and an inch in diameter.

Eel (*Anguilla chrysypa*). A long-bodied, fresh-water food fish which goes to the sea to spawn; common in most regions except Pacific America; usually 20 to 30 inches long, very voracious, eating refuse and dead fish, and destroying great numbers of fish caught in fishermen's nets; very prolific, the young returning from the sea to fresh waters in vast numbers.

ELAND.

Eland (*Oreas canna*). A large ox-like antelope, formerly found all over South Africa, but now inhabiting only the interior region. It is about 5½ feet high, and has a body somewhat like that of an ox and a head like a deer, with twisted horns and a small mane. Elands generally go in herds of 50 to 100 and look so much like cattle that they are often mistaken for them.

Elephant (*Elephas*). The largest living land animal, with a huge body supported by pillar-like legs, an immense head provided with tusks, and a long proboscis or trunk. There are two living species: The **Asian Elephant** (*E. indicus*), native of southern Asia, Ceylon, and Sumatra, usually from 7 to 10 feet high, is extensively domesticated and is the species usually seen in menageries. The **African Elephant** (*E. africanus*) of central Africa, standing 10 to 12 feet high, is wilder and fiercer, with much larger ears, darker skin, and usually has one nail less on each foot, infrequent in captivity, though Jumbo was an African elephant.

AFRICAN ELEPHANT.

Elk. In America the name commonly given to a large, handsome deer (*Cervus canadensis*), also known as **Wapiti.** In Europe the moose (*Alces*) is called elk. (See DEER, MOOSE.)

Emu (*Dromaeus*). A large ostrich-like bird of Australia, allied to the cassowary but larger, and next in size to the ostrich. It differs from the cassowary in having the neck and head feathered, in the absence of a helmet, and in having more slender legs. Emus live in open plains, where they feed upon berries, herbs, etc. They thrive in captivity and are valued for their eggs and flesh.

Equidae. A family of hoofed mammals (*Ungulata*), which have but one toe incased in a solid hoof, and 42 teeth—including the horse, ass, zebra, and quagga.

Ermine (*Mustela erminea*). A kind of weasel found in North America, Europe, and Asia, which turns white in winter, and is valued for its fur. It is about 10 inches long and in summer is reddish brown above and whitish below, with tip of tail black. The habits of the ermine are much like those of the common weasel, but it preys upon larger animals, such as hares and rabbits. In Europe it has been domesticated and used like the ferret.

Falcon (*Falco*). A long-winged bird of prey with a hooked beak and strong, sharp claws, striking down its quarry in flight, found nearly throughout the world. The **Peregrine Falcon** (*F. peregrinus*), found in every continent except Australia, 16 inches long, is the "noble peregrine" of falconry, a veritable tiger of the air, fierce, strong, and swift, quickly overtaking and overpowering the swiftest birds. The **Sparrow Hawk** (*F. sparverius*), very common in the United States, only 11 inches long, a beautiful and graceful species, is one of the boldest and most active falcons.

Fer-de-Lance (*Bothrops lanceolatus*). A much dreaded, venomous snake of the West Indies, 4 to 6 feet long, with very long poison fangs.

Flamingo (*Phoenicopterus*). A small-bodied bird with very long neck and legs, downwardly turned bill, and scarlet or rose-colored plumage with black wings. The **American Flamingo** (*P. ruber*), now rare in Florida and Louisiana, stands nearly 4 feet high. It is easily tamed and often kept in zoological gardens.

Flea (*Pulex*). A small, reddish-brown insect, with a beaked mouth for biting, and long, strong legs, most abundant in the tropics and in warm, dry regions, as in southern Europe, where they are intolerable pests. There are many species, those infesting animals being different from the human flea (*P. irritans*).

Flies (*Muscidae*). A large family of dipterous insects of which the house fly is typical. In its most restricted sense the family numbers about 150 North American species. The larvae, known as maggots, live in decaying animal and vegetable matter, and reach maturity very quickly. The house fly requires only from 10 to 14 days. Most adult Muscidae are of repulsive habits, often carrying germs of disease from their filthy surroundings and depositing them on food. The typhoid fever, when epidemic in military camps, is usually due to these flies. Among better known kinds are: The **House Fly** (*Musca domestica*), which usually breeds in horse dung, might easily be greatly reduced in numbers. Two kinds of **Blow Flies** (*Calliphora vomitoria and C. erythrocephala*) live as larvae in decaying flesh. The **Screw-worm Fly** (*Chrysomyia macellaria*), which occurs from the United States to Argentine Republic, attacks raw sores of domestic animals. The **Biting House Fly** or **Stable Fly** (*Stomoxys calcitrans*) closely resembles the house fly, from which it can be distinguished by its sharper proboscis; it annoys horses and cattle, and bites human beings. The **Horn Fly** (*Haematobia serrata*), smaller than the house fly, attacks cattle, often swarming about the base of their horns. The African **Tsetse Flies** of various species (*Glossina*), insects resembling the common stable fly, transmit by their bites small protozoa (*trypanosomes*) into the blood of horses, cattle, and dogs, resulting fatally; one species (*G. palpalis*) is in this way the cause of the fatal "sleeping sickness" in man, the trypanosomes being transmitted from the crocodile, it is believed.

Flounder or **Flatfish** (Family *Pleuronectidae*). A flat fish frequenting sandy sea bottoms, in which both eyes, by a gradual twisting of the head, appear on one side, which is always uppermost. There are about 50 genera and upwards of 400 species including many valuable food fish such as the halibut, plaice, and turbot.

LIVER FLUKE.
1. Larval stage. Cercaria. 2. Mature fluke.
3. Cyst. 4. Redia stage.

Fluke (*Distomum*). A small, flat, platyhelminthine worm, infesting a great variety of animals, several species attacking man. The common **Liver Fluke** (*D. hepaticum*), parasitic in man and many ruminant animals, causes the destructive disease called rot in sheep. The adult worm in the liver produces hundreds of thousands of eggs, which are discharged through the bile duct. Eventually some of these are washed into ponds where they hatch in the water. The newly-hatched larvae immediately attack and enter the bodies of certain amphibious snails, where they undergo a remarkable series of changes, finally escaping as active cercariae, which encyst upon blades of grass, and are eaten by sheep and other animals. The cyst dissolves in the stomach and the liberated worm penetrates the liver, where it matures and again lays eggs.

Flying Fish (*Exocoetus*). An open-sea fish, possessing large pectoral fins, which leaps from the surface and glides long distances through the air. There are over 40 species, mostly of tropical oceans.

Flying Squirrel (*Sciuropterus*). A squirrel provided with a distensible membrane connecting the fore and hind legs, by means of which it glides from tree to tree. The **Assapan** (*S. volans*), occurring from Canada to Kansas and southward, about 10 inches long including the tail, is the most common American species.

Fox (*Vulpes*). A carnivorous mammal closely related to the wolf and dog, but smaller, with a narrow, pointed nose and a bushy tail, dwelling in burrows, hunting singly at night, living upon small animals and fruit and noted for sagacity and cunning. The **American Red Fox** (*C. fulvus*), reddish yellow, throat and tip of tail white and ears black, ranges eastward from the Missouri river in the Northern States and Canada. The **Prairie Fox** (*V. macrourus*), lighter colored with a larger tail, inhabits the central plains. The **Kit** or **Swift Fox** (*V. velox*), of arid western regions, is smaller, handsomer, and remarkably fleet. The **Arctic Fox** (*V. lagopus*), with thick fur, covering even the soles of the feet, pure white in winter and dull rusty and yellowish in summer, occurs throughout Arctic regions. The **Gray Fox** (*Urocyon virginianus*), more dog-like, gray mixed with black, lives in hollow trees or caves, from Pennsylvania south and west to Texas. Many species occur in Europe, Asia, and Africa.

Fringillidae (Finch family). The largest family of birds, containing 100 genera and more than 500 species, occurring in all continents save Australia, one seventh of all being North American, mostly seed-eating song birds of plain plumage, though some are brilliantly colored, including sparrows, grosbeaks, cross bills, linnets, the snowbird, and the canary.

Frog (*Rana*). A four-footed, tailless amphibian, with the hind legs strongly developed for leaping, smooth skin and webbed feet, living chiefly on insects and small mollusks. There are about 270 species, widely distributed except in arid or frigid regions. The **Bull Frog** (*R. catesbiana*), 5 to 8 inches long, occurring in sluggish waters from Kansas eastward, is noted for its deep bellowing note. The **Common** or **Leopard Frog** (*R. pipiens*), 2½ inches long, usually green above, marked with black patches edged with whitish, is abundant throughout North America, west to the Sierra Nevadas. The **Green Frog** (*R. clamitans*), 3 inches long, confined to the eastern United States, is found also in Europe, Asia, and North Africa.

Garter Snake (*Thamnophis*). The most abundant North American snake, occurring everywhere in grassy places. The most common species is *T. sirtalis*, found throughout the United States, east of the Sierra Nevadas. There are many other species, all absolutely harmless, and on the whole beneficial to man.

FLYING FISH.

Gavial (*Gavialis gangeticus*). A carnivorous reptile of the crocodile family, occurring in the Ganges and other Indian rivers, differing from the crocodile in having a long, slender, knobbed snout, one fifth as long as the body, which sometimes exceeds 18 feet. It feeds upon small animals and is harmless to man.

Gila Monster (*Heloderma suspectum*). A venomous lizard of the arid regions of Arizona, New Mexico, and Sonora, about 18 inches long, whose bite is fatal to some small animals but probably not to man.

Giraffe or **Camelopard** (*Giraffa camelopardalis*). An African hoofed mammal, the tallest living animal, attaining a height of 18 feet, a large part of which is represented by the abnormally long neck. The body, legs, and neck are strikingly colored and spotted; the head is finely formed, with erect

ears, full lustrous eyes, and two bony, hornlike outgrowths from the skull, covered with hair. The tongue is very long, slender, and rough, and is used for plucking trees, the leaves of which constitute most of its food. The giraffe is found only in central and southern Africa.

Glass Snake (*Ophisaurus ventralis*). A smooth, legless, snake-like lizard about 2 feet long, found from North Carolina to Wisconsin and southwestward to Mexico. It is immediately distinguished from true snakes by having eyelids and external ear openings. In common with many lizards it can part with its tail in an emergency and grow a new but much shorter one thereafter, giving rise to many erroneous popular notions as to brittleness and ability to reunite its separated parts.

Gnu (*Connochaetes*). A large ungainly South African antelope, somewhat resembling both the ox and the horse in appearance. The **White-Tailed Gnu** (*C. gnu*), 6½ feet long, standing 4 feet high, lives in herds in open plains where it is hunted for its flesh, hide, and horns.

Golden-eye or **Whistler** (*Glaucionetta clangula americana*). A North American duck, breeding from Maine to Manitoba and northward, wintering southward in Cuba. It is a vigorous diver and swimmer, and the sound of its rapidly driven wings gives rise to the name whistler.

Goose. The common name for a member of a division of the duck family (*Anatidae*), larger than ducks but smaller than swans, found nearly throughout the world. About 10 wild species visit or breed in the eastern United States, among them the **Snow Goose** (*Chen hyperborea*), the **Black Goose** (*C. caerulescens*), the **White Fronted Goose** (*Anser albifrons, var.*), the **Canada Goose** (*Branta canadensis*), and the **Brant** (*Branta bernicla*).

Gopher (*Spermaphilus*). The common name of various ground squirrels possessing cheek pouches. The most abundant is the **Striped Gopher** (*S. tridecemlineatus*) of the prairies from Michigan to Texas and northward, about 10 inches long including the tail; marked with 13 stripes. The true **Pocket Gopher** (*Geomys bursarius*) of the northern Mississippi valley is slightly larger and has cheek pouches lined with hair, opening outside the mouth. The name gopher in the Southern States is applied to a burrowing tortoise.

Gorilla. This largest, most muscular and powerful of the anthropoid apes, a native of the forests of Gabun, black in color, with naked face, small ears, and wide nostrils, a vegetable feeder, living in families, is savage and untamable, not hesitating when cornered to attack man. A full grown male stands more than 5 feet high when erect, and sometimes weighs 400 pounds.

Grasshopper. An orthopterous insect closely related to the locusts, but provided with long antennæ and never migrating in swarms, usually green, resembling the vegetation it lives upon. The so-called grasshoppers once so destructive on western plains are true locusts.

Grouse. Large game birds of northern regions belonging to the family *Tetraonidae*, some of which, as the **Capercaille** of Europe, are nearly 3 feet long, weighing 15 pounds. The **Ruffed Grouse** (*Bonasa umbellus*), wrongly called Partridge in the north, and Pheasant in the south, 18 inches long, makes a peculiar drumming sound by quick strokes of its wings. The **Pinnated Grouse** (*Tympanuchus americanus*), commoniy called Prairie Hen or Prairie Chicken, 17 inches long, was formerly abundant from Indiana westward. The **Sharp Tailed Grouse** (*Pediaecetes phasianellus*) of the Arctic plains extend southward to Illinois. The **Sage Cock** or **Sage Chicken** (*Centrocercus urophasianus*) of western desert plains is the largest American grouse, sometimes 30 inches long. It feeds upon various kinds of sage brush, which impart a bitter flavor to its otherwise excellent flesh.

Guanaco (*Lama guanacus*). A South American mammal of the camel family, found in high altitudes in Peru and Chile, and on the plains of Patagonia; much smaller than the camel, humpless, and with two-toed feet. Both the llama and alpaca probably are domesticated forms of the guanaco.

Hare (*Lepus*). A small rodent, with long hinder legs, short, bushy tail, large eyes, long ears, and almost woolly fur, most numerous in northern regions, usually feeding upon tender plants. The **Cotton Tail** (*L. sylvaticus*), 18 inches long, ranging from Hudson's Bay to Florida and eastward, is our most common species. The **Prairie Hare** or **Jack Rabbit** (*L. campestris*) 23 inches long, ranging from Dakota to Kansas and west to Oregon, turns white in winter.

Hawk (*Accipiter*). In the United States the name is applied to the buzzard, falcon, harrier, and kite, or to almost any bird of prey not an eagle, vulture, or owl. Among the true hawks (*Accipiter*) are the **Sharp-shinned Hawk** (*A. velox*), also called **Pigeon Hawk**, 12 inches long, occurring throughout the United States; the **Chicken Hawk** (*A. cooperi*), also called **Cooper's Hawk**, a bold bird, 18 inches long, feeding upon grouse, pigeons, and hares. The larger **Goshawk** (*A. atricapillus*), 24 inches long, ranging far northward, is a daring robber of poultry.

Heron (*Ardea*). A genus of birds with long necks, wings, and legs, most numerous in warm and tropical regions, frequenting marshy places. The **Great Blue Heron** (*A. herodias*), 40 to 50 inches

Great White Heron.

long, is common throughout North America; the **Great White Heron** (*A. occidentalis*) is slightly larger and entirely white, one of the most striking of the herons. The **Little Blue Heron** (*A. coerulea*), 24 inches long, ranges from Illinois eastward, and the **Little Green Heron** (*A. virescens*), 18 inches long, occurs throughout the continent.

Herring (*Clupea harengus*). A very important food fish, abundant on both shores of the Atlantic, particularly in northwestern Europe. It attains a length of 12 inches and an average weight of one pound. Herring are cured in vast quantities, and young herring are put up as sardines.

Hippopotamus. A thick-skinned, amphibious, hoofed mammal, most nearly related to the common pig, two species of which exist in Africa. The **Common Hippopotamus** (*H. amphibius*), ranging from equatorial Africa southward, exceeded only by the elephant and rhinoceros in bulk, attains a length of 14 feet and a height of 4 to 5½ feet. It is the most aquatic of all hoofed animals, graceful in the water, but very awkward on land, which it visits chiefly at night to feed on herbage. The **Liberian Hippopotamus**

(*H. liberiensis*), scarcely larger than a full grown hog, which it resembles in habits, occurs only in Guinea.

Horned Toad (*Phrynosoma cornutum*). A small, grotesque, harmless lizard about 5 inches long, with a somewhat toad-shaped body, bearing spines on its head and back, common on arid plains of the western United States.

Horse, Wild. The wild horses mentioned by Strabo and Pliny among the Romans and in writings of the Middle Ages were probably all descendants of tame horses which had returned to a wild life. The wild horses which became so numerous in Texas and other western states as well as those of the plains of South America originated from European horses left behind by early Spanish explorers. Some consider the tarpan of central Asian steppes the progenitor of the domestic horse, but most regard it a very wild descendant of tame horses. However, a truly wild horse was discovered in the deserts of Mongolia about 1885 by a Russian naturalist, and named for him **Przevalski's Horse** (*Equus przevalskii*). It is about the size of the zebra and more closely resembles the domestic horse than any other known wild species. Its coat, which is of a dun color, much darker on the front of the legs, becomes very shaggy in winter. The mane is short and there is no forelock. In summer a narrow dark line is visible in the middle of the spine extending from the mane to the tail. The bristles of the upper part of the tail are shorter than in the horse, but longer than in the donkey, and the head and limbs are larger in proportion to the body than in the domestic form.

PRZEVALSKI'S HORSE. Summer coat.

House or English Sparrow (*Passer domesticus*). A small bird, 6 inches long, ranging from India westward throughout the most of Europe, and introduced into America, Australia, and New Zealand; first brought into the United States at Brooklyn, N. Y., in 1851, to destroy insects; now widely diffused and abundant east of the Rocky Mountains.

Humming Birds (*Trochilidae*). A family of some 75 genera and 400 species, peculiar to America, containing the smallest and most brilliantly colored of birds, mostly tropical, but a few occur in temperate regions. The largest species is 8½ inches long, the smallest about 2½ inches; 17 visit various portions of the United States in summer, one ranging as far as Alaska. The **Ruby-Throated Humming Bird** (*Trochilus colubris*), breeding from Florida to Labrador, is the only representative in eastern North America.

Hyena (*Hyaena*). A carnivorous mammal, most numerous in warm regions of Asia and Africa, of repulsive appearance and habits, living on carrion and attacking sick or wounded animals. There are several species, which, like the vultures among birds, are valuable as scavengers.

Ibis. A genus of birds allied to the herons. The **Sacred Ibis** (*I. aethiopica*) of the ancient Egyptians, native of the Nile valley and southward but now rare in Egypt, is a beautiful bird, with pure white plumage, contrasted with black head, neck, and wing feathers, and a bronze blue-black plume. The **Scarlet Ibis** (*Guara rubra*) of tropical America is pure scarlet in color excepting the black tips of wing feathers. The **White Ibis** (*Guara alba*) of the southern United States is pure white with black tipped wing feathers.

Iguana. A genus of large arboreal lizards, mostly of tropical America, with a crest of spines extending from the neck to the end of the tail, and a wide fold of skin under the throat. The **Common Iguana** (*I. tuberculata*) 3 ot 4 feet long, feeding upon leaves, fruits, and insects, is much prized for food in South America. The **Ring-tailed Iguana** (*Cyclura carinata*) of the West Indies, 4 feet long, mostly grass eating, is strong fleshed and inedible. The **Black Iguana** (*Ctenosaur acanthus*) of California is valued for its flesh.

PRZEVALSKI'S HORSE. Winter coat.

Jackal (*Canis aureus*). A carnivorous mammal very closely related to the dog, found in the Mediterranean region and southern Asia, about 2 feet long, possessing an offensive odor like the fox, grayish yellow in color, with many varieties; nocturnal in habits, attacking domestic animals, robbing hen roosts, fond of fruit, but also eating carrion. The jackal is readily domesticated.

Jackdaw (*Corvus monedula*). A European bird, 10 inches long, the smallest member of the crow family (*Corvidae*); glossy black with back of head ashy gray; an omnivorous feeder, robbing other birds of their eggs; nesting on hollow trees, church towers, and corners of buildings, possessing the power of imitating sounds, for which it is sometimes kept as a pet.

IGUANA.

Jay. The jays belong to a subdivision (*Garrulinae*) of the crow family (*Corvidae*), one of their near relatives being the magpie; distinguished from crows by longer tail and more brilliant colors. There are about 30 North American species, many more or less bluish in color, the majority occur-

ring in the southwestern United States and Mexico. The **Blue Jay** (*Cyanocitta cristata*) of eastern North America is a noisy, rather bold bird, nesting in trees, often about houses; about a foot long, with crest and back light blue, wing and tail feathers deep blue with white tips and black bars, and a black collar on the breast.

Jellyfish or **Medusae.** Free swimming marine coelenterate animals with disc-shaped or umbrella-shaped bodies of jelly-like consistency, composed chiefly of water, only about one per cent. being solid matter. Small forms are less than an inch in diameter, while larger forms measure 6 to 7 feet across the disc, with tentacles 100 feet long. Many are beautifully colored and nearly all are phosphorescent, some giving forth a strong light when disturbed. The stinging tentacles of some are poisonous to bathers. The common **Yellow Jellyfish** (*Aurelia flavidula*) of the New England coast, 8 to 10 inches in diameter, is not poisonous.

June Bug. A heavy bodied beetle of the family *Scarabaeidae*, appearing in great numbers about lights in May and June. In Europe most June bugs are species of *Rhizotrogus*; in eastern North America there are over 100 species of *Lachnosterna*, supplying most of the June bugs. The beetles do but little damage, but the larvae—white fleshy grubs—injure turf and cut off roots of strawberry plants. The **Common June Bug** (*L. fusca*) abundant in the northeastern United States is almost an inch long and dark brown in color.

Kangaroo (*Macropodidae*). A marsupial mammal peculiar to the Australian region, distinguished by disproportionately large hind limbs, mostly ranging in size from that of a sheep to a rabbit; all strictly vegetarian, living on grass and roots. Some are nocturnal in habit and all are timid creatures, protecting themselves only when forced to do so. When at rest kangaroos stand upright, locomotion being accomplished by a series of immense bounding jumps. The marsupium or pouch in which the young are placed as soon as born contains four nipples. The young of the Great Kangaroo are only about an inch long at birth. There are two groups, the true kangaroos, 30 species, and the rat kangaroos, 10 species—none larger than rabbits. The **Great Kangaroo** (*Macropus giganteus*) 4 to 5 feet high with a tail 4 feet long, of eastern Australia and Tasmania was discovered by Captain Cook in 1770.

Katydid. The katydids are large, green, long-horned grasshoppers, with well developed wings, and feed amongst foliage. The **Common Katydid** (*Cyrtophyllus concavus*), of the northwestern United States, the sharp chirp of which gave rise to the name ka-ty-did, is arboreal in habits but rather local in occurrence. Its evening song, heard in late summer and fall, often in the tops of tall elms, is produced by rubbing the wing-covers and wings together.

Kingbird (*Tyrannus*). Kingbirds are flycatchers, of powerful and skillful flight, 8 to 10 inches long, black or gray above with an erectile crest marked with a yellowish-red patch; usually white or gray below. During nesting season the male attacks all birds that come near his nest, teasing and driving away eagles, hawks, and crows, by darting down upon their backs. The **Common Kingbird** (*T. tyrannus*) of eastern North America is very useful as an insect destroyer, though it sometimes eats bees.

King Crab or **Horseshoe Crab** (*Limulus polyphemus*). The king crab, believed by some naturalists to belong to the crustacea, and by others to be nearly related to the arachnida, has a body—cephalothorax—shaped like the foot of a horse, behind which is a wedge-shaped abdomen, and a long narrow inflexible tail. It burrows in sandy or muddy shores of the Atlantic coast, living on small animals, chiefly worms. Two other species occur in Asia.

Kingfish. The kingfish (*Menticurrus nebulosus*) of American fishermen, a game fish of excellent flavor, closely allied to the mullets, occurs along the Atlantic coast from Massachusetts to Florida, and is also locally known as tomcod, barb, black mullet, and whiting. The name is given to many other fishes. The brightly colored deep-water fish (*Lampris luna*) called kingfish in England, attaining a length of 4 feet, and very highly esteemed for its rich flesh, intermediate between that of the salmon and tunny in color, seems best entitled to the name.

Kite. A diurnal bird of prey, of the same family as hawks and eagles (*Falconidae*), but with a deeply forked tail. The **European Kite** (*Milvus ictinus*), once abundant in Great Britain, now nearly extinct, slightly exceeds 2 feet in length, of which the tail is nearly one half. Rags usually form a part of its tree-built nest of mixed materials, explaining the meaning of Autolycus's advice to laundresses (Winter's Tale, Act IV, scene 3), "When the kite builds look to lesser linen." The flight of the kite is very elegant and strong, and few modern Londoners "who see the paper toys hovering over the parks in fine days of summer, have any idea that the bird from which they derive their name used to float all day in hot weather high over the heads of their ancestors." Other species occur in the Old World, and of the five North American Kites the best known is the **Swallow-tailed Kite** (*Elanoides forficatus*), 25 inches long, bronze purplish with white head and tail, which ranges from South America to Minnesota and Pennsylvania.

Koodoo or **Kudu** (*Strepsiceros kudu*). This African antelope, now becoming rare from excessive hunting, found from Abyssinia southward to the Cape, stands over 4 feet high at the withers, and the spiral horns, present only in the male, are sometimes 4 feet long. It is reddish brown with vertical white stripes. The **Lesser Koodoo** (*S. imberbis*) of Somaliland, is much smaller.

Ladybird or **Ladybug.** Ladybirds (*Coccinellidae*) are short-legged, approximately hemispherical beetles, of medium or small size, often red marked with black spots, or black with red spots. There are hundreds of kinds, some of which are found in all temperate and tropical regions, more than 150 species having been described from North America north of Mexico. The larvae, like the beetles themselves, eat plant lice, scale insects, mites, and eggs of other insects. So useful are the ladybugs and their larvae that economic entomologists are naturalizing foreign kinds to aid in the control of especially noxious scale insects. Ladybugs are especially active in bright sunlight, their acrid blood protecting them from destruction by birds.

Lark. Larks are migratory, insectivorous passerine birds belonging to the family *Alaudidae*, but when the word lark is used alone the European lark is meant. Other birds which resemble the *Alaudidae* are often called by the name of lark with a prefix, as the meadow lark and tit lark. The **Lark** or **Skylark** (*Alauda arvensis*), 7 inches long, with an erectile crest, is one of the most abundant birds of western Europe. At the time of their autumn migration southward larks are taken in great numbers for the markets. The **Horned Lark** (*Otocoris alpestris*), closely related to the skylark, is found, in about 7 well-marked varieties, in various parts of North America. It is about the same size as the European lark, and each side of the head bears a narrow horn-like tuft of black feathers.

Leech. Leeches are blood-sucking parasitic worms, and most of them live in fresh water. They have tough, leathery, elongate, flattened bodies, with a sucker at each end. The mouth is provided with three saw-like jaws, by means of which the leech makes a wound like a three-pointed star, from which it sucks the blood. Leeches can be kept several years in a jar of pure water, without food. They were much employed by physicians in the past to bleed patients as a remedy for certain diseases, but now the employment of the leech is uncommon. The use of leeches as remedial agents dates back to the times of the Romans. The **Medicinal Leech** (*Hirudo medicinalis*), a native of middle Europe, is over 6 inches in length when fully extended.

Lemur. The lemurs form the lowest suborder of primates, and are old-world monkeys. Thirty-six species are found in Madagascar; about 14 others are distributed from Africa eastward as far as the Philippine Islands. The typical lemurs (*Lemur*) are omnivorous, gregarious, active, noisy, diurnal animals, about as large as a cat, with fox-like face, thick fur, and long bushy tail. The **Ring-tailed Lemur** (*L. catta*), from Madagascar, is one of the most striking species. Its body is gray, but the long tail has alter-

nate rings of black and white. The **Ruffed Lemur** (*L. varius*), also from Madagascar, is the largest species. In this species there is much individual variation in the color of the sex, scarcely any two being alike. The name Lemur comes from the Latin lemures (ghost) and is the name applied by Linnaeus to these peculiar Malagasy representatives of the order **Primates** which do not actually come under the designation of either monkeys or apes.

RUFFED LEMUR in the Bronx Zoo.

Leopard (*Felis pardus*). A large cat-like carnivore found in southern Asia and in Africa. It is of a tawny ground color, nearly pure white beneath, and spotted with a few solid spots and numerous rosettes of black. In southern Asia a black variety is occasionally found, and the leopards of northern China have longer fur than those of more tropical regions. The leopard attains a length of more than 7 feet, tail included; is very ferocious and climbs like a cat, which it also resembles in the stealthy capture of prey. It captures and devours many small animals, especially dogs, and sometimes attacks man.

Lion (*Felis leo*). The lion is readily distinguished from all related cat-like animals (*Felidae*) by the adult male having a mane. Lions are found in Africa and in parts of southern and western Asia. They all belong to one species, although variable in the amount of mane, and in color, which ranges from yellowish brown to chestnut brown or to deep red, and sometimes to almost silver gray. A male lion measures about 10 feet in length, including 3 feet of tail; the female is about a foot shorter. Lions cannot climb; they live in sandy and rocky places, often in thickets of undergrowth near streams and springs, where they lie in wait for their prey. Their greatest activity is at night, although they are often seen during the day. Opinions differ widely as to the courage of the lion, as well as to the loudness of its roar; there has been much exaggeration in regard to both subjects, but a hungry or provoked lion, especially at night, is a very dangerous and aggressive animal. The lion often overcomes animals larger than himself by means of his stealthy cat-like habit of springing upon them unawares. He preys upon buffaloes, zebras, and even young elephants. Lions, although monogamous, sometimes go in troops, being sociable rather than gregarious. The male aids in care and feeding of the young, which number from two to four, usually three, at a birth. The pupil of the lion's eye is circular when contracted, not a narrow slit as in the cat. The papillae of its tongue are so large that it can rapidly rasp the flesh from bones by licking them.

Lobster. The three species of *Homarus*, marine ten-footed crustaceans, are called lobsters,—one is European, one North American, and one South African. The forward pair of legs is enormously enlarged, one bearing immense blunt pincers for holding food, and the other sharp-toothed pincers for tearing. They are fond of decaying animal matter, and are caught in lobster pots, made of lath and netting baited with fish offal, and lowered to the bottom by a cord attached to a float to mark the location. The **American Lobster** (*H. americanus*), found from Labrador to New Jersey, has been caught so much that notwithstanding stringent laws regulating time of catching and size of lobsters caught, they average smaller from year to year, and it seems almost incredible that lobsters were formerly taken weighing nearly 40 pounds.

Locust. The grasshoppers with long horns (antennæ), of which the katydid is an example, are scientifically *Locustidae;* but the grasshoppers with short antennae, known scientifically as *Acrididae*, are the locusts mentioned in the Bible, and in the numerous works on destructive locusts. The seventeen-year cicada is also often wrongly called a locust. True locusts (*Acrididae*) form the largest family of orthopterous insects. These herbivorous insects mainly rest upon the ground, and their stridulation is usually due to rubbing the hind thighs against the outer edges of the wing-covers. The **Rocky Mountain Locust** (*Caloptenus spretus*), 1¼ inches long, ravaged the United States between the Rocky Mountains and the Mississippi River particularly during the early history of that region, and the U. S. Entomological Commission was organized, in 1877, to study these insects. These muscular, gregarious locusts, strong in flight, migrate in clouds and destroy every green leaf before them. The very similar **Red-legged Locust** (*Caloptenus femur-rubrum*) is distributed throughout the eastern United States. Tropical locusts are often very large, some having a wing spread of nine inches.

Loon. A name correctly applied only to divers of the genus *Urinator*, all of the northern hemisphere. They walk with difficulty, but swim very rapidly; are black or slaty above, speckled with white in summer, and white beneath; have a hind toe, webbed feet, and very short tail feathers, and usually lay two brown spotted eggs in a roughly formed nest near the water. The **Common Loon** or **Great Northern Diver** (*Urinator imber*), 36 inches long, breeds from latitude 42 degrees northward, going south as far as the Gulf of Mexico in winter. It is such a quick diver that it sometimes escapes the shot by diving beneath the surface of the water at the flash of a gun.

CANADA LYNX.

Lynx. The popular and scientific name of cat-like animals, rather larger than the domestic cat, having a short tail and tufted ears. Lynxes are more or less mottled brownish or gray, lighter beneath the body. They are all savage in disposition and prey upon smaller animals, doing much damage to sheep, lambs, and poultry. They climb trees readily and frequent rocky places in forests. The **European Lynx** (*Lynx lynx*), found in central and northern Europe and in northern Asia, is over two feet in body length and has sharp-pointed ears and a longer tail than most lynxes. The **Canada Lynx** (*Lynx canadensis*), once distributed in forests from Maine to Alaska, but now rare in eastern Canada and the United States, is over a yard long, including the tail. The somewhat smaller **Bay Lynx** or **Wildcat** (*Lynx rufus*) is found from northern Georgia to Maine, and is not rare in many thinly settled districts.

Lyre Bird. Two of the three species of the genus *Menura*, of the family *Menuridae*, Australian passerine birds, are known, from the lyre-like form of their tails, as lyre birds. The bodies of these birds are about the size of that of a small hen, but the long tail gives them a total length of nearly a yard. The tail has two outer feathers that are very heavily webbed, and curved in the form of the horns of a lyre. The rest of the tail feathers, representing the strings of the lyre, are very abnormal, and are thinly furnished with hair-like barbs.

Mackerel. A name applied especially to certain teleost (*acanthopterygid*) fishes of the family *Scombridae*. The common mackerel (*Scomber scombrus*), an important food fish of both sides of the north Atlantic, rarely attaining a length of 18 inches, makes extensive migrations along the coast, at or near the surface, in immense schools that sometimes contain thousands of barrels of fish. Some years mackerel are abundant, other years rare. The greater part of their food consists of small crustacea, but they eat spawn of lobsters and of fishes, young fishes, even of their own species, and the middle of large jellyfishes. They are taken with young fish for bait, but will bite at almost any shining object. Besides the common mackerel the better known North American kinds are: the chub-mackerel, big-eyed mackerel, bull mackerel or thimble-eye (*Scomber colias*) of the Atlantic coast; the frigate mackerel (*Auxis thazard*) of warm seas which rarely appears off the New England coast; the horse mackerel, or tunny (*Thunnus thynnus*), of the northern hemisphere.

Magpie. A collective name for all birds of the genus *Pica*. They are related to the crows, which they resemble in their omnivorous habits, audacity, and cunning. The **European Magpie**, or **Pie** (*Pica pica*), of which the somewhat larger magpie of western North America, formerly supposed to be a separate species (*Pica hudsonica*), but now regarded as a variety, is a bird of about 20 inches total length, of which over one half is of the long tail. Its color is lustrous black, with belly, shoulders, and edges of the wings white. Once common in Great Britain, its thievish habits have led to its being nearly exterminated. The **Yellow-billed Magpie** (*Pica nuttalli*) of central California resembles the common magpie except that the bill and bare skin around the eyes are yellow.

Mallard. The mallard (*Anas boschas*), the wild form from which domestic ducks were derived, is found throughout the northern hemisphere, reaching in winter as far south as the Isthmus of Panama, Egypt, and India, but in summer ranging the Arctic regions, or oftentimes, in America, breeding in the valleys of the Rocky Mountains. The mallard duck is 20 to 25 inches long; the male with brilliant metallic green neck, rich chestnut chest, a collar of pure white and a rhomboidal violet spot on each wing; the female has the wing-spot like the male, but is otherwise with yellowish or buff variations. The mother duck lines her rather rude nest with down from her breast, and her clutch is of from 9 to 11 eggs, which hatch in 28 days, the young being cared for by the mother until full grown and feathered. The word mallard is still sometimes used in its original sense for the male or drake; duck for the female.

Manati, or Sea-cow (*Manatus*). An aquatic, gregarious mammal, of the order Sirenia, nearly related to the dugong, and found in fresh water and along the Atlantic coasts of Africa (1 species) and of tropical America (2 or 3 species). It is shaped somewhat like a whale, has paddle-formed fore limbs, no hind limbs, a horizontally flattened tail, very small eyes, and reaches a length of eight feet. Beneath its wrinkled, black skin is a layer of blubber, which contains no free oil, as does that of the whale. It has a large number of molar or grinding teeth, which are replaced from before backwards during life, being worn away by its food, which consists of water plants mixed with sand. The two lobe-like halves of its upper lip, beset with stout bristles, move independently and aided by the fore limbs, draw the food into its mouth.

Mandrill (*Cynocephalus mormon*). The mandrill is one of the West African baboons, the lowest family of the catarrhine anthropoid apes. The bridge of its nose is red, and it has blue ridges on the muzzle. Mandrills are omnivorous, gregarious, ferocious apes, with large face, prominent brow-ridges, and very short tail. The naked ischial callosities of the rump of adult males are bright red, more intense when the animal is excited, and the mandrill, which is often seen in zoölogical gardens, is repulsive in looks and habits.

Marmoset. Marmosets are platyrrhine monkeys of the family *Hapalidae*, which is made up of the genera *Hapale* (7 species) and *Midas* (14 species), all from tropical America. They are the smallest of monkeys, about as large as squirrels, soft-furred and usually have a mane. The long tail is hairy, ringed, and not prehensile, although their habits are arboreal.

Marten. Martens are carnivorous mammals of the genus *Mustela*, nearly related to the weasels. The **American Marten** or **Sable** (*Mustela americana*), an important fur-bearing animal, was once abundant in the Atlantic states from Maine to Virginia, but has become rare except in the wilder parts of British America. It is about 18 inches long, exclusive of its bushy tail, and is trapped in simply constructed deadfalls baited with any kind of meat, a piece of fish, or a bird's head. The **Siberian Sable** (*Mustela zibellina*), with black fur, and the British **Pine Marten** (*Mustela martes*), dark brown with a brownish-yellow throat, are the European representatives.

Martin. A name applied to swallows (*Hirundinidae*), but especially with a modifying prefix, to certain well-known kinds. All are valuable insectivorous birds, with long wings and of rapid flight. The **Purple Martin** (*Progne subis*) often nests, several pairs together, in the same box provided for it; the **Sand Martin**, or bank swallow (*Riparia riparia*), a smaller sort found in North America, Europe, and Asia, digs deep holes in sand banks in which to build its nest; the **European House Martin** (*Chelidon urbica*) attaches its nests to the eaves of houses. Shakespeare wrote (Macbeth, act 1, sc. 6) of the last species:—

> "No jutty, frieze,
> Buttress, nor coign of vantage, but this bird
> Hath made his pendent bed and procreant cradle."

Meadow Lark. Meadow Larks are American birds of the genus *Sturnella*, belonging to the troupials (*Icteridae*), near relatives of orioles, red-winged blackbirds, and bobolinks, the name lark being here a misnomer. The **Common Meadow Lark** (*Sturnella magna*) of eastern North America is about 10 inches long, including about 3½ inches length of tail, is brownish streaked with black above and chiefly yellow below, but with a black irregular crescent on the breast. The **Western Meadow Lark** (*Sturnella neglecta*), from Illinois westward to the Pacific, is similar to its eastern congener, but has a much sweeter song.

Milk Snake. The milk snake, or house snake, of the northern United States is a color variety of the Southern States corn snake, or red snake (*Ophibolus doliatus*), a very variable non-poisonous species, 3 feet long, marked with brown blotches bordered with black. The milk snake, generally known in New England as spotted adder, has an arrow-shaped brown spot on the top of the head; the head of the corn snake is red.

Mink (*Putorius vison*) A black or dark brown amphibious mammal, 15 to 18 inches long exclusive of its bushy tail, and related to the weasels. Its food is mainly frogs and mollusks, but it will eat flesh of birds and quadrupeds. It nests in burrows in banks of streams, producing five or six young each April. Minks are caught in deadfalls and steel traps, fresh fish being used as bait. They have been bred in captivity for their valuable fur, which consists of a dense, soft under-fur mixed with long, lustrous hairs.

Minnow. A term loosely applied in the United States to almost any small fresh-water fish, and sometimes to those found in salt water. The genus Notropis, of the so-called minnow family *Cyprinidae*, numbers upwards of 100 species, all confined to North America east of the Rocky Mountains, which have been termed American minnows or shiners. They are of no importance as food fishes for man, but are useful as food for the larger predatory fishes, and as bait in fishing.

Mite (*Acarina*). Mites are near relatives of the spiders, but have the thorax and abdomen fused together to form a more or less rounded body, and are usually small. Some mites are scavengers, others infest plants, and many are parasites of other animals. The **Ticks** (*Ixodidae*), parasitic on larger animals, are conveyors of disease. The **Cattle Ticks** (*Margaropus*) in warmer regions infect cattle with a protozoan blood-parasite, causing Texas fever. The **Itch Mite** (*Sarcoptes scabiei*), a microscopic species that burrows in the human skin, giving rise to the itch. The **Red Spider** (*Tetranychus telarius*), a minute species that spins webs, attacks indoor cultivated plants. **Chicken Mites** (*Dermanyssus gallinae*) often swarm under the perches of ill-kept henhouses, and attack the poultry at night. **Harvest Mites** (*Leptus irritans*) known as jiggers or chigoes in the southern and western United States, burrow in the human skin, causing severe itching. The minute, white **Sugar Mite** (*Tyroglyphus sacchari*) infests raw or unrefined sugar in immense numbers, sometimes estimated to exceed 100,000 to a pound of sugar, and causes grocer's itch.

Moccasin Snake (*Ancistrodon piscivorus*). A dangerous venomous snake of the south Atlantic and Gulf states and the lower Mississippi valley, closely related to the copperhead, also known as the **Water Moccasin** from its aquatic habits, and as the **Cotton-mouth** from the whiteness of its mouth. It is about 4 feet long; dark chestnut brown, with the head purplish black.

Mole. General name for the small insectivorous mammals of the family *Talpidae*, of which there are seven genera and numerous species, all found in the northern hemisphere. They have short fore limbs and burrow in the ground; their fur is dense and velvety; they have no external ear, and their eyes are rudimentary. The **Common Mole** of the northern United States (*Scalops aquaticus*) is dark lead-colored above, paler beneath; about 4 inches long, exclusive of the tail, which is shorter than the head; burrows galleries just beneath the ground, often to the injury of lawns, in its search for insects and earthworms. The **Star-Nosed Mole** (*Condylura cristata*) of the northern United States is blackish, with slender head, the nose tipped with a circle of fleshy projections, and the tail longer than the head.

Monkey. A general name given to many long-tailed anthropoid primates; certain monkeys with long bushy tails are called marmosets, and others with dog-like faces are termed baboons. Large monkeys are often spoken of as apes, though this name is best restricted to the short-tailed man-like kinds. The apes and monkeys together number about 212 species. They are divided into two great groups: the catarrhines and platyrrhines. The catarrhine monkeys are confined to the old world; their nostrils are close together and point downward, and they have 32 teeth. Those catarrhines that have long tails do not use them as prehensile organs. The platyrrhine monkeys are found only in the new world; their nostrils are wide apart and directed outwards, and, with the exception of the marmosets, they have 36 teeth. The tail is generally long; often prehensile.

Moose or Elk (*Alces machlis*). This largest of deer, clumsy, heavy, short-necked, with long head and broad ears, small eyes, big upper lip hanging over the lower one, and far from a deer-like aspect, is the largest game animal of North America and Europe. It reaches a height of eight feet at the withers, and is clothed with long, coarse, brownish hair. Its nearest relative is the reindeer, but, unlike the latter, the male moose has palmate horns, which, in old males, have 14 snags each, weigh as much as 60 pounds, and are formidable weapons. The hoofs are also used as weapons. The moose, or true elk, which should not be confounded with the "American elk" (*Cervus canadensis*), an entirely different animal and preferably called wapiti, has a circumpolar distribution, usually living in forests. Its American range is from Maine to Oregon and northward. (See DEER.)

Mosquito (*Culicidae*). Mosquitoes are small, blood-sucking diptera, occurring in nearly all parts of the world. Most species are crepuscular or nocturnal, a few diurnal; many kinds attack birds and reptiles as well as mammals, yet probably the normal food of adult mosquitoes is vegetable. The eggs of certain kinds are deposited in boat-shaped masses that float on the water, but other kinds lay their eggs singly. The larvae live in fresh or brackish water, some preferring foul, others clear water. They breathe air, coming often to the surface of the water to take it in through a tube at the posterior end of the body. The proboscis, or biting organ, of the female is a penetrating lance made up of six sharp filaments. The male mosquito does not bite. Malarial fever is caused by a blood-parasite introduced into the human system by the bite of species of **Malarial Mosquito** (*Anopheles*). Yellow fever is transmitted by the **Yellow-fever Mosquito** (*Stegomyia fasciata*), which inhabits the warmer portions of the globe, and is common in southern parts of the United States, as far north as Virginia and Arkansas. Elephantiasis, a tropical disease, is also conveyed by the bite of mosquitoes (*Culex*). Remedies against the multiplication of mosquitoes consist in draining their breeding pools; in treatment of these pools with kerosene, and in the introduction of small fishes, their natural enemies.

AMERICAN ELK, or WAPITI. Cervus canadensis.

Moth. Moths and butterflies together constitute the order *Lepidoptera*, or scale-winged insects, the butterflies being diurnal in habits and having knob-tipped antennae; the moths crepuscular or nocturnal in habits, and with antennae of various forms. The North American moths number about 6,600 species. Moths mostly pass the pupal state in cocoons, often of silk, or pupate beneath the ground. The larvae are commonly injurious to vegetation. **Hawk Moths** or **Humming-bird Moths** (*Sphingidae*) are heavy bodied moths with rather narrow wings, the caterpillars of which generally have a spine above the posterior end of the body; the so-called **Tomato Worms** and **Tobacco Worms** are larvae of large kinds of hawk moths (*Phlegethontius*). The **Bombycine Moths** (*Bombycina*) include some of the largest moths, and a great number of small species, among them the **Silkworm Moth** (*Bombyx mori*); the **Gypsy Moth** (*Porthetria dispar*) and the **Brown-tail Moth** (*Euroctis chrysorrhoea*), both bombycine moths introduced into New England from Europe, are very destructive to fruit and forest trees. To the **Owlet Moths** (*Noctuidae*) belong some of the most injurious garden insects, their larvae including the various species of cutworms. The **Measure-worm Moths** (*Geometridae*) are so termed because their caterpillars progress by a kind of looping and seem to be measuring the surface beneath them. The smallest moths (*Tineina*) include those species of Tinea which attack clothing, carpets, furs, and food.

Mouflon. Closely related to the domestic sheep (*Ovis aries*), the origin of which is unknown, are about 12 kinds of wild sheep, of which three species are called mouflons. Mouflons are gregarious ruminants, in general appearance and in the form of their horns recalling sheep, but they are hair-clad rather than woolly. The **Common Mouflon** (*Ovis musimon*) inhabits Corsica and Sardinia, and is thought to have been formerly found in Spain. The **Cyprus Mouflon** (*Ovis ophion*) is found in small

numbers on the island of Cyprus, and the other species occurs in the mountains of central Asia.

MOUFLON. Ovis musimon.

Mouse. The smaller species of the rodent mammalian family *Muridae* are known as mice, the larger species as rats. Mice are omnivorous, sometimes cannibals, and are nocturnal in habits. The name was originally applied to the house mouse (*Mus musculus*), a native of Asia, which has become established in all parts of the world, and needs no description. Though commonest in buildings and cultivated fields it sometimes occurs in woods. White (*albino*), piebald, and abnormally colored varieties of the common mouse have been bred, and have at times commanded fanciful prices.

Mullet. A name applied to several kinds of teleost (*percesocine*) fishes of the family *Mugilidae*. The **Common Mullet** (*Mugil capito*), a nearly cylindrical food fish about a foot long, is taken in fresh and salt water from Scandinavia to the Cape of Good Hope. It feeds on organic matter found in mud. In the United States the name mullet is rather loosely applied to a number of catastomid and cyprinid fishes (*teleosts*), but more especially to *Mugil cephalus*, not only found in Europe, but along the Atlantic coast of America from Cape Cod to Brazil and on the Pacific coast from Monterey to Chile. It is from one to two feet long, dark bluish above and pale yellowish below, with silvery sides and dark stripes along each row of scales. **Red Mullets** are small marine and brackish water food fishes of tropical regions, extending, however, to northern Europe. There are about 50 species; they belong to the teleost (*acanthopterygid*) family *Mullidae*, and feed on minute animals and decomposing matter.

Musk Ox (*Ovibos moschatus*). This gregarious ruminant mammal has habits and structure somewhat like the sheep, but is of the size of small cattle; it forms a subfamily (*Ovibovinae*) of its own. It is called also musk-sheep and musk-buffalo. It once ranged through northern Europe as far south as the plains of Germany and France, and in North America to Virginia, but is now confined to the North American continent north of 60 degrees latitude.

Muskrat or Musquash (*Fiber zibethicus*). A rodent belonging to the *Muridae*, is found from the northern barrens of British America to the boundaries of Mexico, and from the Atlantic to the Pacific. Its length, exclusive of its laterally flattened, nearly naked, scaly tail, is about a foot; it is dark brown, almost black above, and gray beneath. Both sexes have large inguinal glands of which the secretion has a musky odor, whence the name muskrat.

Mussel. Salt water mussels are bivalve mollusks of the family *Mytilidae*. The **Edible Mussel** (*Mytilus edulis*) 2 to 3 inches long, a native of the temperate shores of Europe, is an immigrant in North America north of Cape Hatteras and on the Pacific coast. Its shell is black on the outside, bluish on the inside. **Fresh-water Mussels**, also called clams, are bivalve mollusks of the famiy *Unionidae*. The thicker kinds of their pearly shells are used to make buttons, and pearls of considerable value are found in river clams.

Nautilus. Cephalopod mollusks with a flat, spirally coiled, many-chambered shell, immensely abundant in earlier geologic periods,—over 2,000 fossil species of the family being known; now represented by about six living forms, natives of eastern oceans, commonly called **Pearly Nautilus**, from the inner lining of the shell.

Night Hawk (*Chordeiles virginianus*). A bird of the goatsucker family (*Caprimulgidae*), related to the whip-poor-will, occurring throughout North America; about 9 inches long, mottled black, gray and buffy with a white spot on the throat; flying in flocks at evening, catching insects with widely open mouth. It builds no nest, laying two eggs on the ground or in stumps.

Nightingale (*Daulias luscinia*). A small Old World warbler, about 7 inches long, famous since ancient times for its exquisite song. It is a shy, inconspicuous, woodland bird, wintering in Africa, visiting Europe and western Asia in summer.

Noddy (*Anous stolidus*). A sea bird related to the tern, common on tropical coasts, so named because it exhibits so little fear of man as to appear stupid.

Ocelot (*Felis pardalis*). An American mammal of the cat family found from Texas to Paraguay, also called **Tiger Cat**, and sometimes leopard. It is a woodland animal, 3 feet long, hunting small animals and birds at night. Other species called ocelots occur in South America.

Octopus, Devil Fish. A cephalopod mollusk with a nearly spherical, sac-shaped body, two conspicuous eyes, and a large mouth surrounded by 8 long arms provided with suckers, with which it seizes fish and other sea animals upon which it feeds. There are nearly 100 species, found in all oceans—some Pacific coast species having an arm spread of 15 feet.

Okapi (*Ocapia johnstoni*). An African ruminant mammal very closely related to the giraffe, but with much shorter neck and fore legs, discovered in the Congo Free State in 1900 by Sir Harry Johnston. It resembles a large deer in size and form and is strikingly colored, the forehead being bright red, the cheeks yellowish white, the body reddish with the haunches and upper portions of the legs marked with zebra-like whitish stripes, and the lower parts of the legs white.

YOUNG MUSK OX.

Opossum (*Didelphis virginiana*). A North American marsupial mammal, occurring from New York to California and southward, about the size of a cat, with a long, scaly, prehensile tail, and

a pointed nose; dwelling in trees, hunting at night; living upon insects, small animals, and birds. The opossum is remarkable for its habit of feigning death when caught, and with one exception is the only genus of pouched mammals outside of the Australian region—the young being carried by their mother in a pouch for 2 months after birth. Some 20 more species of opossums occur in South America.

Orang-Utan (*Simia satyrus*). A large manlike ape, 4½ feet high when erect, native of Borneo and Sumatra, ranking below the chimpanzee and gorilla, living in trees, and subsisting upon fruits, nuts, and tender plants. It is a prime favorite in menageries, displaying remarkable powers of imitation and almost human actions such as dressing in clothes, sitting at table, and eating food with fork and spoon.

Oriole (*Icterus*). Some 40 species of beautiful singing birds of the New World, related to the blackbirds, building suspended, pouch-like nests of closely woven fibers. The **Baltimore Oriole** (*I. galbula*), so named because its colors corresponded with the orange and black of Lord Baltimore's livery, is common in the eastern United States. The **Orchard Oriole** (*I. spurius*), a fine songster, but slightly smaller and less conspicuously colored, has a similar range.

Otter. A fish-eating mammal of the weasel family, living along lakes and streams, highly prized for its fur. The **North American Otter** (*Lutra canadensis*) about 3 feet long, tail 18 inches, is most abundant in British America. The **Sea Otter** (*Latax lutris*), a most valuable fur animal, more stoutly built, with a woolly undercoat, formerly abundant, is now nearly extinct in Alaska.

Ounce (*Felis uncia*). A large, thick-furred cat, adapted to life in the cold mountain regions of Asia, about equal to the leopard in size, living upon smaller animals, never attacking man.

Owl (*Bubonidae, Strigidae*). A well-marked group of nocturnal birds of prey, containing about 200 species, found nearly throughout the world, usually solitary, preying chiefly upon mice, moles, and other small injurious animals, and hence generally beneficial to man. The **Great Horned Owl** (*Bubo virginianus*), the largest and boldest common species, 22 inches long, is abundant throughout the continent. The slightly larger **Snowy Owl** (*Nyctea nyctea*), 25 inches long, breeding from Labrador northward, visits the northern United States in winter. The **Long-eared Owl** (*Asio wilsonianus*), 15 inches long, common from Manitoba southward and eastward, nesting in holes in trees or in old crows' nests, is very destructive to mice. The **Short-eared Owl** (*Asio accipitrinus*), 15 inches long, almost cosmopolitan, lives and nests in marshes. The **Barred** or **Hoot Owl** (*Syrnium nebulosum*), common from Manitoba southward and eastward, is familiar by reason of its hooting call. The solemn visaged **Barn Owl** (*Strix pratincola*), 17 inches long, ranges from New York southeastward to Mexico. The **Screech Owl** (*Megascops asio*), only 10 inches long, is known everywhere from Minnesota eastward and southward on account of its weird cry. The **Burrowing Owl** (*Speotyta cunicularia*), 10 inches long, of Rocky Mountain plains, lives in the burrows of prairie dogs and squirrels, but the story that these owls, prairie dogs, and rattlesnakes live together is a myth.

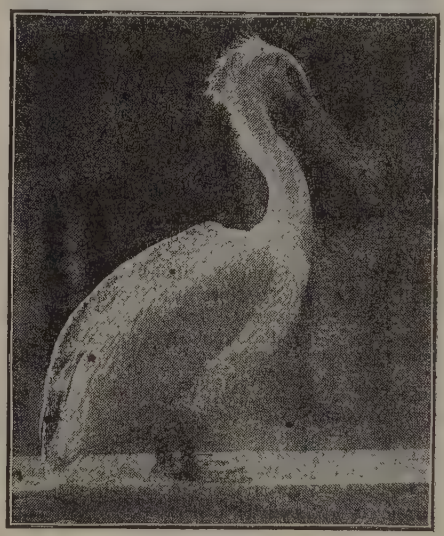
Oyster (*Ostrea*). A marine bivalve mollusk, growing near shore, in 12 to 35 feet of water in nearly all oceans,—there being upwards of 50 species, the most common of which are *O. virginiana* of the east coast of the United States, and *O. edulis* of Europe, both of which are extensively cultivated in specially prepared beds for the markets. Oyster culture was probably first practised by the Romans.

Parrot (*Psittacidae*). A family of 350 species of birds, chiefly tropical, none occurring in Europe, China, or the Philippines, of striking form and plumage, some of which possess remarkable powers of imitating the human voice. Only one species, the **Carolina Parrot** or **Parakeet** (*Conurus carolinensis*), occurs in the United States and is now confined to southern Florida.

Partridge. A name popularly given to many hen-like game birds (*Tetraonidae*). The true partridge (*Perdix cinerea*) is the common game bird of Great Britain. In New England the ruffed grouse (*Bonasa umbellus*) is called partridge, while farther south the bob white or quail (*Colinus*) receives the name, and the ruffed grouse is called pheasant. There are several species of true partridges and quails in the southeastern United States and Mexico. (See GROUSE, QUAIL.)

Peccary (*Dicotyles*). A small forest-dwelling, hoofed mammal, allied to the swine, but with more slender legs, no visible tail, and only three toes on the hind feet. The **Collared Peccary** (*D. torquatus*), 14 inches high, 38 inches long, living in pairs or small parties, ranges from Arkansas and Texas to Patagonia. The larger **White-lipped Peccary** (*D. labiatus*) occurs in vast herds from Central America to Paraguay.

Pelican (*Pelecanus*). A large fish-eating bird with an immense bill provided with a pouch used as a scoop net for catching fish. The **White Pelican** (*P. onocrotalus*), abundant in the Mediterranean region, 5 to 6 feet long, wing spread 9 to 10 feet, was well known to the ancients. The **American White**



PELICAN.

Pelican (*P. erithrorhyncus*) of the Western and Southern states is very similar. The smaller, more active **Brown Pelican** (*P. fuscus*) is common on warm coasts of North and South America.

Perch (*Percidae*). A large family of northern fresh water fishes. The **Yellow Perch** (*Perca flavescens*), 10 to 15 inches long, of the Eastern States, is an excellent pan fish. The **Pike Perch** or **Wall-eyed Pike** (*Stizostedion vitreum*) of Lake Champlain to Lake Michigan and northward, a valuable food fish, 1 to 3 feet long, is distributed in millions by the U. S. Fish Commission.

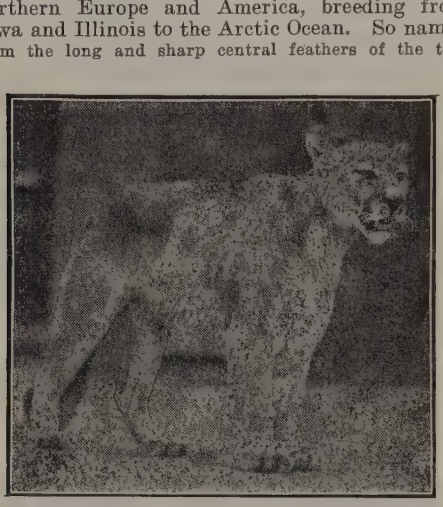
Petrel. A wandering, tube-nosed, oceanic bird, most abundant in southern seas, some apparently visiting land only at nesting season. The **Stormy Petrel** or **Mother Carey's Chicken** (*Procellaria pelagica*), about 6 inches long, the smallest of web-footed birds, breeds on Norwegian and British coasts.

Pheasant (*Phasianus colchicus*). A game bird, related to the peacock and turkey, native of Asia, now naturalized in Europe, particularly in England, where it is reared in great numbers. The **Golden Pheasant** (*Thaumalea picta*) and the **Silver Pheasant** (*Euplocomus nycthemerus*), both brilliant Chinese species, are reared in aviaries. The **Argus Pheasant** (*Argusianus giganteus*) is a beautiful south Asian species.

Pike (*Esox*). A slender, long-snouted, very voracious, fresh-water, game, and food fish. The **Common Pike** (*E. lucius*), ranging from New

York westward and northward, is 2½ to 4 feet long and sometimes weighs 40 pounds. The splendid **Muskallunge** (*E. masquinongy*), largest of all, attains 6 feet ni length and 75 pounds weight. The well-known, gamy **Eastern Pickerel** (*E. reticulatus*), 30 inches long, is common in ponds east of the Alleghanies from Maine to Alabama.

Pintail (*Dafila acuta*). A duck common to northern Europe and America, breeding from Iowa and Illinois to the Arctic Ocean. So named from the long and sharp central feathers of the tail.



PUMA.

Plover. A group of about 75 species of wading birds, widely distributed over the world. The **Golden Plover** (*Charadrius dominicus*), 10 inches long, found throughout North America, also in South America, Europe, and Asia, is a well-known game bird.

Porcupine. True Old World porcupines are burrowing rodents; those found in America live in trees or in clefts of rocks. The **Canada Porcupine** (*Erethizon dorsatus*) of eastern North America, 3 feet long, is effectively protected by an array of barbed spines, loosely attached to its skin.

Porpoise (*Phocaena communis*). An aquatic mammal related to the whale, 4 to 6 feet long, abundant in northern oceans, going in schools, feeding upon fish, once used for food but now taken mostly for oil and leather.

Portuguese Man-of-War (*Physalia arethusa*). A colonial jellyfish whose beautifully colored sac-like float, about 6 inches long and filled with air, is surmounted by a sort of comb, while underneath are long streamers of many shapes, often 20 feet in length, some of which are armed with batteries of stinging cells of such power as to overcome large fish, which are devoured for food. The various grape-like or thread-like appendages are members of the colony. While common in the tropical waters some drift northward with the Gulf Stream and are seen off the New England coast.

Potato Beetle (*Leptinotarsa decemlineata*). A leaf beetle with a round yellow body with black stripes, very destructive to potato plants; native of Colorado, but migrating eastward in 1859, reaching the Atlantic coast in 1874; now common throughout the eastern United States and also introduced in other countries.

Prairie Dog (*Cynomys ludovicianus*). A small, burrowing rodent about a foot long, related to the gophers, living in large colonies called dog towns or villages, in the high plains in Wyoming and east of the Rocky Mountains. They are very timid, never venturing far from their burrows, and live upon grass and roots.

Ptarmigan (*Lagopus*). An arctic bird of the grouse family, brown and white in summer, turning pure white in winter, usually with feathered legs and feet. The **White or Willow Ptarmigan** (*L. lagopus*) visits the northern United States in winter.

Puma (*Felis concolor*). Called also cougar, panther, catamount, and mountain lion. A large cat, 7 feet long, weighing 200 pounds, tawny or reddish above, grading to nearly white below, ranging from British America to Patagonia, now rare east of the Mississippi, still abundant in the Rocky Mountains; very destructive to cattle, colts, and sheep, but rarely, if ever, attacking man.

Python. A huge, crushing, non-venomous Old World snake of the boa family, second only to the anaconda in size, dwelling in forests, living upon small mammals and birds. The **Regal Python** (*P. reticulatus*) of the East Indian region attains a length of 25 feet, and the **Rock Python** (*P. sebae*) of Africa exceeds 20 feet.

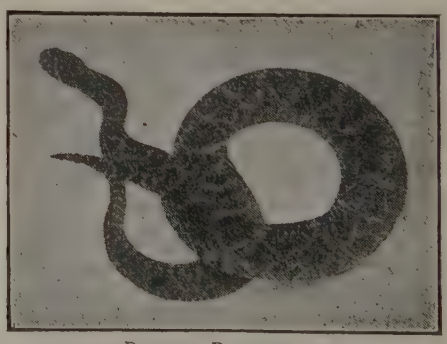
Quagga (*Equus quagga*). An African zebra-like mammal more nearly resembling the horse than the ass, formerly only of limited range, and now thought to be extinct.

Quail. The **American Quail** or **Bobwhite** (*Colinus virginianus*). A highly esteemed game bird, 9 inches long, occurs from the Great Plains eastward. It is usually called partridge in the Middle and Southern States. The true quail (*Coturnix*), slightly smaller, breeding abundantly in Europe and returning to Africa for the winter, is caught in immense numbers for the markets. (See PARTRIDGE.)

Quetzal (*Pharomacrus mocinno*). A Central American trogon, one of the most beautiful of birds, with the wings, chest, and throat metallic green, the under portions brilliant scarlet, and long white tail feathers with a black base, sometimes over 3 feet long, so much prized in millinery that the species is becoming rare.

Rabbit. A name applied in the United States to all the wild species of hares, but properly belonging to the European species (*Lepus cuniculus*). The European rabbit is smaller than the hare, with shorter limbs, and differs from it especially in the fact that the young are born blind. It is very prolific and the flesh is considered excellent food. Rabbits were introduced into Australia in 1850 and soon became so abundant as to be a plague. There are about 10 varieties of domesticated rabbits, among which is the Belgian hare.

Raccoon (*Procyon lotor*). A North American carnivorous mammal closely related to the bears. It is about 12 inches high and has long, yellowish gray fur with black rings around the tail. Raccoons are especially abundant in the southern United States, where they frequent wooded swamps and forests bordering streams.



DIAMOND RATTLESNAKE.

Rattlesnake (*Crotalus horridus*). A venomous American snake once common from the Rocky Mountains eastward, but now largely exterminated, sometimes 4 feet in length, distinguished by the rattle composed usually of 6 to 9 horny rings, terminating the tail, with which it almost invariably gives

warning before it strikes. The **Diamond Rattlesnake** (*C. adamanteus*) of Florida is larger, sometimes being 8 feet in length, and more dangerous. The small **Prairie Rattlesnake** or **Massasauga** (*Sistrurus catenatus*), 30 inches long, of the interior plains, is now becoming rare. There are 11 true rattlesnakes and 2 massasaugas in North America.

Rhea. The generic and English name of a family of ostrich-like birds of South America. The head and neck of the rhea are fully feathered, the wings, which are longer than those of the ostrich, are covered with long slender plumes, and the feet are three-toed.

Rhinoceros. A large, thick-skinned, hoofed mammal of tropical Asia and Africa, with a horned snout, second only to the elephant in bulk, though perhaps equaled by the hippopotamus. The **Indian Rhinoceros** (*R. unicornis*), the largest of all, exceeding 10 feet in body length, and standing fully 5 feet at the shoulder, has but 1 horn. Its exceedingly thick skin is arranged in shield-like folds. Two smaller one-horned species are found in southern Asia and adjacent islands. The **African Rhinoceros** (*R. bicornis*) of central and southern Africa, is somewhat smaller than the Indian rhinoceros. It possesses two horns and the skin is free from folds.

Robin. The **American Robin** (*Merula migratoria*), of the thrush family, found everywhere from the Rocky Mountains and Alaska eastward. It nests from Virginia and Kansas northward to Alaska and the Arctic coast and winters chiefly in the southern states though occasionally a few winter as far north as southern Canada. It is one of the best known and most affectionately regarded of American birds. The robin is about 10 inches long, olive gray above with blackish head and tail and chestnut red below. Nests usually in fruit or shade trees, laying 3 to 5 greenish-blue eggs. The food consists chiefly of worms, small fruits, berries and insects.

THE ROCKY MOUNTAIN GOAT is probably the most freakish looking animal native to North America. It is a great climber, being able to scale almost perpendicular mountain walls.

Rocky Mountain Goat (*Oreamnos montanus*). A North American goat-like antelope, ranging from middle California northward to Alaska, living at high elevations near the upper limit of trees, and feeding upon mosses, lichens, and shrubs. It is seldom taken by sportsmen, and is rare in zoölogical gardens, though it endures captivity better than the mountain sheep or bighorn. In form, though not in color, it resembles somewhat a small American bison, having high shoulders with low hind quarters, strong legs, stout body and a shaggy coat, generally carrying the head low. A full grown male will stand about 3 feet high at the shoulders, is about 6½ feet long and in weight is nearly equal to the Virginia deer. In 1900 a new species called Kennedy's Mountain Goat was discovered in the mountains near the Copper River in Alaska.

Salamander. A name given to tailed amphibians of the order *Urodela* and family *Salamandridae*. They have a robust body, well developed limbs, 4 and 5 toes, and no external gills in the adult form. Salamanders are most abundant in the northern hemisphere, especially North America.

Sandpiper. A name applied to a large number of shore birds of the family *Scolopacidae*, closely related to the snipes. They are mostly birds which breed in the Arctic region and go to southern climates to pass the winter.

Sardine. A small fish of the genus *Clupanodon*, allied to the herring. The **European Sardine** (*C. pilchardus*), which is very common in the Mediterranean and adjoining ocean, is commonly put up in oil and canned.

Scallop. A common bivalve mollusk of the genus *Pecten*, with a fan-shaped shell. The **Common Scallop** (*Pecten irradians*), found along the Atlantic coast, is about 2½ inches in diameter and has a horn-colored shell. The adductor muscle of this species is in great demand as a delicacy.

Scorpion. A small, mostly tropical, animal of the family *Scorpionidae*, usually 2 to 8 inches long, and somewhat resembling a small lobster in shape. Scorpions have 4 pairs of legs, a pair of pincers much like those of a lobster, and a jointed, flexible tail ending in a sharp venomous sting. Although very painful, the sting is rarely if ever fatal to man. About 30 species are North American, mostly small in size and confined to warm regions.

Sea Anemone. A marine coelenterate animal similar to the coral polyp, so named for its resemblance to a flower,—the brilliantly colored tentacles expanding like petals. They are practically stationary, but possess some slight power of motion over the rocks to which they cling. They catch their prey, shrimps or small fish, by paralyzing it with the peculiar lasso cells in the tentacles.

Sea Cucumber (*Holothuroidea*). A group of marine animals (*Echinoderms*), with a soft, worm-like body having a tough, leathery covering, often cylindrical in shape and warty like a cucumber. The mouth is surrounded by a circle of food-grasping tentacles. Locomotion is effected by alternate elongation and contraction of the body. About 600 species are known. The larger forms supply the Chinese with "trepang" or bêche-de-mer, considered a great delicacy.

Sea Horse (*Hippocampus*). A small fish of the family *Syngnathidae*, having a head and neck somewhat resembling that of a horse, and a finless, prehensile tail. The body is covered with a bony shell arranged in rings. The male has a pouch on the breast, in which it carries the eggs until they are hatched.

Seal. True or hair seals are fin-footed, aquatic mammals of the family *Phocidae*, numbering about 15 species, mostly of cold seas, of which five or six occur in North American waters; among them the common harbor seal, ring seal, hooded seal, and the harp or Greenland seal, highly valued for oil and leather. The "fur" seal is a sea lion.

Sea Lion. An aquatic, pinniped mammal (family *Otariidae*), closely related to the seals, numbering 9 species, mostly Antarctic, of which 3 occur in the North Pacific. The **California Sea Lion** (*Zalophus californianus*), 7 feet long, weighing 450 pounds, is often kept in captivity. **Steller's Sea Lion** (*Eumetopias stelleri*) of the North Pacific, largest of all, is 10 feet long and stands 6 feet high. The so-called **Fur Seal** (*Callotaria ursina*), yielding beautiful fur, is found on islands in Bering Sea.

Sea Turtles (*Chelonidae*). Four species occur in North American waters: the **Loggerhead Turtle**, weighing 300 pounds, of tropical seas; **Kemp's Loggerhead Turtle** of the Gulf of Mexco; the **Green Turtle** (*Chelonia myas*), highly esteemed for food, rarely weighing 600 pounds; and the much smaller **Hawk's-bill Turtle** (*C. imbricata*), which yields the "tortoise shell" of commerce.

Sea Urchin (*Echinoidea*). A marine echinoderm related to the starfish, with spherical, heart-shaped, or disc-shaped body, provided with movable spines. The body is inclosed in a case of 10 double rows of calcareous plates, the 5 alternate rows being perforated to allow the exit of the feet or tentacles. Besides these are hundreds of small tubular feet by which the animal moves along with a rocking motion and with which it secures its food, usually seaweed and dead fish. Over 300 species are known.

Secretary Bird (*Serpentarius secretarius*). A large South African bird having long legs, a long tail, and a crest of feathers protruding from the back of the head. It feeds upon reptiles of all kinds and is much prized on account of its habit of killing snakes.

Shrew. A small, insectivorous mammal of the family *Soricidae*, having much the general appearance of a mouse, with a long pointed muzzle and soft fur. Shrews are very widely distributed, being found in most parts of the northern hemisphere.

Shrike (*Laniidae*). A family of passerine birds with habits like birds of prey, numbering 200 species, mostly of the Old World; only two are American. The **Great Northern Shrike** or **Butcher Bird** (*Lanius borealis*) breeds far north, but migrates southward in winter to Kansas and Virginia. The **Loggerhead Shrike** (*Lanius ludovicianus*) common in the Eastern and Southern States breeds northward to the Great Lakes and eastward to Maine.

Shrimp (*Crangon vulgaris*). A small, slender crustacean with a long tail, abundant on the coasts of Europe, and much prized for food in England and France. In the United States the so-called shrimps of the markets are usually prawns.

Skink. A lizard of the family *Scincidae*, widely distributed throughout the world, especially in warm regions. There are about 60 genera and 200 species. They have short limbs and most of them are terrestrial and burrowing. Several species are found in the United States.

Skunk. A carnivorous fur-bearing mammal of the family *Mustelidae*, found only in America. Skunks have a slender body, a bushy tail, and long hair with black and white markings. They protect themselves by means of a very offensive fluid which is ejected from glands under the tail. The **Common Skunk** (*Mephitis*), of which there are about 9 species, is widely distributed throughout the United States and Mexico. The fur is very extensively used, the white portion being colored black.

Sloth (*Bradypodidae*). A sluggish, wholly arboreal, edentate mammal, occurring in Central and South American forests, particularly in the Amazon region. The **Three-toed Sloth** (*Bradypus tridactylis*), about 20 inches long, has 3 toes on each foot, and 9 cervical vertebrae, while the slightly larger **Two-toed Sloth** (*Choloepus didactylus*) has 2 toes on the fore feet and only 6 cervical vertebrae.

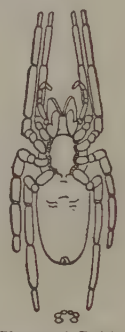
Smelt (*Osmerus*). A small, finely-flavored, much-prized food fish, related to the salmon. The **American Smelt** (*O. mordax*) of the Atlantic coast and many New England lakes, greenish above with silvery sides, and attaining a length of 10 inches, is marketed in great quantities. The **European Smelt** (*O. eperlanus*) is very similar.

Snails (*Helicidae*). A very numerous group of gastropod mollusks, provided with a protective spiral shell containing the whole animal, embracing several thousand species, varying from the northern limits of trees to Patagonia, and from tropical plains to mountain elevations of 10,000 feet. The Romans reared the **Vineyard Snail** (*Helix pomatia*) for food which, together with other edible species, is still largely eaten in Europe, particularly during Lent.

Snipe (*Gallinago*). The common name of several game birds related to the woodcock and sandpipers, living on oozy shores of streams and ponds, where they search the mud with their long, straight bills for worms and insects. **Wilson's Snipe** (*G. delicata*), breeding from New England to Labrador and westward to Illinois, is highly prized by sportsmen, not only for its excellent flesh, but also on account of the skill in marksmanship required to secure it.

Sole (*Solea vulgaris*). A European flat fish, 10 to 20 inches long, much esteemed for its delicate flavor, very abundant on sandy British shores, where it is taken in nets. The somewhat smaller **American Sole** (*Achirus fasciatus*) occurs from Massachusetts to Texas, while the larger and excellent **California Sole** (*Eopsetta jordani*) ranges from Monterey to Puget Sound.

Sparrow (*Passer*). The common name given to many small birds of the finch family, chiefly field or plain inhabiting, with brown or streaked, protectively colored plumage; seed-eating and much less migratory than insect-eating birds. Among the better known common species in the United States are the house, or English sparrow, the tree, field, chipping, and song sparrows.



Six-eyed Spider.

Jumping Spider.

SPIDERS.

Spiders (*Araneida*). An order of *Arachnida*, distinguished by a round abdomen, provided with web-secreting spinnerets, 4 pairs of seven-jointed legs, biting mandibles connected with poison glands and usually 8 eyes. There are upwards of 30 families, embracing an immense number of species, ranging from minute forms to huge bird spiders 3 inches long with a leg spread of 10 inches. With reference to habit they may be considered in two classes: web-weaving spiders which entrap their prey in more or less elaborate webs, and wandering spiders, which capture by hunting. While their bite is poisonous only a few are dangerous—the dreaded tarantula being comparatively harmless, though the bite of the New Zealand **Katipo** (*Latrodectus*) sometimes causes death.

Sponges (*Porifera*). A large group of fixed, plant-like animals, ranking next to the protozoa in simplicity of structure. Sponges consist of a framework—sometimes of a fibrous or horn-like sub-

Ventriculites.

Dactylocalyx.

Sycandra.

SPONGES.

stance, and sometimes of an aggregation of hard, siliceous spicules—which supports in its meshes the soft, jelly-like animal parts. The fibrous framework or

skeleton of certain species freed from animal matter and dried is the sponge of commerce. Of several thousand species of sponges only about 6 are commercially valuable. The best dried sponges come from the Mediterranean, those from the Red Sea are next, while those from the West Indies are coarser and less durable. The **Wool Sponge** (*Spongia gossypina*) of Florida attains a weight of one tenth of a pound in 6 months' growth and is marketable in a year. **Venus's Flower-basket** is a peculiar siliceous sponge, as is also the curious **Glass-rope Sponge.**

Squid. A cephalopod mollusk, with a long body, wide lateral fins, a head encircled by 8 sucker-bearing arms and 2 longer, slender tentacular arms or feelers, also sucker-bearing. The **Common Squid** (*Loligo vulgaris*) of European waters, 12 inches long, is a much prized bait for cod, as is the very abundant **Flying Squid** (*Ommastrephes illecebrosus*), 6 to 12 inches long, of the New England coast, so named from its habit of leaping from the water. The **Giant Squid** (*Architeuthis princeps*) attains enormous size, a specimen washed ashore in Newfoundland measuring 44 feet in length.

Squirrel (*Sciurus*). A small rodent with soft fur, long bushy tail, large eyes, and long whiskers, diurnal and mostly arboreal in habit, numbering over 100 species, distributed nearly throughout the world, except Australia, the largest and most beautiful occurring in southern Asia. The **Red Squirrel** (*S. hudsonicus*), 14 inches long, tail 6 inches, ranging from Labrador to the Rocky Mountains and Alaska, is the hardiest American species, never hibernating in winter. The **Gray Squirrel** (*S. carolinensis*), 20 inches long, tail 9 inches, inhabiting forests from Maine to Minnesota southward, partially hibernating in winter, is abundant in parks and easily tamed. The southern **Fox Squirrel** (*S. niger*), 26 inches long, tail 12 inches, occurring in the south Atlantic and Gulf states, is the largest American species.

Starfish (*Asteroidea*). A class of marine echinoderms with a five-sided, usually five-rayed, star-shaped body covered with short small spines. There are 2 or 4 rows of feet or tentacles on the mouth side of the body which enable them to crawl. At the end of each ray is a rudimentary eye. Starfish are very destructive to snails, worms, clams, and small shellfish, particularly oysters, doing great damage to oyster beds. The starfish grasps the oyster with its tentacles, exerts a steady strain, finally compelling it to open. The starfish then protrudes its stomach and digests the soft parts of the oyster.

Starling (*Sturnus vulgaris*). An Old World bird of striking brown, black and buff plumage, resembling small crows in habits, often mimicking other birds and familiar sounds; well known to the ancients and still frequently kept as a cage bird.

Stork (*Ciconia alba*). A large, well-known heron-like European bird, standing fully 3 feet high and exceeding 3½ feet in length. In central Europe, where they are protected as scavengers, they build their nests on roofs and chimneys in immense numbers. Storks display remarkable fidelity to their young and have entered largely into folk lore, proverbs, and fable.

Sturgeon (*Acipenser*). A large, long-snouted, sea and river fish, occurring in northern regions. The **Common Sturgeon** (*Acipenser sturio*) of Europe and America, a shark-like fish, sometimes reaching a length of 12 feet, is much prized for food, caviare being made from its roe. The **Giant Sturgeon** (*A. huso*) of the Caspian and Black seas attaining 24 feet in length and weighing upwards of 1,200 pounds, is coarse-fleshed and inferior.

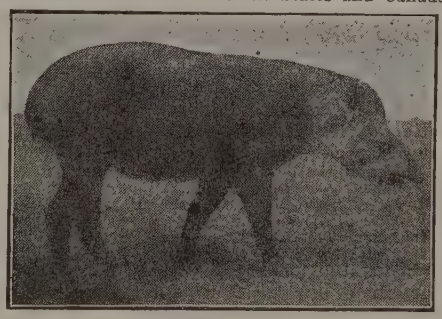
Sucker (*Catastomus*). A North American fresh-water fish distinguished by a toothless, sucker-like mouth, without barbels. There are upwards of 50 species, some of which are prized for food, though the flesh is rather inferior and somewhat tasteless.

Sunfish (*Lepomis*). A small perch-like, North American fish inhabiting still, clear streams and ponds, living on crustacea, worms, and other fishes. They are easily caught and are of fair quality as food fish.

Swallow (*Hirundinidae*). A passerine bird with a forked tail, long pointed wings, and a short, widely opening bill, found in nearly all regions. The **Barn Swallow** (*Petrochelidon erythrogaster*) nesting in colonies in barns, 7 inches long, steel-blue above, buff below, is exceedingly abundant from the Atlantic to the Pacific. The **Cliff Swallow** (*Petrochelidon lunifrons*), also called **Eave Swallow,** 5 inches long, steel-blue above, whitish below, usually builds under eaves. The **Tree Swallow** (*Tachycineta bicolor*), 6 inches long, steel-blue above, pure white below, ranging from Labrador to Alaska, usually nests in trees. The **Bank Swallow** (*Riparia riparia*), 5 inches long, grayish brown above, white below, nests in burrows in sand or gravel banks.

Swordfish (*Xiphias gladius*). A large, widely distributed fish, frequenting the open seas, reaching a length of 15 feet and weighing upwards of 400 pounds. The bones of the upper jaw are prolonged into a stiff, flattened sword, which it uses to kill other fish for food. Its oily flesh is highly regarded, resembling that of the halibut.

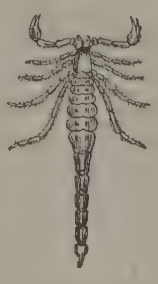
Tanager (*Tanagridae*). A family of small, usually brilliantly colored birds, related to the finches, numbering upwards of 300 species, mostly of tropical America. The **Scarlet Tanager** (*Piranga erythromelas*) of eastern North America from Manitoba southward, a fairly good song bird with brilliant scarlet body and black wings, is conspicuous in woodlands in summer. The **Summer Tanager** or **Redbird** (*P. rubra*) of the Eastern States, is similar in size, but deep rich red throughout. The **Louisiana Tanager** (*P. ludoviciana*), yellow and black with only the head red, occurs in the Western States and Canada.



American Tapir.

Tapir (*Tapirus*). A large, thick-skinned, hoofed mammal with a short, movable proboscis, small eyes, pig-like ears, distinguished from their nearest allies the rhinoceroses by having 4 toes on the fore feet, and 3 toes on the hind feet. In habit tapirs are solitary, shy, and harmless, living in the dense undergrowth of forests. The **American Tapir** (*T. americanus*) of South American forests east of the Andes, 6 feet long and 3½ feet high, is hunted for its flesh and sometimes domesticated. The **Malay Tapir** (*T. indicus*) of southern Asia, Sumatra, and Borneo, is the largest species, reaching 8 feet in length.

Tarantula.



Scorpion.

Tarantula (*Lycosa*). A large, savage, preying spider, formerly reputed extremely poisonous, but found to be comparatively harmless. The

tarantula of southern Europe (*L. tarantula*) is sometimes 2 inches long, and the American species (*L. fatifera*) of New England and (*L. carolinensis*) of the Southern States are nearly equal to it in size.

Tarpon (*Tarpon atlanticus*). An immense American game fish, with enormous silver scales, sometimes 3 inches in diameter, ranging from Long Island to Brazil, most abundant in Florida and Porto Rico, reaching a length of 6 feet and 300 pounds weight, second in size only to the tuna or tunny among game fishes.

Teal (*Anas*). A small duck of the northern hemisphere, inhabiting lakes and swamps, usually easily insnared or shot, and highly esteemed for food. The **Blue-winged Teal** (*A. discors*), abundant east of the Rocky Mountains, about 16 inches long, is readily known by its sky-blue wing coverts. The slightly smaller **Green-winged Teal** (*A. carolinensis*), distinguished by a shining green patch behind the eye, ranges throughout North America. The **Cinnamon Teal** (*A. cyanoptera*) of the western United States, 17 inches long, has a cinnamon-colored head and neck and blue wing coverts.

Termites or **White Ants** (*Termes*). Isopterous insects somewhat resembling true ants in form and habits, though in no wise related to them. There are about 200 species, mostly of tropical regions, where they dwell in large colonies, sometimes constructing huge nests 10 feet high. They live chiefly upon dead wood and are very destructive to timber, wooden dwellings, and furniture.

Tern (*Sterna*). A sea bird related to the gulls, but swifter and more graceful in flight, often called the sea swallow. The **Common Tern** (*S. hirundo*), a beautiful bird about 15 inches long, grayish-blue and pearl gray in color, of the Atlantic coast, was once much more abundant, but has been nearly exterminated for millinery purposes.

Terrapin. Small carnivorous turtles, mostly aquatic, a few being terrestrial. There are about 80 species, 25 of which are North American. Some of the best known are the **Diamond Back** (*Malaclemmys centrata*) of the Atlantic coast, highly prized as a table delicacy; the **Painted Terrapin** (*Chrysemys picta*), common in ponds and shores, and the **Box Tortoise** (*Terrapene carolina*) of dry woods from New York to Missouri, which can shut itself in its shell like a box.

Thrush (*Turdidae*). The name for a large family of birds containing about 300 species, including many of the finest song birds. The **Wood Thrush** (*Turdus mustelinus*), frequenting woodlands of the eastern United States, is noted for its exquisite song, while the smaller **Hermit Thrush** (*T. aonalaskae*), occurring throughout North America, resembles the nightingale in appearance, and nearly equals it in song. The large **Missel Thrush** (*T. viscivorous*), the **Fieldfare** (*T. pilaris*), and the **Song Thrush, Throstle,** or **Mavis** (*T. musicus*) are common in Europe, the latter being one of the finest songsters.

Tiger (*Felis tigris*). A carnivorous mammal found exclusively in Asia, chiefly in India; a large, powerful, and active cat, second only to the lion in size, measuring when full grown, 6½ feet, besides the tail, about 3 feet in length, and weighing 350 to upwards of 500 pounds. The tiger is usually solitary in habit, lying hidden during the day, fond of water, and a strong swimmer. Game-hunting tigers live upon deer, antelope, wild pigs, and other small animals that destroy crops, and are rather beneficial than otherwise. Cattle-killing tigers, however, infest jungles near villages and wreak destruction upon cattle, horses, sheep, and goats, doing immense damage, and some of these, losing their fear of human beings, become man-eating tigers, which were a terrible scourge in India before European occupation. If taken very early, tiger cubs may be trained and remain good tempered when young, but are never trustworthy when full grown. Captive tigers were exhibited in ancient Rome and are now taken to most parts of the world, frequently living to an age of 25 years in captivity.

Toad (*Bufo*). A four-footed amphibian, related to the frog but lacking teeth, and more sluggish in habit, found chiefly on land, feeding on worms and insects, harmless except for slightly irritating secretions from its skin. The **American Toad,** (*B. lentiginosus*) of the Eastern States is 3½ inches long, very warty when adult, brownish olive above and yellowish below, with several varieties.

Tortoise (*Testudinidae*). The name given to land turtles, which walk rather than swim, are herbivorous rather than carnivorous, and, though somewhat aquatic, none are marine. There

GIANT TORTOISE.

are about 20 species, the largest being found in the Galapagos Islands west of Ecuador, several kinds measuring 4 to 5 feet in length, and weighing several hundred pounds. Many are esteemed for their flesh, particularly some of the smaller species.

Tree Frog or **Tree Toad** (*Hyla*). A four-footed batrachian related to the frogs, with the toes provided with sticky discs for clinging to leaves and branches. The common **Tree Frog** (*H. versicolor*), 2 inches long, lives in trees from Kansas eastward. The **Cricket Frog** (*Acris gryllus*) somewhat smaller, with a sharp voice like that of a cricket, is found in swamps but rarely in trees.

Trichina (*T. spiralis*). A minute thread worm, infesting the intestines of the pig and some other mammals. When introduced into the human system encysted in raw or imperfectly cooked pork, trichinae develop in immense numbers, and in migrating to the muscles, produce the extremely painful and often fatal disease, trichinosis.

Trout (*Salvelinus*). A genus of fishes very closely related to the salmon, but smaller, more beautiful, and usually living in colder waters. The **Brook Trout** (*S. fontinalis*), the finest and most prized of inland game fishes occurring in cold streams, from New England to Minnesota northward, and introduced westward, is usually 6 to 10 inches long and seldom exceeds 2 pounds weight. The **Great Lake Trout** (*S. namaycush*), the largest species, very valuable for food, sometimes weighing 100 pounds, and averaging 15 to 20 pounds, occurs in large lakes from Maine to Vancouver and northward.

Tunny or **Tuna** (*Thunnus thynnus*). The largest of game fishes, in rare instances 10 to 15 feet long and weighing 1,500 pounds, but 50 to 250 pounds is a common size in California. Tunny fishing antedates the Christian era in the Mediterranean and is now the favorite sea sport of the California coast.

Turtle. The general name for any reptile of the order *Chelonia*, especially applied to marine forms, although in America land forms or tortoises as well as fresh-water species are called turtles. (See CHELONIA, SEA TURTLE, TERRAPIN, TORTOISE.)

Umbrella Bird (*Cephaloterus ornatus*). A South American bird similar to the crow in size, so named from a peculiar umbrella-like crest of feathers.

Ungulata, Ungulates. An order of mammals containing all hoofed animals, and including nearly all domestic animals, ox, horse, ass, sheep, goat, pig, reindeer, camel, llama, as well as the deer,

antelope, giraffe, elephant, zebra, tapir, rhinoceros, and hippopotamus.

Vampires. Certain South American leaf-nosed bats, mostly living upon insects and fruits, are called vampires. Popular superstition has invested the **Great Vampire** (*Vampyrus spectrum*), which has a hideous countenance beset with long canine teeth and a wing spread exceeding 2 feet with most horrible blood-sucking propensities, but it lives exclusively upon insects and fruits, and is entirely harmless. However, two small **Blood-sucking Vampires**, *Desmodus rufus*, only 3 inches long, and *Diphylla ecaudata*, still smaller, attack men, cattle, horses, and other animals and are believed to subsist entirely upon blood.

VICUNA.

Vicuna (*Lama vicuña*). A mammal of the camel family, found in the high Andes from Ecuador to Bolivia, smaller than the guanaco, standing only about 2½ feet high at the shoulder, light brown or yellowish above and lighter below, still hunted by the native peoples for its flesh and wool.

Vinegar Eel (*Anguillula antiglutinis*). A small, slender worm living on the small fungi that grow in fermenting fruit juices, often seen in incompletely fermented or unfiltered vinegar.

Viper. Old World venomous snakes of the family *Viperidae*. The **Common Viper** (*Pelias berus*), the only poisonous snake of Great Britain, occurs throughout Europe and northern Asia. The **Chain Viper** (*Vipera russelli*), next to the cobra is the most deadly serpent in India. The large **Puff Adder** (*V. arietans*), sometimes 6 feet long, is equally feared nearly throughout Africa. The small **Horned Viper** (*Cerastes cornutus*) of North Africa, only 2 feet long, is exceedingly dangerous.

Vulture. A carrion eating, diurnal bird of prey. Those of the New World (family *Cathartidae*) are large, long-winged birds of powerful and graceful flight, but voiceless, with naked head and neck, and clumsy and repulsive when on the ground. The **Black Vulture** (*Catharista urubu*), common in the Southern States and South America, and the **Turkey Buzzard** (*Cathartes aura*) with a wide range in the United States, and very abundant in the South and Southwest, are valuable scavengers in southern cities. The **California Vulture** (*Pseudogryphus californianus*), second only to the condor among birds of flight, sometimes attains a wing spread exceeding 10 feet. The **King Vulture** (*Gypagus papa*) of Mexico, is only slightly smaller, while the **Condor**, a South American vulture, is probably the largest bird of flight.

Walrus (*Odobenus*). A marine, carnivorous mammal, closely related to the seals; distinguished by the development of the upper incisor teeth into long, pointed tusks, an immense girth of body about the fore limbs, and the absence of external ears. The **Pacific Walrus** (*O. obesus*), sometimes 12 feet long, weighing 2,000 pounds, with tusks 2 feet in length, once ranged in large herds along the coasts of Alaska, but since 1860 has been nearly exterminated for its hide, ivory, and oil. The **Atlantic Walrus** (*O. rosmarus*), somewhat smaller, though occasionally exceeding 10 feet in length and 1,500 pounds weight, with tusks 18 inches long, was formerly abundant from Newfoundland northward, though it is now restricted to high latitudes by reason of its destruction for walrus oil, tusks, and leather.

Warblers. The name given to a large family (*Mniotiltidae*) of small American birds from their resemblance to the Old World warblers; usually brilliantly and variously colored; of about 100 species, a few are remarkable songsters, but most possess only feeble vocal powers. All are insect-eaters, and highly migratory; some species range from the tropics to beyond the Arctic circle and return during the year.

Wart Hog (*Phacochaerus*). Two closely related East African wild hogs are so named from large, wart-like protuberances on the sides of the face. Their heads are of enormous size, with long snouts and huge tusks. Except for the bristly mane surmounting the back their bodies are scantily covered with hair. The wart hogs are the ugliest in appearance of all swine, strong and fearless, and live chiefly on roots which they unearth with their tusks.

Wasp. A predatory, stinging insect, related to the bees, but differing in having strong jaws for biting, and lacking structures for gathering honey. Social Wasps, like honeybees, live in communities made up of males, workers, and females. The young are fed upon insects killed and prepared by the workers, while the grown wasps live upon meats, insects, fruit, and honey captured from honeybees in flight. Among the best known social wasps are the **Common Hornet** (*Vespa crabro*), and the **Yellow Jacket** (*Vespa arenaria*). Solitary Wasps do not form communities—each female making her own nest and rearing her young. These include the mud, sand, wood, and digger wasps. The **Common Mud Wasp** or **Mud Dauber** (*Eumenes fraterna*) plasters cells of clay on walls of houses, lays an egg in each and then fills them with insects paralyzed, but not killed, by stinging, which become food for the larvae when hatched.

Waxwing (*Ampelis*). A small passerine bird, so named from the small, red, horny, wax-like tips to the shafts of certain wing feathers. The **Bohemian Waxwing** (*A. garrulus*) is a graceful, beautifully crested bird about 8 inches long, ranging from the Great Lakes to Alaska, and also in Europe. The **Cedar Waxwing** or **Cedar Bird** (*A. cedrorum*), a somewhat smaller species, breeding from Virginia to Labrador, and wintering from the northern United States to Central America, is one of the most beautiful and attractive American birds.

Weasel (*Putorius*). A small carnivorous mammal of the marten family (*Mustelidae*), with a very slender body, short legs, and a long neck; very muscular, alert, and courageous; as savage and relentless as a tiger, preying upon mice, rats, birds, and other small animals, sometimes attacking poultry, but in the main beneficial to the farmer. Most weasels are reddish brown above, yellowish or white beneath, with a blackish tip on the tail, and in northern regions turn snow-white in the winter, when their fur is known as ermine.

Whale (Order *Cetacea*). A marine mammal, the largest of living animals, and, so far as known, the largest that ever existed. While fish-like in form, whales are air-breathing, warm-blooded, and suckle their young like land mammals. Some 25 species are known, distributed in all oceans, but most abundant in cold zones, grouped in two families: the **Baleen Whales** (*Balaenidae*), without teeth, but provided instead with baleen, which is the whalebone of commerce, and the **Sperm Whales** (*Physeteridae*) furnished with formidable teeth and containing in their enormous heads the peculiar oil called spermaceti. The baleen whales are largest, the giant **Sulphur-bottom Whale** (*Balaenoptera sulfureus*) of the California coast, largest of all, attaining nearly 100 feet in length; the **Atlantic Blue Whale** (*B. musculus*), next in size, reaching 85 feet, the **Rorqual** (*B. physalus*), 70 feet, and the **Arctic Bowhead** (*Balaena mysticetus*), the most valuable for whalebone and oil, sometimes exceeding 60 feet. The sperm whales range in size from the **Pygmy Sperm Whale** (*Kogia*), 15 feet long, to the **Great Sperm Whale** (*Physeter macrocephalus*), over 80 feet in length.

Whip-poor-will (*Antrostomus vociferus*). A peculiar bird of the goat-sucker family (*Caprimulgidae*), about 10 inches long, nocturnal in habits, ranging throughout the eastern United States and Canada, so named for its peculiar cry uttered for some time after sunset and before sunrise.

Whitefish (*Coregonus*). The common name, given on account of their silvery color, by which some forty species of excellent food fishes are known; found chiefly in the lake region of North America. The **Common Whitefish** (*C. clupeiformis*) of the Great Lakes, most valuable of all, and ranking very high among food fishes, is marketed in large quantities.

Wildcat. An indefinite name by which several of the smaller members of the cat family are popularly called. In the United States it is most commonly applied to the lynxes.

PRAIRIE WOLF, or COYOTE.

Wolf (*Canis*). A wild, carnivorous mammal of the dog family (*Canidae*). All are natives of the northern hemisphere, except one Antarctic species. Wolves in general are despicable cowards, and are readily frightened, usually obtaining their food by stealth, but when emboldened by hunger will attack cattle, horses, and even man. According to Hornaday, they are the only animals which make a regular practice of killing and devouring their wounded companions and eating their own dead. The **Gray** or **Timber Wolf** (*C. occidentalis*) ranges from northern Mexico almost throughout the continent to far beyond the Arctic circle. It attains a length of 4 feet, and is usually mixed black and white in color, but varies from black to white and reddish brown. In lairs in caves, burrows, or deep thickets, litters of 6 to 10 young are reared. It lives mostly upon small animals, particularly the sick and wounded, but when hunting in packs, will overpower the largest game. It has been largely exterminated in the Eastern States owing to its destructiveness to sheep and poultry. The **Coyote** or **Prairie Wolf** (*C. latrans*), similar, but smaller, being only about 3 feet long, common in the plains and mountains from central Mexico to Alberta, is very wary, cowardly, and is never dangerous to man, though it continually steals poultry, lambs, sheep, and pigs from ranches.

Wolverene or **Carcajou** (*Gulo luscus*). A small carnivore of the marten family (*Mustelidae*), about 30 inches long, with coarse, black outer fur, resembling a bear in form, but a marten in structure; noted for its cunning and voracity; becoming rare in America, now most abundant in the northern Rocky Mountains and Alaska.

Woodchuck or **Ground Hog** (*Arctomys monax*). A small, burrowing rodent, the best known of several North American marmots, about 18 inches long, clumsy, with short legs and a bushy tail, living on roots and herbs, hibernating early in winter, ranging from Hudson Bay to New England, Virginia, and Nebraska.

Woodcock (*Philohela minor*). A game bird of the snipe family, occurring from Manitoba to Labrador and southward, 11 inches long, with a long, straight bill, and large eyes set far back in the head, much prized for the table and, consequently, rapidly becoming scarce.

Wood Duck (*Aix sponsa*). The most beautiful of all ducks, noted for its resplendent plumage; occurs throughout North America, living in lowland woods, usually nesting in hollow stumps or trees, frequenting most portions of the United States during the summer, wintering southward and in Mexico and the West Indies.

Woodpecker (*Picidae*). The common name for a large group of arboreal, insect-eating birds, with a straight, strong bill, adapted for drilling in wood, a sharp-pointed, barbed tongue for spearing insects, and feet fitted for creeping and climbing, often brilliantly colored, but usually with harsh, unmelodious voices, numbering about 350 species, ranging throughout the world except in Australia and Madagascar, some 20 occurring in the United States.

Wren (*Troglodytes*). The name given to a group of small, passerine song birds, all plainly colored, very active, insect-eating, and mostly migratory, very widely distributed but most abundant in tropical America, there being over 150 species, of which the most familiar example is the **House Wren** (*T. aedon*) of the eastern United States.

Yellow Bird (*Spinus tristis*). A small bird of the finch family, about 5 inches long, bright yellow with black wings, occurring throughout eastern North America, also called **American Goldfinch** or **Thistle Bird.**

Yellow Hammer, Flicker, Golden-winged Woodpecker (*Colaptes auratus*). The largest as well as the most common and conspicuous woodpecker of eastern North America, ranging from Alaska southward east of the Rocky Mountains.

Yellow-legs (*Totanus*). A wading game bird of the snipe family, so called from the color of its long legs. Two species, the **Greater Yellow-legs** (*T. melanoleucus*) and the **Lesser Yellow-legs** (*T. flavipes*) are found in the eastern and central United States.

ZEBRA.

Zebra (*Equus*). An African ass-like animal, marked with conspicuous stripes, differing from the horse by having an erect mane, larger head, and larger ears. The **Mountain Zebra** (*E. zebra*) of Cape Colony is 4 feet high, white, striped with black on the head, body, and legs, resembling the ass more than the horse. **Burchell's Zebra** (*E. burchellii*), larger and more horse-like, 4½ feet high, sorrel above, white below with dark brown or black stripes only on the body and head, lives in herds on south African plains, where it is hunted for its hide and flesh.

BY ELIHU VEDDER.

HISTORY OF THE DEVELOPMENTS OF GOVERNMENTS: FAMILY, PATRIARCHAL, TRIBES, CLANS, VILLAGE, COMMUNITIES. FEUDALISM, DEMOCRACY, CONSTITUTIONAL MONARCHY, REPUBLIC. UNITED STATES GOVERNMENT AND DEPARTMENTS, FEDERAL, STATE, LOCAL AND MUNICIPAL GOVERNMENT. TERRITORIAL GOVERNMENT. SUFFRAGE. HISTORIC PRESIDENTIAL UTTERANCES. POLITICAL PARTIES: MAJOR AND MINOR. INDIAN AFFAIRS. BRITISH GOVERNMENT. PARLIAMENTARY LAW.

HISTORY OF GOVERNMENT.

Family and Patriarchal Forms.—The earliest known form of government which has come down from prehistoric times is the family or social unit. The Semitic family is patriarchal and polygamous; the Aryan family is monogamic.

Aryan Family.—In the Aryan family, such as was to be found in India, the family lived separately and possessed rights. The great idea was reverence of ancestors. Every home had a sacred fire, fed by certain kinds of wood, and never allowed to go out. This burned to the ancestors represented by Agni, just as in later days it burned to Vesta in Rome. The ancestral dead were buried near the home and reverenced as they are to-day in China. A woman, on marriage, left her home, her gods, and her ancestors, and assumed the gods, the ancestors, and the home of her husband. The daughter was not equal to the son, for upon him devolved the sacred duties of continuing the line and of keeping up the ever-burning fire.

Semitic Family.—Very early the Semites evolved the idea of obedience to one head, the patriarch. Members of the family knew very little personal liberty. The wives and children were practically slaves. Service and obedience were all they knew. Love was strongly marked, but it ranked second to the great idea of obedience. Discipline was severe and unbending. Land and possessions were chiefly held by families and not by individuals.

Greek Family.—From Homeric times family life in Greece was marked by the tenderest feelings, highest ideals, and most marked dignity. The love of Penelope for Ulysses, the tender and affectionate parting of Hector and Andromache, the heroism of Alcestis, the filial piety of Antigone, the majesty and grandeur of Polyxena, the sweet, modest love of Nausicaa, are, as Lecky says, "pictures of perennial beauty, which Rome and Christendom, chivalry and modern civilization, have neither eclipsed nor surpassed." Still, women were servants and performed the household duties, brought water, and ground flour. Even in the bright days in Athens, woman did not share the intellectual life of her husband.

Tribal Government.—Very early, as the family grew, the bounds of kinship were extended to embrace all distantly related members

for certain purposes, chiefly for protection. The chief was the eldest and governing member of the largest or most powerful family. Gradually other unrelated members were associated and a sort of social organization based upon real or assumed consanguinity grew up with military functions. The chief difference between a clan and a tribe appears to have been based upon the legal or juristic duties of the clan, and the military functions of the tribe. The clan settled its internal disputes; while the tribe, an aggregation of clans, settled differences with the outside world.

Village Communities.—The tribal system gradually changed into the village community, which was a settled agricultural form in place of the nomadic, pastoral form of tribal life. Village community government marks the change from pastoral or tribal to agricultural life and occupation. The tribe was divided into small groups of tillers of the arable land, spread over a moderately sized area, and governed by an overlord to whom they paid tribute.

Feudalism.—This form of government really gave shape to society during the greater part of the Middle Ages. After the Romans lost the world-power and the Germans invaded the neighboring countries, feudal government gradually appeared and endured until modern times in some form or other. The growth and the decline of feudal institutions were each gradual processes, and they did not appear instantly nor disappear suddenly. Very early in the feudal development it became customary for men of low rank and slight power to associate themselves with powerful men. The association was called *commendation*, and was performed by an oath of fealty and service. The subordinate was then a *vassal* or *man;* the superior was a *suzerain* or *lord;* and the ceremony was known as *homage and fealty*. This subordination became general, and often involved every one in a community, even kings becoming vassals of more powerful kings and suzerains.

The *fief, fee,* or *feud* was the foundation of the whole system. A *fief* was a piece of land held by a tenant from his lord without rent, but in exchange for certain feudal services. A ceremony called investiture attended the granting and acceptance of the land, when the tenant acknowledged his dependency and the lord gave his protection. The chief service tendered to lords by tenants was that of military service of himself and men for a certain period; and so general was this mode that the feudal system is often called military tenure.

Court service was a certain attendance at courts which the lord might exact. The lord claimed a guardianship or *wardship* over minor heirs of a deceased tenant, who were to be provided for and educated. The lord was also empowered to control the marriage of heirs, heiresses, and widows of deceased tenants. All of these services might be evaded by the payment of a fee. Cases in which fees were due to the lord were: a *relief* payable to the lord by an heir upon receipt of his property; an *aid* to defray the expenses of knighting the eldest son of the lord; of the marriage of the lord's daughter; and for his ransom in case of captivity. When there was no heir the land might revert to the king by an *escheat*, or, in cases of failure to render feudal service, by *forfeiture*.

In feudal society were to be found the nobles, who did the fighting, the clergy, and those who did the work. Among the nobles the titles of duke, marquis, and count were enjoyed by leaders who placed large forces in the field. Knights and barons ranked below these, and were, in turn, attended by squires. The peasants who worked upon the *manor*, as the lord's estate was called, were classed as *freemen* and *serfs*. The manor consisted of the *demesne* upon which the house was built, and the *outland*, held by the tenants, who dwelt in the village and who were nearly all *villeins*. The tenure of this land by the tenants was by *socage*, which involved the duty of performing a fixed number of days' work upon the farm, or of contributing food to the lord's table. When military service was rendered it was known as *knight service*. The divisions of the manors were *farms*. Free tenants were known as *franklins*, and ranked higher than the villeins or serfs, while the lower classes of serfs were the property of the master.

Democracy.—By the growth of democracy is meant the admission of the people to a larger share in administering the affairs of the country. It does not specify any particular form of government, for there may be a larger share of voice in public affairs allowed to the subjects in a constitutional monarchy than in a republic; and even under absolute monarchy and despotism there are occasions when the popular voice is unmistakably heard.

The democratic form of government was seen in Athens, where it reached a high stage of development in the way of free institutions and individual growth. Solon's reforms from 594 B. C. onward were the beginnings of democracy, which were furthered by Pisistratus, Cleisthenes, Themistocles, Ephialtes, and Pericles.

The struggles in Rome during its early period between the patricians or aristocrats, and the plebeians or democrats, mark the steady advance of democratic ideas and the recognition of the people in affairs of state. The expulsion of the kings in 509 B. C. and the adoption of the consular form of government, the agrarian laws and reforms, the establishment of the *comitia tributa*, the more general use of the word *populus* in affairs, the drawing up of the Twelve Tables (452 B. C.), and the overthrow of the decemviri (449 B. C.) mark the earliest advances of democracy in Rome. The grand attacks by plebeians upon the aristocratic forces during the following hundred years brought about the complete emancipation of the plebeians from all social and political disabilities. The Lex Canuleia (445 B. C.), which rendered valid the marriage of a plebeian and patrician; the opening of the office of military tribune to the plebs (445 B. C.); of the quæstorship (421 B. C.); of the dictatorship (356 B. C.); of the censorship (351 B. C.); of the prætorship (337 B. C.); and of the pontifical and augurial colleges (300 B. C.), are the chief events in this great struggle. While it may with great truth be said that this extension of privilege increased the power of the rich plebeians, and left the masses in little better condition socially, yet the growth of the democratic principle and the humbling of the aristocratic forces were most

evident through these reforms. Inadequate as remedies for the dissensions between classes as were the several agrarian laws and Licinian rogations, nevertheless the condition of the plebian farmers and middle classes was greatly improved thereby. The extension of Roman power by the defeat of Pyrrhus and the subjugation of all Italy brought about the threefold division of Roman subjects into: (1) *Cives Romani*, or Roman citizens with the fullest privileges; (2) *Nomen Latinum*, without the Roman franchise; and (3) *Socii* or allies, with privileges greatly varying in different localities. But with this military aggrandizement passed the powers of the lower classes, and there came in the growing power of a military oligarchy which subjected the lower classes to a condition of suffering and despotism which was not improved by the temporary successes of the Gracchi. Nor were these conditions improved by the wild confusion in Rome during the struggles between Marius and Sulla, when the aristocratic forces under Sulla triumphed in the name of order, and sought to rebuild from the rottenness of Roman society a political and social structure that might endure. But with the Cataline conspiracy, the triumvirate of Crassus, Pompey, and Cæsar (60 B. C.), the lawless and bloody tribunates of Claudius and Milo (58–57 B. C.), followed by the second triumvirate composed of Antonius, Lepidus, and Octavianus, the way was paved for the establishment of the Roman Empire under Augustus (29 B. C.), when the political life of the Republic was ended.

In the Dark and Middle Ages, the dominant feudal system admitted of no development or growth of democratic power in Europe. In the succeeding years there were in all countries spasmodic protests by rebellion of the people against injustice and tyranny; and these mark the desires of the people which led to the later organized efforts that brought about the needed reforms.

The most important of these was the wresting from King John at Runnymede, in 1215, those concessions and recognitions which have been called Magna Charta, the corner stone of English liberty. The establishment of parliament by Edward III. (1295), and the gradual extension of privileges by a number of acts, small in themselves but important in the aggregate, mark the track of the evolution of the principle, subject at times to checks and interruptions. The erection of the Commonwealth in England under Oliver Cromwell attacked the principle under which monarchs and despots held their power—the control of the standing army. So long as rulers were surrounded by armed guards who, from incentives of loyalty, or, more frequently, from mercenary motives, were ready to do the sovereign's bidding, there was every means at their disposal for suppression of the people. Cromwell's demand that Charles I. give up the command of the army, and the king's reply, "No, not for an hour," marked the power of the army as a safeguard of the tyrant and as a menace to liberty. Yet it may be said that the army was the force which Cromwell used to awe the royalists into obedience to his laws. With the restoration of the monarchy in the person of Charles II. came an apparent return to freedom from the austere morality of the Commonwealth and the undoing of the reforms of that time. But the true spirit of the people is seen in the adoption of the principle of cabinet government in England after the accession of William and Mary (1689). The king's ministers were now responsible to the people for royal acts, and, though the carrying out of the principle during a few years after its inception was crude and inefficient, the period is marked by events which led to a beneficent extension of popular control. Not the least of these was the establishment of the freedom of the press (1694), the extension of the franchise, and the adoption of measures of responsible government.

The great protest in France against the tyranny of the aristocrats, the French Revolution, appalled the world with the severity of its measures and the intensity of its power. In it the popular voice was heard, not alone demanding redress of its wrongs, but the right to redress its own wrongs. Following as it did the determination of the American colonists to adapt their government to meet the conditions of the New World, it intensified the object lesson in social economy which subsequent events were unable to obliterate. These, with the rebellion in Poland, magnificent in ideals and in effort but lamentable in results; the erection of the German Empire; the founding of the French Republic, the unification of Italy in 1866, and formation of republics after 1917 mark the path of democratic influences.

Monarchy.—This form of government covers nearly the whole of Europe, Asia, Africa, and half of North America. It may be divided into two kinds: that in which the power has been transferred wholly or in part to the body of the people, which form is called a limited monarchy; and that in which the sovereign control is vested in the hands of the monarch, which is called absolute or despotic monarchy. Sometimes the government is in the hands of a few, forming an oligarchy, while the ruler or the sovereign is a mere figurehead. This class is to be found in those countries in which caste or a class holds the ruling power, and may be either hereditary, as in Japan, tribal, as it was in China, or bureaucratic, as once in Russia, where the head of a department or bureau controls the department absolutely, and makes recommendations to the monarch for his approval.

Every European government places in the hands of the people a very large share of power. Turkey was until 1908 an example of that form of monarchy which existed in feudal times.

Monarchies are called *limited* or *constitutional* because the powers of the sovereigns are limited by the constitution or by the will of the people. In fact, the purpose for which a constitution is provided is to specify clearly how far and in what direction governmental powers shall extend. Some governments are extremely complex because of the federation or union of states and provinces of different types under one rule. The British Empire, for instance, comprises under one monarch a variety of forms of government. There is the centralized government of England, Scotland, and Wales, which are all subject to Parliament. There are the self-governing colonies of Canada and Australia, in each of which separate states

or provinces with independent powers are federated under a general government of their own. There is India, a crown colony under direct control of Parliament; while Egypt is a dependency of Great Britain under still different forms of control. Germany was also a federated empire containing variously organized states and possessions. The United States is an example of the federated republic including under one rule many self-governing commonwealths.

The chief monarchies of the world are: Belgium, British Empire, Bulgaria, Denmark, Italy, Japan, Nepál, Netherlands, Norway, Persia, Roumania, Jugo-Slavia, Spain, and Sweden.

Few other despotisms remain, the nearest examples being possibly Afghanistan, Morocco, Thibet, and Siam. Some desert African, and island tribes are modified despotisms.

Republics.—A republic is a form of administration in which the members of the governing body are chosen by electors to whom they are theoretically responsible. In some of the earlier forms of republics the electors comprised the whole adult male population of the state; in others a small group of persons exercised the power of election by constitutional right or by inheritance. The extent of the popular voice in the election of representatives in a republic varies according to the spirit of democracy which prevails at the time. Accordingly in the republics of later times, and especially in the western world, the franchise or right to vote has been enjoyed by a larger body of the members of a community than was customary in the earlier days of a more restricted democratic influence. In analyzing a form of government it must be observed that the name does not always convey the idea of the essential form of government. There are republics in fact which are not so in name; and there are republics in name that are really monarchies or empires. It may be conceived that a monarchy in which democratic principles are most pronounced and in which the monarch exercises no power or authority would really be a republic. Such a condition as existed in Rome under the Cæsars, though nominally republican, was none the less monarchical. Corresponding with these two types in modern days we find the English government as a monarchy rapidly approaching a republic in form; on the other hand, the despotic governments of South America, though republican in name, are in many cases truly monarchical. Europe witnessed, in 1848, a remarkable wave of democratic influence which threatened the thrones of the continent, and while the monarchical forms in Europe nearly all survived it, except in the cases of France and Switzerland, the reaction that has followed it has tended to change existing conditions rather than to abolish them and substitute others. Modern views upon the republican form of government hold that the essentials to its highest development are character, education on the part of the mass of the people, and a willingness to promote industrial progress rather than military power. Under such conditions it may be expected that the popular republican form of government will confer upon a nation stability, good order, and unequaled progress.

The chief republics of the world are: Andorra, Argentina (federal), Austria, Bolivia, Brazil (federal), Czecho-Slovakia, Chile, China, Colombia, Costa Rica, Cuba, Dominican, Ecuador, France, Germany, Guatemala, Haiti, Hungary, Honduras, Liberia, Mexico (federal), Nicaragua, Panama, Paraguay, Peru, Portugal, Russia, Salvador, San Marino, Switzerland (federal), United States of America (federal), Uruguay, Venezuela (federal).

The republican form of government offers almost limitless opportunities for experiment, and to this fact may be attributed the failure of many of them. The U. S., the world's first successful republic, drew upon colonial experience in writing her constitution, with the result that the government set up was in many ways already familiar to the people of the country. But when the people of France, Central and South America, and China attempted to model their governments after that of the U. S. the invariable result was unqualified failure. The lesson is plain: the form of government adopted by each nation should be the one that harmonizes with the political background of the people, and grants self-government only to the degree that the people are intellectually ready for it. China and Mexico prove that a republic may be only another name for anarchy, and that even a despotism may be better.

TYPICAL REPUBLICS.

France.—France is a strongly centralized republic, local governments having only the powers conferred on them by the Parliament. The President is elected for a term of seven years by Parliament. He possesses no independent political power, every act having to be countersigned by the responsible officer. Thus, officially, he can do neither right nor wrong. Parliament is composed of a Senate and a Chamber of Deputies. The Senate is composed of representatives chosen from the Departments by an electoral body composed of the Deputies from that Department and various other local officials. The term is nine years, one third retiring every third year. The Senate was originally intended to be equal in power to the Deputies, but experience has shown that the legislative branch to which the Cabinet is responsible will gain power at the expense of the other house. Thus the Senate has declined in importance. The Deputies are elected from the Departments under proportional representation for a term of four years, all retiring at the same time. The Cabinet is invariably drawn from Parliament, the President selecting a Premier to form a Cabinet. As there are so many political groups in France every Cabinet is a coalition, and seldom lasts longer than a few months. But it must be noted that the fall of a ministry does not disturb Parliament, as it does in England where a dissolution of the Commons is likely to result. France is becoming more republican each year.

Switzerland.—Switzerland is a federation of 22 cantons, a very great degree of local self-government being allowed. The central government is made up of a Federal Assembly which is composed of a State Council of 44 members, two for each canton; and a National Council composed of elected representatives from the cantons, one deputy for every 20,000 people. The executive power is placed in a Federal Council of 7, elected for three years by the Federal

Assembly. Each year the Council chooses a President, who is called the President of Switzerland, but who has no more power than the other members of the Council. Each member is the head of a department. The initiative and the referendum are used rather extensively.

The United States.

Government Functions.—The eight essential functions of Government are best outlined by Ex-President Wilson in his work, "The State."

(1). To keep order and provide for the protection of persons and property from violence and robbery.

(2). To fix the legal relations between man and wife, between parents and children.

(3). To regulate the holding, transmission and interchange of property, and the determination of its liabilities for debt or for crime.

(4). To fix contractual rights between individuals.

(5). To regulate means for the administration of justice in civil cases.

(6). To define crime and provide for punishment of criminals.

(7). To make clear, the political duties, privileges and relations of citizens to each other.

(8). To regulate the dealings of states with foreign powers; to preserve it from external danger and advance international interest.

First Steps Toward Union.—The Colonies being widely separated, from different countries, with different vocations and racial beliefs, had nothing in common from political or economic points of view to weld them together. In fact, the motive for the first colonial meetings of any consequence whatever, was largely for protection from the Indians.

(1). As for example during the period intervening between 1643 and 1684, Massachusetts Bay, New Plymouth, Connecticut and New Haven Colonies formed the New England Confederacy with the sole purpose of protection against the Indians, Dutch and French.

(2). The second coming together of the Colonies in convention was 1754, meeting at Albany, with a purpose of arranging a treaty between the Iroquois Indians and to consider other questions of common interest.

(3). In 1765 because of the passage of the *Stamp Act* by Great Britain, nine of the Colonies at the request of the Massachusetts Colony, sent representatives to New York, at which conference we find the first real outbreak of sentiment against the parental English Government.

(4). The next step was brought about through the *Townshend Act*, which led to the formation of committees of correspondence among the colonists. This did much toward fostering sentiment against England, and showed the need of laying aside intercolonial jealousies. This leads up to the *First Continental Congress*, called by Massachusetts in 1774, when the coercion acts were passed by the mother country against the colony of Massachusetts. All the Colonies sent delegates to Philadelphia, excepting Georgia. Here was first drafted the Declaration of Rights, Articles of Association were adopted which provided for further calling together of the colonists in May 1775, if necessary.

(5). In the meantime England had passed additional acts of coercion against the colonies; feeling was running high in New England and the battle of Lexington had been fought. It, therefore, became necessary for the meeting of the *Second Continental Congress* to provide for further means of resistance.

Confederation.—After the colonies declared their independence of Great Britain, they appointed a congressional committee composed of a delegate from each state to draw up a form of union. The articles thus drawn up were called the Articles of Confederation, were discussed in Congress for more than a year, and adopted by Congress in 1777, yet were not ratified by all until 1781. The inherent weakness in the confederation was its lack of central power. The individual states retained their sovereignty, freedom and independence, leaving the confederation largely an advisory body. This Congress consisted of from two to seven delegates from each state, each state having a right to cast but one vote.

Under the Articles of Confederation, Congress had no power for making a treaty, for carrying on war, or creating an army or navy, had no power to regulate any treaties with the Indians or even to settle disputes among the states themselves.

Under the Articles of Confederation, Congress was unable to set up a lasting government, inasmuch as:

(a). No important law could be passed without the consent of nine states.

(b). Congress had no means enabling it to raise revenue.

(c). It had no power to regulate interstate or foreign commerce.

(d). No power to enforce laws.

(e). No power to tax.

(f). Without the unanimous approval of the States, it had no right to amend the Articles of Confederation, and hence overcome its inherent difficulties.

During 1785 at a meeting of commissioners between Maryland and Virginia concerning commercial matters, the State of Virginia suggested a meeting of delegates of all the States at Annapolis in 1786. Only five states sent representatives. Among them were such men as Alexander Hamilton, who seeing the lack of central power in Congress, suggested the calling of a convention to amend the Articles of Confederation.

This Convention met at Philadelphia, May 25th, 1787. All States were represented excepting Rhode Island. Finally, September 17th, 1787 after much argument and many compromises being made, the Constitution was adopted, submitted to Congress, and sent to the States for ratification. New Hampshire ratified it, June 21st, 1788, making the necessary number of nine States for adoption. Rhode Island was the last state to ratify, May 29th, 1790. However, Congress in 1789 provided an act by which the Constitution went into operation.

Amendments.—In contrast to the Articles of Confederation, the power of Amendment was here created, and the first ten amendments were ratified by the State Legislatures soon after the adoption of the Constitution. Additional amendments have been passed from time to time. The entire list of Amendments of the Constitution are treated immediately after the Article on Constitution in this book.

UNITED STATES OF AMERICA.

The Second Continental Congress, representing the thirteen original colonies, assembled at Philadelphia, declared their independence of Great Britain, July 4, 1776, and thereafter each colony was known as a State.

Text of the Declaration of Independence.

In Congress, July 4, 1776. The unanimous Declaration of the Thirteen United States of America.

When, in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation.

We hold these truths to be self-evident: That all men are created equal; that they are endowed, by their Creator, with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness. That, to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that, whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute new government, laying its foundation on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness. Prudence, indeed, will dictate that governments long established should not be changed for light and transient causes; and accordingly all experience hath shown that mankind are more disposed to suffer while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such government, and to provide new guards for their future security. Such has been the patient sufferance of these colonies; and such is now the necessity which constrains them to alter their former systems of government. The history of the present King of Great Britain is a history of repeated injuries and usurpations, all having in direct object the establishment of an absolute tyranny over these States. To prove this, let facts be submitted to a candid world.

He has refused his assent to laws the most wholesome and necessary for the public good.

He has forbidden his governors to pass laws of immediate and pressing importance, unless suspended in their operation till his assent should be obtained; and when so suspended, he has utterly neglected to attend to them.

He has refused to pass other laws for the accommodation of large districts of people, unless those people would relinquish the right of representation in the legislature—a right inestimable to them, and formidable to tyrants only.

He has called together legislative bodies at places unusual, uncomfortable, and distant from the depository of their public records, for the sole purpose of fatiguing them into compliance with his measures.

He has dissolved representative houses repeatedly, for opposing with manly firmness his invasions on the rights of the people.

He has refused, for a long time after such dissolutions, to cause others to be elected; whereby the legislative powers, incapable of annihilation, have returned to the people at large for their exercise, the State remaining, in the meantime, exposed to all the dangers of invasion from without, and convulsions within.

He has endeavored to prevent the population of these States; for that purpose obstructing the laws for naturalization of foreigners; refusing to pass others to encourage their migration hither, and raising the conditions of new appropriations of lands.

He has obstructed the administration of justice, by refusing his assent to laws for establishing judiciary powers.

He has made judges dependent on his will alone, for the tenure of their offices, and the amount and payment of their salaries.

He has erected a multitude of new offices, and sent hither swarms of officers to harass our people, and eat out their substance.

He has kept among us, in times of peace, standing armies, without the consent of our legislature.

He has affected to render the military independent of and superior to the civil power.

He has combined with others to subject us to a jurisdiction foreign to our constitution, and unacknowledged by our laws; giving his assent to their acts of pretended legislation:

For quartering large bodies of armed troops among us;

For protecting them, by a mock trial, from punishment for any murders which they should commit on the inhabitants of these States;

For cutting off our trade with all parts of the world;

For imposing taxes on us without our consent;

For depriving us, in many cases, of the benefits of trial by jury;

For transporting us beyond seas to be tried for pretended offenses;

For abolishing the free system of English laws in a neighboring province, establishing therein an arbitrary government, and enlarging its boundaries so as to render it at once an example and fit instrument for introducing the same absolute rule into these colonies;

For taking away our charters, abolishing our most valuable laws, and altering fundamentally the forms of our governments;

For suspending our own legislatures and declaring themselves invested with power to legislate for us in all cases whatsoever.

He has abdicated government here, by declaring us out of his protection and waging war against us.

He has plundered our seas, ravaged our coasts, burnt our towns, and destroyed the lives of our people.

He is at this time transporting large armies of foreign mercenaries to complete the works of death, desolation, and tyranny, already begun with circumstances of cruelty and perfidy scarcely paralleled in the most barbarous ages, and totally unworthy the head of a civilized nation.

He has constrained our fellow-citizens, taken captive on the high seas, to bear arms against their country, to become the executioners of their friends and brethren, or to fall themselves by their hands.

He has excited domestic insurrections among us, and has endeavored to bring on the inhabitants of our frontiers the merciless Indian savages, whose known rule of warfare is an undistinguished destruction of all ages, sexes, and conditions.

In every stage of these oppressions we have petitioned for redress in the most humble terms; our repeated petitions have been answered only by repeated injury. A prince whose character is thus marked by every act which may define a tyrant is unfit to be the ruler of a free people.

Nor have we been wanting in attention to our British brethren. We have warned them from time to time of attempts by their legislature to extend an unwarrantable jurisdiction over us. We have reminded them of the circumstances of our emigration and settlement here. We have appealed to their native justice and magnanimity; and we have conjured them by the ties of our common kindred to disavow these usurpations, which would inevitably interrupt our connections and correspondence. They, too, have been deaf to the voice of justice and of consanguinity. We must, therefore, acquiesce in the necessity which denounces our separation, and hold them, as we hold the rest of mankind, enemies in war, in peace friends.

We, therefore, the Representatives of the United States of America, in General Congress assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, do, in the name and by authority of the good people of these Colonies, solemnly publish and declare, That these United Colonies are, and of right ought to be, free and independent States; that they are absolved from all allegiance to the British crown, and that all political connection between them and the State of Great Britain is, and ought to be, totally dissolved; and that, as free and independent States, they have full power to levy war, conclude peace, contract alliances, establish commerce, and to do all other acts and things which independent States may of right do. And, for the support of this declaration, with a firm reliance on the protection of Divine Providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor.

*Order in which they signed. †Age at death.

As a result of the war with Great Britain, the latter acknowledged the independence of the United States November 30, 1782, and September 3, 1783, a definitive treaty of peace was concluded at Paris. The government of the United States continued under the Congress provided by the Articles of Confederation until March 4, 1789, when a constitution, which had been adopted by representatives of the different States September 17, 1787, went into effect. March 4, 1789, then, is the date of the inception of the present constitutional government of the American Union. The original, without amendments, contains only 4,000 words.

Constitution of the United States of America.

(Went into operation first Wednesday in March, 1789.)

PREAMBLE.—We, the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America.

ARTICLE I.

SECTION I. All legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives.

SECTION II. The House of Representatives shall be composed of members chosen every second year by the people of the several States; and the electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State Legislature.

No person shall be a Representative who shall not have attained to the age of twenty-five years, and been seven years a citizen of the United States, and who shall not, when elected, be an inhabitant of that State in which he shall be chosen.

Representatives and direct taxes shall be apportioned among the several States which may be included within this Union, according to their respective numbers, which shall be determined by adding to the whole number of free persons, including those bound to service for a term of years, and excluding Indians not taxed, three fifths of all other persons. The actual enumeration shall be made within three years after the first meeting of the Congress of the United States, and within every subsequent term of ten years, in such manner as they shall by law direct. The number of Representatives shall not exceed one for every thirty thousand, but each State shall have at least one Representative; and until such enumeration shall be made, the State of New Hampshire shall be entitled to choose three; Massachusetts, eight; Rhode Island and Providence Plantations, one; Connecticut, five; New York, six; New Jersey, four; Pennsylvania, eight; Delaware, one; Maryland, six; Virginia, ten; North Carolina, five; South Carolina, five, and Georgia, three.

When vacancies happen in the representation from any State, the executive authority thereof shall issue writs of election to fill such vacancies.

The House of Representatives shall choose their speaker and other officers; and shall have the sole power of impeachment.

SECTION III. The Senate of the United States shall be composed of two Senators from each State, chosen by the Legislature thereof for six years; and each Senator shall have one vote.

Immediately after they shall be assembled in consequence of the first election, they shall be divided as equally as may be into three classes. The seats of the Senators of the first class shall be vacated at the expiration of the second year, of the second class at the expiration of the fourth year, and of the third class at the expiration of the sixth year, so that one third may be chosen every second year; and if vacancies happen by resignation, or otherwise, during the recess of the Legislature of any State, the executive thereof may make temporary appointments until the next meeting of the Legislature, which shall then fill such vacancies.

No person shall be a Senator who shall not have attained to the age of thirty years, and been nine years a citizen of the United States, and who shall not, when elected, be an inhabitant of that State for which he shall be chosen.

The Vice-President of the United States shall be President of the Senate, but shall have no vote unless they be equally divided.

The Senate shall choose their other officers, and also a President pro tempore, in the absence of the Vice-President, or when he shall exercise the office of President of the United States.

The Senate shall have the sole power to try all impeachments. When sitting for that purpose, they shall be on oath or affirmation. When the President of the United States is tried, the Chief Justice shall preside; and no person shall be convicted without the concurrence of two thirds of the members present.

Judgment in cases of impeachment shall not extend further than to removal from office, and disqualification to hold and enjoy any office of honor, trust, or profit under the United States; but the party convicted shall nevertheless be liable and subject to indictment, trial, judgment, and punishment, according to law.

SECTION IV. The times, places, and manner of holding elections for Senators and Representatives shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by law make or alter such regulations, except as to the places of choosing Senators.

The Congress shall assemble at least once in every year; and such meeting shall be on the first Monday in December, unless they shall by law appoint a different day.

SECTION V. Each House shall be the judge of the election, returns, and qualifications of its own members, and a majority of each shall constitute a quorum to do business; but a smaller number may adjourn from day to day, and may be authorized to compel the attendance of absent members, in such manner and under such penalties as each House may provide.

Each House may determine the rules of its proceedings, punish its members for disorderly behavior, and, with the concurrence of two thirds, expel a member.

Each House shall keep a journal of its proceedings, and from time to time publish the same, excepting such parts as may in their judgment require secrecy; and the yeas and nays of the members of either House on any question shall, at the desire of one fifth of those present, be entered on the journal.

Neither House, during the session of Congress, shall, without the consent of the other, adjourn for more than three days, nor to any other place than that in which the two houses shall be sitting.

SECTION VI. The Senators and Representatives shall receive a compensation for their services, to be ascertained by law, and paid out of the treasury of the United States. They shall, in all cases, except treason, felony, and breach of the peace, be privileged from arrest during their attendance at the sessions of their respective Houses, and in going to and returning from the same; and for any speech or debate in either House, they shall not be questioned in any other place.

No Senator or Representative shall, during the time for which he was elected, be appointed to any civil office under the authority of the United States which shall have been created, or the emoluments whereof shall have been increased during such time; and no person holding any office under the United States shall be a member of either House during his continuance in office.

SECTION VII. All bills for raising revenue shall originate in the House of Representatives, but the Senate may propose or concur with amendments, as on other bills.

Every bill which shall have passed the House of Representatives and the Senate shall, before it become a law, be presented to the President of the United States; if he approve, he shall sign it, but if not, he shall return it, with his objections, to that House in which it shall have originated, who shall enter the objections at large on their journal, and proceed to reconsider it. If after such reconsideration two thirds of that House shall agree to pass the bill, it shall be sent, together with the objections, to the other House, by which it shall likewise be reconsidered; and if approved by two thirds of that House it shall become a law. But in all such cases the votes of both Houses shall be determined by yeas and nays, and the names of the persons voting for and against the bill shall be entered on the journal of each House respectively. If any bill shall not be returned by the President within ten days (Sundays excepted) after it shall have been presented to him, the same shall be a law in like manner as if he had signed it, unless the Congress by their adjournment, prevent its return; in which case it shall not be a law.

Every order, resolution, or vote to which the concurrence of the Senate and House of Representatives may be necessary (except on a question of adjournment) shall be presented to the President of the United States; and before the same shall take effect shall be approved by him, or being disapproved by him, shall be repassed by two thirds of the Senate and House of Representatives, according to the rules and limitations prescribed in the case of a bill.

SECTION VIII. The Congress shall have power:

To lay and collect taxes, duties, imposts, and excises, to pay the debts and provide for the common defense and general welfare of the United States; but all duties, imposts, and excises shall be uniform throughout the United States.

To borrow money on the credit of the United States.

To regulate commerce with foreign nations, and among the several States, and with the Indian tribes.

To establish an uniform rule of naturalization and uniform laws on the subject of bankruptcies throughout the United States.

To coin money, regulate the value thereof, and of foreign coin, and fix the standard of weights and measures.

To provide for the punishment of counterfeiting the securities and current coin of the United States.

To establish post offices and post roads.

To promote the progress of science and useful arts by securing for limited times to authors and inventors

the exclusive right to their respective writings and discoveries.

To constitute tribunals inferior to the Supreme Court.

To define and punish piracies and felonies committed on the high seas, and offenses against the law of nations.

To declare war, grant letters of marque and reprisal, and make rules concerning captures on land and water.

To raise and support armies, but no appropriation of money to that use shall be for a longer term than two years.

To provide and maintain a navy.

To make rules for the government and regulation of the land and naval forces.

To provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions.

To provide for organizing, arming, and disciplining the militia, and for governing such part of them as may be employed in the service of the United States, reserving to the States respectively the appointment of the officers, and the authority of training the militia according to the discipline prescribed by Congress.

To exercise exclusive legislation in all cases whatsoever over such district (not exceeding ten miles square) as may, by cession of particular States and the acceptance of Congress, become the seat of the Government of the United States, and to exercise like authority over all places purchased by the consent of the Legislature of the State in which the same shall be, for the erection of forts, magazines, arsenals, dockyards, and other needful buildings; and

To make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof.

SECTION IX. The migration or importation of such persons as any of the States now existing shall think proper to admit shall not be prohibited by the Congress prior to the year one thousand eight hundred and eight, but a tax or duty may be imposed on such importation, not exceeding ten dollars for each person.

The privilege of the writ of habeas corpus shall not be suspended, unless when in cases of rebellion or invasion the public safety may require it.

No bill of attainder or ex post facto law shall be passed.

No capitation or other direct tax shall be laid, unless in proportion to the census or enumeration hereinbefore directed to be taken.

No tax or duty shall be laid on articles exported from any State.

No preference shall be given by any regulation of commerce or revenue to the ports of one State over those of another, nor shall vessels bound to or from one State be obliged to enter, clear, or pay duties in another.

No money shall be drawn from the Treasury but in consequence of appropriations made by law; and a regular statement and account of the receipts and expenditures of all public money shall be published from time to time.

No title of nobility shall be granted by the United States. And no person holding any office of profit or trust under them shall, without the consent of the Congress, accept of any present, emolument, office, or title of any kind whatever from any king, prince, or foreign state.

SECTION X. No State shall enter into any treaty, alliance, or confederation, grant letters of marque and reprisal, coin money, emit bills of credit, make anything but gold and silver coin a tender in payment of debts, pass any bill of attainder, ex post facto law, or law impairing the obligation of contracts, or grant any title of nobility.

No State shall, without the consent of the Congress, lay any impost or duties on imports or exports, except what may be absolutely necessary for executing its inspection laws, and the net produce of all duties and imposts, laid by any State on imports or exports, shall be for the use of the Treasury of the United States; and all such laws shall be subject to the revision and control of the Congress.

No State shall, without the consent of Congress, lay any duty of tonnage, keep troops or ships of war in time of peace, enter into any agreement or compact with another State, or with a foreign power, or engage in war, unless actually invaded, or in such imminent danger as will not admit of delay.

ARTICLE II.

SECTION I. The Executive power shall be vested in a President of the United States of America. He shall hold his office during the term of four years, and, together with the Vice-President, chosen for the same term, be elected as follows:

Each State shall appoint, in such manner as the Legislature thereof may direct, a number of electors, equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress; but no Senator or Representative or person holding an office of trust or profit under the United States shall be appointed an elector.

[The electors shall meet in their respective States and vote by ballot for two persons, of whom one at least shall not be an inhabitant of the same State with themselves. And they shall make a list of all the persons voted for, and of the number of votes for each, which list they shall sign and certify and transmit, sealed, to the seat of the government of the United States, directed to the President of the Senate. The President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates, and the votes shall then be counted. The person having the greatest number of votes shall be the President, if such number be a majority of the whole number of electors appointed, and if there be more than one who have such majority, and have an equal number of votes, then the House of Representatives shall immediately choose by ballot one of them for President; and if no person have a majority, then from the five highest on the list the said House shall in like manner choose the President. But in choosing the President, the vote shall be taken by States, the representation from each State having one vote. A quorum, for this purpose, shall consist of a member or members from two thirds of the States, and a majority of all the States shall be necessary to a choice. In every case, after the choice of the President, the person having the greatest number of votes of the electors shall be the Vice-President. But if there should remain two or more who have equal votes, the Senate shall choose from them by ballot the Vice-President.][1]

The Congress may determine the time of choosing the electors and the day on which they shall give their votes, which day shall be the same throughout the United States.

No person except a natural born citizen, or a citizen of the United States at the time of the adoption of this Constitution, shall be eligible to the office of President; neither shall any person be eligible to that office who shall not have attained to the age of thirty-five years and been fourteen years a resident within the United States.

In case of the removal of the President from office, or of his death, resignation, or inability to discharge the powers and duties of the said office, the same shall devolve on the Vice-President, and the Congress may by law provide for the case of removal, death, resignation, or inability, both of the President and Vice-President, declaring what officer shall then act as President, and such officer shall act accordingly until the disability be removed or a President shall be elected.

The President shall, at stated times, receive for his services a compensation, which shall neither be increased nor diminished during the period for which he shall have been elected, and he shall not receive within that period any other emolument from the United States, or any of them.

Before he enter on the execution of his office he shall take the following oath or affirmation:—

"I do solemnly swear (or affirm) that I will faithfully execute the office of President of the United States, and will, to the best of my ability, preserve, protect, and defend the Constitution of the United States."

SECTION II. The President shall be Commander-in-Chief of the Army and Navy of the United States, and of the militia of the several States when called into the actual service of the United States; he may require the opinion, in writing, of the principal officer in each of the executive departments upon any subject relating to the duties of their respective offices, and he shall have power to grant reprieves and pardons for offenses against the United States except in cases of impeachment.

He shall have power, by and with the advice and consent of the Senate, to make treaties, provided two thirds of the Senators present concur; and he shall nominate, and by and with the advice and consent of the Senate shall appoint ambassadors, other public ministers and consuls, judges of the Supreme Court, and all other officers of the United States whose appointments are not herein otherwise provided for, and which shall be established by law; but the Congress may by law vest the appointment of such inferior officers as they think proper in the President alone, in the courts of law, or in the heads of departments.

---

[1]Superseded by Article XII., Amendments.

The President shall have power to fill up all vacancies that may happen during the recess of the Senate by granting commissions which shall expire at the end of their next session.

SECTION III. He shall from time to time give to the Congress information of the state of the Union, and recommend to their consideration such measures as he shall judge necessary and expedient; he may, on extraordinary occasions, convene both Houses, or either of them, and in case of disagreement between them with respect to the time of adjournment, he may adjourn them to such time as he shall think proper; he shall receive ambassadors and other public ministers; he shall take care that the laws be faithfully executed, and shall commission all the officers of the United States.

SECTION IV. The President, Vice-President, and all civil officers of the United States shall be removed from office on impeachment for and conviction of treason, bribery, or other high crimes and misdemeanors.

ARTICLE III.

SECTION I. The judicial power of the United States shall be vested in one Supreme Court, and in such inferior courts as the Congress may from time to time ordain and establish. The judges, both of the Supreme and inferior courts, shall hold their offices during good behavior, and shall at stated times receive for their services a compensation which shall not be diminished during their continuance in office.

SECTION II. The judicial power shall extend to all cases in law and equity arising under this Constitution, the laws of the United States, and treaties made, or which shall be made, under their authority; to all cases affecting ambassadors, other public ministers, and consuls; to all cases of admiralty and maritime jurisdiction; to controversies to which the United States shall be a party; to controversies between two or more States, between a State and citizens of another State, between citizens of different States, between citizens of the same State claiming lands under grants of different States, and between a State, or the citizens thereof, and foreign States, citizens, or subjects.

In all cases affecting ambassadors, other public ministers, and consuls, and those in which a State shall be party, the Supreme Court shall have original jurisdiction. In all the other cases before mentioned the Supreme Court shall have appellate jurisdiction both as to law and fact, with such exceptions and under such regulations as the Congress shall make.

The trial of all crimes, except in cases of impeachment, shall be by jury, and such trial shall be held in the State where the said crimes shall have been committed; but when not committed within any State the trial shall be at such place or places as the Congress may by law have directed.

SECTION III. Treason against the United States shall consist only in levying war against them, or in adhering to their enemies, giving them aid and comfort. No person shall be convicted of treason unless on the testimony of two witnesses to the same overt act, or on confession in open court.

The Congress shall have power to declare the punishment of treason, but no attainder of treason shall work corruption of blood, or forfeiture, except during the life of the person attainted.

ARTICLE IV.

SECTION I. Full faith and credit shall be given in each State to the public acts, records, and judicial proceedings of every other State. And the Congress may by general laws prescribe the manner in which such acts, records, and proceedings shall be proved, and the effect thereof.

SECTION II. The citizens of each State shall be entitled to all privileges and immunities of citizens in the several States.

A person charged in any State with treason, felony, or other crime, who shall flee from justice, and be found in another State, shall, on demand of the Executive authority of the State from which he fled, be delivered up, to be removed to the State having jurisdiction of the crime.

No person held to service or labor in one State, under the laws thereof, escaping into another, shall, in consequence of any law or regulation therein, be discharged from such service or labor, but shall be delivered up on claim of the party to whom such service or labor may be due.

SECTION III. New States may be admitted by the Congress into this Union; but no new State shall be formed or erected within the jurisdiction of any other State, nor any State be formed by the junction of two or more States, or parts of States, without the consent of the Legislatures of the States concerned, as well as of the Congress.

The Congress shall have power to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States; and nothing in this Constitution shall be so construed as to prejudice any claims of the United States, or of any particular State.

SECTION IV. The United States shall guarantee to every State in this Union a republican form of government, and shall protect each of them against invasion, and, on application of the Legislature, or of the Executive (when the Legislature cannot be convened), against domestic violence.

ARTICLE V.

The Congress, whenever two thirds of both Houses shall deem it necessary, shall propose amendments to this Constitution, or, on the application of the Legislatures of two thirds of the several States, shall call a convention for proposing amendments, which, in either case, shall be valid to all intents and purposes, as part of this Constitution, when ratified by the Legislatures of three fourths of the several States, or by conventions in three fourths thereof, as the one or the other mode of ratification may be proposed by the Congress; provided that no amendment which may be made prior to the year one thousand eight hundred and eight shall in any manner affect the first and fourth clauses in the Ninth Section of the First Article; and that no State, without its consent, shall be deprived of its equal suffrage in the Senate.

ARTICLE VI.

All debts contracted and engagements entered into before the adoption of this Constitution shall be as valid against the United States under this Constitution as under the Confederation.

This Constitution and the laws of the United States which shall be made in pursuance thereof and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land, and the judges in every State shall be bound thereby, anything in the Constitution or laws of any State to the contrary notwithstanding.

The Senators and Representatives before mentioned, and the members of the several State Legislatures, and all executive and judicial officers, both of the United States and of the several States, shall be bound by oath or affirmation to support this Constitution; but no religious test shall ever be required as a qualification to any office or public trust under the United States.

ARTICLE VII.

The ratification of the Conventions of nine States shall be sufficient for the establishment of this Constitution between the States so ratifying the same.

Ratification of the Constitution by the Thirteen Original States.

	States.	Ratified the Constitution.	Vote.
1	Delaware	December 7....1787	Unanimous
2	Pennsylvania	December 12...1787	46 to 23
3	New Jersey	December 18...1787	Unanimous
4	Georgia	January 2.....1788	Unanimous
5	Connecticut	January 9.....1788	128 to 40
6	Massachusetts	February 6....1788	187 to 168
7	Maryland	April 28.....1788	63 to 12
8	South Carolina	May 23.....1788	149 to 73
9	New Hampshire	June 21.....1788	57 to 46
10	Virginia	June 26.....1788	89 to 79
11	New York	July 26.....1788	30 to 28
12	North Carolina	November 21..1789	193 to 75
13	Rhode Island	May 29.....1790	34 to 32

Amendments to the Constitution.

Ten amendments were added to the original Constitution Dec. 15, 1791; 11th, Jan. 8, 1798; 12th, Sept. 25, 1804; 13th, Dec. 18, 1865; 14th, July 28, 1868; 15th, Mar. 30, 1870; 16th, Feb. 25, 1913; 17th, May 31, 1913; 18th, Jan. 29, 1919; 20th, Feb. 6, 1933, and the 21st, Dec. 5, 1933. Amendments must be adopted by three-fourths of the States, acting through their legislatures.

ARTICLE I.

Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise there-

of; or abridging the freedom of speech or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances.

ARTICLE II.

A well-regulated militia being necessary to the security of a free State, the right of the people to keep and bear arms shall not be infringed.

ARTICLE III.

No soldier shall, in time of peace, be quartered in any house without the consent of the owner, nor in time of war but in a manner to be prescribed by law.

ARTICLE IV.

The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no warrants shall issue but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

ARTICLE V.

No person shall be held to answer for a capital or otherwise infamous crime unless on a presentment or indictment of a grand jury, except in cases arising in the land or naval forces, or in the militia, when in actual service, in time of war or public danger; nor shall any person be subject for the same offense to be twice put in jeopardy of life or limb; nor shall be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use without just compensation.

ARTICLE VI.

In all criminal prosecutions, the accused shall enjoy the right to a speedy and public trial, by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have compulsory process for obtaining witnesses in his favor, and to have the assistance of counsel for his defense.

ARTICLE VII.

In suits at common law, where the value in controversy shall exceed twenty dollars, the right of trial by jury shall be preserved, and no fact tried by a jury shall be otherwise re-examined in any court of the United States than according to the rules of the common law.

ARTICLE VIII.

Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.

ARTICLE IX.

The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people.

ARTICLE X.

The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.

ARTICLE XI.

The judicial power of the United States shall not be construed to extend to any suit in law or equity, commenced or prosecuted against one of the United States by citizens of another State, or by citizens or subjects of any foreign State.

ARTICLE XII.

The electors shall meet in their respective States, and vote by ballot for President and Vice-President, one of whom at least shall not be an inhabitant of the same State with themselves; they shall name in their ballots the person voted for as President, and in distinct ballots the person voted for as Vice-President; and they shall make distinct lists of all persons voted for as President, and of all persons voted for as Vice-President, and of the number of votes for each, which lists they shall sign and certify, and transmit, sealed, to the seat of the Government of the United States, directed to the President of the Senate; the President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates, and the votes shall then be counted; the person having the greatest number of votes for President shall be the President, if such number be a majority of the whole number of electors appointed; and if no person have such majority, then from the persons having the highest numbers, not exceeding three, on the list of those voted for as President, the House of Representatives shall choose immediately, by ballot, the President. But in choosing the President, the votes shall be taken by States, the representation from each State having one vote; a quorum for this purpose shall consist of a member or members from two thirds of the States, and a majority of all the States shall be necessary to a choice. And if the House of Representatives shall not choose a President, whenever the right of choice shall devolve upon them, before the fourth day of March next following, then the Vice-President shall act as President, as in the case of the death or other constitutional disability of the President. The person having the greatest number of votes as Vice-President shall be the Vice-President, if such number be a majority of the whole number of electors appointed; and if no person have a majority, then from the two highest numbers on the list the Senate shall choose the Vice-President; a quorum for the purpose shall consist of two thirds of the whole number of Senators, and a majority of the whole number shall be necessary to a choice. But no person constitutionally ineligible to the office of President shall be eligible to that of Vice-President of the United States.

ARTICLE XIII.

SECTION 1. Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction.

SECTION 2. Congress shall have power to enforce this article by appropriate legislation.

ARTICLE XIV.

SECTION 1. All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws.

SECTION 2. Representatives shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed. But when the right to vote at any election for the choice of electors for President and Vice-President of the United States, Representatives in Congress, the executive and judicial officers of a State, or the members of the Legislature thereof, is denied to any of the male inhabitants of such State, being twenty-one years of age, and citizens of the United States, or in any way abridged, except for participation in rebellion or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such State.

SECTION 3. No person shall be a Senator or Representative in Congress, or elector of President and Vice-President, or hold any office, civil or military, under the United States, or under any State, who, having previously taken an oath, as a member of Congress, or as an officer of the United States, or as a member of any State Legislature, or as an executive or judicial officer of any State, to support the Constitution of the United States, shall have engaged in insurrection or rebellion against the same, or given aid or comfort to the enemies thereof. But Congress may, by a vote of two thirds of each House, remove such disability.

SECTION 4. The validity of the public debt of the United States, authorized by law, including debts incurred for payment of pensions and bounties for services in suppressing insurrection or rebellion, shall not be questioned. But neither the United States nor any State shall assume or pay any debt or obligation incurred in aid of insurrection or rebellion against the United States, or any claim for the loss or emancipation of any slave; but all such debts, obligations, and claims shall be held illegal and void.

SECTION 5. The Congress shall have power to enforce by appropriate legislation the provisions of this article.

ARTICLE XV.

SECTION 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude.

SECTION 2. The Congress shall have power to enforce this article by appropriate legislation.

ARTICLE XVI.

The Congress shall have power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several States, and without regard to any census or enumeration.

ARTICLE XVII.

The Senate of the United States shall be composed of two Senators from each State, elected by the people thereof, for six years; and each Senator shall have one vote. The electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State Legislatures.

When vacancies happen in the representation of any State in the Senate, the executive authority of such State shall issue writs of election to fill such vacancies: *Provided*, That the Legislature of any State may empower the executive thereof to make temporary appointments until the people fill the vacancies by election as the Legislature may direct.

This amendment shall not be so construed as to affect the election or term of any Senator chosen before it becomes valid as part of the Constitution.

ARTICLE XVIII.

1. After one year from the ratification of this article the manufacture, sale, or transportation of intoxicating liquors within, the importation thereof into, or the exportation thereof from, the United States and all territory subject to the jurisdiction thereof for beverage purposes is hereby prohibited.

2. The Congress and the several states shall have concurrent power to enforce this article by appropriate legislation.

3. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of the several states, as provided by the Constitution, within seven years from the date of the submission hereof to the states by the Congress.

ARTICLE XIX.

1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any state on account of sex.

2. Congress shall have power, by appropriate legislation, to enforce the provisions of this Article.

ARTICLE XX.

SECTION 1. The terms of the President and Vice-President shall end at noon on the 20th day of January, and the terms of Senators and Representatives at noon on the 3rd day of January, of the years in which such terms would have ended if this article had not been ratified; and the terms of their successors shall then begin.

SECTION 2. The Congress shall assemble at least once in every year, and such meeting shall begin at noon on the 3rd day of January, unless they shall by law appoint a different day.

SECTION 3. If, at the time fixed for the beginning of the term of the President, the President elect shall have died, the Vice-President elect shall become President. If a President shall not have been chosen before the time fixed for the beginning of his term, or if the President elect shall have failed to qualify, then the Vice-President elect shall act as President until a President shall have qualified; and the Congress may by law provide for the case wherein neither a President elect nor a Vice-President elect shall have qualified, declaring who shall then act as President, or the manner in which one who is to act shall be selected, and such person shall act accordingly until a President or Vice-President shall have qualified.

SECTION 4. The Congress may by law provide for the case of the death of any of the persons from whom the House of Representatives may choose a President whenever the right of choice shall have devolved upon them, and for the case of the death of any of the persons from whom the Senate may choose a Vice-President whenever the right of choice shall have devolved upon them.

SECTION 5. Sections 1 and 2 shall take effect on the 15th day of October following the ratification of this article (Oct., 1933).

SECTION 6. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several States within seven years from the date of its submission.

ARTICLE XXI.

SECTION 1. The eighteenth article of amendment to the Constitution of the United States is hereby repealed.

SECTION 2. The transportation or importation into any State, Territory, or Possession of the United States for delivery or use therein of intoxicating liquors, in violation of the laws thereof, is hereby prohibited.

SECTION 3. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by conventions in the several States, as provided in the Constitution, within seven years from the date of the submission hereof to the States by the Congress.

The Union comprises 48 states: 13 original states (New Hampshire, Massachusetts, Rhode Island, Connecticut, New York, Pennsylvania, New Jersey, Delaware, Maryland, Virginia, North Carolina, South Carolina, Georgia), and the following, of which 7 were admitted without having been territories and 28 have been territories. Admission is granted by special acts of Congress.

	STATES.	ADMITTED.
1	Vermont	1791, March 4.
2	Kentucky	1792, June 1.
3	Tennessee	1796, June 1.
4	Ohio	1803, February 19.
5	Louisiana	1812, April 30.
6	Indiana	1816, December 11.

33	Oklahoma	1907, November 16.
34	New Mexico	1912, January 6.
35	Arizona	1912, February 14.

By the Constitution, the government of the United States is conducted by three distinct departments, the executive, the legislative, and the judicial.

Executive.—The executive power is centered in a President, Vice-President, and nine chief officers or heads of departments called secretaries, who are collectively known by the popular term of the Cabinet.

President.—The head of the government holds office during the term of four years. Candidates for this office are nominated by the respective parties at what are known as national conventions. In the conduct of party affairs the chief instrument is the standing party committee composed of one member from each state. These are elected every year by the delegation of their states at the national convention. The first

year in which political parties had regular conventions, nominated candidates, and framed platforms was in 1840, and this system has been conducted uninterruptedly since. The Republican Convention at Chicago in 1860 was the first conducted in a large building in the presence of spectators. The membership of a national convention is composed usually of two delegates for each congressional district, four at large for each state, and six from each territory, making a total of about 1,080. To insure attendance of representatives a large number of alternates are appointed. A temporary chairman appointed by the national committee opens the convention. A permanent chairman is then elected, a committee on credentials is appointed, and the convention is organized ready to receive the report of the committee. Sometimes the platform is drawn up before the nominations are made. Friends of the aspirants for nomination present the name after a laudatory speech, and the selection is made by votes of the delegates. The candidate is notified of his nomination by a committee, before whom he makes a speech of acceptance, though this sometimes takes the form of a letter.

Campaign.—Political parties are thoroughly organized and are conducted upon sound business principles. This work is conducted by the party committees and their chairmen. The chairman of a political party is a man with large influence, which he exerts to the utmost in his efforts to bring out the vote and to influence the voters, and these efforts may take the form of simple persuasion, pamphlets, news articles, radio addresses, voting polls, and other methods.

Electors.—In 1845 Congress prescribed that presidential elections should take place on the Tuesday after the first Monday in November. At this election the voters do not elect a President, but choose a certain number of persons from each state who have the power of electing a President. These are known as electors, and together they form the Electoral College. In no case in all elections since 1796 has one single elector voted differently from the way he was expected to vote.

Electoral College.—The respective state representatives to this body meet the first Monday after the second Wednesday in December following their election, cast their ballots for President and Vice-President, and send certified copies of the returns to Washington. These votes are counted by Congress, which meets for that purpose on the 6th day of January following. Should there be no majority of the electoral votes for any one candidate, the Constitution direct that the House of Representatives shall elect a President from the three highest names on the list, each state having one vote; and the manner in which that vote shall be cast for a state in cases of a difference of opinion among the representatives from that state is decided by the majority of votes of the representatives. This provision has been resorted to only twice in the history of the country: namely, in 1801, when Jefferson and Burr had 73 votes each for President, and Jefferson was chosen by the House of Representatives; and in 1824, when there was no majority, the three highest being Adams, Jackson and Crawford, and John Quincy Adams was chosen.

Presidential Succession.—A vacancy resulting from the death or inability of the President is supplied by the Vice-President. There are five instances of such succession: namely, April 4, 1841, Tyler became President by the death of Harrison; July 9, 1850, Fillmore became President by the death of Taylor; April 15, 1865, Johnson became President upon the assassination of Lincoln; September 19, 1881, Arthur became President upon the assassination of Garfield; and September 14, 1901, Roosevelt became President upon the assassination of McKinley; August 4, 1923—Coolidge became President upon death of Harding. In 1792 Congress attempted to provide in case of the death or inability of both President and Vice-President by enacting that the President *pro tempore* of the Senate should discharge the duties of President, and after him the Speaker of the House, but that a new election should follow in two months. On January 19, 1886, Congress provided that in such cases the duties of President shall be discharged by a Secretary of a Department, ranking in order: Secretary of State, Secretary of the Treasury, Secretary of War, Attorney General, Postmaster General, Secretary of the Navy, and Secretary of the Interior. No new election is provided for. In 1933 provision was made for the vice-president elect to take office if the president elect should die before his inauguration.

Term of Office.—The President is elected for four years. His term begins at 12 noon on the January 20 following. Since 1841 six presidents had double terms: Lincoln, Grant, Cleveland, McKinley, Wilson, F. D. Roosevelt. Each President until 1841 was a candidate for reëlection, and of these Washington, Jefferson, Madison, Monroe, and Jackson were elected, but John Adams, John Quincy Adams, and Van Buren were defeated. Between the years 1840 and 1860 no President was renominated. Cleveland was renominated and defeated in 1888, nominated and elected in 1892. Harrison, Taft, and Hoover were renominated but defeated. Washington refused a third term. Grant's friends sought one for him; the first Roosevelt ran on a technicality. F. D. Roosevelt won a third term.

Eligibility.—Of all the officers in the United States government the President and Vice-President alone must be native-born citizens. A candidate for either of these offices must be 35 years of age and have lived 14 years in the country.

Duties of the President.—These are regulated by the Constitution and may be briefly stated as follows: Commander-in-chief of the army and navy, to which he appoints commissions and assigns officers; in time of war he is military chief. He names foreign ministers and consuls, judges of the Supreme Court, and other important federal officers, subject to the consent of the Senate. He may remove from public office without such consent. He directs foreign relations, submits treaties, can pardon any offense except cases of impeachment, can use the militia or naval forces to maintain the law, can veto bills, and may call the attention of Congress by messages to necessary legislation. In 1790 the President's salary was fixed at $25,000 a year; in 1871 raised to $50,000, in 1909 to $75,000, traveling expenses, $25,000. Congress provides for the care and repair of the White House, makes

allowance for lights, stable, hothouse, fuel, and steward's salary, and extends to the President the use of a government vessel for his sea trips. In the intervals between the sessions, the President may appoint temporary officeholders subject to the approval of Congress upon its reassembling. While the President is more powerful in Congress than any other individual, a majority in one or both Houses may resist his efforts to secure good legislation. Presidents most opposed by Congress were Madison in 1809, John Quincy Adams altogether, Jackson in his first term, Tyler by the Whigs, Johnson, Wilson for his war policies, and Hoover by the Democrats.

Departments.—There are ten heads of Departments, or secretaries, who form the Cabinet, and these officers are appointed by the President and the appointment is confirmed by the Senate. The Departments of Foreign Affairs, Treasury, and War date from the Confederation. The offices of Secretary of State and Attorney General were created by an act of 1789, though the Department of Justice was not organized until 1870. The Navy Department was separated from the War Department in 1789. The Postmaster General existed under the Confederation but he was not recognized as equal to the other secretaries until Jackson's administration. The Department of the Interior was created in 1849. The Bureau of Agriculture became a department with a secretary in 1889, the Department of Commerce was organized in 1903, and the Department of Labor in 1913. Each secretary receives an annual salary of $15,000, and holds office during the pleasure of the President.

Secretary of State.—This officer controls foreign negotiations, American consuls, holds interviews and corresponds with the accredited representatives of foreign powers to the United States.

Secretary of the Treasury.—This officer controls the National finances, has charge of the public accounts, directs the plans for public buildings, for coining and printing money, and submits estimates of revenue and disbursements of the government to Congress every year.

Secretary of War.—He is the head of the army, under the President, and controls the several offices relating to the army. Within his department are the control of the United States military academy at West Point, of the National cemeteries, and of river and harbor improvements, and his consent must be obtained before any bridge may be built over any navigable river anywhere in the United States.

Department of Justice.—The Attorney General is the legal adviser to the President and to the heads of the other departments in questions of law relating to their work, prosecutes for the federal government and acts as its special counsel.

Postmaster General.—This officer directs and manages the postal business of the United States. In the discharge of his varied duties he appoints officers and employees of the department (except the four assistant postmasters general, who are appointed by the President); makes postal treaties with foreign governments; and manages the foreign and domestic mail service. He is responsible for the appointment of over 90,000 persons, including all postmasters whose remuneration does not exceed $1,000 a year.

Secretary of the Navy.—In this department is conducted the construction of ships, the manning, equipping and arming of the vessels of war, which is done in the navy yards and at the naval arsenal at Washington; it also controls the naval academy at Annapolis.

Secretary of the Interior.—Supervision over patents, pensions, public lands and surveys, Indians, education, railroads, public parks, and some of the public institutions within the District of Columbia are among his duties.

Secretary of Agriculture.—This officer controls the agricultural experiment stations, the quarantine stations, the weather bureau, forestry, and the bureau of animal industry.

Secretary of Commerce.—This officer controls the census, steamboat inspection, lighthouses, coast survey, foreign and domestic commerce, shipping, fisheries, and investigation of corporations and trusts.

Secretary of Labor.—Under his direction are immigration, naturalization, labor statistics, and the Children's Bureau.

There is a growing list of regular bureaus and commissions not responsible to any cabinet officer, but to Congress and the president. In most cases the heads report to the president. Some of the important ones are the Civil Service Commission, controlling over 800,000 employees, Interstate Commerce Commission, Federal Reserve Board, Tariff Commission, Smithsonian Institution, and Pan American Union. Emergency boards are not included, because of their temporary nature.

Civil Service Employees.—The total number of civilian executive employees in 1940 was 133,645 in Washington, 869,175 outside,—including some 68,578 new in 1940, and 150,000 unclassified as yet. The officials in both houses of Congress and the judges, clerks, marshals, and other court officials are not under the Civil Service Commission.

Judiciary.—The American judiciary system was an evolution from the English courts in the early colonies. After the Revolution the judges were appointed by Congress. The history of the development of courts and of their organization is treated under the head of "Law" elsewhere. There are 9 Supreme Court justices, 48 circuit judges, 150 district, 5 of the Court of Claims, 9 of the U. S. Customs Court (New York), 5 of Customs and Patent Court, and others. Each judge of the United States is appointed by the President, subject to approval by the Senate. Justices of the Supreme Court receive $20,000 a year; circuit judges, $12,500; and district judges, $10,000. Judges leave the bench by death, resignation, retiring on allowance of full salary after 70 years of age, by the discontinuance of the office, or by impeachment. The federal courts exercise a very great power over states, by the right to declare state acts unconstitutional and, consequently, void. By the federal constitution the power is conferred upon federal courts to disallow such state laws as conflict with the constitution or with laws and treaties made constitutional by the United States government. Instances in which the federal courts have passed unfavorably upon acts of Congress have been very few indeed, especially outside of the difficulties arising out of reconstruction after the Civil War. Although the constitution does not demand it, none but law-

LEGISLATIVE BODIES.

	Senate.	House of Representatives.
1. Number	Two from each state.	Four hundred and thirty-five members, appointed according to population—one to every 328,959 inhabitants.
2. How Elected	By direct vote after 1913, Constitution, Art. XVII.	By votes in the several Congressional Districts.
3. Term	For six years, but so arranged by states that one third of the entire Senate is elected every two years.	For two years, which is the life of a Congress, and is divided into two sessions. At the expiration of the term the members for a new House are chosen.
4. Qualifications of Candidates	A citizenship of the United States for at least nine years; a resident of the state; and at least 30 years of age.	A citizen of the United States for at least seven years; a resident of the state; and at least 25 years of age.
5. Salary	Annual of $10,000.	Annual of $10,000.
6. Presiding Officer.	The Vice-President of the United States is *ex officio* President of the Senate; salary, $15,000 a year.	The Speaker, elected by the House at the beginning of its first session; salary, $15,000 a year.
7. Powers	1. Elects a President of the Senate, *pro tempore*, to act in the absence of the Vice-President. 2. Passes upon nominations for office made by the President. 3. With House supervises counting of electoral votes for President and Vice-President. Decides election contests. May change revenue bills proposed by House. Seldom restricts debate. Qualifies its own members, and expels for cause. Holds secret or executive sessions. Members may not be prosecuted for utterances in sessions. 4. Tries all persons impeached by the House. 5. Ratifies, amends, or rejects treaties proposed by the executive departments.	1. Elects a Speaker of the House and other officers. 2. Originates all bills for raising revenues. 3. Joins Senate in counting electoral votes. Like Senate, meets on January 3 after election to organize for business. Has about 50 committees, restricts debate, expels members for cause, and elects its own officers. All members elected every two years. Committee chairmanships assigned in order of seniority. 4. Brings impeachment charges and conducts proceedings before the Senate. May impeach any executive or judicial officer.

yers have ever been appointed to the position of judge of a federal court.

Apportionment of Representatives.—The number of representatives which a state shall have in Congress is appointed according to its population, and the number is adjusted before the meeting of the first Congress after the latest census. From 1789 to 1865 in estimating population 100,000 slaves were considered equivalent to 60,000 free men, but, as no slave voted, the white people of the South had greater representation than did the white people of the North. The Thirteenth Amendment in 1865 adjusted this matter. The number of representatives in the House has been increased after each census except that of 1840, when the number sank from 240 to 232. By the census of 1900 the number of members in the House of Representatives was increased from 356 to 391. In 1910 it was increased to 433, with one each from New Mexico and Arizona in 1912, making 435. In adjusting population the difficulty arises over the fractions that result from dividing the population of the state by the number decided upon as the ratio number, the latest estimate being 328,959. The method introduced in 1910 assumed that the divisor was a continuous quantity between certain limits, changing only by indefinitely small additions. The decisive point at which the decimal part of the quotient of each state passes one half can be easily determined, and divisors were selected midway between each two of these critical points. A series of tables was thus obtained, each apportioning one more representative than its predecessor, and each allotting one representative for every fraction greater than one half and none for the fractions less. Every state, large or small, has one representative. The following table shows the present distribution:—

Alabama	9	Nebraska	4
Arizona	2	Nevada	1
Arkansas	6	New Hampshire	2
California	23	New Jersey	14
Colorado	4	New Mexico	2
Connecticut	6	New York	45
Delaware	1	North Carolina	12
Florida	6	North Dakota	2
Georgia	10	Ohio	23
Idaho	2	Oklahoma	8
Illinois	26	Oregon	4
Indiana	11	Pennsylvania	33
Iowa	8	Rhode Island	2
Kansas	6	South Carolina	6
Kentucky	9	South Dakota	2
Louisiana	8	Tennessee	10
Maine	3	Texas	21
Maryland	6	Utah	2
Massachusetts	14	Vermont	1
Michigan	18	Virginia	9
Minnesota	9	Washington	6
Mississippi	7	West Virginia	6
Missouri	13	Wisconsin	10
Montana	2	Wyoming	1
		Total	435

Variation in apportionment according to the several censuses has been as follows:

Under.	Census.		Apportionment.		Whole Nu'ber of Representatives.
	Year.	Populat'n.	Year.	Ratio	
Constitution	....	.....	1789	30,000	65
First Census	1790	3,929,214	1793	33,000	105
Second Census	1800	5,308,483	1803	33,000	141
Third Census	1810	7,239,881	1813	35,000	181
Fourth Census	1820	9,633,822	1823	40,000	213
Fifth Census	1830	12,866,020	1833	47,700	240
Sixth Census	1840	17,069,453	1843	70,680	223
Seventh Census	1850	23,191,876	1853	93,423	234
Eighth Census	1860	31,443,321	1863	127,381	241
Ninth Census	1870	38,558,371	1873	131,425	292
Tenth Census	1880	50,155,783	1883	151,911	325
Eleventh Census	1890	62,622,250	1893	173,901	356
Twelfth Census	1900	75,994,575	1903	201,860	391
Thirteenth Census	1910	91,972,266	1913	211,877	435
Fifteenth Census	1930	122,093,455	1933	280,674	435

Meetings of Congress.—Unless Congress provides otherwise, they shall meet Jan. 3, next after election, as per Amendment XX to the Constitution in 1933. Congress or President may call extra session. Formerly the life of a Congress was from twelve o'clock on March 4 immediately following the election of representatives, until twelve o'clock noon on March 4 of the next odd year, when Congress is said to "die." The longest session on record was in 1890, when the adjournment took place on October 1, after 240 days of session. From 1789 to 1934 the time of meeting of Congress was the first Monday in December. Until 1791 the sessions were held in New York, then in Philadelphia until 1800, and then in the National Capitol at Washington, D. C.

Salaries.—Between the years 1789 and 1815 the salary of senators and representatives was six dollars a day; from 1817 until 1855, eight dollars; the Act of March 19, 1816, made the salary $1,500 a year, but was violently opposed by the people and was repealed. In 1855 the compensation was made $3,000 a year, and raised in 1865 to $5,000. On the last day of the session in 1873 the salary was made $7,500; this act was repealed early in the next session and the salary was placed at $5,000 a year. But in 1924 the salary was increased to $10,000 a year. Congress pays a total of $2,500,000 a year in salaries and mileage. Mileage is a grant made to senators and representatives to cover their traveling expenses from and to their homes. Between the years 1789 and 1815 each member was granted six dollars for every 20 miles of travel; from 1817 to 1865, eight dollars for every 20 miles; and since 1865 it has been 20 cents a mile. At one time a member from Oregon was obliged to travel 5,000 miles to Washington, drawing for this $2,000.

Speaker.—The presiding officer of the House of Representatives is elected by his party. From 1790 to 1910 the speaker appointed all committees. Party leadership was then taken from him and divided between the chairmen of the Committee on Rules and of the Ways and Means Committee. Both are held responsible to party rules. The caucus of the dominant party becomes the real source of all legislation. Each party is allowed to select its share of each committee. Under this rule the absolute control passes to the House itself and the Speaker's control of it rests in his authority as a presiding officer. His influence is still very great, for he decides which member is entitled to the floor during debates, and by refusing to recognize members may retard or prevent legislation; this power is further increased by his right to state questions, to put them, and to decide points of order.

Committees.—These are selected in the party caucuses, and are promptly elected by the House itself. The 600 committee places are thus distributed among the 435 House members. Committees in the Senate are supposed to be appointed by ballot. All committees meet in committee rooms, of which there are a great number in the Capitol, and such committee room is usually the headquarters upon all occasions for the chairman of that committee. Much of the work of legislation is done in the daily meetings of the committees, and it is not unusual for as many as 1,000 bills to be referred to one committee in a session. The meetings are usually private, though open at nearly all times to any especially interested. With the tremendous growth of business and the enormous amount of work to be done, committee work has become a necessity in order to consider sufficiently the several bills which are presented to the House, and a great deal of a representative's hardest work is done in the committee room. Reports upon bills that have been under consideration are made to the House, and final action is guided almost wholly by that report.

Sessions of Congress.—Both Houses usually meet at noon and the average duration of a session is from four to five hours. Sunday sessions, evening sessions, and all night sessions are not unknown. The sessions of the Senate during its first two years were private; in 1793 the public was admitted; and in 1802 a stenographic reporter was allowed. When a private session of the Senate is now required, the Senate resolves to go into executive session, during which time no spectators are allowed and the journals and records of such meeting are kept private. Secret sessions in the House are practically unknown, though in 1807 that on the Burr question, and in 1811 that on the Act for taking possession of West Florida, were secret. Newspaper reports of debates began in 1800; the *Congressional Globe* was privately started in 1833,

in which debates were published verbatim and so continued until 1873, when its place was taken by the *Congressional Record* conducted by Congress, in which reports of speeches are published daily, but members have the privilege of editing and changing their remarks after utterance, and in hurried sessions a member asks for and receives leave to print speeches which have never been delivered.

State Government.—The government of states, like that of the federal government, is threefold: legislative, executive, and judicial.

State Legislature.—This goes by the name of the General Court in New Hampshire and Massachusetts; of the Legislative Assembly in North Dakota, Oregon, and Montana; of the Legislature in many states; and of the General Assembly in an equal number. When a Legislature consists of two houses it is known as a bicameral form of government; when of only one, unicameral. Government in Georgia was unicameral from 1777 until 1789; in Pennsylvania from 1776 until 1790; and in Vermont until 1836. Nebraska established the unicameral system in 1937. The upper house is always known as the Senate. In nearly all of the states the lower house is called the House of Representatives, except in West Virginia, Virginia, and Maryland, where it is known as the House of Delegates; in New York, Wisconsin, Nevada, and California, the Assembly; and in New Jersey, the General Assembly. Until 1868 the lower house in North Carolina was the House of Commons.

State Executives.—This comprises the Governor, Lieutenant Governor, and, in some cases, heads of departments.

Governor.—The Governor is responsible for the faithful execution of the law; informs the Legislature by message of affairs in the state; may call the Legislature in special session; nominates and appoints under confirmation of the Senate certain of the state officers; fills vacancies which occur during sessions; grants pardons or commutes sentences; has a limited power of veto; may call out the militia to his aid; and is a commander of the militia, with a military staff.

State Officers.—In each state the secretary of state keeps the state records and the great seal; the treasurer has charge of the state funds; an auditor or comptroller in some states audits the accounts; an attorney general looks after the state business at court and is counsel to the state; and the state superintendent of education has charge of all matters relating to public instruction. By their direct responsibility to the people these officials differ from the President's Cabinet in their relation to the executive.

Lieutenant Governor.—In many states this officer is elected to fill a possible vacancy in the Governorship, and to act as President of the Senate. Arkansas, Florida, Georgia, Maryland, New Hampshire, Maine, Tennessee, Utah, Wyoming, New Jersey, West Virginia, and Oregon have no Lieutenant Governor. In most of these the President of the Senate, elected by the Senate, fills any vacancy in the Governorship. But Oregon, Utah, and Wyoming provide that the Secretary of State shall be Governor; Maryland permits the Legislature to elect a successor if in session, otherwise, the President of the Senate takes the office.

District of Columbia.—Chosen in 1790 by act of Congress as the seat of government; Maryland and Virginia gave up claim to this territory. From 1790 until 1800 the seat of government was at Philadelphia. The limits of the District as now existing with its 70 square miles were defined in 1846 and lie wholly on the left bank of the Potomac River. In 1878, because of the heavy indebtedness of the government on a territorial basis, the present system of government by three commissioners was adopted. The people have no vote and no voice in the management of affairs, which is under the control of Congress.

Local Government.—There exist in the United States four forms of local government: (1) The Town System; (2) the County System; (3) the Mixed System; and (4) Municipal Government.

Town System.—This form was based upon the English idea which the early colonists brought with them. The charter is given by the state legislature. The town elects its own officers; imposes and collects its taxes; coöperates with the county and state in the collection of their taxes within its limits.

At the annual meetings reports of the departments for the past year are rendered; taxes are voted; and town officers are chosen. The officers are selectmen varying in number from three to nine; the school committee; the town clerk; town treasurer; assessors; overseers of the poor; surveyors of highways; fence-viewers, etc.

County System.—This system originated in Virginia and was carried to the West by emigrants from that state. The state legislature grants the charter; there is no assembly corresponding to the town meeting, but county officers administer the affairs; the governing body is the County Board or the County Court. Under it are the collector, assessor, superintendent of schools, sheriff, etc.

In some states the subdivisions of the county are called precincts; in others, townships; in Delaware, hundreds; in Georgia, militia districts; in Louisiana, wards; in Mississippi, beats; in Maryland, election districts; and in Tennessee, civil districts.

Mixed System.—In many states there is a combination of the town and the county systems, and the ratio of the one element to the other is of varying degrees. In New York there is more of the town than of the county; in Pennsylvania, more of the county than of the town. In both of these states the county as well as the town is a body corporate and politic. The mixed system and the county system are the only forms found in the West.

Municipal Government.—None of the forms of state government can possibly meet all of the demands of city administration. This is placed beyond the control of the state though the form is modeled to a greater or less degree upon state methods. The chief characteristic of municipal control is the strong centralizing of power. The charter of the city, given by the state legislature, is really the constitution of the city, limits its privileges and defines its duties. The city legislature often consists of a bicameral form of the board of aldermen and the common

council; but New York, Chicago, San Francisco, and a great number of small cities have only one chamber. This body passes city ordinances, levies taxes, and makes appropriations. The executive is the mayor, who stands to the city in much the same position as does the governor to the state. The several administrative departments of the city are under the direction of officials or salaried officers, sometimes by committees from the council. In some cities the mayor presides at the city council; but in larger cities a special judge, called the city or police judge.

The functions of a municipality embrace (1) ways and means of communication and transportation, as well as the supply of light and water; (2) disposal of wastes; (3) protection of life, health, and property; (4) education; (5) recreation; (6) municipal housing; (7) charities and correction.

(1) The providing of ways and means of communication and transportation is the first function of a municipality. In dealing with street traffic it rests with the municipal authorities either to provide street railways or to arrange for such by private enterprise. In Great Britain and her colonies many of the street railways are owned by the municipality, but in the United States private enterprise is the rule. When waterways are encountered, the municipality has to arrange for the construction of bridges, as well as, on occasion, docks, wharves, and harbors. Ferries, too, must be provided. The construction of harbors is usually a function of the national government, though municipal docks are common. The supply of water for household and industrial purposes, as well as for fire protection and street and sewer flushing, is one of the most important municipal services. Water and lighting supplies are usually municipal functions. Municipal markets and slaughter houses are often provided, or else a strict supervision is kept over private markets and food supplies.

(2) *Wastes.*—The provision of an adequate sewerage system, the disposal of garbage and rubbish, and the cleansing of streets are essentially municipal functions. Cemeteries, too, come within the province of the municipality.

(3) *Protection of Life, Health, and Property* comprises the work of the police, the courts, the board of health, the fire department, the provision of public baths, wash-houses, and latrines, as well as the building inspection service.

(4) *Education.*—This includes the work of elementary education, besides manual and technical training, night schools, vacation schools, museums, and libraries. In exercising these functions the municipality is acting as the agent of the state, and is subject to central control.

(5) *Recreation.*—This embraces the provision and maintenance of playgrounds, parks, gymnasiums, swimming baths, besides suitable halls for concerts and lectures.

(6) *Municipal Housing* is almost unknown in the United States but is a characteristic feature of municipal activity in Great Britain and even in India. Houses are built at municipal expense to provide sanitary dwellings for the poorest wage-earners.

(7) *Charities and Correction.*—These include organized poor relief and the maintenance of asylums, reformatories, and occasionally hospitals.

MUNICIPAL REFORM.

Each locality is confronted with its own problem of municipal reform, and too often partisan politics is allowed to run counter to the common weal. The remedy lies with the citizens and taxpayers, who frequently are too indifferent to insist on sound and honest government. A distinct reform was effected in Scotland in 1833, and in England and Wales in 1835, as the result of agitation against corrupt local government. These reform acts were supplemented until in 1888 an act was passed providing that cities and towns of over 50,000 inhabitants should be administrative counties. One of the most important reforms in many American states has been the adoption of constitutional amendments, from 1850 to 1880, prohibiting special acts of the legislature applying to a single municipality. Other agencies of municipal reform are the good government clubs, which are federated into the National Municipal League. One of the best known efforts to reform the abuses in city government is that termed the Federal Plan, which was put into effect in Philadelphia in 1887. All legislative power is vested in the council and all executive power in the mayor and the heads of certain departments nominated by the mayor with the consent of the council. The mayor has also the right of veto. The main advantage of this plan is that power and responsibility are centered in a few individuals.

Municipal Ownership.—From earliest times certain cities of importance have owned lands, constructed harbors, docks, and aqueducts, and made these a source of revenue. But in the nineteenth century municipal-owned water works, gas works, and the like became the rule almost throughout the civilized world. Authorities are at variance regarding the proper scope of municipal ownership; but in the main they are agreed on the following points: (1) it may include all services of a sanitary nature, such as sewerage and water supply; (2) it should restrict its activities to industries of a public character, and not enter into undue competition with private enterprise. But local conditions alone can determine the advisability of public or private ownership, and the relative efficiency and economy are the deciding factors. It is generally conceded that municipal ownership should be run on sound business principles, for in the event of reckless or mismanaged undertakings resulting in financial loss, the deficit would have to be met from the general tax rate.

Municipal ownership of sewerage is almost universal, and no country is better provided in this respect than the United States. Water works are the commonest form of revenue-producing services, while gas works, though frequently owned by the municipality in Europe, are rarely under such ownership in America. Street railways have been developed since 1850, but outside of Great Britain municipal ownership is rare. Electric lighting plants are frequently owned by the municipality in the United States and Great Britain, though more rarely on the continent of Europe. The telephone service is national rather than municipal, and in the United States is controlled by private companies, but in Great Britain the trunk lines are owned by the government postal authorities.

DEPARTMENT OF GOVERNMENT

Alaska.—Following the purchase from Russia in 1867, the government was organized the following year, with little change until after the great gold rush at the end of the century. In 1900 Alaska was made a civil and judicial district; in 1912 a territory was organized. From 1900 towns were allowed to incorporate as municipalities, and to date over 20 have so organized. Alaska has a bicameral system of legislation, and also a dual control by the territory itself and by the United States, a plan leading to considerable duplication of bureaus. The senate contains eight members, two from each judicial district, serving for four years; the house contains 16 members, four from each district, elected for two years. Congress retains the right to repeal acts passed by the territorial legislature, which is also forbidden to pass definite laws on excises, game fishing, and similar subjects. The president appoints a governor and territorial secretary, each for four years. The governor in turn appoints a commissioner of health, a treasurer with consent of the senate, for two and four years respectively; while a commissioner of education is appointed by the territorial board of education for two years, and an attorney general is elected by the people. Judges hold both U. S. and territorial courts. U. S. commissioners act as justices of the peace and in other roles. Government expenses are shared locally and by the United States, the chief territorial revenues being from taxes, license fees, and other imposts, including 25% from the forest supplies.

Hawaii.—By an organic act of April 30, 1900, Hawaii was set up as a territory, a part of the United States. The islands were formally annexed on June 14 of the same year. Administrative machinery is highly organized. The legislature, which meets biennially, comprises a senate of 15 members, elected for four years, seven at one time, eight two years later, and also a house of 30 members, elected for two years. The U. S. president appoints a governor and a secretary for four years, the chief justice and two associates, and eight judges for federal courts. The governor, with advice of the territorial senate, appoints a considerable number of officers, chairman of boards, and superintendents of education, public work, and so on. Hawaii has administration and revenue of its public lands. Appeals are made to the Federal circuit court of the ninth district. Requirements for voting are similar to those in the various states. Seven counties have been set up for administrative purposes among the many islands. Midway Island, farther east, is not included, but two small coral ones, Johnson and Palmyra, are. The Westerly Islands have been constituted the Hawaiian Islands Bird Reservation, largest of its type in the world. Hawaii sends one delegate to the U. S. House of Representatives, who can introduce bills and speak on the floor, but has no vote.

Philippine Islands.—From 1898 to 1902 the islands were under control of military governors, and then under a commission with a governor general at the head, including Gen. Leonard Wood and William Howard Taft. After insistent demands the Congress of the United States passed a conditional independence bill in 1932, vetoed by President Hoover, and passed over his objection. The Philippine Legislature promptly rejected it. A more liberal one, signed in March 1934, was accepted on May 1, the 36th anniversary of Dewey's victory in Manila Bay. After 10 years the islands are to be completely free, when the United States abandons all military control, July 4, 1945. Manual Quezon was inaugurated first president of the Philippines on Nov. 15, 1935, at which time a new constitution went into effect. The U. S. still maintains a resident high commissioner in the Philippines. The Philippine constitution is progressive. It provides that the president and vice president shall hold office for a single term of six years, one legislative chamber of 120 members, initiative and referendum, limited veto for the president, woman suffrage, a supreme court of 7, which may declare laws unconstitutional only by at least two-third vote, regulation of franchises, and a liberal bill of rights. On request of President Quezon, Gen. Douglas MacArthur, retired, of the United States army was asked to organize a system of national defenses. Certain tariffs on imports from the Philippines into the United States, already in force, will be increased after 10 years, the proceeds to be applied to the liquidation of the debt owed to the United States,—about $125,000,000. Immigration to the United States is limited to 50 annually.

Puorto Rico.—Spain ceded this island to the United States on Dec. 10, 1898. Military rule ended on May 1, 1900. The organic act for government was passed in 1917, at which time the United States Supreme Court declared Puorto Rico unorganized territory, unlike Alaska and Hawaii. The act was further changed in 1927 and 1935. The president appoints the governor, with advice of the Senate. The island legislature consists of a Senate of 19 and a House of 39 members, elected for four years by direct male suffrage. Puorto Ricans are recognized as American citizens. The executive departments are justice, finance, interior, education, agriculture and commerce, labor, and health. The President appoints the attorney general, commissioner of education, and an auditor. The governor, subject to the insular senate, appoints the heads of other departments. Five justices of the Supreme Court are appointed by the president. Puorto Rico sends a commissioner to the United States House, but he has only the privilege of speaking, and no vote. The island raises its own taxes, customs, and other revenues, none of which go to the federal government. Following a movement for statehood in the island, a bill in the U. S. Senate in 1936 provided for independence after a transition period of four years, with the levying of tariffs by the United States. It was coldly received in Puorto Rico and was not pressed. The literacy test for voting was abolished in 1935. Congress in that year passed a Rehabilitation Act, providing $41,000,000 for use in the island. According to law Spanish is taught in the first eight grades, with English as a second language; afterwards instruction is in the English language.

Virgin Islands.—Formerly the Danish West Indies, ceded by Denmark to the United States for $25,000,000 in 1917, are a group of three large islands, and many small ones, in the Caribbean east of Puorto Rico. St. Thomas, the chief island and city, is about 1442 miles from New York City. In 1927 Congress gave citizenship to the inhabitants, who are of mixed race, largely colored; in 1936 suffrage was granted all who read and write English, spoken by 98% of the people. During prohibition, trade of the islands was restricted to sugar, bay rum, and other products; more recently the rum industry has again flourished. St. Thomas has a council of 9 members; St. Croix, one of 7; these make up the colonial legislature, meeting each year. The United States appoints a governor.

American Samoa, of which Pago Pago Harbor was acquired in 1872, and part of the island group ceded by Great Britain and Germany in 1900, is governed by the U. S. Navy. Guam, ceded by Spain in 1898, is also in charge of the Navy, which has a powerful radio station there. Uncle Sam owns a few other small Pacific islands. **Panama Canal Zone**, a strip of five miles on each side of the Canal, is administered as an independent agency of the United States, headed by a governor, protected by a garrison, and under general supervision of the Secretary of War.

SPECIAL GOVERNMENT SERVICES

Apart from the ordinary routine of the various government departments, Uncle Sam performs a multitude of services for his citizens. He even maintains an Information Service in Washington, to which various questions may be sent as to agencies. Every department has its numerous bureaus, commissions, agencies, and administrations. In the last generation these have been rapidly increased until they have become a vast and intricate system. Plans for reorganizing and simplifying the activities of Uncle Sam have been considered for a long time. President Hoover urged Congress to act to coordinate the various bureaus, and President Roosevelt also so promised. Much transferring and adjusting has gone forward, but the activities of the government still overlap from department to department. Since 1900 many independent commissions and agencies have been authorized by Congress. Quite a number of these report to Congress, some of them to the president, and a few like the Director of the Budget are virtually uncontrolled. Others have various cabinet heads on their governing boards.

In recent years the federal authorities have issued a publication, frequently revised, to give information as to the classes and nature of the scores of different services. Along with hundreds of pamphlets and other publications, this can be obtained by sending the appropriate sum ($2 for this one) to the Government Printing Office, Washington. It would be impossible, outside a small volume even to describe the many sources of aid to groups, individuals, and the nation as a unit. Only those are mentioned below which are of unusual and special nature or more directly concern the wants of single persons. Every cabinet department has many others besides those we can mention here. Below are also included several agencies or bureaus or commissions that report to no one department head.

Bureau of the Census. As the Constitution provides, since 1790 a Census has been taken every ten years of the inhabitants of the entire United States. At first only meager data were collected, mainly as to families, persons of certain ages, and the like. Gradually the service expanded, until in 1930 the Fifteenth Census included five volumes on Population; two on Occupations; two on Unemployment; eight on Agriculture; one on Horticulture; two on Irrigation and Drainage; three on Manufactures; two on Mines; four on Distribution; and one on Construction. Prior to 1902 each Census organization was disbanded after the decenial statistics had been collected. Then the Census became permanent, until now over 700 are regularly employed, increased to 6000 during the actual decenial enumeration. In addition some 90,000 workers are employed from two to six weeks in the field taking data from house to house. Ten branches are in charge of that many specialists. In 1930 for the first time, data on retail trade were taken. In 1934 and 1935 business conditions were also studied, and in 1936 the listings were even more comprehensive. Every year statistics are collected as to births, deaths, finances of cities over 100,000 in population, prisoners and other inmates of federal and state institutions. Data on selling and production of 75 commodities like cotton goods, hose, boots and shoes, automobiles, and clothing are taken. In some cases the Bureau issued information monthly.

Bureau of Public Health. Organized at present in the Treasury Department, the health service employs 2536, with over 500 part-time workers. The Bureau has charge of 26 marine hospitals, and 131 other relief stations about the country. Some of the numerous services are taking a national health inventory, improving the records of vital statistics, studying community sanitation, such as filers for disposal of sewage in large cities, helping prevent yellow and other fevers, the spread of other diseases like tuberculosis and syphilis, improving conditions in hospitals for mental defectives, and looking out for health in schools.

Consular Services. The United States sends ambassadors and ministers to all important nations. These have to do with diplomatic affairs. In addition hundreds of consuls, vice consuls, and others now make up the foreign service. The first consuls were recognized in 1780, provided for definitely by the Constitution, but save in North Africa were unpaid until after 1816, when small salaries were authorized. Consuls were put under the Civil Service in 1906, and in 1924 and later the system was reorganized, divided into nine classes, with better salaries. A contributory system of pensions was also established for consular servants. The consuls assist distressed seamen in foreign ports, adjust differences between men and masters of seacraft, protect citizens abroad, settle estates of persons dying intestate in a foreign land, look after health conditions, issue passports. An important service, established a few years ago, was

collection of statistics as to possibilities of foreign trade. For instance, an American manufacturer of cutlery inquires as to possibilities of sales in Morocco. The consuls investigate, inform him, and he establishes business there.

Farm Credits. Under an act of Congress in 1916, the secretary of the treasury and four others constituted a board on farm credits and mortgages. Various changes have been made to meet new conditions. The United States is divided into 12 districts, with the same number of land banks to make long-term agreements; 12 intermediate land banks, to make short-term financing; 12 production corporations, to assist in providing various farm commodities. The object is to make it easier for agriculture to hold and retain possession of lands by making long term arrangements on very moderate terms. Other subordinate agencies cooperate to this end.

Federal Communications Commission. In 1934 the Communications Act extended and renamed the old Radio Commission to regulate communications by wire and radio. This board has seven members. Authority is granted over telephone, telegraph, and air services, with regard to quicker means of communication. The country is divided into 21 districts, with inspection service in each, and also with two general "monitor" stations, one at Grand Island, Nebraska, and one at Great Lakes, Ills. These consider violations of the broadcasting wave-lengths and other regulations. No censorship or abridgment of freedom of speech can be attempted, though the president may suspend certain guarantees in case of war or other emergency. The Interstate Commerce Commission is now relieved of any control it once exercised over the means of communication. Control is given as to foreign or cable service from the United States. The law specifies that no discrimination is permitted by a station as between candidates for the same office who wish to broadcast their opinions, but no station is forced to give any candidate such a privilege. If one has it, all must be given the same opportunity.

Federal Power Commission, organized in 1920, with the secretaries of war, interior, and agriculture in charge, was reconstituted in 1930, with five full-time commissioners, appointed by the president under the Federal Power Act. In 1933 the Commission was asked by Congress to make a national power survey, including these items: holding companies as to power operations, power requirements for the railways, rural electrification plans, costs of distributing power and cooperation among agencies, relation of coal to hydroelectric development, and best location of plants.

Federal Reserve System. Legally now the Board of Governors of the Federal Reserve System. First constituted in 1913, this agency has branches in Boston, New York, Philadelphia, Cleveland, Richmond, Atlanta, Cincinnati, St. Louis, Minneapolis, Kansas City, Dallas, and San Francisco, with 25 sub-branches in other large centers. The main purposes is to supervise generally American banking, to provide for a safer method of discounts, advances, and rediscounts of paper, or, briefly, to make our system more elastic. National banks become members of the Federal Reserve System through their connection with a regional Federal Reserve Bank. The stock is owned by member banks and represents, in case of each bank, 6% of the total paid-up capital of that bank. Part of this is held in reserve and on call by the district bank of the system. The Board of Governors is made up of 6 members, with the secretary of the treasury and comptroller of the currency members ex officio.

Federal Trade Commission. By an act of 1915, and several later ones, the Commission has five members, each serving for seven years, with no more than three from one political party. Business men for years had been complaining of the unfair methods of some of their competitors. So the functions of the body are limited to the two phases of economic and legal as to business practices. Questions often arise as to the misbranding of goods, and so gaining advantage over a more scrupulous competitor; of unfair discrimination as to price, rebates, and other advantages; of compulsory price fixing by manufacturers, and the like. Typical examples are whether it is fair for one company to put out an article under one name or brand, and the same or very similar, under another brand or name, to be sold at an appreciably lower price by large concerns that will buy in quantity; again, whether a jobber is fair in making it appear in his advertising that he sells direct to the consumer from the factory, whereas he is acting as middle man, but claiming not to so act; whether a correspondence school can be called a college, university, or "institute." Everything from tires to electricity, gas, and milk has been considered in one way or another. The Trade Commission serves notices to offending firms to "desist," brings them into court, or posts them as unfair competitors.

Flood Control Act of 1936. Disastrous floods in modern times call for government remedies, since the federal agencies have control of inland waterways. Under the act of 1928, much work was done on the Mississippi system and other main river courses. By 1936 the plans from Cape Girardeau, Missouri, to the mouth of the Mississippi had been completed 90%, but $272,000,000 additional was authorized for further construction, dredging, and building of reservoirs, levees, and bars. In recent years a definite policy has been developed, after years of agitation and of suffering from floods, and 270 projects in 31 states have been marked for completion. The government pays no costs for lands, easements, and the like, unless these mount to over 50% of the cost of the entire improvements. States are compelled to cooperate in these regards. Over 1000 separate projects have been completed,—even to the extent of harbor improvements, port facilities such as huge docks, fish piers, and oil refineries where needed.

Food and Drug Administration. For 50 years the government has sought to protect the public in the matter of foods. The Act of 1906 secured adequate protection in many respects. Others have followed, as conditions arose, such as three concerning labels and three concerning insecticides, naval stores, and caustic poisons. Recently

further legislation has failed to pass Congress for one reason or another. Many adulterants not known in 1906 now get by the laws because those in force do not cover such cases. The government employs many chemists to analyze things on the open market. Some idea of the scope of the work of the Administration may be gained from a partial report of one recent year. In 1935, 3040 actions were started with regard to cheats of various kinds in foods and allied products, decomposition of food, filth found in cans, and substances harmful to health. In the same year, 1029 drug imports were refused, and also 2554 shipments of food. Investigations included the use of cheap soybean flour in macaroni, low-grade vegetable oils in expensive salad dressings, cheese mixed with milk (filled cheese, against the law in some states), too much moisture in fruits, jams and jellies with low fruit content, butter deficient in fats, fruit that had spray residues upon it, and 73 cases of food poisoning. In regard to poison food, but one of the 73 cases involved a commercial product. Much agitation recently concerns the use of containers that have too much tin in them and the use of chemicals in bleaching or otherwise treating foods.

Forest Service. Apart from the increasing demand for forest products, the maintenance of a correct natural balance between cleared and uncleared areas, or cultivated and wild land, receives more and more attention. Dust storms originate in areas that never should have been stripped of their trees or of their prairie vegetation. For many years the Forest Service has tried to educate the public to think more of such matters. At last results are apparent. Flood control, soil conservation, and growth of new timber have long been considered by our foresters. Cutting away the small brush, straightening the streams to make water run off quickly, and taking the tall grasses from the land have all hastened and aggravated floods.

One-third of the area of the nation receives forest service, 615,000,000 acres, of which Uncle Sam owns 165,000,000, and minor government units over 19,000,000 more. Under the Weeks Law, 7,000,000 acres were acquired in 1935, and 4,000,000 in 1936. In the latter year over 300,000,000 trees were planted, and a special report to Congress showed that excessive stocking, drouths, cutting off the vegetation, and forest fires had depleted the forage values on 728,000,000 acres, which had formerly been quite suitable for grazing. In 1936 a special division of wildlife management was organized to preserve the animals of the national domain. Already big game and other wild life have been encouraged, until over a million head live in our national forests, an increase of over 100% in 12 to 15 years. Annually 12,000,000 persons use the national forests for camping and other recreation. Forest rangers who live in the national areas also help prevent fires, which yearly take a staggering total of timber and land coverings. Considerable emergency forest work has been done by the Civilian Conservation Corps and other agencies, but much of this is of temporary benefit only. See article on *Wild Life Reserves.*

Geological Survey, first organized in 1879, seeks to locate the mineral and other natural resources of the country. Geology, the mineral wealth of Alaska, minerals of the continental areas, and chemical and physical researches are the main branches of this service. Some of the special features are a topographical map of the United States, issued in folios as soon as each small area is covered; study of the mineral, water, and other nature resources; and classifications of the public lands.

Government Printing Office. During the Civil War the need for quick printing was felt so acutely that a special printing office was set up in Washington by the government. From time to time it has been enlarged in size and activities, being mainly enlarged in 1895. The work is supervised by an expert printer, who is independent, except that he reports to the president. A Committee on Printing, of Congress, exercises some control over the type and amount of work undertaken. The office employs over 4000, a third of whom are women, runs on double shifts, and often turns out an immense amount of work between 7 in the evening and the opening of Congress the following noon. Speed, secrecy, and reliability must obtain at all times. Branch printing plants are located in the new annex to the Library of Congress and in the State, War, and Navy Building. Millions of pieces of material have been printed for use of government departments and agencies or for sale to the public. Publications of the United States are sent to about 470 libraries through the country, which keep on hand all or most of the 3500 documents printed each year. Monthly indexes are prepared for the same libraries. An Information and Sales Room is maintained in Washington. For those outside lists and costs may be obtained by writing to the Superintendent of Documents, Washington, D. C.

Interstate Commerce Commission. One of the best known of the government agencies, which was organized in 1887, and given additional powers and duties from time to time. The object is to prevent undue advantage, discrimination, or any unfairness as to the rates charged for passenger and freight service. In 1906 the Hepburn Act extended the authority of the Commission to express companies, pipe lines, and sleeping car companies; in 1910 the Elkins Act brought interstate communications (telegraph, telephone, and the like) within the jurisdiction of the group; but this was later transferred to the new Communications Commission; in 1920 Congress asked that an adequate passenger service be planned; and in 1935 motor transportation was assigned to the Commission for study and regulation. Thus the activities have also expanded to include not only rates, but also routings of cars, pooling of freight, an examination of competing water routes, and other matters. After some complaints of discriminations within state borders, the Commission undertook to adjust both passenger and freight charges, so that competition might be fair between places in a state and others in another state nearby. In the *Shreveport case* and others, the Supreme Court upheld the right to fix or change rates within a state when low or high ones there interfere with the flow of commerce between that and nearby states. At present the Interstate Commerce Commission has 11 members.

Library of Congress. Books were collected for the nation before 1800, but were burned when the Capitol was destroyed in 1814. One early purchase was the library of Thomas Jefferson, about 6800 volumes. In 1851 over 35,000 books of the national library were destroyed by fire. Since then the collections have been augmented to gigantic proportions by the purchases authorized by Congress, by copyrighted books deposited as required by law by the authors or publishers, by many gifts and exchanges with libraries, and by deposits of books and material from the Smithsonian Institution. The new library building, completed in 1897, contains 15.29 acres of floor space; an annex in 1933 brought the number to 35 acres and 414 miles of bookshelves. No library of the world is better equipped with files, card indexing systems, a printing plant, and the national copyright office. On June 30, 1940, the Library of Congress housed over 6,000,000 books, millions of pages of manuscripts, and also two million pages in photographic facsimile from documents in foreign libraries, paid for by J. D. Rockefeller, Jr. Besides unrivaled historical material relating to the United States, the library is rich in special collections, a few of which are those on Russian literature (80,000 books), of Judaica (20,000), early, documents, autographs, and the great Vollibehr collection of incunabula (3000), purchased for $1,500,000. This last contains many items not found anywhere else in the world. The Library of Congress is open for readers every day. Under certain restricted conditions, books are sometimes sent to other libraries for use of readers there.

Maritime Commission. Established in 1936 to replace the Shipping Board, organized in 1916, and the merchant marine as provided for in 1920, this commission provides for foreign and domestic shipping and for the national defense in time of war. No more than three of the five members of the board may come from a single political party. In time of war, the board cooperated with the U. S. Navy. One function of the Commission is to investigate seamen's wages. Three main objects are intended: (1) to provide boats enough for domestic and some share of foreign commerce; (2) to build up an auxiliary for use in time of emergency; (3) the boats are to be owned, equipped, and manned by citizens of the United States.

National Archives. From 1877 to 1913 suggestions were made for the housing of government archives, as all modern nations had provided long before. The World War and other events interfered until an appropriation was provided in 1926 for a suitable building. This was started in 1931 and finished in 1933. More than four billion cubic feet of space were needed in Washington alone to preserve documents and papers. The archives building is in form of two cubes, the smaller one containing 21 levels of stacks and vaults for different classes of documents. The director of publications issues catalogs, guides, inventories, and other material. Members from the government departments compose an archives council. There is a national archivist, who reports on January 1 the papers, documents, and printed material which, in his judgment, should be discarded. The building is fireproof, and the individual document containers are also.

National Parks and Monuments. See page 645.

Patents and Copyrights. The government gives individuals the exclusive right to make and market their inventions for a period of 17 years. Improvements or infringements on patents that have expired are not subject to registration. No patent is granted for an idea, or a mere suggestion, but only for some novel article, design, or other patentable form. In early days a model had to be deposited in the Patent Office. Now an accurate working drawing, with complete description of the object, is kept on file in Washington. The rather intricate directions for applying for a patent may be obtained by writing to the Patent Office, Washington, D. C.

Copyrights cover books, periodicals, addresses or speeches, dramatic works, musical works, works of art or models of such, drawings of scientific nature, prints, motion picture plays, and other literary material. Many things may not be copyrighted. Rights to an author hold for 28 years, then go to his family or are renewed to him or to his estate, for another like period, making 56 years in all. Trade marks differ from copyrights, in that they cover some distinctive emblem, device, or descriptive work used in connection with marketing an article. Certain names in common use, pictures of presidents or others, without their consent, seals of fraternal orders, and names of firms, individuals, and many other things are not subject to trade mark. For information in detail write the Copyright Office, Library of Congress, Washington, D. C.

Reclamation Service. Congress in 1902 organized a Bureau of Reclamation in the Department of the Interior. Within the next 25 years, 47 irrigation projects in 17 arid states of the far West had been completed, and 27 more were in process of construction, making a total irrigated area over 3,000,000 acres. Meanwhile the Bureau had provided 18,750 miles of canals and ditches, about 180,000 canal structures, 109 storage dams with a total storage volume of 30,000,000 cubic yards of water. The largest of all such projects was Boulder Dam in Arizona and the Colorado River, which had cost $375,000,000 when operation began on Sept. 11, 1936. The construction required an excavation of over 400,000,000 cubic yards of material, with the use of over 5,500,000 barrels of cement. Boulder Dam is the highest artificial structure of its type, 737 feet altogether, raises the level of the Colorado 582 feet, is 650 feet wide at the bottom, 45 at the top, and the power house at the dam will contain 15 generators.

Some other large dams are the Owyhee in Oregon, 405 feet high; Arrowrock, Idaho, 354 feet; Elephant Butte, New Mexico, 306 feet; Diabalo, Washington, 389 feet; Shoshone, Wyoming, 328 feet; Roosevelt, Arizona, 284 feet; Pathfinder, North Platte, Wyoming, 218 feet. Some dams are used only for irrigation, and others also for power, or water supply for cities or both. Over 50 great dams have been constructed, some of them by aid of private capital, for these uses. See page 642.

Reconstruction Finance Corporation. Established fully in 1932, this agency has done much to stabilize conditions since the beginning of 1929. The secretary of the treasury is one of a board of seven directors, to whom at the start $500,000,000 were given from the Treasury, to be held for the benefit of the United States. Among the main purposes are to provide emergency financing for corporations, banks, or other organizations; to purchase stock of financial institutions to keep them or others from ruin; and to make certain other loans and allocations as demanded by law. Of the total money disbursed, —used as a form of revolving fund,—by September of 1936, 11 billions in value had been handled. Six and a quarter billions went into channels other than those of direct relief of people or allied interests, and of this sum nearly 60% had been paid back to the Corporation by borrowers. Loans had been made to 7468 banking institutions, 88% of which had repaid their loans; depositors of 2688 failed banks had been given allotments; 603 drainage and other local projects had been aided, besides other large and small activities of the RFC.

Rural Services. Besides the conservation of soil, weather service, and other forms of aid to farmers, Uncle Sam maintains a number of special bureaus in the Department of Agriculture. Some of these are the Bureaus of Agricultural Economics, Agricultural Engineering, Biological Survey, Chemistry and Soils, Dairy Industry, Home Economics, Plant Industry, and Public Roads. Recent additions were the Resettlement Administration, Rural Rehabilitation, and Suburban Resettlement. Thus the organization of the Department shows the varied and complicated setup in a cabinet department today. Specific services may now be illustrated.

In Agricultural Economics, the government carries on studies as to production and marketing of farm products. It gathers information as to the crops, livestock, farm conditions and management, standardization, and even foreign openings for American farmers. The Biological Survey studies habits and uses of birds, migratory animals, the increase of fur-bearing stocks, game preserves, and conservation of natural advantages for game and animals useful to mankind. In Dairy Industry, the government fosters better dairy management, sanitary methods of handling milk products, new processes in making cheese and butter, and the transportation of farm goods to markets. Likewise the Bureau of Plant Industry investigates diseases harmful to growing things, studies means of protecting and improving fruits, seeks to produce better grades of fertilizers, and to improve growing conditions in cooperation with the Bureau of Soils. The latter also seeks to utilize farm by-products, to improve the physical and chemical properties of agricultural raw materials, and to classify and map the various types of soils. Again, the United States Experiment Stations, organized in every state and in the territories, conduct many experiments yearly to improve farms and their products. The United States Bureau of Entomology seeks to study smaller animals and bugs which are harmful to growing plants and trees. It also carries on a constant warfare against fungous and other diseases of trees and plants.

For many years the Extension Services of the United States has been justly celebrated. Through the Bureau of Home Economics, and Forest Service, thousands of persons all over the land are constantly informed on questions of food, clothing, care of homes and of animals, farm and home equipment, and other related subjects. Many bulletins are annually distributed on application to the Department of Agriculture, the state Experiment Stations, or other branches of the service. Of particular interest to homemakers are the recipes, information on clothing, food, labor-saving devices and other equipment for the home. More than 300 radio stations donate broadcasting time to bring this information to the public, while the daily market and crop reports of the government and the state units keep rural citizens informed, and alert to changing conditions. Persons interested should write to the Government Printing Office for information as to bulletins and their costs, or to the Experiment Stations of their own states, connected with the state university or agricultural college. Often the county agricultural agents, officers of the farm organizations in local territory, and many libraries have much information of interest to agriculturalists.

Secret Service. This little-known branch, with some other divisions of the government, is an important aid in guarding the president and other officials of the United States. Since the assassination of President McKinley, and later the attempt on the life of President-Elect F. D. Roosevelt, activities of the Secret Service have been much quickened. The days seem past when a president like Lincoln may go about alone and unguarded. From the time a candidate is elected to the hour when he returns to private life, he is under constant guard and observation by some protector. When he makes a journey, elaborate precautions are taken, often weeks in advance. Some of the other varied duties of the Secret Service, which is attached to the Treasury Department, are the unearthing, identification, and conviction of counterfeiters, the discovery of violations of revenue laws, and of other offenses against the Treasury or the government. Other arms of the service relentlessly pursue criminals, assist states, cities, and even individuals in detecting offenses of major nature, such as kidnapping, bank robbery, arson, and many other crimes. Recently, in the assistance given local government units, in the apprehension of men like John Dillinger, Baby-Face Nelson, and their gangs, the so-called "G.-men" have been of great aid to all good citizens.

Securities and Exchange Commission. Everybody has heard the terms *panics, depressions, bad business,* and *prosperity.* Early in the days of the nation, several plans, like those for a central bank which Jackson so sternly opposed, were outlined for insuring a continued flow of business, without the ups and downs, the peaks and valleys of alternate booms and panics or depressions. When panics begin, huge quantities of stocks, other commercial paper, and even real goods like houses and lands, are dumped on the market for

what they will bring, which is often far below their actual value. On the other hand, in times of boom or prosperity, these things sell at an inflated value, or at much above their actual cost or producing level. Marketing of securities that seem peculiarly subject to these up and downs, and to peculiar "refinancing" operations, have long disorganized market values at times of depression. Since 1920 much agitation demanded federal regulation or restriction of stocks of this type.

By the Securities Act of 1933, rather full information as to profits on stocks, commissions, real values back of them, names of those issuing the stocks or bonds, and other data must be submitted to the Federal Trade Commission at least 20 days before the date of first issue of such securities. In 1934 additional acts of Congress set up a bipartisan Securities and Exchange Commission, to take over these duties and administer the various acts. Many things were also provided for by the Exchange Act of 1934, such as licensing of stock exchanges, registration of all issues governed by the act, information as to dealers and their methods, regulation of margins and broker's credit, a definite rate of margin as between the selling price and the amount a would-be buyer must deposit to secure control over a definite stock or similar unit. In 1936 additional laws were passed to coordinate the regulation. Since 1934 the regulation of margins has been controlled by the Federal Reserve governors. Proponents of the acts thus passed assert that they have been of great help to conservative and legitimate activities in stocks and the like.

Smithsonian Institution. An Englishman, James Smithson, in 1826 left his fortune to the United States for "the increase and diffusion of knowledge among men." Twenty years later a legal establishment was set up for the purpose of receiving this and similar gifts. It has nominally at its head a Board of Regents composed of the president, vice president, chief justice, six members of Congress, and six other citizens. An active secretary and a numerous staff are in charge of the Smithsonian. Important scientific researches and discoveries have been made there by men like Henry, Baird, Langley, and Walcott. Individuals and the government have made numerous gifts to all sorts of projects of scientific and humanitarian nature. Expeditions have been sent into remote corners of the world to gather valuable data. Thirteen series of publications have been issued free to many libraries, over 800,000 books have been collected, and museums of historical and scientific information have attained great fame at home and abroad. Various services are in charge of the Smithsonian Institution, including the National Museum, open to the public every day; the National Gallery with a collection of priceless likenesses of important persons; Bureau of American Ethnology, with the aim of studying the American Indians and other early primitive peoples; an Observatory, with branches at Mt. Wilson, Calif., in Chile, and on the Sinai Peninsula; and even a zoological park in Washington. The National Academy of Sciences, allied to the Smithsonian, but legally a separate corporation, has received some princely gifts, such as the $5,000,000 from the Carnegie Corporation.

Social Security. As approved August, 1935, and amended in 1939, the new Social Security Act proposes chiefly to insure (1) decent homes to live in; (2) development of resources so that all may have opportunity to labor; (3) safeguards against misfortunes, dependence in old age, and unemployment. Under the very broad provisions of the Act, the special objectives are unemployment compensation, old age benefits, security for children and helpless, including the blind, extension of public health service, vocational rehabilitation.

The government invites the states to establish a plan of unemployment compensation by obtaining from some classes of labor after Jan. 1, 1940 a sum depending on the average monthly wage while working. Farm labor, home employees, maritime employees, and others are excluded; professional persons are not asked to contribute. The Act applies to establishments employing eight or more. For old age assistance, two plans are proposed, an immediate plan and an annuity plan. The first offers states one-half as much as they contribute for helping persons at least 65 years old, under certain conditions as to their previous employment. The annuity plan provides payments monthly to persons on attaining 65 of their total of at least $2000 in wages after Dec. 31, 1936 and the time they become 65. The minimum monthly payments are $10 and the maximum $85 to a single person. Provision is also made for payments to estates of those who die after they are 65. Many classes of employees are excluded. States are also allowed to enter into cooperation with the federal government in the matter of payments to children in need, to the blind, the crippled, and those unable to employ their own physicians or surgeons. Nearly all the states at once complied with the provisions of the old-age assistance, and most of them in other regards. For example, a single man, who for 10 years has earned at least $50 monthly, on the average, would draw after 65, $22 monthly, and if married, $33; for $100 average wage, he would draw $27.50 or $42.25; on wage of $150, he would draw $33 or $49. Distant relatives also may share.

Soil Conservation. Along with forest and wild animal resources, the soils of many regions are sadly depleted. Destructive results of erosion, washing away of top soils, burning of nutritious plant elements in the soils by forest fires, and man's own lack of skill, carelessness, and indifference have caused the government at least to increase its attention to conservation and restoration of these. The Agricultural Administration Acts of 1933, the Soil Conservation Act of 1935, with certain adjustments and amendments in 1936, are among the recent national attempts to bring our soils back to more producting standing. Direct drouth relief and curtailment of crops by withdrawing acreages from production were temporary measures to meet an emergency. Under the broad terms of the recent acts, soil fertility is to be increased, wasteful practices to be discouraged, erosion to be curtailed if possible and river courses protected from effects of floods. The secretary of agricul-

ture was authorized, under restricted conditions, to give payments to the states that cooperated in this program, the plan to continue until January 1, 1938.

Tariff Commission. After 1880 various controversies, on party and other lines, led to many disagreements and compromises on the matter of rates and exemptions. In both the Arthur and Cleveland regimes, little progress was made, due mainly to failure of the houses of Congress to agree. Some important tariffs have been the McKinley, a high protective measure but exempting sugar and providing for reciprocal rates, 1890; the Wilson, 1894, reduced many rates, particularly on wool; the Dingley, like the McKinley, raised rates and sought high "protection"; the Payne-Aldrich adjusted rates, lowered some, raised fewer; the Underwood-Simmons, 1913, put many articles on the free list; the Hawley-Smoot, 1930, was a compromise measure, signed by Mr. Hoover because he hoped for no better from Congress. This last put 67.8 on the free list, 32.8 on the tariff, but the specific duties and changes caused most of the bickerings. The Payne-Aldrich of 1913 had a free list of 52.6 of articles, a dutiable of 47.4.

Shortly afterward agitation increased for some impartial way of fixing tariffs. At last in 1916 Congress authorized the Commission to be made up of six members, with a secretary, a supervisor, and numerous assistants. The main functions of the Tariff Commission is to study and compare tariffs, and to make recommendations to the president and Congress. Regulation of duties, classifications of objects subject to tariffs, and the effects of rates on wages and labor are among the specific functions. Following the tariffs of 1922 and 1930, with the previous adjustments under Wilson in 1914 and 1921, finally the president, on advice, was allowed to adjust certain tariffs without resorting to new Congressional legislation. President Hoover made some necessary adjustments, and his successor followed suit. The Act of 1930 granted the president additional powers, so that he might be somewhat more free in adjusting rates, with the advice of the Tariff Commission. New investigations were made of prices. Difficulties arose over the enforcement of the provisions of the Agricultural Adjustment Act. Some farm products, as well as nitrogen and others, were adjusted. Cotton cloth received attention. So did a group of related products. In the end some of the provisions of the Smoot-Hawley Tariff were changed, many of them downward in the adjustments. Again, 1934, Congress gave the president authority to institute reciprocal agreements with other nations. President Roosevelt soon made arrangements with Canada in regard to wheat, and with the South American countries as to other farm commodities. By law the tariff could not be changed more than 50%, up or down, on any of the articles so considered.

United States Weather Bureau. From 1891 a meteorological office in the Department of Agriculture has been giving public information about weather conditions and crops. Daily forecasts covering the next 36 hours are taken at many points over the country at 8 morning and evening. items: (1) barometric pressure; (2) present temperatures, with changes since last reports; (3) direction and velocity of the wind; (4) rain or snowfall; (5) humidity; (6) condition as to rain, snow, and other features to expect; (7) nature and direction of clouds. Prediction as to whether there will be rain in a certain, rather limited area is difficult, and hence subject to variations and inaccuracies. One very important feature of the service we learn about only in case of great coastal storms. That is the predictions and storm warnings displayed along the coasts and about the Great Lakes also. The government Weather Bureau has saved untold wealth and many lives by issuing timely warning hours before storms are due.

Veterans Administration. In 1930 the management of the Bureau of Pensions, Veterans' Bureau, and National Homes for Disabled Veterans was consolidated in the U. S. Veterans Administration. The work is divided into six major units, each in charge of an assistant. On June 30, 1936, strange as it may seem, there were still two pensioners on the roll from the dependents of veterans of the War of 1812, and 247 from the Mexican War. Others include either actual veterans or their dependents: 4648 from the Indian Wars; 9664 from the Civil War; 179,169 from the Spanish-American War; and also compensation to 337,867 veterans of the World War, for whom in this manner alone over $400,000,000 have been dispursed. Admission to hospitals of the Veterans Administration in 1936 were 120,365, with 127,000 discharges during the same period. The average length for a soldier in these hospitals is 84 days,—76% being treated generally, and 16% for mental troubles of all sorts, and 8% for pulmonary disorders. There were 8464 deaths. Additional services to veterans consist of physical examinations, dental clinics, and government life insurance.

Wild Life Reserves. These recently have grown in number, until now there are over 200, with others still being added. Ten are designed for big game also. Since birds are known to be among man's best friends, because they destroy huge quantities of harmful insects, designated areas to protect them from hunters are becoming rather common all over the country. Including Alaska and Puorto Rico, the total areas set off as animal sanctuaries make up nearly 10,000,000 acres. Some of the chief large reserves are the National Bison Range in Montana, Niobrara Game Preserve in Nebraska, Sheldon Antelope Refuge in Nevada, Wichita Mountains Wildlife Refuge in Oklahoma, Nunivak Islands Wildlife Refuge in Alaska, Desert Game Range in Nevada, Hart Mountain Game Range in Oregon. Of the many wildfowl refuges may be named the White River in Arkansas, Delta in Louisiana (particularly for geese and ducks), the Seney in Michigan, the Lower Souris in North Dakota, Malheur in Oregon, and the Bear River in Utah. When a Census of big game was taken in 1934, there were about 18,000 elk; 25,000 caribou; over 1200 buffalo; over 1100 moose; nearly 4000 white and black tail deer together; 18,000 mule deer; and 4000 mountain sheep, mostly in their range in Montana.

DIRECT LEGISLATION

Many election reforms have occurred since 1800, mainly in extensions of the franchise, insuring the elector freedom and secrecy in his voting, and giving him more control over local and state legislation. By 1830 most men of 21 could vote, though some petty property requirements still exist in a few states, and literacy tests are often found necessary. The Fourteenth and Fifteenth Amendments guaranteed freedom to vote, irrespective of race, color, or previous condition of servitude. Wyoming gave women the ballot in 1869, and by 1914 seven states followed suit. By the Nineteenth Amendment in 1920 women voted in the national elections. Reform has taken other directions in the last few decades, some of which will now be considered.

Direct Primary. In the old days a group of politicians and their friends gathered and put men up for office. This method has now largely given way to the direct nomination in a primary election of various candidates for elections. Since the party column, emblem, or designation still obtains, voting is largely by parties, though some efforts have been made to range the electors irrespective of party affiliations, as in the new voting for members of the Unicameral Legislature in Nebraska. It is evident that the direct primary gives voters who go to the polls greater freedom, but often so many candidates appear that much confusion renders void any beneficial results. Placing on the primary ballot names similar to those of well-known citizens also often confuses the electors, or often causes them to vote for men under definite misapprehension of identity. For national elections, the convention method is still in vogue.

Preferential Voting. According to this method, the elector designates his first, second, and other choices in order. This plan or a similar one has been used in West Australia, in South Africa, and in American cities like Grand Junction, Colo., and Seattle. Other plans, sometimes called Proportional Representation voting, have been tried in France with success, in Germany since 1919, and in a limited way in England. Objection has often been made on the well-taken ground that candidates of minor or losing parties obtain no seats. Thus a party, by winning a mere majority of votes, may get all the offices. In 1920 in Pennsylvania, some 1,114,000 Republicans elected 35 members to Congress, whereas 600,000 Democrats elected but one member. So 30,000 Republicans had as much voting strength as all 600,000 Democrats. On the proportional plan, the Democrats would have won 12 of the 36 seats. Under the List System, a party nominates as many candidates as it may wish. Each party obtains as many offices as the total vote justifies. In the Hare system, votes left over after a candidate has enough to elect, are distributed to others of the same party by a rather complicated process. Bosses oppose these plans, for they do away with party controls, but smaller parties tend to multiply and continue to live without justifying their existence.

The Short Ballot is another method to aid the puzzled voter. In 1912 in New York, some of the primary ballots were 14 feet long; they contained scores of names, and many voters became confused. Later the elective offices have been reduced, in some states, and so the candidates are fewer. The commission form of government in cities, increasing the number of appointive offices, simplifying the offices by combinations, city manager plans, and independent voting tend to correct the abuses of many candidates that confuse the voters on election day. Another earlier reform was the adoption of the Australian ballot, whereby each voter is guaranteed the right to vote without having his choice known. Most elections now employ some form of this. Again, voting machines were tried in Lockport, N. Y. in 1892, and 65 were used in Rochester, N. Y. in 1896. In the Nov. 1928 election in all New York state, 80% of the voting was by machine. Counting is swift and unerringly accurate, and devices make cheating unknown. Over 15% of the national vote in 1898 was by such means. In Buffalo, with 218,000 voting, the vote has been tabulated, checked, and announced within 90 minutes of the close of the polls. With straight voting, 1000 can use a machine in a voting day; with split voting, about 600 are accommodated. The greatest claim for the voting machine is that it reduces errors of the voters, many of whom carelessly spoil their ballots.

Corrupt Practice Act. Modern voting methods tend to discourage corruption in buying votes or in sending "repeaters" through the polls. Further, the lavish use of money for even legitimate purposes in national and other elections is now discouraged. Congress in 1925 passed a new act, superseding all others, and providing for the reporting of campaign expenses by national parties. Every contribution of $100 or over must be recorded as to name of the giver and the date, and every expenditure of $10 or more must be accounted for. Amounts that may be spent for certain candidates are limited by law.

Initiative and Referendum. Switzerland for a long time has allowed voters to express to their legislature what bills they desire to have passed. They may also vote on bills that have been passed in a nation or canton referendum. Since 1910 Australia has used some form of referendum frequently. One other form of direct legislation is the *recall*, first tried in Los Angeles in 1902, then in various California cities, and finally adopted by Oregon in 1908 (approved by U. S. Supreme Court), California, 1911, and Arizona, 1912, by constitutional amendments. By this method, a certain proportion of voters may start a movement for an election wherein the entire voting population may vote to recall city officials, judges, and other elective persons. Legislative referendums were approved by the voters in Arkansas and Colorado in 1910, and by 12 others before 1920. Woman suffrage and prohibition were subjects considered by referendum in some states.

FEDERAL EMERGENCY AGENCIES

From time to time emergency activities are ordered by Congress. These are assigned to some cabinet department or are independently sponsored. Early in the administration of Presi-

dent F. D. Roosevelt, a number of emergency acts were passed to create some special board or group to administer a definite set of projects or plans.

Federal Home Loan Bank Board (FHLBB), approved by Congress on May 28, 1935, is composed of one member from each district of the banking system, 12 in all, and 4 chosen by the Board itself. The main object is to assist other credit agencies to finance farm properties, loans, and mortgages. No loan may be made for more than $50,000 or for more than 50% of the appraised value of the property concerned. The interest rate after July 1, 1936, was 4%. Intermediate credit banks, production associations, a credit union system, a commissioner of cooperatives, emergency feed and crop loans, and other agencies assist in carrying out the government specifications. Under the same Board was the Home Owner's Loan Corporation (HOLC), to be liquidated July 1, 1937. There is also a Federal Savings and Loan Insurance plan under the same management.

Commodity Credit Corporation (CCC), of which nine directors were chosen from the officials of the Agricultural Adjustment Administration, was authorized to make loans upon cotton, corn, gum-turpentine, and gum rosin, and other products. The capital was $100,000,000, and most of the loans were paid back with interest. The authority ended on June 30, 1937.

Federal Housing Administration (FHA), with three administrators and many assistants, was set up on June 27, 1934. The object was to make small loans for repair and building of houses, to assist the building trades by creating a greater market for them, and to provide work for idle laborers. Up to 80% of the cost or value could be borrowed on a mortgage granted by any bank, with insurance or guarantee of payment by the government. Payment is made monthly by the borrower in installments, spread over as long as 20 years in some cases. By Dec. 5, 1935 the Administration has done business worth half a billion, while private and other agencies had reported three times the same amount because of similar plans. In that period also, almost 650,000 repair projects had been approved for insurance of mortgage payments.

National Emergency Council (NEC), made up of the various cabinet officers and heads of 25 commissions and boards, was created by executive order on Nov. 17, 1933, to take the place of the old group of the same name. The object is to advise the President, to coordinate the work of the various government agencies, and to serve otherwise as the President may direct. The Council in 1934 set up the Information Service (USIS) to supply information to visitors in Washington, those who call by telephone, or ask for data by letter. Under the Secretary of the Interior, an executive order also established the National Resources Committee (NRC) on June 7, 1935, to secure information as to the land, water, and other natural resources of the country, and to cooperate with state and other units as to transfers and care of land resources.

Federal Deposit Insurance Corporation (FDIC) was organized under the banking Act of 1935 to insure deposits in banks. On June 30, 1935 the amounts on regular deposit in nearly 14,280 banks (not over $5000 to any single depositor) were insured. For this purpose the Treasury subscribed $150,000,000 of stock. Each Federal Reserve bank has subscribed an amount not more than one-half its surplus.

Securities and Exchange Commission (SEC), of three members and a general council, is authorized to administer the Securities Act of 1933. By the original provisions, and by the Public Utility Act of 1935, the Commission has wide powers as to marketing and inspection of securities and the means of selling them. The object is also to eliminate certain forms of holding company operations and to develop certain waterpower resources, through investigation and subsequent action.

Tennessee Valley Authority (TVA), under Act of May 18, 1933, with later amendments, is in charge of a board of three, with offices in Washington and four points in the Tennessee River Valley. Four objects are contemplated: 1, Operating the government-owned plants at Muscle Shoals, Ala.; 2, determining the relative costs of supplying electric power; 3, trying to lower costs of production and distribution of electricity; 4, planning erosion control and reforestation. One government nitrate plant, built during the World War, is kept in condition to operate in a national emergency. Some 18,000,000 trees were planted in the Valley in 1936. Wilson Dam, Norris Dam, Wheeler Dam, and three others make up the plans, which include a 7-foot navigation channel for 385 miles, from Paducah, Ky., to Guntersville, Ala.

Labor Relations Board (NLRB). See department of Economics.

Federal Emergency Administration of Public Works (FEAPW), with the secretary of the interior at the head, was set up in 1933 to reduce unemployment, to assist construction, and to help conserve natural resources. Through various agencies the object was to assist many local projects that would furnish employment and be of lasting benefit to the people.

Works Progress Administration (WPA), similar in purpose to the FEAPW, was set up by executive order under the Emergency Relief Act of 1935. The scope is wider and the types of work more varied and flexible, while all kinds of labor—professional, skilled, untrained, common hands—are employed. Some of the projects approved have been roads, streets, sewers, parks, public buildings, and surveys. Various state, county, municipal, and other local authorities supervise the actual work. In February of 1936, this agency had about 3,000,000 persons on its multitude of payrolls. By the end of the year it had expended over two billion dollars. As part of the WPA, the National Youth Administration (NYA) assisted thousands of young men and women either to find positions or to continue their studies in some college or other school.

Agencies with similar purpose to those described above were the Rural Electrification, Resettlement, Emergency Conservation, Electric Home and Farm Authority, National Reemployment Service, and their branches and local affiliations.

MINOR POLITICAL PARTIES IN THE UNITED STATES.

ABOLITIONISTS. Those who worked together to secure the abolition of slavery.

ADAMITES. The supporters of John Quincy Adams (1821-1832).

AMERICAN PARTY. Originated in New York in 1835, organized as a national party (1852); later known as the Know-Nothing party, and adopted the motto, "America for the Americans."

ANTI-FEDERALISTS. Those who opposed the adoption of the Constitution of the United States and, later, objected to a liberal construction of its terms.

ANTI-IMPERIALISTS. Those who opposed the territorial expansion of the United States, especially to the Philippines.

ANTI-MASONS. Originated in New York in 1826 and was hostile to the Masonic body.

ANTI-NEBRASKA PARTY. Those opposed to the repeal of the Missouri Compromise; principally Northern Whigs; organized in 1854 after the passage of the Kansas-Nebraska Bill.

ANTI-RENTERS. New Yorkers who opposed the collection of rent from the tenants of the old patroon estates (1839-1847).

BARNBURNERS. Radicals of the Democratic party in New York opposed to the extension of slavery; flourished after 1844.

BLACK REPUBLICANS. Southern supporters of the Republican party in sympathy with the negro at the close of the Civil War.

BOURBONS. Old school Southern Democrats; later applied to those who hold obstinately to old traditions in politics.

BUCKTAILS. New York opponents to the policy of Governor Clinton (1815); distinguished by wearing bucktails in their hats.

CARPETBAGGERS. Northern politicians who invaded the South at the close of the Civil War.

CONSTITUTIONAL UNION PARTY. Composed of former Southern Whigs; organized in 1860.

COPPERHEADS. A name given by Republicans during the Civil War to those Northern Democrats who advocated closing the war and who sympathized with the Confederates.

CO-OPERATIONISTS. Those in the South who, just before the war, favored the secession of their own state only in the event of the coöperation of the other states.

COURT PARTY. Supporters of the two rival superior courts in Kentucky.

DOUGHFACES. A name given by John Randolph of Roanoke in 1820 to the Northern members of Congress who voted for the Missouri Compromise.

DRYS. Prohibitionists.

FREE-SOILERS. Those who opposed negro slavery and organized in 1848.

GOLD DEMOCRATS. Disaffected Democrats who, in 1896, refused their support to the regular party platform and favored a gold standard. J. M. Palmer of Illinois was their candidate for President.

GREENBACKERS. Those who between 1876 and 1886 favored the issue of an irredeemable paper currency.

HALF-BREEDS. The moderate wing of the New York Republicans who opposed the Stalwarts from 1881 to 1885.

HUNKERS. The moderate wing of the New York Democrats who opposed the Barnburners after 1844.

INDEPENDENCE PARTY. First organized as Independence League by W. R. Hearst; supported T. L. Hisgen for president, 1908.

KNOW NOTHINGS. The American party.

LIBERALS or LIBERAL REPUBLICANS. Those who opposed the reëlection of Grant in 1872 and sought a liberal policy in the South.

LIBERTY PARTY. Abolitionists about 1840.

LILY WHITES. White Republicans in the South who advocated the exclusion of the negro from the party.

LOCOFOCOS. A faction of New York Democrats in 1835.

LOOSE CONSTRUCTIONISTS. Federalists and Whigs who advocated a liberal interpretation of the Constitution of the United States.

MAHONISTS. Followers in Virginia of General William Mahone, who, in 1878, left the Democratic party.

MIDDLE-OF-THE-ROAD POPULISTS. Those of the Populists who, in 1896, voted for W. J. Bryan for President and Thomas E. Watson of Georgia for Vice-President.

MUGWUMPS. Those nominally identified with a particular party but claiming the right to vote with another party. The Indianapolis *Sentinel* first used the term in 1872; but its popular use dates from its application by the New York *Sun* in 1884 to those Independent Republicans who refused to indorse the candidacy of Blaine for President.

NATIVE AMERICANS. Know-Nothings.

NULLIFIERS. Those who claimed the right of any state to suspend within its borders the operation of any law of the United States; strong in North Carolina from 1828 until 1832.

PEOPLE'S PARTY. Populists.

POPULISTS. Organized in Cincinnati (May, 1891) from among the members of the Grange and the Farmers' Alliance.

PROHIBITIONISTS. Those who advocate the abolition of the liquor traffic; a national party since 1872.

RADICALS. The extreme wing of the Republicans after the Civil War.

READJUSTERS. The Mahonists of Virginia, who, in 1878, favored conditionally repudiating the state debt.

RELIEF PARTY. A movement in Kentucky (and in other states from 1830 to 1860) urging the legislature to enact laws to relieve the people of economic and financial burdens.

REPUDIATORS. Those in Mississippi who advocated repudiating the payment of a large issue of Union bank bonds guaranteed by the state.

SCALAWAGS. Native Southerners who, during the era of reconstruction, united with the Republicans.

SILVER GRAYS. Conservative Whigs.

SILVER PARTY. Largely disaffected Republicans who, in 1896, favored the free coinage of silver and supported the Democratic nominees.

SOCIALISTS. Those who urge the adoption of a socialistic policy in government; a national party since 1892.

STALWARTS. The "machine" wing of New York Republicans led by Roscoe Conkling from 1881 to 1885.

STRICT CONSTRUCTIONISTS. Those who favored a strict interpretation of the Constitution of the United States.

UNION LABOR PARTY. A national party in 1888.

UNION LEAGUES. Political organizations of negroes and white Republicans in the South after the Civil War.

WASHINGTONIANS. An early name for the Prohibitionist party.

WOMAN'S RIGHTS PARTY. Advocates of female suffrage; organized as a national party in 1884. In that year and again in 1888 candidates for President and Vice-President were nominated.

QUALIFICATIONS FOR VOTING IN EACH STATE OF THE UNION

STATE AND REQUIREMENT	RESIDENCE REQUIREMENT			THOSE INELIGIBLE
	State	County	Town, etc.	
Alabama—Citizens and declarants who have good character and understanding; must show poll-tax receipt.	2 yrs.	1 yr.	3 mos.	Persons convicted of treason, embezzlement of public funds, other penitentiary offenses, insane, and idiots.
Alaska—Citizens who can read and write English.[1]	1 yr.	.....	30 d.	See note at end of tables.
Arizona—Citizens or declarants of good understanding. Only payers of taxes may vote on bond issues.[2]	1 yr.	30 d.	30 d.	Persons under guardianship, insane, idiots, or convicted of felony unless pardoned or they have served their terms.
Arkansas—Citizens or declarants of good understanding. Registration not required.[3]	1 yr.	6 mo.	30 d.	Idiots, insane, convicts until pardoned, those who do not pay poll-tax.
California—All who have been citizens at least 90 days, or persons who in 1911 were 60 in age or over.	1 yr.	90 d.	40 d.	Chinese and certain other non-Caucasians, idiots, insane, convicts, those who have stolen public money.
Colorado—Citizens.	1 yr.	90 d.	10 d.	Persons under guardianship, insane, idiots, or convicts unless pardoned or completed their terms.
Connecticut—Citizens who can read English.	1 yr.	6 mos.	.....	Convicts unless pardoned.
Delaware—Citizens. Registration not required.[3]	1 yr.	6 mos.	30 d.	Insane, idiots, fefons, paupers.
Florida—Citizens; must show poll-tax receipt.	1 yr.	6 mos.	30 d.	Persons not registered, insane, paupers.
Georgia—Citizens who can read and write and have paid taxes since 1877.[4]	1 yr.	6 mos.	.....	Persons convicted of crime subject to imprisonment, insane, delinquent taxpayers.
Idaho—Citizens.	6 mos.	30 d.	.....	Chinese, insane, felons, polygamists, bigamists, traitors, bribers.
Illinois—Citizens.	1 yr.	90 d.	30 d.	Convicts until pardoned.
Indiana—Citizens.	6 mos.	.....	60 d.	Convicts, persons disfranchised by court, soldiers, and sailors.
Iowa—Citizens.[4]	6 mos.	60 d.	10 d.	Convicts, defectives.
Kansas—Citizens.	6 mos.	30 d.	30 d.	Insane, those who have guardians, convicts, bribers, defrauders of the government, persons dishonorably discharged from government service.
Kentucky—Citizens who have paid poll tax where required.[4]	1 yr.	6 mos.	60 d.	Traitors, felons, bribers, idiots, insane.
Louisiana—Ability to read and write some language, or those registered before 1912.[5]	2 yr.	1 yr.	3 m.	Idiots, insane, all crimes punishable by imprisonment, embezzlement of public funds.
Maine—Citizens.	3 mos.	3 mos.	3 mos.	Paupers,[6] those under guardianship.
Maryland—Citizens.	1 yr.	6 mos.	6 mos.	Persons convicted of larceny or other infamous crimes, those under guardianship, idiots, insane.
Massachusetts—Citizens able to read and write English, who have paid poll tax.	1 yr.	6 mos.	6 mos.	Paupers (not including U. S. soldiers), persons under guardianship.[6]
Michigan—Citizens.	6 mos.	20 d.	20 d.	None definitely specified.
Minnesota—Citizens.[4]	6 mos.	.....	10 d.	Traitors, felons not pardoned, insane, those under guardianship.
Mississippi—Citizens who can read or understand the state constitution; poll tax required.	2 yrs.	1 yr.	1 yr.	Insane, idiots, felons, delinquent taxpayers.
Missouri—Citizens.[4]	1 yr.	60 d.	60 d.	Paupers, convicts, those who misuse franchise; second offense disfranchises permanently.
Montana—Citizens.	1 yr.	30 d.	30 d.	Felons, idiots, insane.
Nebraska—Citizens.[4]	6 mos.	40 d.	40 d.	Lunatics, persons convicted of treason or felony, U. S. soldiers and sailors.
Nevada—Citizens.	6 mos.	30 d.	10 d.	Insane, idiots, traitors or felons, confederated against the U. S., Chinese.

Wyoming—Citizens.	1 yr.	60 d.	10 d.	Idiots, insane, felons, those who can't read the state constitution.

General Requirements for Voting

In the tables given above, citizenship relates to those born in the United States, or who have been naturalized. A child obtains citizen's rights during his minority if one or both parents become naturalized. If a child is born outside the United States, since May 24, 1934, he becomes a citizen if one of his parents had been a resident and citizen of the United States previously. Congress made all Indians citizens on June 2, 1924, but voting is withheld in two or three states, or is restricted. Chinese were first excluded in 1882. Courts have ruled that Chinese, Japanese, Hawaiians, Hindus, Burmese, Arabians, and East Indians "are not free white persons", and hence may not apply for citizenship. One contemplating naturalization, or voting for the first time, should make local inquiries of courts or election boards as to other requirements. Some states, counties, or even election districts have petty restrictions not noted in the preceding tabulations.

Some Special Requirements in States or Districts

[1] Citizenship was conferred by an Act of May 7, 1934 on the Indians of Alaska who founded the colony known as Metlakahtla and who had resided there from Jan. 1, 1900.

[2] Besides Arizona, a few other states exclude non-taxpayers from voting on appropriations, bond issues, or other grants of money. In many localities, only taxpayers may vote in school elections.

[3] Arkansas and Delaware seem to be the only states where registration is not required at all. See next note.

[4] Registration is required in certain districts in some states, but not in all. Georgia requires it in some counties. Iowa, Kansas, and Nebraska require registration in all cities; Kentucky in cities of the first three classes; Minnesota in cities over 1200 in population; Missouri in cities of 10,000 over and counties of 100,000 or over; Wisconsin in cities of 5000 or over; and Texas in cities of 10,000 or over. In these states, registration is not required in the smaller units of government.

[5] Louisiana abolished the *alternative* property requirement of $300 in value in 1922 by constitutional amendment.

[6] Paupers in Maine may be excluded by local election boards. In Massachusetts, New Hampshire, and West Virginia, special acts have provided that persons on relief are not deprived of their votes.

[7] If the voter is 22 years old (that is, a first voter) he must have paid within two years a state or county tax.

[8] In South Carolina the clergy and teachers may vote in the state after a residence there of six months.

FACTS REGARDING

Order.	Presidents. Life Dates.	PARENTS' NAMES.	Education. Early Vocation. Religious Faith.	Wife's Name. Date of Marriage. Number of Children.
1	WASHINGTON, GEORGE. Born February 22, 1732, near Bridges Creek, Westmoreland County, Va. Died December 14, 1799, at Mt. Vernon, Va., of pneumonia, aged 67. Buried at Mt. Vernon, Va.	Eldest son of second family of Augustine Washington, a planter, of English descent. Mary Ball, second wife of Augustine Washington.	Limited education at school until 16. Y. 1928–1930	Anna Eleanor Roosevelt, daughter of Elliott Roosevelt, younger brother of Pres. Theo. Roosevelt, Mar. 17, 1905; children Anna Eleanor, James, Elliott, Franklin, Jr., John A.

HISTORIC UTTERANCES OF OUR PRESIDENTS.

"To be prepared for war is one of the most effectual means of preserving peace."—*Washington.*

"Knowledge is in every country the surest basis of public happiness."—*Washington.*

"The more homogeneous our citizens can be made—the greater will be our prospect of permanent union; and a primary object of such a national institution (university) should be the education of our youth in the science of government."—*Washington.*

"Toward the preservation of your government and the permanency of your present happy state, it is requisite not only that you steadily discountenance irregular oppositions to its acknowledged authority, but also that you resist with care the spirit of innovation upon its principles, however specious the pretexts."—*Washington.*

"If national pride is ever justifiable or excusable it is when it springs, not from power or riches, grandeur or glory, but from conviction of national innocence, information, and benevolence."—*John Adams.*

"All, too, will bear in mind this sacred principle, that though the will of the majority is in all cases to prevail, that will to be rightful must be reasonable; that the minority possess their equal rights, which equal law must protect."—*Jefferson.*

"A wise and frugal government, which shall restrain men from injuring one another, shall leave them otherwise free to regulate their own pursuits of industry and improvement, and shall not take from the mouth of labor the bread it has earned. This is the sum of good government."—*Jefferson.*

"We are firmly convinced—that with nations as with individuals our interests soundly calculated will ever be found inseparable from our moral duties, and history bears witness to the fact that a just nation is trusted on its word when recourse is had to armaments and wars to bridle others."—*Jefferson.*

"The destined career of my country will exhibit a Government pursuing the public good as its sole object . . . ; a Government which watches over the purity of elections, the freedom of speech and the press, the trial by jury . . . ; a Government which avoids intrusions on the internal repose of other nations, and repels them from its own . . . ; and which . . . seeks by appeal to reason and by its liberal examples to infuse into the law which governs the civilized world a spirit which may diminish the frequency or circumscribe the calamities of war . . . ; a Government, in a word, whose conduct within and without may bespeak the most noble of all ambitions—that of promoting peace on earth and good will to man."—*Madison.*

"Let us by all wise and constitutional measures promote intelligence among the people as the best means of preserving our liberties."—*Monroe.*

"To impose taxes when the public exigencies require them is an obligation of the most sacred character—. To dispense with taxes when it may be done with perfect safety is equally the duty of their representatives."—*Monroe.*

"The history of the late wars in Europe (Napoleonic) furnishes a complete demonstration that no system of conduct, however correct in principle, can protect neutral powers from injury from any party: that a defenceless position and distinguished love of peace are the surest invitations to war, and that there is no way to avoid it other than by being always prepared and willing for just cause to meet it."—*Monroe.*

"Our political creed is—that the will of the people is the source and the happiness of the people, the end of all legitimate government upon earth; . . . that the firmest security of peace is the preparation during peace of the defenses of war; that a rigorous economy and accountability of public expenditures should guard against the aggravation and alleviate when possible the burden of taxation;—that the policy of our country is peace and the ark of our salvation union . . . ."—*John Q. Adams.*

"The duties of all public officers are so plain and simple that men of intelligence may readily qualify themselves for their performance; and I can not but believe that more is lost by the long continuance of men in office than is generally to be gained by their experience."—*Jackson.*

"No free government can stand without virtue in the people and a lofty spirit of patriotism, and if the sordid feelings of mere selfishness shall usurp the place which ought to be filled by public spirit, the legislation of Congress will soon be converted into a scramble for personal and sectional advantages."—*Jackson.*

"All communities are apt to look to government for too much.—They (the framers of the Constitution) wisely judged that the less government interferes with private pursuits the better for the general prosperity."—*Van Buren.*

"I can conceive of no more sublime spectacle . . . than a rigid adherence to the principles of justice on the part of a powerful nation in its transactions with a weaker and uncivilized people whom circumstances have placed at its disposal."—*Wm. Henry Harrison.*

"It may be laid down as an axiom founded in moral and political truth that no greater taxes should be imposed than are necessary for economical administration of the Government, and that whatever exists beyond should be reduced or modified."—*Tyler.*

"After so much experience it can not be said that absolute unchecked power is safe in the hands of any one set of representatives, or that the capacity of the people for self-government, which is admitted in its broadest extent, is a conclusive argument to prove the prudence, wisdom, and integrity of their representatives."—*Polk.*

Electoral Vote. Political Opponents. Age at Election. Political Faith.	Events During Term of Office.	After Life.
Democrat Fifty *Election of 1932* Franklin D. Roosevelt, 472; Herbert Hoover, 59. Took office March 4, 1933. *Election of 1936* Franklin D. Roosevelt, 531; Alfred M. Landon, 8. Took office January 20, 1937. *Election of 1940* Franklin D. Roosevelt, 449; Wendell L. Willkie, 82. Took office January 20, 1941.	Repeal of XVIIIth Amendment, Nat'l. Recovery Act, Banking Holiday; all gold called in, gold devaluated. Important Supreme Court decisions. Wage and hour laws. Adopts and repeals Neutrality Act. Cash and Carry Act to aid Britain. National Conscription Act. Defenses strengthened. Passage of Lease-Lend Bill, all-out aid to Britain.	

"By holding the representatives responsible only to the people, and exempting him from all other influences, we elevate the character of the constituent and quicken his sense of responsibility to his country."—*Taylor.*

"Among the acknowledged rights of nations is that which each possesses of establishing that form of government which it may deem most conducive to the happiness and prosperity of its own citizens, of changing that form as circumstances may require, and of managing its own internal affairs according to its own will. . . . The great law of mortality ought to have a national as well as a personal and individual application."—*Fillmore.*

"Public affairs ought to be so conducted that a settled conviction shall pervade the entire Union that nothing short of the highest tone and standard of public morality marks every part of the administration and legislation of the General Government."—*Pierce.*

"Next in importance to the maintenance of the Constitution and the Union is the duty of preserving the Government free from the taint of even the suspicion of corruption. Public virtue is the vital spirit of republics, and history proves that when this has decayed and the love of money has usurped its place, although the forms of free government may remain for a season, the substance has departed forever."—*Buchanan.*

"Labor is prior to and independent of capital. Capital is only the fruit of labor, and could never have existed if labor had not first existed. Labor is the superior of capital, and deserves much the higher consideration."—*Lincoln.*

"With malice toward none, with charity toward all, with firmness in the right as God gives us to see the right, let us strive to finish the work we are in, to bind up the nation's wounds, to care for him who shall have borne the battle and for his widow and his orphan, to do all which may achieve a just and lasting peace among ourselves and with all nations."—*Lincoln.*

"Monopolies, perpetuities, and class legislation are contrary to the genius of free government, and ought not to be allowed."—*Johnson.*

"The education of the masses becomes of the first necessity for the preservation of our institutions. They are worth preserving, because they have secured the greatest good to the greatest proportion of the population of any form of government yet devised."—*Grant.*

"The corrupting doctrine that 'to the victors belong the spoils' is inseparable from Congressional patronage as the established rule and practice of parties in power. . . . Members of Congress will not be relieved from the demands made upon them with reference to appointments to office until by legislative enactment the pernicious practice is condemned and forbidden."—*Hayes.*

"We have no standard to measure the disaster that may be brought upon us by ignorance and vice in the citizens when joined to corruption and fraud in the suffrage."—*Garfield.*

"A nation is justified in repudiating its treaty obligations only when they are in conflict with great paramount interests. Even then all possible means for modifying or changing those obligations by mutual agreement should be exhausted before resorting to the supreme right of refusal to comply with them."—*Arthur.*

"It is the duty of those serving the people in public places to closely limit public expenditures to the actual needs of the Government economically administered, because this bounds the right of the Government to exact tribute from the earnings of labor or the property of the citizen, and public extravagance begets extravagance among the people."—*Cleveland.*

"The lessons of paternalism ought to be unlearned, and the better lesson taught that while the people should patriotically and cheerfully support their Government its functions do not include the support of the people."—*Cleveland.*

"Every thoughtful American must realize the importance of checking at its beginning any tendency in public or private station to regard frugality and economy as virtues which we may safely outgrow. The toleration of this idea results in the waste of the people's money by their chosen servants and encourages prodigality and extravagance in the home life of our countrymen."—*Cleveland.*

"If the educated and influential classes in a community either practice or connive at the systematic violation of laws that seem to them to cross their convenience, what can they expect when the lesson that convenience or a supposed class interest is a sufficient cause for lawlessness has been well learned by the ignorant classes?"—*Benj. Harrison.*

"No political party can long pursue advantage at the expense of public honor or by rude and indecent methods without protest and fatal disaffection in its own body."—*Benj. Harrison.*

"The severest economy must be observed in all public expenditures, and extravagance stopped wherever it is found, and prevented wherever in the future it may be developed."—*McKinley.*

"The preservation of public order, the right of discussion, the integrity of courts, and the orderly administration of justice must continue forever the rock of safety upon which our Government securely rests."—*McKinley.*

"The man who advocates anarchy directly or indirectly, in any shape or fashion, or the man who apologizes for anarchists or their deeds, makes himself morally accessory to murder before the fact."—*Roosevelt.*

"Organized capital and organized labor alike should remember that in the long run the interest of each must be brought into harmony with the interest of the general public; and the conduct of each must conform to the fundamental rules of obedience to the law, of individual freedom, and of justice and fair dealing toward all."—*Roosevelt.*

"We are neither for the rich man as such nor the poor man as such; we are for the upright man, rich or poor."—*Roosevelt.*

"Never before have men tried so vast and formidable an experiment as that of administering the affairs of a continent under the forms of a democratic republic. . . . If we fail, the cause of free self-government throughout the world will rock to its foundations, and therefore our responsibility is heavy, to ourselves, to the world as it is today, and to the generations yet unborn."—*Roosevelt.*

"Votes are not bread, constitutional amendments are not work, referendums do not pay rent or furnish houses, recalls do not furnish clothing, initiatives do not supply employment or relieve inequalities of condition or of opportunity."—*Taft.*

"Power in the hands of great business men does not make me apprehensive, unless it springs out of advantages which they have not created for themselves. Big business is not dangerous because it is big, but because its bigness is an unwholesome inflation created by privileges and exemptions which it ought not to enjoy."—*Wilson.*

"Great democracies are not belligerent. They do not seek or desire war. Their thought is of individual liberty and of the free labor that supports life and the uncensored thought that quickens it. Conquest and dominion are not in our reckoning, or agreeable to our principles."—*Wilson.*

"I believe in my heart that the world has never witnessed a case, and never will witness a case where one people desired to make war on another people."—*Wilson.*

"I have said to the people we meant to have less of government in business as well as more business in government."—*Harding.*

"Government's obligation affirmatively to encourage development of the highest and most efficient type of citizenship is modernly accepted, almost universally."—*Harding.*

"The unrestrained tendency to heedless expenditures and the attending growth of public indebtedness, extending from Federal authority to that of State and municipality and including the smallest political subdivision, constitute the most dangerous phase of government today."—*Harding.*

"Anybody can reduce taxes, but it is not easy to stand in the gap and resist the passage of increasing appropriation bills which would make tax reduction impossible."—*Coolidge.*

"Nothing is so fundamental to the integrity of a republican form of government as honesty in all that relates to the conduct of elections."—*Coolidge.*

"I want the people of all the earth to see in the American flag the symbol of a Government which intends no oppression at home and no aggrandisement abroad, which, in the spirit of a common brotherhood, provides assistance in time of distress."—*Coolidge.*

AN OUTLINE HISTORY OF THE MAJOR POLITICAL PARTIES IN THE UNITED STATES.

Name.	Period.	Leaders.	Principles.	Accomplishments.	Reasons for Break-up.
Federalist.	1789 to 1824 (approximate).	Hamilton, Adams, Jay, Marshall.	Strong central government. U. S. Bank. Excise. Opposed to French radicalism.	U. S. finances stabilized. Federal authority asserted. Mississippi River opened up. Treaty with Eng. (Jay's).	Growth of democracy in U. S. Passage of Alien and Sedition Laws. Disagreements among leaders.
Republican or Democratic-Republican.	1789 to 1828 (approximate).	Jefferson, Burr, Madison, Monroe, Gallatin.	Strict limits on power of Federal government. Government by masses rather than classes. Anti-British. Extreme personal liberty. Few laws.	Checked aristocratic tendencies of Federalists. Purchased Louisiana and Florida. Reduced national debt and taxes. Chartered second U. S. Bank. Prosecuted second War with Great Britain.	This party imperceptibly merged into the modern Democratic party about the time Jackson became leader.
National Republican.	1824 to 1834 (approximate).	Clay, Webster, J. Q. Adams.	Protective tariff. Internal improvements by Federal appropriations. Federal Bank.	Textile and iron industries protected. New South American republics encouraged.	Anti-Jackson elements came together to form Whig party.
Democratic.	1828 to present day.	Calhoun, Hayne, Jackson, Benton, Van Buren, Douglas, Davis, Tilden, Cleveland, Bryan, Wilson, Smith, Roosevelt, Farley.	States-rights. Free-trade (merging into low protection). No Federal money for local improvements. Opposed to colonial expansion.	Annexed Texas. Maintained low tariff before Civil War. Supported Civil Service reform. Fought high tariff. Supported interests of farmer and working man as opposed to the privileged classes. Supported laws intended to check trusts.	
Whig.	1834 to 1856 (approximate).	Clay, Webster, Seward.	Protective Tariff. Internal Improvements. Federal Bank.	Being an opposition party most of the time it accomplished little, the Compromise of 1850 being its greatest achievement.	The Northern and Southern Whigs divided on the subject of slavery. The death of Clay and Webster left the party without leaders.
Republican.	1854 to present time.	Seward, Lincoln, Chase, Conklin, Blaine, Sherman, McKinley, Roosevelt, Aldrich, Taft, Lodge, Penrose, Coolidge, Hoover.	High Protection. Imperialism. Sound money. Extension of power of Federal government. Internal improvements.	Saved the Union from disruption. Imposed military rule on the South after the Civil War, thus preventing reconciliation of the sections. Resumed specie payment after the Civil War. Adopted deflation measures. Annexed Hawaii, The Philippines, and Porto Rico. Built the Panama Canal. Adopted Sherman Anti-Trust Law. Created Interstate Commerce Commission.

AMERICAN GOVERNMENTAL SESSIONS—III

The Washington Arms Parley

Left to right: Garrett, Secretary General of Conference; Van Karnebeck, Netherlands; Dr. Sze, China; Lord Balfour, Great Britain; Secretary of State Hughes, U. S. A.; Premier Briand, France; Shanze, Italy; Baron de Marchienne, Belgium; Prince Tokugawa, Japan; Count D'Alte, Portugal.

English Debt Funding Mission

Left to right, seated: Secretary Hoover, U. S. A.; Rep. Burton, Ohio; Rt. Hon. Stanley Baldwin, Chancellor of Exchequer; M. C. Norman, Governor, Bank of England; Eliot Wadsworth, Asst. Secretary of Treasury, U. S. A.; Sen. Smoot, Utah; Secretary of State Hughes; Secretary of Treasury Mellon. Standing: Secretaries of the Conference.

PRESIDENTIAL ELECTIONS.

There is, properly speaking, no popular vote for President and Vice-President; the people vote for electors, and those chosen in each state meet therein and vote for the candidates for President and Vice-President. The record of any popular vote for electors prior to 1824 is so meager and imperfect that a compilation would be useless. In most of the states, for more than a quarter of a century following the establishment of the government, the State Legislatures "appointed" the Presidential electors, and the people therefore voted only indirectly for them, their choice being expressed by their votes for members of the Legislature. In this tabulation only the aggregate electoral votes for candidates for President and Vice-President in the first nine quadrennial elections appear.

1789. Previous to 1804, each elector voted for two candidates for President. The one who received the largest number of votes was declared President, and the one who received the next largest number of votes was declared Vice-President. The electoral votes for the first President of the United States were: George Washington, 69; John Adams, of Massachusetts, 34; John Jay, of New York, 9; R. H. Harrison, of Maryland, 6; John Rutledge, of South Carolina, 6; John Hancock, of Massachusetts, 4; George Clinton, of New York, 3; Samuel Huntington, of Connecticut, 2; John Milton, of Georgia, 2; James Armstrong, of Georgia, Benjamin Lincoln, of Massachusetts, and Edward Telfair, of Georgia, 1 vote each. Vacancies (votes not cast), 4. George Washington was chosen President and John Adams Vice-President.

1792. George Washington, Federalist, received 132 votes; John Adams, Federalist, 77; George Clinton, of New York, Republican (*a*), 50; Thomas Jefferson, of Virginia, Republican, 4; Aaron Burr, of New York, Republican, 1 vote. Vacancies, 3. George Washington was chosen President and John Adams Vice-President.

1796. John Adams, Federalist, 71; Thomas Jefferson, Republican, 68; Thomas Pinckney, of South Carolina, Federalist, 59; Aaron Burr, of New York, Republican, 30; Samuel Adams, of Massachusetts, Republican, 15; Oliver Ellsworth, of Connecticut, Independent, 11; George Clinton, of New York, Republican, 7; John Jay, of New York, Federalist, 5; James Iredell, of North Carolina, Federalist, 3; George Washington, of Virginia, John Henry, of Maryland, and S. Johnson, of North Carolina, all Federalists, 2 votes each; Charles Cotesworth Pinckney, of South Carolina, Federalist, 1 vote. John Adams was chosen President and Thomas Jefferson Vice-President.

1800. Thomas Jefferson, Republican, 73; Aaron Burr, Republican, 73; John Adams, Federalist, 65; Charles C. Pinckney, Federalist, 64; John Jay, Federalist, 1 vote. There being a tie for Jefferson and Burr, the choice devolved upon the House of Representatives. Jefferson received the votes of ten States, which, being the largest vote cast for a candidate, elected him President. Burr received the votes of four States, which, being the next largest vote, elected him Vice-President. There were 2 blank votes.

1804. The Constitution of the United States having been amended, the electors at this election voted for a President and a Vice-President, instead of for two candidates for President. The result was as follows: For President, Thomas Jefferson, Republican, 162; Charles C. Pinckney, Federalist, 14. For Vice-President, George Clinton, Republican, 162; Rufus King, of New York, Federalist, 14. Jefferson was chosen President and Clinton Vice-President.

1808. For President, James Madison, of Virginia, Republican, 122; Charles C. Pinckney, of South Carolina, Federalist, 47; George Clinton, of New York, Republican, 6. For Vice-President, George Clinton, Republican, 113; Rufus King, of New York, Federalist, 47; John Langdon, of New Hampshire, 9; James Madison, 3; James Monroe, 3. Vacancy, 1. Madison was chosen President and Clinton Vice-President.

1812. For President, James Madison, Republican, 128; De Witt Clinton, of New York, Federalist, 89. For Vice-President, Elbridge Gerry, of Massachusetts, 131; Jared Ingersoll, of Pennsylvania, Federalist, 86. Vacancy, 1. Madison was chosen President and Gerry Vice-President.

1816. For President, James Monroe, of Virginia, Republican, 183; Rufus King, of New York, Federalist, 34. For Vice-President, Daniel D. Tompkins, of New York, Republican, 183; John Eager Howard, of Maryland, Federalist, 22; James Ross, of Pennsylvania, 5; John Marshall, of Virginia, 4; Robert G. Harper, of Maryland, 3. Vacancies, 4. Monroe was chosen President and Tompkins Vice-President.

1820. For President, James Monroe, of Virginia, Republican, 231; John Q. Adams, of Massachusetts, Republican, 1. For Vice-President, Daniel D. Tompkins, Republican, 218; Richard Stockton, of New Jersey, 8; Daniel Rodney, of Delaware, 4; Robert G. Harper, of Maryland, and Richard Rush, of Pennsylvania, 1 vote each. Vacancies, 3. Monroe was chosen President and Tompkins Vice-President.

*Elected. (*e*) Eleven southern states not voting. (*f*) Three southern states disfranchised. (*g*) Horace Greeley died after election, and Democratic electors scattered their vote. (*h*) There being a dispute over the electoral vote of Florida, Louisiana, Oregon, and South Carolina, they were referred by Congress to an electoral commission composed of eight Republicans and seven Democrats, which, by a strict party vote, awarded 185 electoral votes to Hayes and 184 to Tilden. (*i*) Free Democrat. (*k*) In Massachusetts. There was also a Native American ticket in that state, which received 184 votes. (*m*) Middle of the Road or Anti-Fusion People's party. (*n*) Sherman died before the election and Butler was substituted.

UNITED STATES FEDERAL COURTS.

THE SUPREME COURT. Final judicial authority rests in the Supreme Court made up of a chief justice and eight associate justices. This court hears only cases on appeal, save those involving ambassadors and other foreign representatives, trials in which a state is a party, and a few others, in all which the court has original jurisdiction. Salary of the chief justice is $20,500; of associates, $20,000; chief clerk, $6,000; marshal, $5,500; and reporter, $8,000.

COURT OF CLAIMS. Organized first in 1855 to try claims against the United States. It has a chief justice and four associates, all drawing $12,500 each.

CIRCUIT COURT. Tries appeals from district courts, and also has original jurisdiction in many important cases. The United States is divided into ten different areas, with a court of three or more judges in each area. Salary, $12,500 each.

DISTRICT COURTS. One or more in every state and territory, with more restricted jurisdiction than the Circuit Court, but hearing appeals and trying original cases. Salary, $10,000.

CIRCUIT COURT OF APPEALS. Made up of the district and circuit judges of each particular area and also the justice of the Supreme Court who has jurisdiction over the area.

COURT OF CUSTOMS AND PATENT APPEALS. Established first in 1909, with one justice and four associates, each granted $12,500 a year.

CUSTOMS COURT. Established by the Tariff Act of 1930. Sits in New York to hear cases as to customs and similar claims. Each of the nine judges gets $10,000 a year salary.

SOME FAMOUS INDIAN CHIEFS.

ATTUCKS, CRISPUS (*c.* 1720-1770). The first person killed in the Boston Massacre, which is considered the opening of the American Revolution. He was an Indian-negro half-blood, living at Framingham, Mass. Attucks was a sailor and is said to have been the leader of the crowd who fired upon the soldiers in front of the old State House. Massachusetts honored his memory by erecting a monument on Boston Common in 1888.

BLACK HAWK (1767-1838). Chief of the Sac Indians (1788-1838). Took part against the Americans in the War of 1812; made and broke treaties with the United States and precipitated the Black Hawk War (1831-1832); defeated by General Dodge near the Wisconsin River (July 21, 1832), and at Bad Axe River by General Atkinson (August 1-2, 1832); Black Hawk surrendered August 27.

BLUE JACKET. A famous Shawnee chief, who is known chiefly as leader of the Indian forces in the battle at Presque Isle, Ohio, with General Wayne, August 20, 1794. Blue Jacket was opposed to peace, but after Wayne defeated the Indians he signed the treaty of 1795 with the General at Greenville, Ohio, and also the treaty of Ft. Industry, Ohio, July 4, 1805.

BRANT, JOSEPH (THAYENDANEGEA) (about 1742-1807). A famous Mohawk chief, who served with the British during the War of Independence; fought at Cherry Valley, Minisink, and Oriskany. He was not at the Wyoming Massacre; visited England (1786). Fiske says, "He was perhaps the greatest Indian of whom we have any knowledge."

COLBERT, WILLIAM. Chickasaw chief, termed the warrior of his nation. Aided the Americans in the Revolution, leading the Chickasaw allies against the hostile tribes. Served nine months in the regular infantry during the war of 1812, and then led his warriors against the hostile Creeks.

CORNPLANTER (1732-1836). Chief of the Seneca Indians, a half-breed, the son of John O'Bail, or O'Beal, a trader. Became unpopular because of taking part in the treaties of Ft. Stanwix, 1784, and Ft. Harmon, 1789, by which large grants of land were made to the United States, and by signing the treaties of September 15, 1797, and July 30, 1802. In 1790, he, with Halftown, laid before Gen. Washington at Philadelphia the grievances of his people. Six hundred and forty acres of land within Pennsylvania were granted to him by that state March 16, 1796, "for his many valuable services to the whites." In 1866 a monument to his memory was erected on his reservation by the state of Pennsylvania.

CRAZY HORSE (-1877). A great chief of the Oglala Sioux. Leader with Sitting Bull in Custer's massacre. Later surrendered to General Miles. Being suspected of stirring up another war was arrested in 1877, but escaped from the guard and was shot.

GERONIMO (*c.* 1834-1909). A medicine man and prophet of the Chiricahua Apaches. Native name Goyathlay. On account of depredations committed against frontiersmen the government decided to remove the tribe from their reservation in San Carlos, Arizona. Geronimo fled to Mexico with others, returned and was arrested. In 1882 hostile movements were made against the inhabitants of New Mexico and Arizona, and General Crook had orders to capture the chief and his band. An agreement was made and surrender agreed upon in March, 1886, but Geronimo and his followers fled across to Mexico. General Miles, who was in command, pursued, and the following August they were captured. Three hundred and forty, comprising the entire band with leaders, were sent to Florida as prisoners of war, later to Alabama and finally to Ft. Sill, Oklahoma.

HOLLOW-HORN BEAR (1850-1913). Brulé Sioux chief. Attacked United States troops in Wyoming and Montana in 1868, and the next year took part in a raid on laborers on the Union Pacific Railroad. Later he became captain of police at Rosebud Agency, South Dakota, and five years afterwards was appointed second lieutenant under Agent Spencer, but ill health compelled him to resign. As an orator of great ability, he was chosen by the Sioux to be their speaker in 1889, when General Crook was sent to Rosebud to make an agreement with the Indians there. Took part in the inaugurations of Presidents Roosevelt and Wilson.

JOSEPH (-1904). A great general of the Nez Percés, and their leader in the hostilities of 1877. Joseph and his band did not recognize the treaty of 1863, whereby their ancient home in northeast Oregon was given to the whites, and continued to live there, collisions between Indians and whites steadily increasing. A peaceful settlement by the removal of the Indians to Lapwai reservation in Idaho was nearly effected when outrageous acts of the whites brought on war. The whites lost heavily in several engagements, after which extraordinary generalship was exhibited by Joseph in a retreat of over 1,000 miles, "worthy to be remembered with that of Xenophon's ten thousand."

KEOKUK (*c.* 1780-1848). A Sac leader and diplomat of great ability. Became chief councilor in the Sac assembly, enjoying great popularity among his people until the Black Hawk War, during which he remained so passive that he lost influence both socially and politically. At this time the political union of the Sacs and the Foxes was broken, largely as a result of intrigues by Keokuk, and he, with a band of unpatriotic Sacs obtained protection from the Foxes under their chief Padweshik. In the negotiations following the Black Hawk War, Keokuk aided the government so cleverly that he was made chief of the Sacs, his appointment being received by Sacs and Foxes with ridicule and contempt. In 1845 he removed to Kansas, where his death occurred. His remains were removed to Keokuk, Iowa, in 1883. There they were reinterred in the city park, and the citizens of the town erected a monument over his grave. In the capitol at Washington stands a bronze bust of Keokuk.

LONE WOLF (-1879). Kiowa chief. In 1867 signed the treaty of Medicine Lodge, Kansas, whereby his people first agreed to be placed on a reservation; in 1872 leader of a delegation to Washington. His son was killed by the Texans in 1873, which enraged Lone Wolf, and in the outbreak of 1874 he became the leader of the hostile part of his tribe; surrendered in 1875 and was kept three years at Ft. Marion, Florida.

MASSASOIT (1580-1661). Sachem of the Wampanoags; visited Plymouth (1621), and concluded with Governor Carver a treaty of friendship, which was faithfully adhered to for 54 years, the first diplomatic act recorded in the history of New England.

OSCEO'LA (1804?-1838). Famous Seminole chief; he grew up among the Seminoles and when the whites pushed southward opposed them. In 1835 Osceola's wife, being the daughter of a fugitive slave woman, was claimed by her mother's former owner. Infuriated at this, Osceola resolved vengeance on the whites, and began the Second Seminole War; taken prisoner (1837) and held in captivity at Ft. Moultrie till his death.

PHILIP or **METACOMET** (? -1676). Famous Indian chief; son of Massasoit; sachem of the Wampanoags; at first firm friend of white settlers, but, realizing that settlement of the country by them meant the destruction of his own people, began what is known as "King Philip's War" in 1774; 13 towns destroyed, 600 inhabitants killed. The Indians were defeated and King Philip was killed at Mount Hope.

PONTIAC (*c.* 1720-1769). A famous Ottawa chief; leader of confederated tribes against the English (1763-1765) though professing loyalty to English king; by concerted action, all but four of the fourteen English posts were captured; peace being declared between England and France, Pontiac also made a treaty; murdered by an Illinois Indian.

RED JACKET (1751-1830). Seneca Indian chief. During the Revolution he fought for the English; helped the United States against Tecumseh (1810). Probably the most eloquent of the Indian race.

SITTING BULL (1837-1890). Famous Sioux chief. Slaughtered whites. On his refusal to settle down on a reservation General Sheridan with his troops in 1876 opened a campaign against him. General Custer carried on Sheridan's work and at Little Big Horn in June of 1876 there was a slaughter of the troops by the Indians. The chief escaped to Canada but returned in 1881 with a general pardon from General Miles. In 1888, by the advice of Sitting Bull, the Sioux refused to sell their lands. In 1890 he was the leader of the impending uprising among the Indians during the "Messiah" affair. He was killed in North Dakota in 1890 while an attempt was being made to save him from arrest.

TECUMSEH (1775-1813). Celebrated chief of the Shawnee Indians; in the battle of Tippecanoe (1811) his followers were defeated by Harrison. The importance of his aid to the British in the war of 1812 cannot be overestimated.

UNCAS (-about 1683). A famous sachem of the Mohegan Indians of Connecticut. As a Pequot chief he revolted (1635) and with a number of Indians formed the Mohegans. He fought against the Indians and with the English in the Pequot War (1637) and was given a grant of the Pequot lands. He defeated the Narragansett chief, Miantonomoh, in 1643 and later caused his death.

THE BRITISH EMPIRE.

The United Kingdom.—In England the term "Constitution" has not quite the same meaning as in the United States. In this country it denotes a written instrument, which constitutes the supreme law of the land. In England, the Constitution implies the whole political organism, with its laws, usages, and unwritten traditions. A republican constitution is "framed" artificially by a convention; the English Constitution is the natural growth of generations, and is broad-based on the principles of personal liberty and equality. Being for the most part unwritten, its growth and adaptability are unimpeded; and it has developed steadily and securely along the lines of progress, keeping pace with the march of civilization. This flexibility, far from endangering the stability of the government, is the mainstay of its strength, due largely to the conservatism of the English mind. The Constitution forms a part of the English Common Law; yet, unlike the United States, there is no positive law for the establishment of the national representation. The Cabinet, though the actual organ of executive government, is a body unknown to the law, and has never been recognized by any statutes, any rule of Common Law, or any resolution of either House of Parliament. In form, the government is a constitutional or limited monarchy; but in reality, it is a government by the people, a true democracy ruled by a king.

The supreme political authority in the United Kingdom is vested in the Sovereign and Parliament. There is a maxim that "the King can do no wrong"; which means that as every official act is necessarily done in accordance with the law, and as no unlawful act can be recognized as an act of the Crown, whatever the King does officially is done lawfully. "*Nihil enim aliud potest rex nisi id solum quod de jure potest.*" The Legislative is vested in Parliament, but the latter possesses no independent authority, being merely the council of the Crown. Its functions are deliberative, and the control which it exercises over every department of the Executive is indirect. Every act of state remains the act of the King, who by his powers of prorogation and dissolution has the means of checking rash or unwise legislation. In practice the executive authority rests with the Cabinet—a committee of ministers nominated by the Crown on the recommendation of the Prime Minister, but whose power depends upon the possession of a majority in the Commons. The Cabinet thus provides an additional check in the modern system of Parliamentary Government. The ministers are the natural leaders of both Houses. The chief of the Cabinet and the ministry is the Prime Minister or Premier, who exercises important functions and is the chief adviser of the Crown. He is personally appointed by the Sovereign, and is the medium between the Cabinet and the Crown. His resignation or death dissolves the Cabinet. His colleagues are of his own selection, though subject to Royal approval. In the same manner, he fills vacancies in the ranks of deans, bishops, and archbishops, and on his recommendation titles and honors are conferred. "Nowhere in the wide world," says Gladstone, "does so great a substance cast so small a shadow; nowhere is there a man who has so much power, with so little to show for it in the way of formal title or prerogative." Before 1905 the Premier had no recognition in Common Law. His office had no legal existence, but his actual official position was usually that of First Lord of the Treasury. The Premier is the leader of the particular House of which he is a member. The following offices invariably entitle the holder to Cabinet rank: First Lord of the Treasury, Lord Chancellor, Lord President of the Council, the Secretaries of State for the Home Department, Foreign Affairs, the Colonies, for War, and for India, Chancellor of the Exchequer, and First Lord of the Admiralty. The offices which may or may not carry with them a seat in the Cabinet include those of Lord Privy Seal, Chancellor of the Duchy of Lancaster, Postmaster General, First Commissioner of Works, President of the Board of Trade, President of the Board of Agriculture, President of the Local Government Board, Lord Lieutenant of Ireland, Lord Chancellor of Ireland, Chief Secretary for Ireland, Secretary for Scotland. Members of the Cabinet are necessarily Privy Councilors, and their deliberations are confidential. It is the duty of ministers to prepare for Parliament all business connected with the administration, to furnish a suggested budget for the current year, to advise specific improvements in the laws, and to criticise measures brought forward by non-official members. The ministerial control is, however, merely persuasive and advisory, and does not in any way interfere with any member's freedom of action. Every member of Parliament has the right to bring forward whatever proposal he thinks fit, without asking leave of the Crown or of any committee. There are no references to Standing Committees as in the Congress of the United States. A ministry remains in power so long as it holds the confidence of the Commons. It usually resigns when it is defeated upon some question of supreme importance. In such a case the Premier either resigns, or asks leave to appeal to the country, and in the latter course being determined upon a general election ensues.

The Three Estates.—Parliament consists of the Sovereign and the Three Estates of the Realm, viz., the Lords Spiritual, the Lords Temporal, and the Commons; the Lords Spiritual and Temporal together forming the House of Lords. Parliament, unless dissolved by the Crown, exists for seven years. It is one of the curiosities of Parliament that the French language is still used in proclaiming the Royal assent to any bill. When a public measure is approved, the Clerk of the Parliaments (the chief officer of the House of Peers) says, "*Le roy* (or, *la reyne*) *le veult.*" In the case of a private bill he says, "*Soit fait comme il est desire.*" Should the bill pertain to subsidies, the formula is, "*Le roy* (or, *la reyne*) *remercie ses bons sujets, accepte leur benevolence, et ainsi le veult.*" In case of the Crown giving a refusal, the official then says, "*Le roy* (or, *la reyne*) *s'avisera.*" This power of rejection was last exercised in 1707 by Queen Anne.

The House of Lords is composed of (1) Spiritual Peers (2 archbishops and 24 bishops); (2) Temporal Peers by hereditary right, or by creation; (3) representative peers of Scotland

and Ireland; (4) Lords of Appeal (of whom there may not be more than four). By the Act of Union between England and Scotland, the Scottish peers send 16 representatives to the Lords, who sit till Parliament is dissolved. The Irish peers elect 28 representatives for life. The number of Peers on the "Roll" in 1937 was 740. The House of Lords has both legislative and judicial authority, and is the highest appellate court of the realm. The Lord High Chancellor is by prescription Speaker of the House of Lords, and is the chief legal adviser of the Crown. The office may not be held by a Roman Catholic.

The House of Commons is composed of representatives from county, borough, and university constituencies in the United Kingdom. The word "commons" meant originally all those who enjoyed common rights, and were subject to common duties. The House of Commons thus means the House, not of the common people, but of the communities. Persons of full age, with certain exceptions, may be elected to the House of Commons. The following are disqualified: English and Scotch peers (though Irish peers, with the exception of the 28 representatives in the House of Lords, may be elected for any constituency in Great Britain); all English, Scotch, and Irish judges, clergymen of the established church of either England or Scotland; Roman Catholic priests; unnaturalized aliens; government contractors; imbeciles; persons convicted of certain offenses; sheriffs and returning officers. No property qualification is needed. Each member receives £400 a year, unless receiving salary for some other office. By the law of 1918 all the former complicated qualifications for voting were swept away and three simple ones substituted: six months residence; or the occupation of business premises; or the holding of a University degree. If a man is engaged in business in one constituency and has his residence in another he may vote in both constituencies; or if he is a graduate of an accredited University he may vote for the University representative. Plural votes are limited to two. In the case of women the voting age was fixed at 21. Seats were also redistributed by this act, making the representative districts more nearly equal in population, except in Ireland which was left with its over-representation in the Commons. The Act of 1918 enfranchised over 8,000,000 voters, 6,000,000 being women. Unnaturalized aliens, and men who, within twelve months, have received parochial assistance other than medical relief, are disqualified. Elections for members of Parliament are by secret ballot. At the general election in 1935 the Conservatives won a sweeping victory over their Labor and Liberal opponents, and Stanley Baldwin became Prime Minister. This was a blow to the Laborites, who had been steadily gaining, but its effect on the historic Liberal party was worse, for it was almost wiped out. The business of the Commons is conducted in public, on the principle that what directly concerns all should be heard by all. A striking feature of the procedure is the power vested in the Speaker, who ranks as first Commoner, and is responsible for order in the House. The Speaker takes no part in debate, and never votes unless it is necessary to give a casting vote. The House of Commons holds the exclusive and historic right to initiate all Money Bills. No member of the Commons can resign his seat, but by accepting the stewardship of the "Chiltern Hundreds" this can be effected. Under a statute of Anne any member of the House of Commons who accepts a remunerative office thereby forfeits his seat. This Act is now skillfully applied to meet the convenience of unwilling members. As soon as the vacancy is produced, the "stewardship" is immediately resigned that it may be at the disposal of any other member.

The bicameral system, and the *Lex et Consuetudo Parliamenti*—the code of rules governing parliamentary procedure—are peculiar to the Anglo-Saxon race, and have been copied by the legislatures of many other countries. The merit of the bicameral system lies in the mutual restraint exercised by the two Houses, as well as in the fact that this dual division of power is an essential guarantee for freedom.

Dominions Beyond the Seas.—The outlying dominions of Great Britain consists of her Colonies, Dependencies, and Protectorates (a complete list of which will be found elsewhere). The colonies fall naturally into three divisions:—

(1) *Crown Colonies,* ruled by the Imperial Government; e. g., Hongkong.
(2) *Representative Governments,* in which the legislature is partly elective and partly controlled by the Governor; e. g., Jamaica.
(3) *Responsible Governments,* possessing a separate Constitution; e. g., Canada and Australia.

On Dec. 11, 1931 King George V. signed the Statute of Westminster, passed by Commons on Nov. 24. This legalized for the British Empire certain declarations, notably those made by the Imperial Conferences of 1926 and 1930. By this statute the Governor General sent from Great Britain to the major nations of class 3 is said to represent the Crown, and not "the Government of Great Britain." So the nations of Canada, Australia, New Zealand, South Africa, Northern Ireland, and the Irish Free State are recognized as self-governing members of the British Commonwealth of Nations. Already in 1925 a new Secretaryship of State for these Dominions had been established.

I. Crown Colonies.—Taking Hong Kong as an illustration, we see that these are governed by a representative from Great Britain, with or without an Executive Council. At home a secretary for Colonies heads the Colonial Office which manages the Crown Colonies. South Rhodesia and other parts of Africa are also included. So is Newfoundland (until recently a dominion), because of financial difficulties there. Much freedom is given most crown colonies in all local affairs. For a fuller account of the units of the British Empire, see article in Department of History.

II. Representative Governments.—As a type of a partially autonomous colony we may instance Jamaica, where the Crown merely reserves the right of veto on the local legislation,

and appoints the chief public officials. A representative council was established in Jamaica as early as 1661 (six years after the taking of the island); but this was abolished in 1866, and in 1884 a partially elective assembly was instituted. The government now consists of a Governor, a Legislative Assembly of 29 members (5 official, 10 appointed by the Crown, and 14 elected), and a consultative Privy Council. In the case of elected members the term of service is limited to five years. All financial measures must be sanctioned by the Governor before they are submitted to the consideration of the Legislature. Boards are elected in each of the 15 parishes for the administration of local affairs.

III. Responsible Governments.—The Common Law is an Englishman's birthright, and the principles by which he is governed are the same throughout the British dominions. These principles, however, necessarily differ in their local application. Just as every town in the United Kingdom makes its own by-laws, though conforming to the general law of the realm, so by an extension of this idea does each colony determine its own laws for its own internal needs, whilst in other respects maintaining its allegiance to the home government. Colonists are thus subject to two kinds of law; one Imperial and personal, the other local and territorial. The British constitution is the parent of all the colonial governments, and as these young institutions grow to manhood the inherited features become more pronounced. Each colony has its Governor, who takes the place of the King. In the Dominion of Canada and the Commonwealth of Australia (the two examples of responsible government which we are giving), the local representative of the Imperial Government is called the Governor General. His position is a dual one. First, he must safeguard Imperial interests; and, second, he must discharge his duties as a local constitutional ruler—as agent of the Crown in the domestic government of the colony. (1) He is a constituent part of the Legislature, and at his discretion gives his assent or veto to any bill which has passed both Houses. In practice, however, the Governor General does not veto a bill, but reserves any to which he deems it unwise or improper to assent. His consent may be overridden by the home government, Canadian bills within two years, and Australian within one. In both colonies no vote, resolution, or bill appropriating public moneys may be passed unless first recommended by him. The reason is that the Executive, being responsible for the finances of the colony, must have the chief voice in the national expenditure. (2) The Governor General is head of the Executive, and as such the majority of his functions are exercised. In both capacities he acts mostly on the advice of ministers; in Canada he has the King's Privy Council, in Australia the Executive Council. He nominates the members of these councils, but in doing so observes the principles of responsible government, and selects them from the dominant party in the Lower House. In domestic administration, he invariably acts on the advice of the council. His chief power lies in summoning, proroguing, and dissolving Parliament. This constitutes a real check and balance and the knowledge that the Executive has this power effectually chastens the caprice to which all assemblies are prone. In military and naval affairs the Governor General has extensive powers; whilst in connection with the judicial system he exercises important functions. In Canada he has control over provincial legislation and administration, and the appointment and dismissal of the Lieutenant Governor is in his hands. The nomination of the chief permanent officials rests with the Governor General in Council, but in Canada that of the subordinate officers is regulated by a Civil Service Act, which restricts the powers of the political head. Australia, too, has its Civil Service Act, which effectually prevents all jobbery and "graft." This act provides for a non-political method of appointment by a body of Commissioners, who are permanent officers and free from party influence.

In both these great federations the Legislature is composed of the Crown, a Senate, and a Lower House, called in Canada the House of Commons, in Australia the House of Representatives. Of the two federations the Canadian is the more monarchical, the Australian the more democratic. The Canadian constitution is a gift of the home parliament. Authority is largely centralized, and the provinces have a restricted measure of legislative power. The senators, like English peers, are nominees of the Crown, *i. e.*, of the ministry of the day. They represent the provinces in unequal but prescribed proportions, and hold office for life. The Senate is thus only a revising and restraining body, though ostensibly a Council of Provinces; and it suffers from the inherent weakness of such a body, when it chances to clash with the Lower House, which is truly representative. The constitution of the Commonwealth is equally an Act of the Imperial Parliament, but was won only after years of debate and insistence. But the position of the Australian Senate in the body politic is totally different from that of the Canadian Upper House. It is essentially a Council of States, representing the states as states; and its members are directly elected by the people voting as distinct and separate elements. It is as democratic a body as is conceivable and its members are largely drawn from the laboring classes. In Australia, no member of either House is permitted to take, or agree to take, any fee for services rendered to the Commonwealth, or in the Parliament to any person or state. This clause virtually debars professional men such as barristers from entering Parliament, and results in the inordinate representation of labor. Members of both Houses in both Federations are paid; in Australia each member receiving £400 a year, and in Canada a sessional allowance of $2,500 and an additional grant for traveling expenses. The authority of the Federal Parliament is more restricted in Australia than in the Dominion; for the constituent states have each retained almost the same powers they had previous to the Federation. The Canadian provinces on the other hand relegated most of their legislative rights to the Federal Parliament. But whereas the Dominion stands solid as a nation, the Commonwealth is still but a coterie of states torn by inter-provincial jealousy and suspicion.

PARLIAMENTARY LAW.

Definition.—*Parliamentary Law* is the term used to denote that body of rules and usages which govern the conduct of legislative or deliberative assemblies. First developed in England its spread has coincided with the growth of popular government and each year witnesses an increase in the number of such rules.

Obtaining the Floor.—To obtain the floor one must rise and address the presiding officer by his official title, as, "*Mr. President,*" or "*Madam President,*" etc. If recognized the chairman will call the member by name, which is equivalent to permission being given to speak. If one rises while another member is speaking he is out of order and can not claim the floor when the member has finished. If several members rise at the same time the chairman should recognize the one whose business requires prior consideration, or the question may be left to the vote of the assembly. The member who has the floor can only be interrupted by (1) *a motion to reconsider,* (2) *a point of order,* (3) *an objection to the consideration of the question,* (4) *a call for the orders of the day,* (5) *a question of privilege,* (6) *a demand that the question be divided,* (7) *a request for information that requires immediate answer.*

Motions and Resolutions.—A motion is a proposal that the assembly take certain action or indorse certain views. A lengthy motion is usually put in the form of a written resolution, which begins with the words, *Resolved, That—.*" If the introducer wishes to give the reason for his motion the preamble should begin, "*Whereas ——*". The preamble is amended last.

Seconding Motions.—With certain exceptions all motions require a second. In small assemblies it is not necessary for the seconder to rise or be recognized. Nominations, inquiries, motions to reconsider, questions of order, and call for division, do not require a second.

Debate.—A member may not speak twice on the same question so long as there are persons who have not had the floor and who desire to speak. Members must confine their remarks to the immediate question under consideration.

Putting the Question.—When the discussion appears to be over the chairman asks "*Are you ready for the question?,*" and if no one speaks he puts the question, first calling for the affirmative and then the negative. The usual form of putting the question is as follows: "*The question is on the adoption of the resolution (reading it). Those in favor of the resolution say aye; those opposed say no. The ayes have it and the resolution is adopted.*" Or the chairman may request a show of hands and announce the result after counting them.

Common Motions and Their Objects.—(1) *To modify or amend.* If a re-wording is necessary it is well to submit it to a committee. (2) *To defer action.* This motion should fix the time at which the motion will be considered, and requires only a majority vote. By a two-thirds vote it may be made the order of the day for a fixed hour or day and take precedence over all other business. A motion to lay on the table postpones action indefinitely. (3) *To suppress debate.* This may be done by calling for the previous question, and requires a two-thirds vote. (4) *To suppress the question.* This may be done by objecting to its consideration, moving to postpone indefinitely, moving the previous question, or moving to lay on the table. All require a two-thirds vote.

Privileged Motions.—(1) *Fix time of adjournment.* This motion should state the exact time for the meeting of the assembly. (2) *To adjourn.* This is usually a privileged motion and not debatable. (3) *Take a recess.* Upon re-assembling business is continued where it left off. (4) *Questions of privilege.* These usually relate to personal matters such as defamation of character, etc. (5) *Orders of the day.* This is a motion that the regular order of business for the day be taken up. It can not be debated or amended and requires a two-thirds vote to defeat it. *A General Order* is made by postponing a question to a certain day or hour. It does not suspend any rule and does not interrupt business. To make a *Special Rule* requires a two-thirds vote because it suspends all rules that interfere with its consideration except those relating to motions for adjournment or recess, or to questions of privilege, or to special orders made previously.

Incidental Motions.—*Questions of order and appeal.* Such questions take priority over all but privileged motions; are decided by the presiding officer without debate unless he appeals to the assembly or two members appeal from the decision.

Suspension of the Rules.—This is done by a two-thirds vote and only when there is no question before the assembly. It can not be debated or amended. A more common practice is for a member to ask unanimous consent to bring up the business out of its order. If the chairman announces that he hears no objections the member proceeds.

Division of a Question.—Only principal motions and amendments are subject to division. The question to divide is not debatable. The chairman usually divides a question by paragraphs when several subjects are involved, but if he does not a member may take a motion to divide.

Motions Relating to Voting.—After the question has been put a division may be called for if a vote has already been taken viva voce or by show of hands. This is done by rising or by calling the roll.

Requests.—*Parliamentary Inquiry.* A member may at any time address a parliamentary question to the chairman who will answer it if the question is pertinent. *Request for information.* This may be addressed either to the chairman or the person who is speaking. If to the latter the chairman asks the speaker if he will yield to a question, and if he consents directs the questioner to put his question. *Leave to withdraw.* The introducer of a motion may request the privilege of withdrawing it, and, without objection, it will be granted. After the question has been stated he can not withdraw without the consent of the assembly. *Reading papers.* This may only be done with the consent of the assembly. *To be excused from duty.* A member does not have to accept an appointment, but

once having accepted he must get the permission of the chairman to resign it.

Subsidiary Motions.—*To lay on the table.* This motion only yields to privileged motions and is not debatable. It may be applied to any main motion, or to any question of privilege or order of the day. When a motion is taken from the table it must be unchanged in form. If a motion to lay on the table has been lost a similar motion can not be made until the question has been debated. A vote to lay on the table can not be reconsidered. *The previous question.* This motion takes precedence over all subsidiary motions except to lay on the table. It can not be debated or amended and requires a two-thirds vote. Its object is to bring about an immediate vote on the pending question, and its effect is to terminate debate. *Fixing the time limit of debate.* This is not a debatable question. If passed the order applies to all incidental and subsidiary motions and the motion to reconsider. An order to extend debate applies only to the pending question and such others as are specifically mentioned. When the assembly has voted to close debate or limit it any motion to postpone or to commit can not be moved until the vote adopting the order has been reconsidered; but the pending question may be laid on the table, and if it is not taken from the table until the hour appointed for closing the debate and taking the vote no debate or motion to amend is allowed, as the chair should immediately put the question. *To postpone to a certain time.* This may be debated, but the arguments must not be on the main question. This motion takes precedence over the motions to amend, to commit, and to postpone indefinitely. It must fix the time during the present session or the next one immediately following. The effect of postponing a question is to make it the order of the day for the time fixed for its consideration, and if it is not then disposed of it becomes unfinished business. To amend this motion requires a two-thirds vote.

Reference to Committee; Commit.—This motion takes precedence over motions to amend or to postpone indefinitely, but gives way to all other subsidiary and privileged motions. It may be debated as to the main question. The chairman usually refers the motion to the proper committee but he may refer the matter to the assembly to decide. If it goes to a special committee he may appoint the members of the committee or the assembly may elect them. Each member is limited to one nomination and the chairman usually chooses from the list nominated. The purpose of reference to committee is to have a thorough investigation made or to have the question put in better form. Unless a chairman of the committee is designated the member first selected becomes the chairman, and thus it is important to have the first-named member one who is competent to serve in that capacity.

Discharging a Committee.—After a special committee has submitted its final report it is discharged without motion. During the consideration by the committee the assembly can not discuss the question referred to the committee, although it may "*discharge the committee from further consideration*" of the business.

Amending.—The motion to amend takes precedence over the motion to postpone indefinitely but yields to all other motions. It can be amended and debated. Amendments require only a majority vote even though the main question requires a two-thirds vote, the only exception being amendments to constitutions, by-laws, or rules of order all of which require a two-thirds vote. *Form of amendments:* (1) *To insert or add;* (2) *to strike out;* (3) *to strike out and insert, or to substitute,* as when a paragraph is struck out and a new one offered. The motion to insert should always specify the word before or after which the insertion is to be made. The motion to strike out should locate the word or words wherever they occur. It is the duty of the chairman to state accurately the new form of the motion or question even showing what effect the revision will have upon the original motion. Amendments are voted on first, and after they have all been disposed of the chairman will call for a vote on the original resolution. After words have been added or inserted they can not be struck out except by striking out the entire paragraph or by a reconsideration. Only consecutive words may be struck out. If it is desired to strike out separated words a motion must be made for each one or group. The motion to strike out and insert is a combination, and in considering it the words to be struck out are first taken up and then the new words are debated. While an amendment is being considered it is not in order to make a motion to insert or strike out a paragraph. A motion to substitute one paragraph for another is considered by taking up first the amendments to the paragraph to be omitted, and then the amendments to the new paragraph. *Improper amendments:* Amendments must be germane to the question to be amended; they must not have the effect of nullifying the meaning of the original question; they must not change one form of amendment to another form; they must have a serious meaning, and they must not be identical with another question previously decided upon. *The following motions can not be amended:* To adjourn; call for the orders of the day; question of order, and appeal; objection to consideration of a question; call for a division; leave to withdraw a motion; a request of any kind; lay on the table; take from the table; reconsider; the previous question; postpone indefinitely; amend an amendment; nomination.

To Take from the Table.—This motion can not be made while a question is under consideration, and gives way to privileged and incidental motions. It is not debatable nor can it be made until some business has been taken up since the question was laid on the table. A member who rises to make a motion to take from the table takes the floor over a member who rises to make a main motion. The question taken from the table must be the same one that was laid on the table.

Reconsider.—*The motion to reconsider can only be made on the day the vote was taken or the day immediately following. This motion must be made by one who voted for the question,* but any member may second it. It can be made even when another member has the floor, or when another question is pending, or after the motion to adjourn has been carried provided the chairman has not declared the assembly adjourned.

The motion to reconsider can not be amended, postponed indefinitely, or referred to a committee. If the reconsideration is laid on the table or postponed definitely the question to be reconsidered and all adhering questions go with it. The previous question and the motions limiting or extending the limits of debate may be applied to it when it is debatable. It is undebatable only when the motion to be reconsidered is undebatable. When the motion to reconsider is lost it can not be made again except by general consent. *The following motions, after being voted on, can not be reconsidered:* Adjourn; take a recess; lay on the table; take from the table; suspend the rules or order of business; reconsider. *Affirmative votes on the following can not be reconsidered:* Proceed to the orders of the day; adopt or amend; repeal or rescind the constitution, by-laws, or rules of order. *A negative vote on the motion to postpone indefinitely can not be reconsidered.* After a committee has taken up the question referred to it a motion to reconsider is not in order. After the motion to reconsider is passed the business is taken up in the same form as it was before the motion to pass it was carried, and may be debated or amended. Rules limiting debate, etc., apply just as though the question had not been voted on. A vote can not be reconsidered in the committee of the whole.

Rescind, Repeal, or Annul.—A vote may be rescinded by a two-thirds vote, or by a majority vote, provided notice of the motion has been given at the previous meeting. This motion is the same in effect as the one to strike out the entire resolution, paragraph, rule, section, etc. It can only be introduced when nothing is before the assembly. It can not be made if the question can be reached by calling up the motion to reconsider which has previously been made. It is debatable and yields to all privileged and incidental motions. The motion to reconsider is not in order after something has been done as a result of the vote, or where a contract is involved, or where a resignation has been acted upon, or an election or expulsion has been voted.

Renewal of a Motion.—*The following motions can not be renewed at the same session:* To adopt or postpone a main motion indefinitely; to amend; to reconsider, unless the question has been altered materially; to object to the consideration of a question; to fix the time of adjournment; to suspend the rules for the same purpose at the same meeting. The chairman must use firmness in preventing motions for renewal being made for the purpose of delay.

Ratify.—This motion is made for the purpose of confirming some action which needs the consent of the assembly to make it valid, but the motion to confirm is not in order when it applies to something which could not be regularly done under the constitution or by-laws.

Dilatory, Absurd, or Frivolous Motions.—The chairman is the judge of such motions, but an appeal may be taken to the assembly. Where the purpose of the motion is clearly to delay or make ridiculous it is the duty of the chairman to protect the assembly.

Debate.—The length of time allowed for debate is a subject that should be covered by local rules, ten minutes being the usual time allowed. *No member should be permitted to speak more than twice on the same subject without leave being given, the two-thirds rule applying.* Every member should be permitted to speak once, if he desires, before any one has spoken twice. These rules do not apply to the committee of the whole. The member who sponsors the business before the assembly is allowed to close the debate after all others have finished. Amendments are treated as new questions to be governed by the rules governing debates in general. A member is not allowed to speak against his own motion, though he may vote against it. The chairman can not arbitrarily shut off debate by putting the question before the assembly is ready for it.

Conduct of Debate.—Members must confine their remarks to the question under consideration. It is customary to avoid the use of names in referring to members, rather speaking of them in such manner as *"the gentleman who preceded me,"* etc. Officers should be spoken of and addressed by their official titles, as *"Mr. Secretary."* If it is desired to ask a question of one who is speaking the person desiring information rises and says, *"Mr. Chairman, I should like to ask the gentleman a question."* The chairman then asks the speaker if he is ready to yield to a question. If he yields the time comes out of the time alloted to him. The two members do not address each other directly, but use the chairman as the intermediary. The chairman may interrupt the speaker at any time to state a point of order or to give information. While the chairman is speaking the one who has the floor takes his seat.

Closing Debate and Preventing Debate.—When the discussion appears to be ended the chairman asks, *"Are you ready for the question?"* If no one rises to speak the question is put. Debate is not formally closed until both the affirmative and negative are put. Debate may be closed at any time by a two-thirds vote under the rules governing the previous question; or the length of time to be allowed for debate may be fixed in advance by the assembly. *While it requires a mere majority vote to lay on the table the same vote may take from the table.* Discussion may be prevented altogether by a two-thirds vote.

Principles of Debate and Undebatable Motions.—Motions to suppress, extend the limits of, or to limit debate are undebatable. A subsidiary motion is debatable if its effect is to interfere with the right of the assembly to take up the original question at some future time. By "undebatable" is not meant that the motion may not be explained or questions asked and answered concerning it. *The following motions open the main question to debate:* Postpone indefinitely; reconsider a debatable question; rescind; ratify. *The following are the undebatable motions:* Fix the time of re-assembling; adjourn; take a recess; call for the orders of the day; suspension of the rules; objection to the consideration of the question; incidental motions; lay on the table; previous questions, and motions to close, limit, or extend the limits of debate; amend an undebatable motion; reconsider an undebatable motion.

Voting.—The usual method of voting is *viva voce* (by the voice). Another way is by *"show of hands."* Other methods are by *rising*, by *ballot*, by *roll call("yeas and nays")*. Since the re-

sponsibility of announcing the decision rests upon the chairman he may require a second vote, a rising vote, or a show of hands. Any member may demand a rising vote (division), which will be granted if it has sufficient support, the number depending upon the local by-laws. Where the chairman is in doubt as to the result he says, *"the ayes seem to have it";* then, if no one objects, he says, *"the ayes have it."* In announcing the vote the chairman states first whether or not the motion is carried; second, what the effect of the vote may be; third, what business will next be taken up. *A plurality is not sufficient to carry a motion or to elect, a majority being necessary.* In case of a tie the motion is lost. The chairman, though a member of the assembly, can not vote to make it a tie, and then vote to break the tie. A member may change his vote up to the time the result is announced. Voting is not compulsory. Voting by ballot is not usual except in secret societies. When a record of the votes is desired the yeas and nays are ordered, and the secretary or clerk calls the roll, the members answering "yea" or "nay" as their names are called. Any one not desiring to vote answers "present." If it is desired to save time the chair can assume general consent to unimportant motions and dispense with motions, unless there are objections. Under general consent business can be transacted almost as though there were no rules of procedure. *The following motions require a two-thirds vote:* Change any part of the constitution, by-laws, or rules; amend or rescind a standing rule, a program or order of business, or a resolution previously adopted, without notice being given at a previous meeting; to take up a question out of its proper order; suspend the rules; make a special order; discharge an order of the day before it is pending; refuse to proceed to the orders of the day; sustain an objection to the consideration of a question; previous question; limit, or extend the limits of, debate; extend the time appointed for adjournment or for taking a recess; close nominations; expel from membership; discharge a committee when previous notice has not been given.

Committees (Special and Standing).—A special committee is appointed for the purpose of considering some special matter, and is discharged once it presents its report. A standing committee is one that remains through the entire session. The first member named becomes the chairman unless the rules provide for a different mode. Discussion is carried on in an informal manner, the chairman usually taking the leading part. The privilege of reconsidering a vote is freely granted. A quorum must be present to transact business, but a smaller number may meet for the purpose of discussion and investigation. The report of the committee is the majority report but is always referred to as the committee report, not the majority report. A minority report may be submitted, but if there is objection to receiving it a vote of the assembly must be taken, a majority being necessary to receive. If the committee appoints a sub-committee the latter makes its report directly to the committee. Committee reports are made at the time provided for them in the order of business, the chairman generally making the report. To call a committee report up out of its order requires a two-thirds vote. The acceptance of a report takes place when the report is read, without any formal motion. *A vote to accept the report adopts it.*

The Committee of the Whole.—This form of committee is usually resorted to when a large legislative or deliberative assembly wishes to discuss informally some matter that it does not want to refer to a special or standing committee. The presiding officer of the assembly appoints some one to act as chairman of the committee of the whole; rules of debate are less rigid; most voting is viva voce; and, when the motion that the committee rise is carried, the presiding officer resumes his place, and the chairman makes his report as from an ordinary committee.

Officers and their Duties.—*"Mr."* or *"Madam"* is always prefixed to the title of the presiding officer. He always refers to himself as *"the chair." His principal duties are as follows:* To call the meeting to order; announce the business to be taken up in proper order; recognize members who desire to speak; put votes and announce the result; preserve order and protect the assembly from time-wasting motions; decide questions of order (subject to appeal); sign all orders and resolutions which require his signature. *The secretary or clerk:* The secretary is the recording officer of the assembly and the keeper of all records not otherwise taken care of. *His duties are as follows:* To call the roll; notify officers and committees of their appointment; furnish information that he may have; keep the minutes; send out call for meetings. Sometimes these duties are divided betwen a Recording Secretary and a Corresponding Secretary. An important duty of the secretary is to furnish the presiding officer with an order of business for the day.

The Minutes.—The record of the business of an assembly is usually called the minutes. *The following are the essential features of the minutes:* The kind of meeting, regular, stated, etc.; name of the assembly; date and place of the last meeting; officers present; whether or not the minutes were approved; all the main motions and points of order and appeals, whether sustained or lost, and all other motions that were not lost or withdrawn; hour of adjournment.

Miscellaneous.—A session of an assembly is, in theory, a continuous meeting which is not terminated by a recess or temporary adjournment. Usually a meeting is closed by a simple motion to adjourn; the society meets again at the time provided for by the rules or by resolution. In case of the illness of the presiding officer the assembly can not elect a chairman pro tem to serve through the session unless notice of such election has been given in advance. A quorum is the number that must be present in order to transact business and is usually a majority, although where it is found difficult to get so large a number, getting a quorum is made easier. When some member calls attention to the fact that there is no quorum present business is suspended until a quorum is secured.

Order of Business.—Unless the rules provide for a different order the following may be used as a satisfactory order of business:

(1). Reading the minutes of the previous meeting.

(2). Reports of boards and standing committees.
(3). Reports of special committees.
(4). Special orders.
(5). Unfinished business and general orders.
(6). New business.

Nominations and Elections.—Nominations may be made on the floor of the assembly, or they may be referred to a nominating committee. When the committee makes its report other nominations may be made by members not on the committee. Nominations do not require a second. The usual method of election is by ballot, but where just enough candidates have been nominated to fill the offices a motion may be made that the secretary cast the ballot for the offices, naming each one separately.

Constitutions.—*A Constitution should contain only the following:* (1) Name and object of the society; (2) Qualification of members; (3) Officers and their election; (4) Meetings of the society (including only what is essential, leaving details to the by-laws); (5) Method of amending the constitution. These main articles are usually divided into sections. It is well not to load down the constitution with details. To amend the constitution it is necessary to give notice of the amendment, and to require a two-thirds or three-fourths vote.

By-Laws.—All the rules which are of such importance that they can not be changed without previous notice, except those included in the constitution or the rules of order, are included in the by-laws. It is customary for societies to adopt a few rules of order in their by-laws, and then adopt a standard work on parliamentary law as their authority.

Rules of Order.—These should contain only the rules that have to do with the transaction of business in an orderly fashion, and they are largely the same in all societies. *Every society should adopt a rule such as the following: "The rules contained in (a standard work on parliamentary law) shall govern the society in all cases to which they are applicable, and in which they are not inconsistent with the by-laws or the special rules of order of this society."*

The Organization of Mass Meetings, Conventions, and Permanent Societies.—*Mass meetings.* Those responsible for the meeting should meet in advance and decide where the meeting shall be held, who shall nominate the temporary and the permanent chairman, and, in general, make up in advance a business program for the meeting. The meeting is called to order by some one chosen by the committee or the persons responsible for the meeting, and he calls for nominations for the position of chairman. When the latter is elected he at once takes the chair and calls for the election of a secretary, who, when elected, takes his seat near the chairman. Then the chairman directs the secretary to read the call for the meeting and then calls on the person who seems to know most about it to make further explanations. Then a series of resolutions, prepared in advance, may be offered for consideration. If such resolutions are not prepared a committee on resolutions is appointed, to report as soon as possible. *Permanent societies.* All preliminary steps should be carefully taken before the first meeting is held, including the securing of copies of constitutions and by-laws which might serve as a model. The first meeting is conducted very much in the same manner as a mass meeting, described above, the usual topic of speech being the purposes of the proposed society. Then a vote is taken on the advisability of forming such an organization. If carried, a motion is made for the appointment or election of a committee to draft a constitution and by-laws. The meeting usually adjourns after such business is transacted, to meet at a stated time. At the second meeting the former officers serve until their successors are elected. The secretary reads the minutes, and they are approved. The report of committees is next taken up, the one on the constitution and by-laws coming first. The chairman of the committee reads the constitution and by-laws and moves their adoption. The chairman of the meeting directs them to be read paragraph by paragraph, when amendments may be made. After it has been adopted in this manner it is voted on as a whole. If carried, a recess is taken while the members come forward and sign the constitution. Upon re-assembling the secretary reads the list of the members of the society. Then the by-laws are taken up, the procedure being the same as that of the constitution. After the adoption of the by-laws the election of permanent officers takes place, the mode of nomination and election usually being prescribed in the by-laws. If nomination by committee has been agreed upon the meeting may take a recess until the committee is ready to report. Any member is entitled to make nominations after the committee has made its report. *Conventions.* As a general thing conventions maintain an organization which render the preliminary steps described above unnecessary. At the last meeting committees on credentials, registration, and program are provided for. The first business after the opening of the convention is the report of the committee on credentials, which includes merely a list of the accredited delegates and alternates. After this report has been approved the report of the program committee is heard, and, if adopted, becomes the order of business. The procedure from then on follows the usual order.

THE DEVELOPMENT OF LAW.

Early Laws.—Early laws are the outgrowth of social customs or habits. It is very difficult to distinguish clearly between early religion, morals, and law. In the earliest times each man was a law unto himself, and he punished offenses against himself and righted his own wrongs according to his own strength. Vengeance is sanctioned by early laws, and redress and justice are left to a man or his kin. Not only Mosaic but early Anglo-Saxon codes are specific in stating exactly what degree of vengeance each offense deserves according to a list. This action cannot in any sense be regarded as legal; it is only moral. But it is the germ from which law as applying to right and justice was evolved. Just as soon as the community assumes the responsibility of righting the wrongs of others, then the punishment begins to take on a legal rather than a religious or moral aspect. Where the right to be enforced was clear, and where the violation of it was beyond doubt as to both the fact and the agent, early legal codes were ample and explicit. But there was no provision for settling controversies or disputes in the earliest times. The need of this, and the means of doing it, was the evolution or the institution of the court.

Mosaic Law.—This is at once the fullest and, presumably, the most familiar of the codes of ancient times. In the Book of Leviticus are two codes: the Law of Holiness and the Priestly Code. The Law of Holiness was compiled during the Exile and nearly conforms to the Priestly Code, which was presented to the Jewish community at Jerusalem through Ezra and Nehemiah and finally adopted as a binding law in 444 B. C. These codes are both religious and moral. The hygienic and sanitary obligations imposed upon the people have been shown to be of the very nature that the existing conditions most demanded, and are abundant proof of the wise administration by which they were issued.

Babylonian Law.—This great commercial nation developed highly complex laws. The code of Hammurabbi (2000 B. C.) contained 280 edicts. Forms of deeds, mortgages, leases, contracts of sale and partnership, together with records of loans and interest, have been preserved. The earliest known will is that of Sennacherib (700 B. C.).

Medes and Persians.—The codes of these early peoples have become proverbial for their severity and especially for their immutability. "The law of the Medes and Persians which changeth not" carries with it an idea of a law of

unusual severity and an impartial and certain dispensation of punishment. The people are known to have been cruel and merciless as is recorded in Isaiah xiii., and this spirit, most probably aggravated by their ambitious struggle against repression by the Assyrians, was manifested in their code of laws.

India.—The law of India, originally indistinguishable from religion, was derived primarily from the Vedas (*c.* 1000 B. C.), supplemented by the Dharmasmriti, or traditions in rhythmical form, including the Mahabharata (*c.* 100) and by innumerable commentaries or handbooks, the most noted being the Manava Dharmasastra, or laws of Manu (about 200), all of which were rules of life rather than authoritative codes.

Lycurgus.—Whether or not Lycurgus was legendary, it remains true that the laws of Sparta brought about her military supremacy. The law was practically military discipline. The child was inured to hardship, taught gymnastics and military drill. Specific punishment was laid down for each offense, and justice was administered impartially and inflexibly.

Draco.—In the seventh century B. C., Draco compiled a code of laws for the government of Athens. So severe were the penalties attaching to crime, that it was said that the code was written in blood.

Solon.—What Lycurgus did for Sparta, Solon effected for Athens. Archon in 594 B. C., he compiled a code of laws, based upon his Eastern experience, which, by their wise and just provisions, served as models for other nations.

Roman Law.—Romans defined three kinds of law: *jus civile*, the law which governed citizens; *jus gentium*, the law of nations; and *jus naturale*, the law of nature. The earliest versions of Roman civil law were essentially religious until 500 B. C. at least. It would seem that there were some laws in which the plebeians did not share. The laws were at first dispensed by patricians. The frequent complaints of injustice and partiality which the plebeians made, led (about 451 or 450 B. C.) to the formulation of the Twelve Tables. By them the law was the same for both classes except in the matter of marriage, which difference disappeared in 445 B. C. This Law of the Twelve Tables was to the Roman people a charter of liberties, and they were loath to change or amend its laws. The priests alone interpreted the law until 252 B. C., when the office of pontifex maximus was opened to a plebeian. Roman civil law was not applicable to allies or conquered peoples unless expressly provided by treaty. For them special laws grew up out of decrees by rulers and senate between 250 and 150 B. C.

Roman citizenship was gradually extended throughout all Italy until Caracalla in the third century made all free inhabitants of the empire Roman citizens. In this way Roman civil law became the law of the whole empire. Papinian, Paul, and Ulpian were prominent jurists during this period.

Among the many attempts at codification of Roman laws the most important are:—

1. *The Codex Gregorianus*, 295.
2. *The Codex Hermogenianus*, early in the fourth century.
3. *The Codex Theodosianus*, published under the direction of Emperor Theodosius II. of the Byzantine Empire, in 438.
4. *The Codex Justinianus*, by Emperor Justinian, consisting of:—
   (*a*) *The Institutes* (of November, 533), based on the Institutes of Gaius.
   (*b*) *The Digest* or *Pandects* (of December, 533), composed of excerpts from the law literature from 100 B. C. to 300.
   (*c*) *The Codex* (between April, 529, and December, 534).

These were written in Latin, to which some new (*novellae*) constitutions were added in Greek. These law books persisted until the tenth century, when they were condensed into a Greek code called the *Basilica*. This latter lasted until the capture of Constantinople by the Turks in 1453.

Roman Law with Teutonic Modifications.—In the Middle Ages those Teutonic governments erected upon the ruins of the western Roman Empire were governed by Roman law, of which several compilations were made. Among these were:—

1. *Lex Romana Visigothorum*, or the "Breviary of Alaric" (506), issued at Aire in Gascony by authority of Alaric II. This was the chief authority in western Europe until the eleventh century.
2. *The Leges Barbarorum*, a name given to compilations to govern other nations, including:—
   (*a*) *The Lex Antiqua of the Visigoths*, fifth century.
   (*b*) *The Lex Gundobada of the Burgundians*, fifth century.
   (*c*) *The Lex Salica of the Franks*, fifth century.
   (*d*) *The Law of the Riparian Franks*, sixth century.
   (*e*) *The Law of the Longobards*, seventh century.

Local laws gradually superseded these *leges barbarorum*. Special systems of law gradually grew out of the changes which occurred within the nations, especially from the development of municipalities. For a time the works of Justinian lost something of their eminence. Later, in the tenth and eleventh centuries, they were used in the colleges and universities, and were soon restored to the position of the leading authority on jurisprudence.

Trial by Ordeal.—As a religious ceremony, ordeal was a common means of proving the guilt or innocence of suspected persons from the most ancient times. Prior to the introduction of Christianity among the peoples of northern Europe, ordeal was practised among the Celts of Ireland, the Germans, and the Slavs. Trial in the ordinary sense was unknown among these peoples in the Middle Ages. The accused submitted to tests by boiling water, from which he took objects by plunging in his bare hand; by fire, into which he thrust his hand; by red-hot iron, either by carrying an iron rod from three to nine paces or walking upon red-hot plowshares, sometimes by walking blindfolded among 6, 9, or 12 of these; by cold water, in which the innocent sank and the guilty floated; by the cross, where both accused and accuser held uplifted hand before the cross, the decision

being given in favor of the one who endured the test for the longer time. Among the Anglo-Saxons the eating of a piece of bread or cheese by the accused was regarded as an infallible test of innocence. After religious exercises a piece of bread or cheese was given to him and if he was able to swallow it this power was regarded as a proof of his innocence. The ordeal of the bier required the suspected murderer to touch the body of the murdered person, and in cases of guilt it was expected that blood would flow from the wounds. Religious ceremonials were forbidden to be practised at trials by ordeal in 1215, and by the end of the thirteenth century its practice had nearly ceased.

Trial by Torture.—Apart from its use as a means of punishment or of revenge, torture, or the infliction of severe bodily pain, has had its uses in the past to extort confession or evidence. In the Middle Ages it was made use of in Europe as a means of securing evidence in cases of suspected heresy, and it was not until 1816 that its use was forbidden by Papal bull. The rack, scourge, fire, hooks, boots, pincers, and manacles are a few of the ingenious contrivances employed by different peoples and at different times in the administration of torture. As an instrument of torture the rack was introduced into England by the Duke of Exeter, and popularly known as "the Duke of Exeter's Daughter." When practised by the more enlightened nations, its use has been deplored as a necessary evil. At the same time, writers are found who have condemned its use not only on humanitarian grounds but by reason of its unreliability in discovering the truth, for very often innocent persons either from weakness or exhaustion pleaded guilty or accused others wrongfully to escape its pains. The last recorded use of torture in England was during the reign of Charles I. (1640). Its use was abolished by Prussia, Saxony, Austria, and Switzerland before 1750. Russia finally abolished it in 1801. It was practised in France as late as 1814 under the Bourbons; in Württemberg (1806), Bavaria (1807), Hanover (1822), and Baden (1831).

Trial by Combat.—This mode of determining the right or of proving innocence was much in vogue in feudal times. It flourished during the age of chivalry and was an essential feature of knighthood. The Norman kings firmly established the practice throughout England and gave it a regular place in the judicial procedure. A most elaborate code of regulations prescribed the details. In its earliest stages the appeal to this form of trial was permitted in a great variety of cases, but it was soon limited to the decision of cases of felony in criminal law and to disputes regarding the title to lands. In cases of women, infirm persons, or children, a champion might be chosen or any knight might offer his services to protest by single combat against the accusation. Victory was supposed to decide the question of innocence. The modern system of dueling was in many respects a survival of the trial by combat. Its decline was very largely due to the proved and acknowledged superiority of methods in the ordinary courts of law and it was gradually superseded by trial by jury. As an appeal in cases of felony, the last known case of trial by battle occurred in England as late as 1818 in the case of Ashford *v.* Thornton. The practice was forbidden in England by an act passed in 1819. This method of trial was never practised in the United States.

Trial by Jury.—A form of trial in which a body of laymen act as the judges of the truth of facts in dispute at a trial or an action at common law. Its origin is obscure, but it is known that it was customary in the reign of Henry II. (1154-1189). In these earlier times the jurymen were not only judges, but very often witnesses as well. The sheriff acting under a writ known as venire facias, summons citizens residing in the county to attend a term of court for the purpose of acting as jurors. The group of men so summoned are known as talesmen, and from them are chosen a sufficient number to compose a jury. In the process of choice both sides have the privilege of challenging the fitness of any of these to serve as jurymen, after examination into such fitness. The jury is then sworn and the trial begun. All evidence must be given in the hearing of the jurymen, after which the respective lawyers address the jury and sum up the evidence. The judge then makes a review of the case for the instruction and benefit of the jury, and this review is known as the charge. The jury then retires from the court room and is locked in a room until a verdict has been arrived at, or until there is sufficient reason to believe that a unanimous verdict cannot be reached. In the latter case a new trial may be had. It is necessary for all of the jurors to agree upon a verdict, and in a criminal trial this verdict is either guilty or not guilty, and in a civil action either for the plaintiff or for the defendant. The qualifications for jury service vary in the several jurisdictions, but, speaking generally, all persons between the ages of 21 and 60 are liable to be called upon unless they are exempted or disqualified by insanity, conviction of some crime, or by sex, for women are generally not eligible. After the jury is sworn, its members are then entitled to compensation for their services. A special, or struck, jury is selected with a special regard to the intelligence and education of its members to try difficult or complicated cases. In some courts, as in probate, surrogate, and in special cases of equity, questions of fact are decided by the judges and no jury is employed. Especially is this true when the questions involved are those of law and not of fact. In practice, the absence of a single juror suspends the trial until his return, and in cases of death or withdrawal of a single juror at any stage of the trial before a verdict is reached the trial is terminated immediately and proceedings must be begun anew and a new jury selected. The grand jury consists of not more than 23 nor fewer than 12 members, who are good and sufficient men chosen by order of the sheriff to attend court to consider the various indictments or bills which are laid before them, and it is their duty to inquire into each case to ascertain whether or not there is sufficient ground to require a trial. When they find sufficient evidence to warrant a trial they are said to return a true bill. They have the further power of making suggestions to the court for the application of any remedial action to any condition of affairs existing within the jurisdiction as may seem to them advisable.

INTERNATIONAL LAW.

Rights, Powers, and Obligations of States.—The essential rights of a state are (1) sovereignty, (2) independence, and (3) equality. These bear upon one another and are, perhaps, only different phases of sovereignty. (1) Sovereignty implies the exclusive, uncontrolled exercise of powers within the state, whether of making treaties with other states or of governing itself. It is the great essential of existence, for without it the community would not be a state. The sovereignty of the United States dated from July 4, 1776, and not from 1782, when the English treaty recognized its independence. (2) Independence denies the right of any other state to interfere with the sovereignty of a state. (3) Equality is the right of a state to have all of the rights which other states enjoy; and is in no way dependent upon relative size or power.

Where a state is made up of a number of united states the central government is responsible for the acts of the individual units, over whose acts it may not have any control.

No state can render assistance to the colonies or provinces in revolt against the parent state.

The rule of non-interference in the affairs of another state is to be observed except in unusual cases. The interference of the United States in Cuban affairs against Spain was based upon self-protection of commerce and individual rights and upon the laws of humanity. France interfered with affairs in Mexico in 1861 and 1863 ostensibly to protect the rights and property of French citizens in Mexico, but really to check the growth of the United States and to increase French prestige.

The balance of power is really the recognition by international law of the right of interference as a means of protection of contiguous nations, one against the encroachments of another.

The Monroe Doctrine promulgated by President Monroe in his message in 1823 was aimed at the absolutists of Spain, who wished to bring back the Latin countries of America into subjection to the mother country; and it opposed any foreign interference which meditated the changing of the constitution or altering the form of government of an American state and also any interference by force. Since that time many absurd constructions have been put upon the original views. It was quite in harmony with this doctrine for the United States, as soon as her hands were freed in the Civil War, to march her troops to the frontiers of Mexico and to cause the withdrawal of the French and the collapse of the government of Maximilian there in 1866. But it was absurd for Congress to attempt to invoke the principle against the French company which had secured the right or concession to dig the canal across the Isthmus of Panama. There is nothing intended in the principle which will cause the United States to police the continent of America or to become a party in the wars of any little Latin republic which may choose to solicit its aid.

Equality involves national etiquette and is very elaborately observed in some of the monarchies of Europe. The tendency is strongly setting towards equality of rank.

The precedence of ambassadors of equal rank is now decided by the length of residence. The question of whether the German or the English ambassador should take precedence at Washington would be decided by the greater length of residence or priority of appointment.

Property Rights of a State or the Acquisition of Territory.—A nation's right to territory or property is based upon (1) occupation of land that was vacant before and by public and uninterrupted prescription, or (2) from occupation by colonies or other incorporation of land previously occupied, or (3) by conquest generally accepted by other nations and so recognized, or (4) by purchase or gift.

Mere discovery is not enough to establish a claim to territory; there must be some occupation which is of benefit to the territory claimed. The United States based its claim to Oregon on Gray's discovery of the Columbia River in 1792, on Lewis and Clark's exploration in 1805 and 1806, on the settlement made at Astoria, and on contiguity to United States possessions, which then extended to the Rocky Mountains.

A nation has rights over (1) all land within its boundaries and over such rivers, lakes, inland seas, and other waters as lie wholly within its boundaries; (2) the mouths of rivers, bays, and estuaries providing access to the land; (3) the sea along its coasts to the distance of a marine league (three miles).

The high sea is open and free to all nations. All nations have equal rights to fish upon the high seas or upon banks and shoals in them. The Banks of Newfoundland are open to all nations to fish in; but the right to cure and dry fish upon the shores or to fish in bays or mouths of rivers is a private right of the nation owning them. Such waters are often called a *mare clausum*, or closed sea. Such are bays of the sea, such as Delaware Bay, which was declared in 1793 to belong to the United States alone. The Black Sea was made neutral by the treaty of Paris in 1853.

A river which forms the boundary between two nations is to be used equally by both nations and the dividing line is presumed to run through the middle of the river, unless other causes determine otherwise. Where the upper waters of a river belong to one nation and the lower courses to another, the former is considered as having only a moral right to use the lower courses. But this is generally arranged by treaty. The St. Lawrence, after forming the boundary between parts of the United States and Canada, flows wholly in its lower courses through British territory. Previous to the Reciprocity Treaty of 1854 Great Britain refused to acknowledge any right to its use by citizens of the United States. That treaty gave to the United States rights to its use equal to those enjoyed by British subjects; though these rights are subject to termination on notice. In exchange the United States gave British subjects equal rights to the use of Lake Michigan.

Right of Intercourse and Rights of Foreigners within a State.—Where a nation resorts to non-intercourse, it ceases to be protected by international law.

A nation which prevents another nation from commercial intercourse for the purpose of procuring actual necessaries not elsewhere obtainable commits an act of hostility towards that nation.

No nation can prevent another nation from

peaceably using its usual mode of communication with a third nation. No nation can prevent another from intercourse with a third nation against the will of the latter. Every nation is bound to truth and honesty in its intercourse with other nations.

No state can in time of peace exclude property accredited to subjects of a friendly state or expel them after admission without good reasons properly submitted to their home government. Shipwrecked, stranded, or other unfortunate visitors must be treated humanely and all their property rights observed.

Foreigners admitted into a country are subject to the laws of that country.

Naturalization.—Each nation has the right to regulate the manner in which aliens may become naturalized. An alien may become a citizen of the United States in the following manner:—

Declaration of Intention.—First, he shall declare upon oath before any authorized court or his authorized deputy, in the district in which the alien resides, 2 years at least prior to his admission, and after he is 18 years of age, that it is his intention to become a citizen of the United States. Such declaration shall give the name, age, occupation, personal description, place of birth, last foreign residence and allegiance, the date of arrival, and the present place of residence.

Conditions for Citizenship.—Second, not less than 2 years, nor more than 7, after he has made such declaration, he shall make and file a petition in writing which shall set forth that he is not a disbeliever in or opposed to organized government, or affiliated with any body of persons so disbelieving, a polygamist, or a believer in it, and that it is his intention to become a citizen of the United States, to renounce absolutely and forever all allegiance to any foreign prince, potentate, state, or sovereignty, and that it is his intention to reside permanently within the United States, and further state whether he has ever been denied admission as a citizen and upon what grounds, which he must prove have been removed.

Oath of Allegiance Upon Application.—Third, he must take oath in open court that he will support the Constitution of the United States, that he absolutely and entirely renounces and abjures all allegiance and fidelity to any foreign prince, potentate, state, or sovereignty, and particularly by name, of which he was before a subject or citizen; that he will defend and support the Constitution of the United States against all enemies, foreign and domestic, and bear true faith and allegiance to the same.

Conditions of Citizenship.—Fourth, he must satisfy the court that he has resided continuously within the United States 5 years at least, and within the state or territory where the court is held, 1 year preceding his application, and during that time has behaved as a man of good character.

Titles of Nobility.—Fifth, he must renounce any hereditary title or order of nobility in the kingdom or state from which he came.

Widow and Minor Children.—Sixth, if the alien who has declared intention dies before he is actually naturalized, the widow and minor children may be naturalized by complying with the other provisions of this act without declaring intention.

Children of Naturalized Persons.—The children of persons who have been duly naturalized under any law of the United States, or who, previous to the passing of any law on that subject, by the government of the United States, may have become citizens of any one of the states, being under the age of 21 years at the time of the naturalization of their parents, shall, if dwelling in the United States, be considered citizens thereof.

Citizens' Children Born Abroad.—The children of persons who now are, or have been, citizens of the United States, shall, though born out of the limits and jurisdiction of the United States, be considered citizens thereof.

Citizenship of Women by Marriage.—Any woman who is now or may hereafter be married to a citizen of the United States, and who might herself be lawfully naturalized, shall be deemed a citizen.

Aliens in the Army and Navy.—Any alien at the age of 21 years and upwards who has enlisted or may enlist in the armies of the United States, and has been or may be honorably discharged, shall become a citizen upon his petition without any previous declaration, if he proves at least 1 year's residence within the country. Aliens honorably discharged from service in the Navy or Marine Corps, having served 5 consecutive years in the former, or after one enlistment of 4 years in the latter, shall become citizens without previous declaration.

Naturalization Prohibited.—(*a*) No alien shall be admitted to become a citizen who has not for the continued term of 5 years next preceding his admission resided within the United States.

(*b*) No alien who is a native citizen or subject, or a denizen of any country, state, or sovereignty with which the United States is at war, at the time of his application, shall then be admitted to citizenship.

(*c*) No person who disbelieves in or is opposed to organized government, or who is a member of or affiliated with any organization entertaining or teaching such disbelief in or opposition to organized government, or who advocates or teaches the necessity or propriety of the unlawful assaulting or killing of any officer or officers, either specified individuals or officers of the government, because of his or their official character, or who is a polygamist, shall be naturalized or made a citizen of the United States.

(*d*) No alien shall be naturalized or admitted as a citizen of the United States who cannot speak the English language, unless prevented by some physical disability, if otherwise qualified.

(*e*) No state or court shall admit Chinese to citizenship.

Protection Abroad to Naturalized Citizens.—All naturalized citizens of the United States while in foreign countries are entitled to and shall receive from this Government the same protection of persons and property which is accorded to native-born citizens.

The Right of Suffrage.—The right to vote comes from the State, and is a State gift. Naturalization is a Federal right and is a gift of the Union, not of any one State. (See Table

of Qualifications for Voting in each State, pages 1148 and 1149.)

Extradition.—Almost all nations refuse to punish their subjects for foreign crimes against foreign states or their subjects. The right of asylum or of shelter of criminals seeking refuge in foreign countries is becoming more and more limited. It is usually met by an agreement or treaty of extradition. The United States has extradition treaties with nearly all nations. When extradition of a refugee criminal is asked by another nation, certain judges may issue a warrant for his arrest, try him to see that the crime charged comes within the scope of the treaty, and to see that there is some evidence of his guilt. If satisfied the criminal is handed over to the executive. The President, through the Secretary of State, shall then surrender him within two months to the officer or agent of the nation claiming him. If not so surrendered he is liberated. The crimes usually covered by extradition treaties are murder, forgery, assault with intent to kill, piracy, arson, and robbery.

Ambassadors and Consuls.—One nation is not bound to be represented by an ambassador at the court of another, but, if diplomatic relations have once existed, it is a breach of friendship to discontinue them, and this discontinuance precedes a declaration of war. A nation is not forced to receive an ambassador from another nation, if there is good reason for a refusal, such as the uncertainty of the sovereignty of the state he represents in times of civil war; or if the person of the ambassador is obnoxious, or if he is of notoriously bad character.

When an ambassador is sent abroad he is furnished with credentials which specify the degree of power with which he is invested and a list of the subjects upon which he is entitled or empowered to treat. Until such credentials have been presented at the court to which he is sent and are received by that court, he is not recognized officially. The first duty, then, of an ambassador at a foreign court is to present his credentials and establish his status.

An ambassador enjoys very great privileges of exemption from laws and immunity while in a foreign country in his official capacity. This is to secure the fullest freedom to act at all times in the interests of his country. These privileges exist even in case of a declaration of war against his country until he has time to leave the country after the declaration. He is then entitled to liberty of exit. Should he remain longer than is necessary after such dismissal or declaration of war, his status then becomes that of an ordinary traveler.

No private or public person may use force or violence against the person of an ambassador; and the state is bound to afford him, his property, household, and servants full protection.

An ambassador cannot be arrested or imprisoned for any offense, civil or criminal. Any punishment or civil redress must come through the ambassador's sovereign.

The papers of an ambassador relating to his official business are in all cases inviolate.

An ambassador is not usually subject to taxes or to customs duties on goods imported for his own use.

An ambassador may be recalled, sent home, or declare his mission terminated for good reason. It is his duty to call upon the chief executive of the country, present his letter of recall, and ceremoniously take his leave.

The commercial agents of a country residing abroad are called consuls, and include consuls general, consuls, vice-consuls, and consular agents.

A consul's duties mainly consist in expediting matters of commercial importance and of representing his country in all such transactions. Diplomatic powers may or may not attach to his office.

Consuls enjoy no such immunities as are accorded to ambassadors. They are amenable to the laws of the country in which they reside just as are other foreigners.

Treaties.—Treaties, conventions, or contracts may be made by a nation with an individual, body of individuals, or with other nations.

Only properly constituted authorities or persons deputed by them can make treaties.

No treaty can be made which will in any way override the constitution; nor to bind a nation to do anything that flagrantly sacrifices the interests of the nation; nor to bind the nation to do anything which is morally wrong.

Treaties made through false representations or by force are not binding.

Defensive treaties are made to secure the parties mutually against encroachments by other nations.

Treaties of neutrality are mutual obligations binding the parties to take no part in conflicts between other powers.

Offensive and defensive alliances bind the parties to aid one another in all cases of conflict of either of the parties against other powers.

If a treaty has been made and signed by representatives having full powers, the treaty becomes binding at the time of signature. In such cases the ratification by the respective governments becomes retroactive.

It may be specified that the treaty shall become binding only upon ratification by the respective governments. In such cases the states are bound only from the date of ratification. The constitution of the United States requires that all treaties must be ratified by the consent of two thirds of the Senate before it becomes valid. The right of changing terms of conditions is also claimed by the Senate; and such changes are not to be regarded as violations of the treaty.

Where a treaty is flagrantly and repeatedly broken by one party, the other party may regard it as broken and either claim redress or demand its observance.

In interpreting a treaty the common usage of words is to be followed unless it involves an absurdity. If two meanings are possible, that one is chosen which confers the least benefit or advantage to the party who caused or demanded the insertion of the clause. That party is penalized for not making his meaning perfectly clear. Obscure passages may often be explained or cleared up by a consideration of other parts or passages of the treaty. In such cases causes of insertion and reasons for the act are to be considered. Clauses involving hard conditions or cruelty to one of the parties are to be considered strictly so as to minimize the hard conditions; while those which favor justice, equity, and hu-

manity are to be interpreted broadly so as to confer the fullest benefits.

War.—The causes of a just war are (1) the defense of any right which the state is bound to protect; (2) the redress of a wrong; (3) the prevention of an apprehended injury; (4) the protection of individual inhabitants; (5) to avenge insults to national reputation, to the flag, to an ambassador, or to its good name; (5) to enforce terms of a treaty or contract; and (6) to punish great wrongs against religion or liberty.

Rights of a nation are often enforced by acts short of actual war, such as embargo, which detains foreign vessels in port; or reprisal, which consists in seizing from a nation an equivalent of what it has taken, in the failure to get back the actual things taken, and corresponds to levying by force upon property to an equal amount of a debt or damage. Other means are the pacific blockade and a demonstration of force.

A declaration is not now insisted upon by international law, nor is it always practised by nations. This does not arise from a desire to take advantage of the unpreparedness of another nation, but is caused by the superior means of communication and publicity which the age affords. No one can plead ignorance of the prospect of war, which nearly always is preceded by a long chain of portentous events and communications. It is, however, advisable to give notice that a state of war exists, to enable neutrals, foreigners within the nation, and others to act in accordance with the laws governing such cases.

Weapons Forbidden in War.— The use of poisoned weapons, the poisoning of springs of water, use of hired assassins, a copper bullet poisoning the wound, explosive and dumdum bullets, detachable lance heads, barbed bayonets, and similar devices which entail needless suffering are forbidden in war.

Rules of War.—Private persons taking no part in the war are to be unmolested; but those participating are not afforded protection. The property of non-participants is to be uninjured. Contributions and requisitions are permissible. The commander of any detached force may require from the people supplies of food, shelter, and means of transportation, for which receipts are given. But pillage and devastation are neither justifiable nor politic. Spies in disguise may be punished by death; but those in their own uniform are to be treated as ordinary prisoners of war.

Humanity in Warfare.—In addition to the prohibition of weapons which entail needless suffering, much has been done to alleviate the suffering which the use of modern death-dealing agencies have caused. The Convention of Geneva in 1864, and again in 1868, introduced the Red Cross movement. Those engaged in hospitals, ambulances, and similar work were distinguished by wearing a badge of a red cross on a white ground. Another conference at Brussels in 1874 at the call of the czar of Russia, the Oxford Code of 1880, and the several meetings at The Hague in recent years have sought to bring about a more humane treatment of sufferers in war.

CONSTITUTIONAL LAW.

Constitutional law is that which refers to the constitution as a permanent system of government as distinguished from statutory and common law, which relates to matters subordinate to the constitution. It consists of rules and laws relating to the sovereign body, that is, how that body is composed, what are the mutual relations of its constituents, and how the various functions of legislation, judicature, and administration are performed. These rules may or may not take the form of absolute laws; for example, the constitutional rule that the British king and Parliament constitute the sovereign cannot be strictly called a law It is also a rule that the king shall not withhold his assent to a measure which has passed both Houses of Parliament; this neither can be termed a law. At the most the royal veto would in such a case be unconstitutional, but not illegal.

Constitutionalism implies a representative or popular form of government, and as such is of comparatively modern growth. One of the fundamental parts of a complete constitution is the organization of the state so that the "amending power" is duly provided for. Where the constitution is a written one, like that of the United States, the line of demarcation between constitutional law and ordinary statute law is clearly defined; but in England, which has in the main an unwritten constitution, it is not so easy to determine of what constitutional law consists, seeing that the enacting authority in both cases is identical. Its principles must be chiefly gathered from parliamentary statutes, customs, and precedents. Generally speaking, the sovereignty inherent in the constitution, the accepted principles of liberty, the construction of the government, and the question and character of popular representation, are essentially subjects of constitutional law. In England such questions are perforce dealt with by Parliament the same as any ordinary law. In a constitutional crisis the House of Commons appoints a committee to "search its journals for precedents." The unwritten constitution of Great Britain is mobile, adaptative, and constantly undergoing change. This is in contrast with the fixed constitution of the United States, written out in one authoritative code.

The constitution of the United States, which was ratified by each state separately, clearly defines the relationship between the central and the local government, so that neither can destroy nor modify the other. It is worthy of record that the first written American constitution (the "Articles of Confederation," of November, 1777) was defective in that it made no provision for the continuing organization of the state. It created only a central government, which could not legally assume sovereign power. In other words the sovereign, the state, had no legal organization in the system. This defect was rectified in the convention which met at Philadelphia, in May, 1787, the change being brought about largely through the instrumentality and adroitness of Abraham Baldwin and Alexander Hamilton.

The legislative powers of the United States legislature are not to extend to particular kinds of bills, e. g., *ex post facto* bills; the President's

veto can only be overridden by a majority of two thirds in both houses; the constitution itself can only be changed in any particular by the consent of the legislature or conventions of three fourths of the several states; and lastly, the judges of the supreme court are to decide in all cases when the constitutionalism of any act of the legislature is in dispute. In the face of these provisions few changes are ever introduced; and in point of fact, only fifteen constitutional amendments have been passed since the framing of the constitution. The unwritten constitution of England has, on the other hand, changed much, particularly in curtailing the powers of the Crown and the Lords, and correspondingly increasing the power of the Commons through their nominees, the Ministry. The constitution of the United States more nearly approached the model of the British constitution at the end of the eighteenth century, and the president to-day has very much the same powers as the British sovereign of that period.

The bicameral system, which, in England, has made generally for good government by reason of its "checks and balances" is not an ideal form for a democratic legislature, although in practice its advantages far outweigh its drawbacks. In the American constitution, as Bagehot points out, "the Upper House has as much authority as the second; it could produce the maximum impediment, the deadlock, if it liked; if it does not do so it is owing, not to the goodness of the legal constitution, but to the discreetness of members of the chamber." In England the two Houses are far from having equal power, and in the end the will of the Commons must prevail.

In the United States, as in Switzerland and Germany, the constitution is in form an alliance among a number of independent states, and it is always a moot point how far the independence of each state has been sacrificed by submission to a federal constitution. In the United States constitutional progress is somewhat hampered by reason of every amendment requiring ratification by the separate vote of three fourths of the states. A distinguishing feature of the United States constitution is the categorical completeness with which it treats of civil liberty. In England and France, for example, the question of civil liberty is at all times at the mercy of the government. In the matter of organization and the details of administration we have much to learn from European constitutions; but as regards the position and true relations of liberty, imperfect though many of our conceptions be, the American system stands as a model for the constitutions of the Old World.

CRIMINAL LAW.

The criminal or penal law is that portion of the law which deals with crimes. Crimes have been described as offenses against the state and prosecuted by the state, in contradistinction to civil injuries, which are offenses against individuals and prosecuted by private persons. Strictly speaking, all illegal acts are offenses against the state. Torts or civil injuries are offenses for which the injured party may seek redress in the courts. A tort may also be a crime which is punishable both civilly and criminally.

The criminal law of England rests on a basis of common law, modified by judicial interpretation and by statute. In the United States the criminal law is largely based on the common law of England and that of the United States. Several of the states have recast and codified their criminal law. Each state has criminal jurisdiction for all ordinary crimes perpetrated within its borders and is independent of the jurisdiction of the federal courts. The crimes dealt with by the latter are treason, piracy, and other offenses against the laws of nations, crimes committed in the District of Columbia, in the territories, and other dependencies of the United States and on the high seas, and other criminal offenses specially defined by act of Congress, e. g., counterfeiting of securities or United States coin, fraudulent naturalization, and bankruptcy, and the like.

Crimes are divided into treasons, felonies, and misdemeanors. Treasons include offenses against the state, for example, resistance to the authority of the sovereign power; felonies and misdemeanors are not always easy to distinguish from each other, but, generally speaking, felonies are the more serious crimes, such as murder, homicide, arson, house-breaking, etc., while misdemeanors are minor crimes prosecuted civilly as in personal actions for injuries. Attempts to commit crimes are themselves crimes. It is laid down in Russell *On Crimes* (Vol. I. p. 189) that "an attempt to commit a felony is a misdemeanor, and an attempt to commit a misdemeanor is a misdemeanor, whether the offense be so by common law or by statute." Until 1861 under this ruling an attempt to commit murder was only a misdemeanor at common law in England punishable by two years' imprisonment; but now such an attempt is a felony and punishable accordingly. Persons accused of a crime may be either principals of the first or second degree, or accessories before or after the fact. Participation in the commission of a felonious act is in itself a felony.

In the United States criminal procedure follows generally the procedure of the common law. Misdemeanors are invariably dealt with by police magistrates. In cases of felony the accused is entitled to trial by jury, the latter being drawn from the state or district in which the crime was committed. An accused person is further protected by the amendment of the constitution, article V., which reads: "No person shall be held to answer for a capital, or otherwise infamous crime, unless on a presentment or indictment of a grand jury, except in cases arising in the land or naval forces, or in the militia, when in actual service in time of war or public danger; nor shall any person be subject for the same offense to be twice put in jeopardy of life or limb; nor shall be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use, without just compensation." Article VIII. is likewise in the interest of the accused: "Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted."

COMMERCIAL LAW.

Speaking strictly there is no separate and distinct commercial law in the Anglo-American legal system as there is in countries whose legal systems are based upon the Civil Law, where there are codes of commerce and separate commercial tribunals. The origin of the distinct body of commercial law to be found in the countries of continental Europe and their colonies elsewhere was in the Law Merchant or custom of merchants, i. e., the usages of the mercantile class in the Middle Ages and the centuries immediately succeeding. In England this Law Merchant was incorporated into the general law in the eighteenth century and became part of the common law governing particular transactions. As such, it was adopted in the United States. The subjects usually dealt with in the Commercial Codes of European and Latin American countries are Mercantile Persons, i. e., persons whose transactions are within the Commercial and not the Civil Code, Partnerships and Companies, Agents, Factors, and Brokers, Commercial Paper, Loans and Pledges, Maritime Law, Carriers and Transportation, Warehousemen, Bankruptcy, Trademarks and Patents.

Contracts: Conception, Definition, and Classification.—One person may acquire rights against another because of some act of the latter or of both, intended to create such rights, or because of some act not so intended but which the law visits with liability and to which it attaches the consequence of creating such rights. Contracts belong to the first class. They belong to the class of what are called legal transactions or acts-in-the-law, that is, acts intended to produce legal consequences to which the law concedes the effect of creating the consequences intended. Such acts require:—

(1) That the parties doing them have legal capacity so to act,

(2) That they act freely, with knowledge of the facts and without being deceived,

(3) That they act with reference to some possible or permissible subject matter, and

(4) Usually that the act be expressed in or accompanied by some prescribed form. If the third or fourth requirements are not complied with, the acts have no legal effect and are said to be *void*. If the act is deficient with respect to the third requirement, the act is subject to be set aside by the person compelled or mistaken or deceived and is said to be *voidable*. If the defect is in the first requirement in some cases it is void (married women, except as changed by statute, and lunatics under guardianship) and in some (infants and lunatics not under guardianship) it is voidable. These general propositions apply also to contracts.

A Contract is a promise or agreement enforceable by law. The law does not enforce every promise a person may make nor every agreement a number of persons may enter into. Not only must the four requirements above noted be complied with, but the purpose must be to create a legal result. If the parties did not intend the promise or agreement to be legally binding—as, for example, if they intended a joke, or a banter, or an example for instruction, or if they were merely acting, there is no contract.

Classification of Contracts proceeds upon the fourth requirement above set forth, that is, the form in which the act is expressed or by which it is accompanied. If the form is that of a writing, sealed by the party or parties and delivered, there is a formal contract. In the case of *negotiable instruments* (see *infra*) the form is of some importance also, and they are quasi-formal contracts. Where the contract, whether written or oral, does not take on either of these forms, it is said to be a simple contract.

Contracts under Seal.—In legal parlance any instrument in writing to which the parties have set their seals is called a deed. Where such instruments contain promises, such promises are called, technically, covenants. If such an instrument acknowledges a debt or promises to pay money, it is called a bond. Contracts under seal are also called specialties. The requisites of such contracts are:—

(1) That they be in writing,

(2) That the party or parties seal them,

(3) That they be delivered—that is, that the person to be bound part with control, intending the instrument to take effect. In America it is also generally required that they be accepted by the party to whom the promise is made. Promises or agreements so made require no consideration. Originally a seal was an impression on wax or on the substance written on, made by the party or by some one in his presence and by his direction as his seal. But by legislation or judicial decision a wafer or scroll, or the word "seal," or the letters "L. S." now suffice where seals are in use. The distinction betwen contracts under seal and simple contracts is abolished in Alaska, Arizona, California, Idaho, Indiana, Iowa, Kentucky, Mississippi, Missouri, Montana, Nebraska, Nevada, North Dakota, Ohio, Oklahoma, South Dakota, Tennessee, and Texas. In these states, except Nebraska, Nevada, Ohio, and Oklahoma, any contract in writing is presumed to have been made upon consideration, but the contrary may be shown and will invalidate it. In Alabama, Michigan, New Jersey, New York, Oregon, and Wisconsin, the presence of a seal, by statute, only creates a presumption of consideration—that is, the contract may be proved to be without consideration, but stands unless and until such proof is made.

Simple Contracts.—In simple contracts the form is of no consequence. The requisites are:—

(1) That the parties be agreed, or, in legal parlance, that there be a meeting of their minds, and (2) that there be consideration.

Offer and Acceptance.—It takes two or more parties to make a simple contract. The everyday saying that silence gives consent cannot be relied upon in this connection. Agreement is composed of two elements, *offer* and *acceptance*.

An offer is a proposal by the one party, called the offerer, that something be agreed to between them; an acceptance is an assent to or compliance with that proposal by the other party, called the offeree, with the intention and for the purpose of entering into the agreement proposed. An offer

(1) Must be communicated;

(2) Must be complete, so that it needs nothing but acceptance to make a complete contract;

(3) Must be intended seriously (except that if the person to whom it is made understands it seriously and a reasonable man in his place would have done so, there is a contract), and

(4) May be revoked (i. e., recalled) unless there is a collateral contract, with all the requisites of an independent contract, not to revoke it. It will remain open and capable of acceptance for the time fixed by its terms, unless revoked, and if no time is fixed, will remain open for a reasonable time. It may be so made as to be capable of several successive acceptances, in which case there is a new contract upon each acceptance; but after each the offerer may revoke it before there is any further acceptance. An offer comes to an end, so as not to be capable of acceptance thereafter, by lapse of the time fixed for acceptance, by lapse of a reasonable time if none is fixed, or by death of either offerer or offeree before acceptance. It also comes to an end by the making of a counter-offer or by rejection by the offeree, in which cases it is no longer open even though the time fixed for acceptance has not yet elapsed. But it may be renewed after lapse of the time fixed by acts or words of the offerer which amount to treating the offer as still in force.

Revocation of an offer must be communicated to the offeree before acceptance or it has no effect. But it need not be communicated by the offerer himself. Moreover, where the offer is made by advertisement, as in the case of offers of rewards, it may be revoked in the same way, provided the revocation is given the same publicity as was given to the offer.

Acceptance may be in the form of

(1) A promise, so that the contract consists of a promise on each side, the promise of the one being given in exchange for the promise of the other, or

(2) An act, so that the contract consists of a promise on one side and an act on the other, the promise being made in exchange for the doing of the act and the act being done in exchange for the promise. In the former case the contract is *bilateral;* in the latter it is *unilateral.* The acceptance must cover the whole offer and must coincide with it. If not, or if it changes the terms of the offer, there is no acceptance, but only a counter-offer. A mere inquiry, however, as to what the offer means or whether the offerer will make a different offer is not a counter-offer and will not put an end to the original offer. Also the promise or act claimed to constitute an acceptance must have been intended as such. Cross-offers in the same terms do not make a contract. The acceptance must refer to the actual offer made by the offerer, and not to something else understood by the offeree. Otherwise there is said to be no meeting of minds. But if a reasonable man could only understand the offer as made in one way, a person who accepts it on that understanding makes a contract even if the offerer did not so mean it. Likewise if the acceptance would be understood in one way only by a reasonable man, the offerer has a right to rely on it as having that meaning, and if he does so, there is a contract, though the offeree had another meaning. Where an offer is sent by telegraph and the message is incorrectly transmitted and accepted in the form in which it is received, the authorities are not agreed whether there is a contract.

Consideration.—All simple contracts require a consideration. The reason for this is in reality historical, so that consideration is as much a form as a seal. Except in case of formal contracts, Anglo-American law does not enforce a promise unless it is made upon a consideration. The consideration of a promise is the thing given or done in exchange for the promise, provided such thing is regarded legally as a detriment to the promisee or person to whom the promise is made. If a promise is given in exchange for another promise, there is a bilateral contract. If an act is done in exchange for a promise, there is a unilateral contract. As the consideration is something given or done in exchange for the promise, it follows that there must be, as lawyers put it, a present consideration; that is, there must be something which is regarded legally as a detriment to the promisee at the time of and in exchange for the promise. Something done or given or forborne in the past will not suffice. But if the prior act, done at the request of the promisor, was such as to give rise to a duty on the part of the promisor to pay the reasonable value of the service rendered him or benefit received by him, or if the prior act was something which it was the duty of the promisor to do and was done under such circumstances as to give rise to a duty of reimbursement for the service rendered (see *infra* QUASI-CONTRACTS), a subsequent promise to pay a fixed sum in liquidation of such liability is supported by a present consideration. Also, where a pre-existing obligation is voidable by the promisor, or he has a statutory defense which he may or may not interpose, such as a discharge in bankruptcy or the statute of limitations, a subsequent promise to pay is often said to be sustained by the past consideration of the pre-existing obligation. But it is more correct to say that the new promise operates as a waiver of the defense and enables the original obligation to be enforced.

If there is what is legally deemed a detriment to the promisee, the amount or the proportion it bears to the value of the promise is not material. Adequacy of consideration is not taken into account in this connection. But there must be a detriment. Hence a promise to pay a *greater* sum in consideration of payment of a liquidated *smaller* sum is unenforceable.

In a bilateral contract, each promise is consideration for the other. Hence if either is *void,* as against public policy or for incapacity of the promisor to make it or for any other reason, or is too indefinite to be enforceable, there is no consideration for the other. But a promise that is merely *voidable* is consideration for the other.

By "detriment" in this connection the law means simply the doing by promisee of something he is not bound to do. It is no matter that what he does is actually no harm to him pecuniarily or otherwise. His doing in exchange for the promise what he is not bound to do is held legally to be a detriment to him. He has exerted himself to do what he was under no obligation to do and so is to that extent worse off in exchange for the promise. Hence doing what is for the doer's benefit, if he is not bound to do it and does it at the instance of the promisor in exchange for the latter's promise, is a consideration. But doing what one is already bound to do is not a detriment and hence is not a consideration.

Part Payment of a Debt.—It follows from the conception of consideration that payment or promise to pay less than the whole amount of a *liquidated and undisputed* indebtedness is no consideration for release, discharge, extension, or promise to discharge, extend, or not to sue upon such indebtedness. This is the general and well-settled common-law rule. But it is subject to some qualifications and explanations. These may be stated conveniently as four propositions:—

1. Payment of part before maturity is consideration for discharge, extension, or promise to discharge or extend the remainder.

2. Giving or promising to give something other than money or doing something or promising to do something other than pay money in settlement or satisfaction or for an extension of a debt is a consideration, and in such case the pecuniary value of what is given or done or promised is of no consequence.

3. A payment of part or promise to pay part of a debt, made by a third person, not a party to the indebtedness, is consideration for discharge or extension of the remainder.

4. If the debtor binds himself to pay interest for a fixed period beyond maturity, so that he cannot tender the money owing during that time and require the creditor to accept it, there is consideration for an extension for that time.

Promises to do what one is bound to do.—It may be said, as a general proposition, that doing or promising to do what one is already bound to do by reason of contract with the other party or of contract with a third person or of some legal relation or official duty, is not a consideration. But in Alabama, Maryland, Massachusetts, New Jersey, and Vermont, the courts hold to the contrary where the thing done or promised was owing to the promisor already or to a third person by contract of the promisor. And where the general proposition is recognized, it must be noted that where there is a pre-existing contract duty on the part of the promisor to the promisee, the parties may by mutual agreement rescind, that is, put an end to, the contract and thus terminate the duty; and if they do, the doing or promising to do a part or all of what was due before is consideration for a new agreement.

Compromises.—Discontinuance of a pending action or dismissal of a suit in which person or property has been attached, or release of such person or property without discontinuance or dismissal, is consideration for a promise when the holding of the person or property under such attachment is lawful or it is a doubtful question whether such holding is lawful or not; but it is no consideration where the attaching party is clearly liable in damages for so holding or continuing to hold. In the latter case he only does his legal duty in releasing the person or property and his performance of that duty is nothing to give in exchange for a promise. But giving up a legal right is a consideration, and honest litigation of bona fide claims in the courts is a right. Hence settlement of or forbearance to sue upon a claim is consideration for a promise given in exchange therefor in case the promisee had a cause of action, that is, a right to recover in court upon his claim, or in case, although in fact or in law he did not have one, it was doubtful at the time of the compromise whether he had one or not or he believed in good faith and on reasonable grounds that he had one. If he had no cause of action and did not believe he had one, a compromise or forbearance to sue upon his claim is not a consideration.

Accord and Satisfaction.—"Accord," says Blackstone, "is a satisfaction agreed upon between the party injuring and the party injured, which, when performed, is a bar of all action upon this account." "Injury" here means cause of action—a right to sue and get relief in the courts—not a mere property or contract right uninfringed. If such a cause of action exists, the parties may agree on a satisfaction to be given and received, and when the thing agreed on as satisfaction is done, or, as the law books say, the accord is executed, it is a defense to the original claim. An unexecuted accord, that is, a promise to give or do something in satisfaction of a cause of action, is no defense unless the creditor or claimant agreed to take the promise in satisfaction of his claim. But if the accord is executed, i. e., the promise is performed, or the promise as such was taken in satisfaction of the claim, it is a defense to the original cause of action.

Subscriptions.—A subscription, in which a number of persons unite in agreeing to pay the sums set opposite their names for some purpose set forth in the paper, may be a mercantile or business subscription or a charitable subscription. In the former case it is fair to assume that a business transaction was intended and hence that acceptance of the subscription by the payees implies a promise on their part to use the money for the specified purpose in exchange for the promise to contribute it. This is consideration. But it is always wiser to put an express counter-promise of this sort in the paper itself. In the case of a charitable subscription, it is fair to assume that the parties intended a gratuity rather than a business transaction. Hence it is the more advisable to insert the express counter-promise or else, where seals are in use, to have the subscribers affix their seals. The prevailing view appears to be that the subscribers or any of them may revoke (withdraw from) the subscription until work has been done or liabilities have been incurred by the payee in reliance upon it, and that upon the beginning of work or incurring of liability on the faith of the subscription it becomes binding.

Assignment of Contracts.—Where the contract is unilateral, there is practically a debt due from the promisor to the promisee. Hence, an assignment in this case is like any other assignment of a right to recover in the court, or, as it is called in law, of a chose in action. (See *infra*, PERSONAL PROPERTY.) But an assignment may attempt to do more than this. It may purport to transfer not only the assignor's right to the benefit of performance by the promisor, but the right to control or direct such performance as well. In that case, as a general proposition, the promisor must agree to the assignment or the assignee cannot hold him to the performance. But assent to such an assignment is said to be implied from the nature of the contract where from its terms it is evident that there is no choice of persons involved and that the performance may take place between any two men with-

out material difference to those who take part. The rule is the same, and for the same reasons, where the assignment purports both to transfer the rights and to delegate the duties of the assignor under the contract. But if it tries to go further and to relieve the assignor from liability to the other party to the contract, it must be assented to by the latter, or it cannot have that effect.

Joint Contracts.—Contracts, with respect to the promisors, may be joint, or joint and several, or several. With respect to the promisees, they are either joint or else several. A promise is the joint promise of two or more where, for the purpose of the promise, they are to be taken as one; where it is the promise of all of them collectively, but not that of each individually. It is the several promise of each when each promises for himself, so that there is no collective promise, but only an individual promise of each promisor. It is joint and several where it is so made that, although expressed as one, it is really two; made up of (1) the collective promise of all and (2) the individual promises of each. Joint contracts must be enforced against all the promisors jointly. If less than the whole number are sued, that fact may be shown in abatement of the action. But legislation has greatly relaxed this rule in most jurisdictions. Moreover, if the claim is put in judgment against less than all, those who were not sued may show the judgment as a bar to any action against them on the promise, because there was but one promise and that one has already changed its form and become a judgment. Where two or more persons make the same promise at the same time or in the same instrument, *prima facie*, it is a joint promise. But if there are what are called "words of severance," the promise will be joint and several. By "words of severance" are meant any words indicating that the collective promise of all is also the individual promise of each, as "we jointly and severally promise," or "I promise" (when two or more execute the promise), or "I, we, or either of us." Where the promise is joint and several all the promisors may be sued jointly or each or any one separately; but not a number less than all jointly.

In case there is a judgment for or against any one promisor, it does not bar pursuit of the claim against the others, as in case of a joint contract; but there can only be one satisfaction. A release or discharge of one joint promisor or debtor releases all. But this is not so if the right to pursue the others is reserved in the release or discharge; and a contract not to sue one does not discharge the others, nor can the others use it as a defense. In case one of the joint promisors or joint debtors dies, the survivors may be sued, and at common law they alone were liable, and could only hold the estate of the deceased for its share by proceeding in equity. But statutes to-day allow the creditor to enforce his claim directly against the estate or the representatives of the deceased in such cases. If one of a number of joint promisees dies, the survivors succeed to the right to collect the money or enforce the promise, but the estate of the deceased may compel them to account for its share of the proceeds. Also all the joint promisees, or, if some have died, all the survivors, must join in an action to enforce the promise. But there is a great diversity of legislation in the several states modifying these rules and a lawyer should be consulted with reference to the details.

Statute of Frauds.—Although the law prescribes no form for a simple contract, certain contracts must be *proved* by a written instrument or written memorandum or they are not enforceable. This does not mean that such contracts must of necessity be reduced to writing when made. They are not *void* if not expressed in writing. But when an action is brought upon such a contract, the contract must be proved by written evidence, either in the form of a written instrument in which it was set forth when made, or by some subsequent memorandum of its terms. This requirement grows out of an English statute, enacted in 1676, called the Statute of Frauds and Perjuries, or, shortly, the Statute of Frauds. The provisions of that statute which have to do with contracts are contained in the fourth and seventeenth sections. The fourth section provides that no action shall be brought upon any of the following five classes of contracts unless evidenced by some written instrument or note or memorandum thereof in writing, signed by the party sought to be charged or some one lawfully authorized by him:—

1. Special promises by executors or administrators to pay debts of the deceased out of their own property.
2. Contracts of guaranty.
3. Contracts upon consideration of marriage.
4. Contracts for the sale of land or sales of lands or any interests in lands.
5. Contracts not to be performed within one year from the making thereof. These provisions have been reënacted everywhere in America. The seventeenth section provides that contracts for the sale of goods, wares, and merchandise for the price of £10 or more shall not be enforced unless the buyer shall accept and actually receive part of the goods sold or shall make a part payment or give something by way of earnest money to bind the bargain, or a note or memorandum in writing of the bargain shall be made, signed by the parties to be charged or their authorized agents. The provisions of this section have been reënacted in most American jurisdictions, but they are not in force in Alabama, Arizona, Delaware, Illinois, Kentucky, Louisiana, New Mexico, North Carolina, Ohio, Pennsylvania, Rhode Island, Tennessee, Texas, Virginia, and West Virginia.

Fourth Section.—Taking up the fourth section first, the first and third provisions speak for themselves. The second provision covers all agreements by one person to become responsible for any civil liability incurred by another. The undertaking is said by lawyers to be "collateral"; and it is said that "original" undertakings are not included in the statute. In other words, to come within the statute, there must be three persons concerned; a creditor, a principal debtor, and a guarantor. Hence if one promises to pay his own debt or the debt of a partnership of which he is a member, the promise need not comply with the statute. For the same reason, there must be a subsisting and legal liability of the debtor to the creditor, or the promise of the third person to pay the claim is not gov-

erned by the statute. Other exceptions to this provision are:—

1. Contracts of indemnity, that is, contracts to save the promisee from loss in case he permits another to incur a liability to him or incurs liability to another.

2. Promises to the debtor (not the creditor) to pay the former's debt.

3. Contracts which discharge the debtor's liability to the creditor and substitute a newly-created liability of the promisor.

4. Contracts to pay the creditor out of property of the debtor put in the hands of the promisor for that purpose.

5. Contracts to pay or assume the debt of another made by the promisor for his own benefit and for a consideration inuring to the promisor alone. But the first of these exceptions is not recognized by the courts in Mississippi, Missouri, North Carolina, Ohio, Pennsylvania, and Tennessee, and there is not entire agreement as to the details of the fifth. The fourth subdivision of section four applies not only to contracts for the sale of land and for the creation of estates or interests in or liens or charges upon land, but also for the disposition of buildings and fixtures which in law are regarded as a part of the land. But growing crops are not within the provision; nor is a contract to sever a fixture from the land and dispose of it when severed. With respect to sales of timber growing upon land, most American jurisdictions hold that the statute applies. The fifth provision of section four applies only to promises which cannot, according to their terms, be performed within a year. Hence it has no application:—

(1) Where no time for performance is fixed,

(2) Where performance is made to depend on a condition or contingency which may be performed or may happen within a year,

(3) Where performance is to take place within a period longer than a year, but may, consistently with such provision, take place within a year.

Seventeenth Section.—The seventeenth section, where it is in force, applies to all sales and contracts for the sale of tangible personal property. And, in this country, it includes also shares of stock and other choses in action (see *infra*, PERSONAL PROPERTY) which have a tangible form. Whether contracts for the future delivery of property are within this section has been the subject of much controversy. In this country, two rules exist. In Massachusetts, a contract is governed by the statute where it is for the sale of articles existing at the time of the contract or for the making and sale of articles such as the seller manufactures or procures for the general market in the ordinary course of his business, whether on hand at the date of the contract or not. This rule is adhered to in California, Connecticut, Georgia, Maine, Michigan, Minnesota, New Hampshire, New Jersey, New Mexico, Washington, Wisconsin, and Wyoming. In New York, if the article to be sold is not in existence at the time the contract is made, or is not at that time in a condition to be delivered, the contract is not covered by the statute, unless the acts to be done by the seller are such as will not alter the essential character of the artiele contracted for. This rule is adopted in Iowa, Maryland, South Carolina, and Vermont.

The Note or Memorandum in Writing.—The note or memorandum need not be made at the time of the contract; a subsequent memorandum will suffice unless made after suit is brought. It need not be in any particular form. Indeed, it may consist of several distinct letters or papers provided they are connected and complete and do not need to be eked out by oral testimony. It must show the terms of the contract and show who are the parties to it. Whether and how far it must express the consideration of the contract has been the subject of much dispute and no general rules can be laid down safely within the compass of this discussion. Only the party who is sought to be held need sign. And the signature need not be at the end. The name written or printed anywhere on the paper, even as a letterhead, will suffice, if adopted by the party to identify the writing as his.

Conditions.—A promise may be absolute, that is, it may be a promise to do something at all events, or it may be subject to limitations. Such limitations may be in respect of the time of performance, or accompany performance, or supervene and defeat a liability to perform. A condition is an act or event which must precede some change in the legal relations of the parties. With respect to the mode of their creation, conditions are express, implied in fact, or implied in law. With respect to the mode of their operation, they are precedent, concurrent, or subsequent. An express condition is one stated in the agreement or promise in express terms. A condition implied in fact is one not expressed in the agreement or promise, but intended by the parties—such intention appearing from the fact that the condition must be performed in order that the promise may be performed. A condition implied in law is one which, without being either expressed or intended by the parties, is supplied or imported into the contract by the courts in the interest of fair dealing. A condition precedent is an act or event which must be performed or exist before any liability accrues under the promise. Conditions are concurrent where liability to perform on each side of a bilateral contract is dependent upon simultaneous performance on the other side. In such cases, the *act* which must precede liability on each side is a tender of performance on the other side. A condition is subsequent where it provides that an existing liability to perform is to terminate or be put an end to by some act or event other than performance itself. Conditions precedent and conditions concurrent may be express, implied in fact, or implied in law. All conditions subsequent are express. In the law of contracts, the courts prefer and imply conditions concurrent wherever possible. As between conditions precedent and conditions subsequent, courts prefer the latter in the law of property, the former in the law of contracts.

Express Conditions, Warranties, Representations.—A representation is a statement, express or by implication (i. e., by acts or conduct), of some material fact affording a reason or motive to another for entering into a legal transaction. A warranty is a contract, collateral to a legal transaction (which may be and usually is itself another contract) by which a party thereto undertakes or promises that cer-

tain facts are or shall be as he represents them to be. The untruth of a representation does not give rise to a cause of action or affect a contract unless the representation was made fraudulently or was made recklessly in known ignorance of the facts represented. The untruth of a warranty, of itself, gives rise to a cause of action upon the warranty. In insurance policies and charter parties a representation or promise, which is made by the parties an essential part of the contract, is called a warranty, and is a condition precedent to liability upon the contract. Whether a representation or promise in a policy of insurance or a charter party is also a warranty, depends on whether the parties have expressly, or by unexpressed intention, gathered from the whole contract, made the validity of or liability under the contract dependent on the truth or the performance of such representation or promise. Express conditions must be complied with strictly, while conditions implied in law require a substantial compliance only. The rule as to express conditions is subject to some qualifications. Courts incline to construe express conditions so as not to work unjust forfeitures or oppressions, as contrasted with mere loss of privilege. Again, in New York, express conditions in building contracts, such as a requirement of production of an architect's certificate as a condition of payment, are treated the same as conditions implied in law. The prevailing American doctrine is that such conditions must be complied with literally, except that fraud of the architect or his refusal to exercise an honest judgment, will excuse a failure to produce his certificate, even though he did not collude with the owner. But fraud of the party who insists upon the condition, or collusion between the owner and the architect in the case put, will excuse from performance of an express condition in all jurisdictions. Where performance of something by the promisee to the satisfaction of the promisor is made an express condition precedent to the liability of the promisor, if the subject matter is one of personal taste and judgment, the decision of the promisor is decisive, even though wrong and unreasonable, if it is honest; but where the subject is one of which any one else may judge equally well, the courts generally construe the condition to require only such performance as ought to satisfy a reasonable man.

Conditions Implied in Law.—The law implies conditions in bilateral contracts only. The reason for implying them in such contracts is that, as there are two promises, each given in exchange for the other, justice and fair dealing demand that neither party be permitted to enforce the promise of the other while in default of performance of his own. Hence, wherever it is possible, consistently with the terms of the contract, the courts will hold that performance, or at least tender of performance, on one side is a condition of calling for performance upon the other side; and they will hold that the two sides of a bilateral contract are conditions concurrent wherever they can reasonably do so. There are, however, cases where this cannot be done, and conditions precedent are implied. A breach of promise gives rise to a cause of action. But if the promise is also a condition, the breach is a defense and an excuse for non-performance on his part of the promise given by the promisee in exchange for the one broken. It is not every breach of the promises made in a bilateral contract which will be held a breach of condition also. If the breach takes place at the outset, before any part of the contract has been performed, a less breach will be held a breach of condition than where it takes place after part performance. But in general, and especially after part performance, the breach of contract on one side, in order to be a breach of condition available to the other side as a defense or as ground for non-performance on that side, must go to the essence of the contract, i. e., must defeat the chief object or at least a very important object of the agreement. In America, the courts generally hold that in mercantile contracts provisions as to time are of the essence of the contract. In other cases the terms and circumstances of the contract must determine the question. A majority of American jurisdictions make it a condition implied in law that the promisor shall not repudiate his promise or announce in advance of the time for performance that he will not perform. In such jurisdictions the other party in such case may treat the contract as broken completely and may sue at once. But in some jurisdictions he must wait till the time fixed for performance has elapsed before suing.

Impossibility of Performance.—Impossibility of performance of a promise may be inherent, that is, the promise may have been to do a thing intrinsically impossible or impossible under circumstances existing when it was made, or supervening; that is, it may have been possible of performance when made or possible intrinsically, but a change of circumstances may have occurred which has made performance impossible. As it is one of the requisites of all legal transactions that the intention of the parties be directed to a possible result, in case a promise is intrinsically impossible it is void. If it was apparently possible, but circumstances unknown to the parties exist which render it impossible, the promise may be voidable for mistake. In case of supervening impossibility some distinctions must be taken. If the promise was intrinsically possible, and the promisor assumed the risk of supervening impossibility, unless the contract is a wager, he is absolutely liable. But in contracts for personal service, it is a condition implied in fact that the person who promises such service shall be able physically to perform.

Contracts in Restraint of Trade.—A contract in restraint of trade may be made as part of and incident to a transfer of a business and its good will from promisor to promisee, or independent thereof. If made as a part of such a transfer it is valid and enforceable, provided it does not go beyond what is reasonably necessary for the protection of the business sold or transferred. In general the restriction should be limited both with respect to time and with respect to space. A general promise not to engage in the business in question anywhere at any time would hardly be reasonable under any circumstances. In drawing such agreements, care should be taken to limit the time and the place to the demands of a reasonable protection of the business transferred, and, in practice, it is safest to have the agreement drawn or passed

upon by a lawyer. An agreement not to engage in any business—not limited to the particular business sold or transferred—is obviously unreasonable and is invalid. Sales of existing business concerns to competitors for the purpose of suppressing competition and creating combinations in restraint of trade are now rendered invalid or at least are visited with penalties by legislation in the several states, and, so far as interstate commerce is affected, by federal legislation.

Wagering Contracts.—Originally wagers were not held intrinsically invalid, but were only invalid legally where the wager involved something inherently illegal or immoral. But legislation changed the rule in England, and in the United States many jurisdictions refused to follow it, so that by judicial decision or legislation all wagers are held contrary to public policy, and void. With respect to wagering contracts of a commercial nature, it may be said that wagers upon the prices of provisions, grain, stock, securities, and the like, upon the basis of "settlement of differences," are unlawful. But this does not mean that all agreements for future sale or partial delivery, even though made on margin or by way of option, are necessarily illegal. In an increasing number of states option contracts of this sort are being declared illegal by statute. But, except as modified by statute, contracts for future delivery are valid, even though the seller does not have the property sold; and buying and selling on margin is not unlawful, provided actual transactions are intended, and not colorable ones to cover actual gambling. Consequently option contracts are not inherently and necessarily unlawful, and the burden of showing that they are colorable and are mere cloaks for what are in fact gambling transactions is upon the person who asserts their invalidity. But if it is shown that neither party intended an actual transaction, each contemplating simply an adjustment by settlement of the difference between the contract price and the market price at the time of settlement, the transaction is void. If both parties, when the contract was made, contemplated actual sale and delivery, they may afterwards settle differences in price by way of performance. If neither intended actual sale and delivery at the time, a subsequent contract providing for actual delivery will nevertheless be upheld. If one of them contemplated actual sale and delivery, but the other intended only a settlement of differences, the former may enforce the contract but the latter may not.

Other Contracts Against Public Policy.—As was said at the outset, it is true of all legal transactions that they must be directed to a legally permissible result. The law will not sanction acts or agreements which have for their purpose anything illegal or contrary to good morals. Hence contracts which have for their plain and acknowledged purpose the violation of the laws of another state are unenforceable. So also the sale of articles which can only be used for illegal or immoral purposes creates no obligation. But sales of ordinary articles of merchandise which can be and usually are used for proper and lawful purposes, are valid, even if the purchaser intends and makes a different use. Yet there may be cases where the purpose is so obviously for use in immoral or unlawful pursuit that the transaction is void, as in case of a letting to a notorious prostitute. All promises and agreements also which tend to corruption, public or private, are void. That is, they are void not only where they involve breach of duty on the part of public officers or deceit of or fraud upon the public, but also where they involve breach of private relations of trust and confidence or fraud upon individuals. Moreover, all promises and agreements that obstruct the administration of justice are invalid. Hence any agreement to stifle a prosecution for a criminal offense, or any agreement, the consideration of which is that one who has committed a crime shall not be prosecuted or that evidence that might convict him shall be suppressed, concealed, or withheld, is void.

Alteration of Written Instruments.—As a general proposition, alteration of a written instrument in any material respect, whether by addition, interlineation, erasure, or substitution, deprives the instrument of legal effect; but to have this consequence the alteration must be made intentionally. An alteration made with the consent of the other party amounts to a new agreement, changing the terms of the original, and will be upheld as such.

Interpretation.—The purpose of interpretation is to find out exactly what the parties intended. To this end the primary clue or index is the literal meaning of the words they have used, or, if the words used have a special significance in the trade, art, or profession in which they were engaged, or a customary meaning in the locality where they contracted, such special or local meaning. If, so considered, their language is ambiguous or the apparent meaning does not seem reasonable, resort is to be had to the context, that is, to the remainder of the instrument or agreement or to instruments or documents executed at the same time or at other times as parts of the same transaction. If the intention still remains in doubt, the intrinsic merit of the various possible interpretations must be considered, and that interpretation is to be adopted which appears most fair, just, and reasonable under all the circumstances. In general, the language of a writing in case of doubt will be taken more strongly against the party who drew it, and hence, presumably, chose language most favorable to himself. The instrument will be construed, so far as possible, so as to reconcile every part of it with every other and thus give effect to every clause and provision; as between an interpretation that would make the instrument or the agreement or any part of it illegal, or invalid, and one that would give it full effect, the latter is to be adopted, and as between those parts which are printed or typewritten and those inserted in writing (or in case of a printed form inserted in typewriting) the inserted matter, in case of conflict, is to be followed.

Drawing Written Contracts.—If an agreement is of enough importance to be reduced to writing, it is usually of enough importance to be drawn or passed upon by a lawyer. A trifling fee at the outset will often save controversy, expense, and litigation later. In general, the danger of contracts drawn up by laymen is, not defect of form, for form counts for little or noth-

ing, but neglect to consider and provide against possible contingencies, so that when something occurs that should have been but was not guarded against or provided for, the writing affords no guide and differences arise. A lawyer, from experience, knows what these contingencies are. It is very rare that a layman appreciates them or that his experience covers all of them. If, however, the layman insists upon drawing his own contract, the chief things for him to do are: (1) to be sure that he clearly understands exactly what the several terms of the agreement are; (2) to state the several things agreed to in plain, simple, non-technical language so clearly that no one can misunderstand, and (3) to ask himself diligently what contingencies may arise to alter or modify the situation, determine what is desired or intended in each of such contingencies, if they happen, and provide fully and clearly for each. Do not try to use technical expressions. Do not try to fill out blank forms. Both are apt to be blind guides, except to the expert. The great thing is to ascertain and to say exactly what you mean. Clear understanding of the precise terms of the agreement and of the contingencies that may affect it is worth more than all the forms that were ever invented. There is always danger that the attention of the layman will be diverted from the substance of the agreement to the form he is trying to follow or the blank he is trying to fill out. No amount of formality will supply deficiencies in substance.

Quasi-Contracts.—The underlying principle of quasi-contract is that one person ought not to be enriched unjustly at the expense of another, and hence where the former, because of mistake, oppression, failure of consideration, or non-performance, impossibility of performance or unenforceability of a contract, is found holding money or property or the benefit of labor or services of the latter, not given to him voluntarily, i. e., as a mere gift, for which he has rendered no equivalent, and which, therefore, it is inequitable and unconscientious for him to retain, the law requires the person holding such money or property to restore the money or the value of the property or services as if he had actually promised so to do.

One who holds money or property paid or delivered to him under a mistake of material fact, is bound to restore the money or the value of the property, unless the person to whom it was paid or delivered has, before he knew of the mistake, changed his position; that is, done something in reliance on or because of such payment or delivery whereby he would suffer loss if compelled to make restitution. Unless there has been a change of position, it does not matter that the mistake was a negligent one on the part of the person who made it. By "material" mistake is meant a mistake inhering in the transaction itself as contrasted with a mistake in the "inducement" thereto—i. e., in the motive or in matters which led to the transaction. To be material, the mistake must be as to the transaction itself, as where one signs a note supposing it is a receipt or a deed of conveyance supposing it is a lease, as to the person, as where one believes he is dealing with one person when in fact it is another person, or as to the object dealt with, as where the parties have one piece of land in mind and actually contract about another. But mistake as to the person is only material in those transactions in which there is a choice of persons. Where, as in sales for cash of property taken after inspection, the person dealt with is wholly indifferent, a mistake in the person is of no consequence. It is generally laid down that mistake of law will not afford ground for relief. But there are many exceptions.

Compulsion.—In the same way money paid by one person to another under compulsion may be recovered back, unless it was actually owing. The compulsion need not be actual physical compulsion. Threatened seizure of or sale of property under legal process, injury to business, or arrest may put such pressure on a person that he does not pay voluntarily. On the same principle, if any one, but especially a public officer or a public service company, extorts money to induce the performance of a duty it owes already without any such payment, the money may be recovered.

Default Under Contract.—Where a party to a contract who has received benefit or advantages thereunder fails to perform his part of the agreement, the other party who has performed or has performed part, may, instead of prosecuting his ordinary remedy for damages for breach of the contract, choose to repudiate the contract on his part also. In such case it follows that the former holds something, not given him as a mere gift, for which he has rendered no equivalent, and he is liable to restore it, if money, or its value, if property or services. In case of services, however, some courts allow only the contract wage or compensation to be recovered. If performance of a contract becomes impossible, money paid or property delivered or services performed thereunder, without any equivalent, may be recovered on the same principle. So also, if the contract is not enforceable because of the Statute of Frauds. But if the contract is void for illegality, there can be no recovery upon Quasi-Contract for money paid, property transferred or services rendered thereunder, because, the parties being equally at fault (in legal phrase, *in pari delicto*), the law will not help either of them. If they are not equally at fault, as, for example, if one of them has been in a position to and has exerted pressure upon the other, or if the transaction was made illegal in order to protect the one from the other, the one less at fault may recover benefits conferred upon the other under the contract for which he has received no equivalent. In most jurisdictions, also, there are special statutes permitting recovery of money lost in gambling.

Negotiable Instruments: Bills of Exchange, Promissory Notes and Checks.—Negotiable instruments, so-called because, unlike other "choses in action" (see *infra*, PERSONAL PROPERTY) the legal title to them could be transferred, and transfer of them by indorsement and delivery to a purchaser in good faith, for value, before maturity, will have the effect of cutting off defenses which the maker may have had against the prior holder, are now governed in most jurisdictions by a statute known as the Negotiable Instruments Law. That statute is modeled upon the English Bills-of-Exchange Act, 1882. It had its inception in this country

in the Conference of Commissioners on Uniform State Laws, which, in 1895, instructed its committee on Commercial Law to prepare a draft of a statute codifying the law of bills and notes. The draft was prepared accordingly, was adopted by the Conference of Commissioners in 1896, and, on the recommendation of the Commissioners, has been adopted in the following jurisdictions: Alabama, Arizona, Colorado, Connecticut, District of Columbia, Florida, Idaho, Illinois, Iowa, Kansas, Kentucky, Louisiana, Maryland, Massachusetts, Michigan, Missouri, Montana, Nebraska, Nevada, New Jersey, New Mexico, New York, North Carolina, North Dakota, Ohio, Oregon, Pennsylvania, Rhode Island, Tennessee, Utah, Virginia, Washington, West Virginia, Wisconsin, Wyoming. Probably in a few years it will be in force throughout the United States. In the main the statute does not change the substance of the law as it has existed heretofore, but puts it in a more simple and orderly form and reconciles or eliminates conflicts and inconsistencies, which had grown up gradually in the course of decision in the several states. A summary of its provisions, as nearly as possible in its very words, with an indication of the most important local differences and rules recognized in jurisdictions where the statute is not in force, follows:—

Form and Interpretation.—An instrument to be negotiable must (1) be in writing, signed by the maker or drawer, but pencil writing suffices; (2) contain an unconditional promise or order to pay a sum certain in money; but in Georgia, Illinois, and Indiana, notes payable in produce or merchandise are negotiable by virtue of special statutes, and in the same way notes payable in cotton are negotiable in Mississippi; (3) be payable on demand or at a fixed or determinable future time; (4) be payable to order or to bearer—hence if the instrument is payable to a person named and not to his order or to bearer, it is not negotiable; also (5) where the instrument is a bill of exchange the drawee (person on whom it is drawn) must be named or otherwise indicated with reasonable certainty.

By "sum certain" is meant a fixed, definite sum of money. But the sum payable is a "sum certain" within the meaning of the Negotiable Instruments Law, although it is to be paid with interest or by stated installments or by stated installments with a provision (called an acceleration clause) that upon default in payment of any installment or of interest the whole shall become due, or with exchange, either at a fixed rate or at the current rate, or with costs of collection or an attorney's fee in case payment shall not be made at maturity. Where the Negotiable Instruments Law is not in force, authorities differ as to the effect of making the note payable with exchange. In Minnesota and Texas the rule is the same as that prescribed by the Negotiable Instruments Law. But in Indiana and South Carolina such a provision makes the note non-negotiable. Provisions for payment of an attorney's fee in case of non-payment at maturity are unenforceable in Arkansas, Kentucky, Michigan, Nebraska, North Carolina, Ohio, Oregon, and Virginia. Such a provision destroys negotiability in California, Minnesota, South Carolina, and South Dakota.

A promise to pay is unconditional within the meaning of the Negotiable Instruments Law, although it is coupled with an indication of a particular fund out of which reimbursement is to be made or a particular account to be debited with the amount paid or a statement of the transaction which gives rise to the instrument, such as, for instance, that the instrument was given for the purchase price of something named therein. But an order or promise to pay out of a particular fund is not unconditional, and hence the instrument containing it is not negotiable.

By "fixed or determinable future time" the statute means that the instrument must be payable (1) at a fixed period after date or sight, or (2) on or before a fixed or (absolutely) determinable specified future time, or (3) on or at a fixed period after the occurrence of a specified event which is certain to happen (such as the death of the maker), though the *time* of its happening may be uncertain. But if it is payable upon a contingency, it is not negotiable, even if the event does actually take place. For example, a note payable when some person specified comes of age is not negotiable, because he may not live to come of age, and so the note may not become payable.

If the instrument contains an order or promise to do anything beyond payment of money, it is not negotiable. Exceptions to this are provisions authorizing the sale of collateral securities if the instrument is not paid, provisions for confession of judgment upon the instrument, waivers of exemption and other like laws for the benefit of the maker or drawer, and provisions allowing the holder, if he chooses, to require something to be done instead of payment. Provisions for confession of judgment and for waiver of legal protection or benefits are not allowed in many states, and in these the statute does not change the rule. It merely prevents such provision from affecting the negotiability of the instrument.

It is not necessary that the instrument be dated or recite that value has been received or specify the place where it is drawn or the place where it is payable. In many states, however, there are special statutes requiring notes given in payment for patent rights to state that such is the consideration. Where these or similar statutes are in force, the general provision of the Negotiable Instruments Law does not alter the rule. If no time for payment is expressed, the instrument is payable on demand. When it is knowingly made payable to the order of a fictitious or non-existent person, or the name of the payee does not purport to be the name of any person or the only or last indorsement is an indorsement in blank (that is, an indorsement of the name of the indorser only) the instrument is payable to bearer as well as when it is payable "to bearer" or to a person named "or bearer." Ante-dating or post-dating, unless done for an illegal or fraudulent purpose, does not affect the validity of the instrument.

Consideration.—Every negotiable instrument is presumed to have been issued for a valuable consideration, and every one whose signature appears upon it is presumed to have become a party thereto for value. Any consideration that would support a simple contract (see *supra*, CONTRACTS—*Consideration*) is held to be "value," and in addition (differing from simple

contracts) any antecedent or pre-existing debt. A holder who has a lien upon the instrument (as, for example, a pledgee of a note as collateral security) is considered a holder for value to the extent of his lien. Want of consideration or failure of consideration (i. e., that in exchange for which the instrument was given proves to be of no value or non-existent, or, if a promise, is not done or performed) is a defense against any one except a holder "in due course" (i. e., one who took for value, before maturity, without notice of any defense). If the failure of consideration is partial it is a defense to the extent of such failure except against the holder in due course. An accommodation party (i. e., one who becomes a party to the instrument, without receiving value, in order to lend his name to another), is liable to a holder for value, although such holder knew him to be an accommodation party only.

Negotiation.—A negotiable instrument is negotiated (i. e., transferred so as to make the person to whom it is transferred the "holder" of it) by delivery if it is payable to bearer, and by indorsement and delivery if it is payable to order. The indorsement must be written upon the instrument itself or upon a paper attached thereto.

Indorsements.—An indorsement may be either special or in blank, and may also be restrictive, qualified, or conditional. The holder may convert a blank indorsement into a special indorsement by writing over the signature of the indorser in blank any contract consistent with the character of the indorsement. A special indorsement specifies the indorsee, so that the indorsement of the latter becomes necessary to any further negotiation of the instrument. An indorsement is restrictive when it prohibits further negotiation of the instrument or makes the indorsee agent of the indorser for collection (e. g., "pay John Stiles, for collection," or simply "for collection"), or makes the indorsee a trustee for some one else (e. g., "pay John Stiles for account of Thomas Jackson"). A special indorsement to a person named without adding "or order" or "to the order of" is not restrictive. An indorsee who takes by a restrictive indorsement acquires the right to receive payment and to sue upon the instrument. If the restrictive indorsement authorizes him to indorse (e. g., "pay John Doe or order for collection"), he may transfer his rights as indorsee to another; but in that case his indorsee acquires only the title of the first indorsee under the restrictive indorsement. One who takes by restrictive indorsement takes subject to defenses which the maker might have set up had there been no indorsement. Where the Negotiable Instruments Law is not in force, most jurisdictions hold, as the statute prescribes, that an indorsee for collection may sue upon the instrument. But he cannot do so in Minnesota. A qualified indorsement relieves the indorser of all liability *as indorser*, and operates only to transfer the instrument to the indorsee. It may be made by adding to the indorser's signature the words "without recourse," or any words of similar import. Such an indorsement does not impair the negotiability of the instrument and does not serve to put the indorsee on inquiry as to equities between the original parties. Where the indorsement is conditional, a party liable on the instrument may disregard the condition and pay the holder whether the condition has been fulfilled or not, and the holder will take the money subject to the rights of the conditional indorser. If an instrument payable to bearer is indorsed specially, the instrument is still subject to negotiation by delivery, but the person who indorsed specially is liable as indorser only to such holders as take through his indorsement. If an instrument is drawn or indorsed to a person as cashier or other fiscal officer of a bank or corporation, it is *prima facie* (that is, unless and until the contrary is shown) payable to the bank or corporation and negotiable by its indorsement or by that of the officer. Unless the indorsement bears a date which shows the contrary, every negotiation *prima facie* is considered to have taken place before maturity.

Rights of the Holder.—The holder may sue in his own name (whereas at common law the assignee of non-negotiable choses in action had to sue in the name of his assignor). Payment to the holder in due course of business discharges the instrument. A "holder in due course" is one to whom the instrument was negotiated under the following conditions: (1) it was complete and regular upon its face; (2) he became the holder before it was overdue and without knowledge that it had been previously dishonored, if such was the fact; (3) he took it in good faith (that is, intending actually to buy it as a business transaction, and not merely to cut off defenses of the maker or some other party thereto) and for value; (4) at the time it was negotiated to him, he had no notice of any infirmity in the instrument or defect in the title of the person negotiating it. If the instrument is payable on demand, and is negotiated an unreasonable time after its issue, the holder is not a holder in due course. What is a reasonable time depends upon the facts of each case. A few days could not suggest to any one that the instrument had been dishonored. A few months might, depending on circumstances. A year or more would almost certainly do so. The holder must not only have taken the instrument but must have paid the full amount agreed to be paid therefor before receiving notice of any infirmity in the instrument or defect of title in the person negotiating it, or he will not be a holder in due course. If he has paid part before receiving notice, he is a holder in due course to the extent of such payment. The title of the person who negotiates an instrument is considered defective when he obtained it, or any signature to it, by fraud, compulsion, or other unlawful means, or for an illegal consideration, or when his negotiating it is a breach of faith or amounts to fraud. To constitute notice of an infirmity in the instrument, or defect in the title of the person negotiating it, the person to whom it is negotiated must have had actual knowledge of the infirmity or defect or knowledge of such facts that his taking the instrument amounted to bad faith. A holder in due course holds the instrument free from any defect of title of prior parties and free from defenses available to prior parties among themselves, and may enforce payment for the full amount of the instrument against all parties liable upon it. In the hands of any holder other than a holder in due course,

a negotiable instrument is subject to the same defenses as if it were non-negotiable. But a holder who derives his title through a holder in due course, and who is not himself a party to any fraud or illegality affecting the instrument, has all the rights of the holder in due course through whom he takes as against all parties prior to the latter. By "prior" parties are meant those who became parties by making, drawing, accepting, or negotiating before the indorsement in question. Every holder is taken to be a holder in due course unless and until the contrary is shown. But when it is shown that the title of any person who has negotiated the instrument was defective, the burden is on the holder to prove that he, or some person under whom he claims, took as a holder in due course.

Liability of Parties.—The maker of a negotiable note contracts to pay it according to its terms, and is the person primarily liable upon it. The drawer of a bill of exchange or of a check contracts that the instrument will be accepted or paid, as the case may be, on due presentment, according to its terms, and that if it is dishonored and due notice is given, he will pay the amount to the holder or to any indorser who may be compelled to pay it. The acceptor of a bill contracts to pay it according to the terms of his acceptance, and is the person primarily liable. A person who places his signature upon a negotiable instrument otherwise than as maker, drawer, or acceptor, is taken to be an indorser unless he uses words that clearly show an intention to be bound in some other way (e. g., as guarantor). Where a person who is not maker or drawer or payee puts his signature in blank upon a negotiable instrument before delivery, he is called an irregular indorser. The Negotiable Instruments Law provides that an irregular indorser shall be liable as indorser, subject to three rules: (1) If the instrument is payable to the order of a third person, he is liable to the payee and to all subsequent parties; (2) if the instrument is payable to the order of the maker or drawer, or is payable to bearer, he is liable to all parties subsequent to the maker or drawer; (3) if he signs for the accommodation of the payee (i. e., to enable the payee to negotiate it), he is liable to all parties subsequent to the payee. Every person negotiating an instrument by delivery (i. e., where payable to bearer or indorsed in blank prior to the negotiation) or by a qualified indorsement (i. e., one "without recourse") warrants (1) that the instrument is genuine and in all respects what it purports to be; (2) that he has good title to it; (3) that all prior parties had capacity to contract; and (4) that he has no knowledge of any fact which would impair the validity of the instrument or render it valueless. He is liable for damages for breach of any of the warranties which the law creates, even though he did not indorse at all or indorsed "without recourse." But where the negotiation is by delivery only, only the immediate transferee has the benefit of the warranty involved in the transfer, and the warranty of capacity of the parties to contract does not apply to municipal or corporate bonds or to public or private securities other than bills of exchange and promissory notes. An indorser, except one who makes a qualified indorsement, warrants (1) that the instrument is genuine and what it purports to be; (2) that he has a good title to it; (3) that all prior parties had capacity to contract; and (4) that the instrument is valid and subsisting at the time of his indorsement. In addition to the warranties involved in his indorsement, his indorsement is a contract that on due presentment the instrument shall be accepted, or paid, or both, according to its tenor, and that if it is dishonored, and due notice is given, he will pay the amount of it to the holder or to any subsequent indorser who may be compelled to pay it. Among themselves, in the absence of special agreement, indorsers are liable in the order in which they indorsed.

Presentment for Payment.—Presentment for payment is not necessary in order to hold the person primarily liable on the instrument, but it is necessary in order to hold the drawer of a bill or check and in order to hold indorsers. Where the instrument is not payable on demand, presentment must be made on the day it falls due. If payable on demand, presentment must be made within a reasonable time after the instrument is "issued" (i. e., first delivered, complete in form, to a person who takes it as holder). But a bill of exchange payable on demand may be presented for payment within a reasonable time after the last negotiation of it. Presentment must be made by the holder or by some one authorized to receive payment on his behalf, at a reasonable hour on a business day, to the person primarily liable, or, if he is absent or cannot be reached, to any person found at the place where presentment is to be made. Presentment for payment must be made at the place of payment specified in the instrument, if any is specified. If no place is specified, but the address of the person to make payment is given in the instrument, it must be presented there. Otherwise it is to be presented at the usual place of business or residence of the person who is to make payment. If no such place may be found, with reasonable inquiry, it may be presented to the person who is to make payment, wherever found, or at his last known place of business or residence. If payable at a bank, presentment for payment must be made during banking hours, unless the person to make payment has no funds there to meet it at any time during the day, in which case presentment at any time before the bank is closed on that day is sufficient. If the party primarily liable is dead, and no place of payment is specified, presentment must be made to his executor or administrator, if any. Where the persons primarily liable are liable as partners, and no place of payment is named, presentment may be made to any one, even though the partnership has been dissolved. But in other cases of joint debtors on the instrument, unless a place of payment is named, presentment must be made to all. If the drawer has no right to expect or require that the drawee or acceptor will pay the instrument, presentment for payment is not necessary to hold the drawer; nor is it necessary to charge an indorser where the instrument was made or accepted for his accommodation, and he has no reason to expect that it will be paid if presented. If delay in making presentment is caused by circumstances beyond the control of the holder, it will be excused. But he must make presentment with reasonable diligence after the cause of delay

ceases to operate. Presentment is dispensed with where, after the exercise of reasonable diligence, it cannot be made and where the drawee is a fictitious person. It may also be waived in writing or orally, and waiver may be shown by the usage of the parties or the business. The instrument is dishonored by non-payment when it is duly presented and payment is refused or cannot be obtained, or where presentment is not necessary or dispensed with and the instrument is overdue and unpaid. When the instrument has been dishonored, and notice has been given, it is said that the liability of drawers, indorsers, and parties secondarily liable has "become fixed." The holder now has a right to resort to them for payment, and they are no longer regarded as sureties for the person primarily liable. By the Law Merchant, three days of grace were allowed for payment after the date fixed by the instrument. The Negotiable Instruments Law has abolished days of grace, but it provides that if the instrument falls due on Sunday or a holiday, it is payable on the next succeeding business day. This was the rule of the Law Merchant also. Where days of grace exist, if the last day of grace falls on Sunday or a holiday, but two days are allowed.

Notice of Dishonor.—Notice of dishonor must be given to the drawer and to each indorser, and, in general, any drawer or indorser to whom such notice is not given is discharged. It may be given by or on behalf of the holder or by or on behalf of any party who might be compelled to pay the holder, and on so doing could claim reimbursement from the party notified. It may be given by agent, and the agent may give the notice in his own name. If given by or on behalf of the holder all subsequent holders and all prior parties who have a right of recourse against the party notified are entitled to the benefit of the notice. It may be written or oral. If written it need not be signed, and may be supplemented by an oral communication. A misdescription of the instrument does not invalidate it unless the misdescription actually misleads the party notified. But it must identify the instrument and must indicate that the instrument has been dishonored by non-acceptance or non-payment. It may be given by personal communication or delivery or through the mails, and either to the party himself or his agent. If the party to be notified is dead, it must be given to his executor or administrator, if any. If there is none, it may be sent to his last residence or last place of business. With respect to partners and joint debtors, the rule is the same as in case of presentment. The notice may be given as soon as the instrument is dishonored, and, if the parties reside in the same place, must be given as follows: (1) If given at the place of business of the person to receive notice, before the close of business hours on the day following; (2) if at his residence, before the usual hours of rest on the day following; (3) if sent by mail it must be deposited in the post office so as to reach him in the usual course of mail on the day following. If the parties reside in different places, if the notice is sent by mail, it must be deposited in the post office in time to go by mail the day following the day of dishonor, or if there is none at a convenient hour, by the next mail thereafter. If given in some other manner, it must be within the time in which a notice by mail, duly given, would have been received. If properly addressed and deposited in the post office, there is due notice, notwithstanding any miscarriage in the mails; and the term post office in the statute includes branch post offices and letter boxes. Where a party has added an address to his signature, notice must be sent to that address. If he has given no address, it must be sent to the post office where he is accustomed to receive letters, either his place of business, or his office, or any place where he is staying. If he actually receives it in time, it is no matter where it was addressed. Notice may be waived, and a waiver of "protest" is held to waive presentment and notice. Delay is excused and notice itself dispensed with in like circumstances as in case of presentment. But in addition, if drawer and drawee are the same person, or the drawee is a fictitious person, or the drawer has stopped payment, the drawer is not entitled to notice of dishonor. Notice need not be given to an indorser where the drawee is a fictitious person, and he knew it, or where the instrument was made or accepted for his accommodation.

Bills of Exchange.—An inland bill of exchange is a bill which on its face is both drawn and payable within the state. Any other bill is called a foreign bill. The bill may be drawn on two or more drawees jointly, but not in the alternative or in succession. But the drawer or any indorser may insert the name of a "referee in case of need," that is, of a person to whom the holder may apply, in case the bill is not accepted or is not paid. In such a case, the holder may resort to such person or not as he sees fit.

Acceptance of Bills of Exchange.—The acceptance must be in writing, signed by the drawee. The usual form is "accepted," followed by the signature of the drawee. The holder has the right to insist that the acceptance be written on the bill, and may treat the bill as dishonored if this is not done. But an acceptance on another paper will bind the acceptor in favor of any one to whom it is shown and who takes the bill for value on the faith of it. The drawee is allowed 24 hours after presentment in which to decide whether or not to accept, but if he destroys the bill or refuses to return it after 24 hours, he is held to have accepted. This provision is not in force in Illinois.

Protest.—Protest is only necessary in case of dishonor of a foreign bill of exchange by non-acceptance, or, if not previously dishonored by non-acceptance, by non-payment. If it is not made the drawer and indorsers are discharged. But it is much better and safer to resort to a notary public and have protest made in all cases, as the record of the notary affords a certain and convenient mode of proof, and the notary usually has given an official bond upon which recourse may be had if he makes a mistake resulting in loss. The protest must be in writing, signed and sealed by the notary, and must be attached to the bill or to a copy of it. It must be made at the place and on the day of dishonor of the bill. In other respects the rules governing it are similar to those governing notice of dishonor.

Checks.—The Negotiable Instruments Law provides expressly that its rules applicable to bills of exchange payable on demand shall apply to checks, except as otherwise provided. Three special points should be noted: (1) a check must be presented for payment within a reasonable time after it is issued, or the drawer will be discharged from liability to the extent of any loss caused by the delay (e. g., intervening insolvency of the drawee); (2) where the check is certified by the bank on which it is drawn, the certification is equivalent to an acceptance; (3) if the holder procures the check to be certified, the drawer and all indorsers are discharged.

Agency.—An agent is a person appointed to do some act or to act generally on behalf of another. The latter is called the "principal"; and what the agent does in execution of his agency is regarded legally as if done by the principal. An attorney-at-law is an agent who conducts the legal business of his principal, here called his "client." An attorney in fact is an agent appointed by a deed, called a power of attorney. (See *infra*, CONVEYANCING). A factor is an agent to whom goods are consigned for sale upon commission. If he undertakes to become responsible to the principal for payment by or solvency of those to whom he sells, he is called a *"del credere* agent." A broker is an agent employed to buy or sell without having possession of the property or to go between the parties and bring them together.

Appointment of Agents.—In general, no form is necessary. A course of conduct which shows an intention that the agent act for and on behalf of the principal will suffice. And if the course of conduct is such that a reasonable man would so interpret it, those who deal with the supposed agent in reliance on the appearance so created will be permitted to hold the supposed principal as what his acts have made him appear.

Ratification.—Although one who acts as agent has no authority, the person for whom he has assumed to act may treat the act as authorized and thus become bound thereby as if he had authorized it in the first instance. This is called ratification. One may ratify expressly or by accepting the benefit of the transaction with knowledge of all the facts. But one who ratifies must ratify the whole. He cannot ratify that part which is to his advantage and repudiate the remainder.

General and Special Agents: Execution of the Agency.—A general agent is one employed either to manage the whole business of the principal or in a position of a generally recognized character, which, from its nature, carries a considerable apparent authority. A special agent is one appointed for a particular occasion or purpose which does not involve any apparent authority beyond what is specially given. The principal is bound by what the general agent does within the scope of his authority, even if contrary to the instructions given him. He is only bound by the acts of the special agents so far as they were authorized. The agent ought always, if only for his own protection, to act in the name of his principal. Thus he should not sign "Richard Roe, Agent," but "John Doe, by Richard Roe, his agent." Otherwise there is danger that he may be held personally upon a transaction into which he intended to enter as agent only. If he acts in his own name without disclosing his principal, the principal may nevertheless sue or be sued upon the transaction, because in truth it is his. But the agent may be held personally, because the other party dealt with him supposing him to be the party in interest. Also if the principal sues in such a case, the other party may make any defense he might have made against the agent. The agent having been chosen because of the confidence reposed in him personally, cannot delegate his agency to another. But he has the power to do anything reasonably necessary to execution of his agency, which includes the employment of sub-agents for whose acts he is liable as principal. He is responsible to the principal for execution of his authority according to the terms thereof. If he exceeds his authority or violates his instructions, he may make the principal liable to third persons, but he will himself be liable to the principal for the resulting loss. When he deals with third persons as agent, he impliedly warrants his authority, and is liable to them if his acts fail to bind the principal for lack of authority.

Rights and Duties of Agents.—An agent is a fiduciary, that is, he occupies a relation of trust and confidence. Hence he must deal with his principal in the utmost good faith, must fully disclose to him all facts bearing on transactions between himself and the principal, must not make any secret profit out of the agency, and must account to the principal for it if he does, and occupies the position of a trustee with respect to money and property in his hands. He is entitled to be reimbursed for expenses properly incurred in the course of the agency. Whether or not he is entitled to compensation depends upon his contract with the principal.

Revocation.—Agency is terminated by death of either principal or agent. It may also be revoked by the principal unless the agency is "coupled with an interest" (i. e., unless the agent is agent of the principal for some purpose of the agent's as well as of the principal's). But if the agency is generally known, the principal on revoking should notify third persons who have been in the habit of dealing with the agent as such, or he may be bound by the appearance of agency which he suffers to continue.

Suretyship and Guaranty.—A surety enters into a joint or joint and several contract along with the principal debtor (called the principal) upon the same consideration, so that in form both principal and surety have joined in the promise or undertaking. A guarantor enters into an independent contract, collateral to the contract or obligation of the principal, upon an independent consideration, if made after the principal's obligation is incurred, to be answerable for performance by the principal. A guaranty must be evidenced by writing (see *supra*, CONTRACTS, STATUTE OF FRAUDS). As between principal and surety, the former ought to pay or perform. Hence he is said to be primarily and the latter to be secondarily liable. As between the creditor and the surety, the latter is a joint or joint and several debtor. But if the principal knows the latter to be surety, he is bound so to act as not to interfere with the rights of the

surety, as between him and the principal, growing out of the surety's secondary liability.

Release or Discharge of Surety or Guarantor.—As the contract of a guarantor is collateral, obviously he cannot be liable unless there is an obligation on the part of a principal, to which his agreement may be collateral. Hence if the principal is not liable or the liability of the principal is extinguished, the collateral liability comes to an end also. Moreover, the surety or guarantor may be discharged (1) by acts of the creditor without his consent, altering materially the contract with the principal; (2) by acts which, without his consent, take away his right to pay the creditor, and for his own protection obtain thereby the immediate power to enforce the creditor's rights against the principal. Hence an extension of time to the debtor on consideration and for a definite period, a surrender of securities to the principal, or a material variation of the surety's or guarantor's risk, without the latter's consent, is a discharge. In the absence of statute, the better opinion (though the matter is in dispute) is that surety or guarantor cannot compel the creditor to sue the principal first; his remedy is to pay the debt and enforce the creditor's rights against the principal himself for his own protection. But statutes allow him to notify the creditor to sue, and release him in case the notice is not complied with, in Alabama, Arkansas, Illinois, Indiana, Iowa, Kentucky, Mississippi, Missouri, North Carolina, Ohio, South Dakota, Tennessee, Texas, Virginia, and Washington. The same result is reached by judicial decision in New York, Pennsylvania, and partially in Minnesota.

Rights of Surety.—In addition to the right to pay the debt and succeed to the creditor's rights against the principal debtor for his own protection, a surety has a right against the principal to be indemnified for whatever he has been compelled to pay on the debt, against his cosureties to compel them to contribute their shares of what he has had to pay, supposing he has paid more than his share, and against the principal to compel the latter to exonerate him by paying the debt.

Rights of the Creditor.—The creditor, except when notice is allowed as above explained, may proceed immediately against guarantor or against surety, if he is jointly and severally liable, or against principal and surety jointly, if they are jointly liable, to collect the debt. He also has a right to require the guarantor or surety to apply on the debt any securities the principal may have given him for his indemnity.

Partnership.—Partnership is the relation between persons who have agreed to combine their money or property or labor or skill or some of them in a joint enterprise or business, and to share the profits. The basis of partnership is agreement, and the law does not recognize the partnership as an entity or legal person. Herein it differs from a corporation, the basis of which is the authority of the state creating a legal entity or person distinct and apart from the individual incorporators. Hence, while a corporation owes debts, not the stockholders or members, a partnership does not owe debts legally, but the partners owe them. That is, the liability of members or stockholders in a corporation is a limited one, usually extending only to the amount unpaid upon their shares. But the partners in a partnership are joint debtors, and are liable for the whole amount of the partnership indebtedness. It is common, however, for statutes to provide for special or limited partnership, in which a special partner, who advances or has advanced money to the business, receives a share of the profits for the use of his money, and is not liable for debts. Such statutes require that the name of the special partner shall not appear in the firm name, and that the partnership agreement (or articles) shall be filed in some specified public office. It follows also from the legal conception of a partnership that debts due to it are legally due to the partners as joint creditors. Hence, if one partner dies, the debt, in legal understanding, is due to the surviving partner. But he must account to the estate of the deceased partner for the latter's share. Conversely, the legal liability for partnership debts, in case of death of one partner, is imposed on the survivor. But the latter is entitled to be repaid out of the estate of the deceased for anything he may pay upon such debts beyond his share. On the same ground, suits against the partnership originally had to be, and, even after modern legislation allowing suits by or against partnerships in the partnership name, may be brought against the partners jointly, just as against any other joint debtors, and either the property of any partner or the partnership property may be levied upon under execution to pay the debt. Moreover, a creditor of a partner, for a debt in which the partnership has nothing to do, may levy execution upon the partnership property and sell the debtor's interest therein, as in any other case of joint ownership.

Powers and Duties of Partners.—Each partner is the agent of the partnership, and hence of all the partners, with respect to the partnership business. If among themselves they have agreed to limit the authority of some one partner, he may become liable to his co-partners if he exceeds such limitation. But persons who deal with the partnership are entitled to assume that any partner may bind all, unless they know of the limitation. Partnership is a fiduciary relation, and all that was said above (see AGENCY, *supra*) as to the nature and consequences of such a relation applies here also. A partner cannot sell or transfer his share or any part of it so as to bring a new partner into the partnership without the consent of all his co-partners. And if a new one is so brought in, he becomes a co-owner of partnership property and joint debtor for its debts from the time he is taken in. He is not liable for prior debts, and the former partner whose place he takes is still liable therefor. But it may be agreed that he shall assume the liability of the retiring partner.

Dissolution.—A partnership, if formed for a fixed and limited time, is dissolved by expiration of that time; if not, it may be dissolved by notification of any one to the others that it is dissolved. In either case, it is dissolved if all consent, if a partner dies, or if one of the partners becomes bankrupt. It may also be dissolved by a court if one of the partners become insane or incapable of acting, or so conducts

himself as to prevent proper carrying on of the business, or if the business can only be carried on at a loss. Where a court winds up a partnership, it will pay the partnership creditors first out of the partnership assets, and will allow creditors of the individual partners to take only what is left.

Corporations.—A corporation is regarded in law as a person distinct from its members, so much so that it may have rights against them and they in turn have rights against it or toward it. It derives its existence from the state. Formerly each corporation was created by a special act, for that purpose called a charter. The practice now is to provide by general law, that ordinary business corporations may be formed by a simple process of adopting articles of association or incorporation and filing them or a certificate thereof in some designated public office.

Corporations are of two kinds, public and private. A public corporation is one created for some purpose of government, such as a city, a village, a school district. Other corporations, even where they are public-service corporations, like railway, telegraph, telephone, and express companies, are called private corporations. In case of charitable, religious, library, and sometimes social institutions or societies, which are permitted to incorporate, the statutes prescribe an organization without capital stock. But in other cases the interest which the members have in the corporation is represented by shares in the capital stock, the total amount of which is fixed by the charter or articles. The stockholders are not in any sense the owners of the property or assets of the corporation. The corporation owns them. The stockholders own merely the shares, which give them a right to participate in the control of the corporation, receive dividends, if any are declared, and upon winding up of the corporation, to receive a share in the residue after payment of all claims against the corporation in the proportion which their shares of stock bear to the whole capital.

Powers of Corporations.—A corporation may sue and be sued in the corporate name, may have and use a seal, and may make reasonable by-laws, not inconsistent with law, for its government. It also has what is called legally "perpetual succession"; that is, the corporate existence is in no way affected by changes in its membership, and its property and obligations belong to and are those of the legal entity, no matter who are the members or how the membership changes. But the corporation only has the powers and can only use its powers for the purpose provided in its charter articles. An act outside of what is so provided is said to be *ultra vires*, that is, beyond its powers. If it attempts to do *ultra vires* acts, any stockholder may obtain an injunction. The corporation cannot enforce *ultra vires* contracts against third persons, and some authorities hold that *ultra vires* acts are wholly void.

Management of Corporations.—The charter or articles provide how a corporation shall be managed or governed. As a general proposition, the ultimate government is in the meeting of all the stockholders, in which each has one vote for each share which he holds. The immediate management is usually in a board of directors. These directors occupy a fiduciary relation to the corporation and to the stockholders (see *supra*, AGENCY). In case of mismanagement, in breach of the duties imposed by this relation, a stockholder may bring a suit on behalf of the corporation to enjoin the mismanagement and compel restitution to the corporation of money or property it is equitably entitled to.

Stock and Stockholders.—Shares are usually evidenced by certificates and are transferable on the books of the corporation by surrender of the old certificate and taking out a new one running to the new shareholder. The usual practice is to execute a blank power of attorney on the back of the certificate authorizing the holder to make such transfer, so that practically when the original holder has indorsed it, the certificate can pass by delivery. But at law the person who is registered on the books as stockholder is regarded as owning the shares, and he only is entitled to vote at meetings and to receive dividends.

Dissolution.—A corporation may be dissolved by expiration of the time fixed in its charter or articles, by voluntary surrender of its franchises, or by forfeiture, either for not using its franchises or for misusing them, at suit of the state. Statutes in many jurisdictions also provide for the judicial winding up of insolvent corporations, on the vote of the stockholders, or at the instance of certain public officers.

Property.—The law distinguishes two kinds of property, real property and personal property. The distinction is an arbitrary and technical one, and is by no means as easy as the layman usually supposes it. Real property, on the death of the owner, descends at once to the heir or heirs, unless disposed of by will; personal property, whether there is a will or not, passes at once to the executor or administrator, by whom, if disposed of by legacies in the will, it is turned over to the legatees, or, if there is no will, it is distributed among the next of kin of the deceased owner. Estates in land, except for a fixed period of time, i. e., for years, and certain rights called "incorporeal hereditaments," such as rights of way and other like rights in another's land, rights to take something from another's land (called profits), franchises, annuities and rents, are real property. Everything else that may be owned, including estates in land of definite duration, is personal property.

Personal Property.—The technical term for personal property is "chattels" or "goods and chattels." Chattels are of two kinds: chattels real, that is, estates in land less than freehold (i. e., for years or at will), and chattels personal, that is, all other forms of personal property. Chattels personal are classified as choses in possession, that is, tangible corporeal chattels and choses in action, that is, incorporeal chattels, such as notes, book accounts, shares of stock, bonds, judgments, and the like.

Choses in Action.—Originally the law did not allow choses in action to be transferred. Later it allowed transfer of claims upon contract or for injury to property to the extent that the assignee might sue and collect in the assignor's name. Statutes now allow him to sue in his own name in most jurisdictions. But

claims for salary of public officers not yet earned cannot be assigned.

Joint and Common Ownership. — Where two or more persons own a chattel in undivided shares they are to-day owners in common. Partners as to debts due the firm, and trustees, executors, and administrators are an exception. They are held joint owners, so that is one dies the legal title goes to the survivors. In case of ownership in common, the share of a deceased owner is treated like any other property. Ownership in common of chattels is a very unsatisfactory form of ownership. Each owner is entitled to possession, and the possession of one is that of all. Hence unless the chattel is divisible (e. g., so many tons of hay or bushels of grain), if one owner in common excludes the other from the use of the chattel, the latter's only remedy is to go and take it, if he can, without breach of the peace. Even if there is a contract how it shall be used, he can only sue for breach of that contract. If the chattel is divisible, there may be partition by either taking his share. In any case there may be partition by agreement, or if the chattel is indivisible and they cannot agree, by suit for that purpose. If repairs are necessary, either may repair, and if the other has agreed or has been notified and refused to do anything, the latter may be held for his share of the reasonable expense of necessary repairs.

Acquisition of Chattels.—There are two modes of acquisition: original acquisition, by which one gets a new and independent title (without regard to any pre-existing rights of others), and derivative acquisition, in which one gets whatever title the person from whom he takes has to give him. One mode of original acquisition is occupation, i. e., taking possession with intent to become owner, of wild animals (not on another's land), or of abandoned chattels (provided one is rightfully on the land where he finds them). An abandoned chattel is one of which the owner has relinquished possession intending to give up all his rights in it. Another mode is adverse possession of the chattel for the period of the statute of limitations. Another mode is called accession. The person seized of land for the time being, even if wrongfully, becomes the owner of the fruits and products of the soil he removes therefrom while seized. The owner of animals becomes owner of the increase born to such animals. Another form of accession takes place where materials of two persons are united or where one person expends labor upon another's materials so as to change their form. In the former case, if they cannot be separated, the whole belongs to the owner of the principal materials, but the other has a claim for the value of what he thus loses. In the latter, if the new form is of a value greatly in excess of the old one, the person who has made the change by his labor in good faith is owner, but the other has a claim for the value of the materials; if the new form is not of a value greatly exceeding that of the old one, the original owner does not lose his property. Still another mode is confusion. If the property of two persons is confused so that the original components of the new mass cannot be distinguished, each owns an undivided share in the new mass to the extent to which his property is represented therein. If the proportion of the original components to the new mass cannot be ascertained, and the confusion was made willfully and fraudulently by one of the parties, the whole is awarded to the innocent party.

Derivative acquisition takes place by law when one who has converted to his own use another's chattel and has been sued for the conversion pays the judgment. By satisfying the judgment he becomes owner as of the date of the conversion. It takes place by act of the parties in case of gift, legacy, sale, or mortgage.

Gifts.—A gift is a gratuitous transfer of a chattel from one person to another. Gifts must be accepted by the donee (person to whom the gift is made), but acceptance is presumed. They are of two kinds: *inter vivos*, i. e., between living persons, and *causa mortis*, i. e., in contemplation of death and conditioned on death ensuing. Gifts of each kind require delivery of the article to the donee or to some one for him. A gift *causa mortis* is one made in contemplation of death from disease or from some impending peril. If death does not ensue, the gift does not take effect. And the donor (giver) may revoke the gift at any time. When a gift *inter vivos* is complete by delivery or one *causa mortis* by delivery in the lifetime of the donor and death of the donor from the disease or casualty feared, it is not revocable.

Sales.—A uniform statute on the subject of sales of personal property has been approved by the Commissioners on Uniform State Laws, and has been adopted in six jurisdictions. It is likely that eventually it will be put in force throughout the United States. At present, however, the common law on the subject is generally in force. The word "sale" is used in two senses. Strictly it means an agreement by which the seller (legally called the vendor) transfers to the buyer (vendee) the whole of some existing property right for a price in money. But the term is also used to mean a contract to make such a transfer at some future time (executory sale). In an executory sale, one need not be owner; he may bind himself to procure and transfer in the future. But no one can give any better or greater title by a sale than he has to transfer. Even though the buyer takes for value without notice, except in the case of negotiable instruments, he only gets the title of the seller, whatever that was. If, however, one sells something he does not own and warrants the title, in case he afterwards acquires title to it, that title will pass to the vendee, because the law will not allow the vendor to deny the title he purported to convey and warranted. If a bill of sale, i. e., a written transfer of the property under seal (except where seals are abolished, see CONTRACTS, *supra*), is executed and delivered, title passes thereby at once. If not, if the subject of the sale is not specific, e. g., 10 horses, but not 10 particular horses, 10,000 bushels of wheat, but not the wheat in a particular elevator, title passes to the buyer on delivery. If the subject is specific, when title passes depends on the intention of the parties; if they intend an immediate transfer, it passes; if they intend an executory sale to be completed later by carrying out the agreement, it does not. Until title has passed to the buyer, the risk of loss of the article (e. g., by destruction, burning, death, etc.) is on the seller. Delivery to a common

carrier consigned to the buyer is a delivery which passes title to the buyer unless the parties have agreed otherwise. Where the sale is on credit and the property is sent to the buyer by a common carrier or any agency other than the buyer's agent or servant, the seller may stop it while in transit and retake it, in case it has not come into the buyer's possession and control, if the buyer becomes insolvent. This is called the right of stoppage *in transitu*. Where section 17 of the Statute of Frauds is in force (see CONTRACTS, *supra*) it applies to sales.

Warranty.—Every sale of a chattel which at the time of the sale is in the seller's possession carries with it by implication a warranty that the seller has title to what he sells. But there is no implied warranty of quality. As to that the buyer takes the risk unless there is an actual (express) warranty. There are exceptions, however. If something is ordered from a manufacturer for a special purpose of which he has knowledge, he warrants by implication that it shall be reasonably fit for that purpose. Express warranties are subject to an exception that if the buyer had an opportunity to inspect the thing warranted, the warranty does not cover obvious defects which any one could discover by an ordinary examination. If the sale is procured by fraud, it is voidable (see CONTRACTS, *supra*). But if not, a mere breach of warranty does not give the buyer a right to set aside an executed sale. His remedy is to sue for breach of the warranty.

Chattel Mortgages.—A chattel mortgage is in form a conveyance of personal property to a creditor upon a condition that if the debt is paid according to the terms of the obligation, the transfer shall be void and the property revest in the mortgagor. Originally if the debt was not paid at maturity, the mortgagee simply had a complete title to the property. But equity allowed the mortgagor to redeem and the mortgagee to sue in equity to require him to do so, and cut off (foreclose) the right of redemption if he did not. To-day statutes everywhere provide a simple and inexpensive foreclosure by taking possession of the property, selling at public sale after notice, and applying the proceeds on the debt. Blanks for chattel mortgages adapted to local requirements may be procured in any community, but a few suggestions and warnings about the use of them may be made. The description of the property should be such as to afford notice to third persons. Hence the property must not only be described clearly but *located*. The place where the property is situated is an important element of the description, and should not be omitted. It is also important to bear in mind that a power of sale by the mortgagor, without requiring him to account to the mortgagee for the proceeds of sales, is a fraud on other creditors, and makes the mortgage void as to them. If there is nothing in the mortgage upon this matter, but the mortgagee knows of and permits sales without an accounting for the proceeds, other creditors may set the mortgage aside. Where a mortgage is given upon a stock of goods, therefore, one ought to be careful to insert a provision therein covering this point. The mortgagee should also see to it that the form or blank used contains a clause authorizing foreclosure in case the mortgagee feels "unsafe or insecure." This will enable him to take the property, if with good reason he believes his security is becoming impaired. If the mortgage is for a small sum, it is for the advantage of both parties to include a waiver of the statutory requirements as to notice of sale, and even to agree to a private sale. Unless waived, all statutory provisions must be substantially complied with. If not, the mortgagee may become liable to the mortgagor for conversion of the property. Statutory provisions as to recording or filing chattel mortgages vary greatly in the different states. These should be looked up and carefully complied with. Otherwise other creditors may defeat the security.

Possession of Chattels: Bailments.—Without being the owner of a chattel, one may nevertheless have the right to possession of it against every one, including the owner, or against every one but the owner, by reason of bailment, or pledge, or lien, or finding. A bailment is a delivery of possession of a chattel by one person (called the bailor) to another (called the bailee) to be held by the latter for the purpose of the bailment and redelivered when that purpose is accomplished. Bailments are of three kinds: (1) those for the sole benefit of the bailor, such as a deposit for safe keeping without compensation; (2) those for the sole benefit of the bailee, such as gratuitous loan of an article; and (3) those for the benefit of both, such as delivery to a carrier for transportation for hire or delivery to a creditor by way of pledge. In the first class, the bailee is excused if the property is lost or stolen or destroyed unless he was grossly negligent. In the second he is held to a high degree of care, and is liable if the property is lost or stolen or destroyed unless he uses such care. In the third class he is held to ordinary care such as prudent men generally employ.

Pledges.—A pledge or pawn is a bailment of a chattel as security for a debt, the pledgee acquiring a right to retain possession until the debt is paid. If the debt is not paid, he may foreclose by suit for that purpose or he may give reasonable notice to the owner and proceed to sell at auction and apply the proceeds on the debt. The pledgee may assign his rights to another, or even pledge them, if he does so subject to the rights of the pledgee, but he has no right to sell before the debt is due or to repledge as his own so as to cut off the right to redeem. If he does so, the pledgor may sue for conversion and recover the difference between the value of the property and the amount of the debt. Whatever pledgee may do, the pledgor is not entitled to possession until he pays or tenders the amount of the debt. In case of pledges of negotiable instruments or other choses in action, called collateral securities, the instruments, indorsed where necessary, are delivered to the pledgee and a written contract is usually entered into specifying the manner in which the securities shall be disposed of in case the debt is not paid. Reference may be made to Jones, *Pledges* (2 ed.), Boston, 1901, or Colebrooke, *Treatise on the Law of Collateral Securities* (2 ed.), Chicago, 1898.

Liens.—A lien is a right to hold possession of the property of another until some claim of the person in possession is satisfied. This is the original use of the term, and a lien of this sort

is called a "common-law lien." There are also statutory liens, which give a right to sell for satisfaction of the claim, and even, in some cases, to take possession of the property and have it sold. With respect to extent, liens are special or general, that is, they are rights to hold (or hold and sell) for a particular claim, or to hold (or hold and sell) for all sums due from the owner to the lien holder. Of the latter type is the lien of the factor upon goods of the principal in his hands. Special liens are given by the common law to the carrier for freight upon the property transported (but not on other property), to the innkeeper upon all property brought into the inn by a guest which the innkeeper is bound to receive, as security for the board and lodging on that occasion (but not on prior occasions), and to any other person to whom a chattel is delivered in order that he do some work upon or perform some service with respect to it, provided its value is increased by such work or service. Such liens give a right to hold until the claim is paid, but not to sell for payment. Strictly, such a sale can only be had by foreclosure in court. Statutes now give liens also to stable keepers for the keep of horses, and to persons who take animals for pasturage (called "agisters"), and in many diverse cases of the sort. These statutory liens may usually be foreclosed by notice to the debtor and public sale, as in case of a pledge. If the lien holder gives up possession, he loses his lien, and can only sue for the debt.

Finding Chattels.—One who finds a lost chattel (even if on the land of another, provided he is there rightfully at the time) acquires a right to take and hold possession against every one except the owner. He must deliver to the owner, and has no right to hold for expenses incurred or for a reward, unless a definite sum has been offered by way of reward, in which case he can hold for that sum. If a finder loses, a second finder must restore to the former, subject to the paramount right of the owner. An important distinction exists between lost chattels and those that are merely mislaid. An article is lost when, without intending it, the owner has let it get out of his control or possession. If he puts it in a place which is in the custody or control of another intentionally, and then forgets to remove it, the person in charge of such place has the right to hold it, and another cannot claim the right to take possession of it as a finder.

Real Property: Conveyancing.—The law of real property is the most technical and difficult part of our legal system. Hence, unless one is sure that he knows what he is about, it is very unwise for the layman to do anything of consequence involving a point of real property law without the advice of a lawyer. It is particularly necessary to remember that rights and interests in land are governed by the law of the place where the land is situated, and that the laws of the several states differ greatly in many important details in the law of real property. One should not assume that rules with which he is familiar in his own locality will govern estates in land in other jurisdictions. Conveyancing blanks adapted to local requirements may be had of stationers almost everywhere. Hence it would subserve no useful purpose to insert forms here, especially as the practice of different jurisdictions varies so greatly. But a few suggestions and cautions may be of use.

Forms and Conveyancing Blanks.—Care should be exercised in the selection of blank forms of conveyances. There is often a great difference in forms, and one ought never to fill out a form and assume that it will suffice without first reading it very carefully, unless it is one with which he is familiar. Many clauses which are highly desirable in such instruments as mortgages, for instance, will not be found in every blank. It is wise also to look a blank over before using it unless one is familiar with it, in order to avoid mistakes in filling it out. Never abbreviate. Neither the names of parties nor the description of the property should be abbreviated. Avoid also erasures, alterations, and interlineations. They are dangerous and may be fatal to some subsequent use of the instrument which may be desired. Draw it over rather than erase or alter.

Deeds.—Title to freehold estates in land (i. e., for life or in fee simple, that is, to one and his heirs and assigns forever) can only be transferred by a formal conveyance, which takes place to-day by execution and delivery of a deed. Except where private seals are abolished (see CONTRACTS, *supra*), the deed must be under seal. It takes effect when it is delivered, i. e., when the grantor (person who conveys) puts it out of his control with the intention that it operate. He may deliver it upon condition (technically *in escrow*), so that it is beyond his control, and yet will not be turned over to the grantee or will not operate till the condition is performed. A deed which releases or conveys the interest or estate of the grantor without any covenant or covenants as to title is generally called a quit-claim deed. One which contains covenants warranting the title is generally called a warranty deed. The covenants in a warranty deed not only subserve the purpose of assuring the grantor's title, but they also operate to transmit to the grantee or his successors in interest any title which the grantor acquires afterwards, unless he reacquires the title he warranted. Hence a warranty deed is much to be preferred.

In describing the parties, the first name of grantor and grantee ought to be given in full, as, if litigation ensues, it may be essential to know the full name. If in the chain of title the grantor is described by his initials, it is better to have him make the conveyance by his full name and add a recital to show that he is the person referred to by the initials, as "John Doe, described in a certain conveyance from ..... to ....., dated ....., and recorded in ....., as J. Doe. It often happens that errors creep into conveyances, and that the name under which the title is held is not the real name of the grantor. In such case it is best to describe him by his true name, and refer to the prior conveyance and the description therein as illustrated above. The residence of grantor and grantee respectively ought also to be inserted carefully. While this is in no way essential, it is often highly convenient subsequently when some claim arises with respect to title.

Great care should be taken to have the description of the property complete, certain, and accurate. Avoid such crude and ambiguous descriptions as "the east ten feet of lot one," or "ten feet off of lot two." If it is not possible to describe by reference to a plat or government subdivision, so that the tract must be bounded, always begin at a known point or at a point on a known line, or, if that is impossible, at a point located by course and distance from two known points. So far as possible, run along known lines, stating direction and distance, and, where this cannot be done, wherever possible run parallel to known lines, stating the line to which you run parallel, the direction and the distance. Be careful to see that your boundaries connect. Remember that, in case of discrepancy, monuments and known points prevail over distances, and also that, in general, where a highway or stream is described as a boundary, or a line is run along a stream or highway as a boundary, the middle of the stream or highway is understood. If the parties intend otherwise, care should be taken to make their intention manifest.

Where witnesses are required, be sure that they are disinterested. If different grantors sign at different times, the witnesses ought to indicate whose signature they attest.

With respect to acknowledgment, the following points are important: It should be taken by a magistrate authorized to take it; the magistrate should not be beneficially interested in the conveyance in any way; he should be careful to distinctly ask each grantor if the conveyance is his voluntary act and deed, otherwise, in many jurisdictions, a conveyance of a homestead may fail; if he has a seal he should affix it to his certificate, and he should sign the certificate officially; if the instrument conveys lands outside of the state, the acknowledgment should always be taken before some officer having a seal. Finally, one should see to it that the signatures conform to the names in the body of the deed.

If covenants or conditions restricting the use of the land are desired, a lawyer should be consulted, as the law on this subject is complex and technical.

Mortgages.—What has been said as to deeds applies also to mortgages, which are a form of deed.

Leases.—The foregoing suggestions apply also to leases. But a few further suggestions may be made. At common law the landlord is not bound to make repairs. Hence, if it is intended he shall repair, there must be a covenant to that effect in the lease. In a lease of land with buildings there should also, in most jurisdictions, be a provision as to rent in case of destruction by fire. There should also be provisions as to sub-letting and assignment. If restrictions upon the use of the property are inserted, in order to make them effective there should be a condition that the term shall cease in case they or any of them are not adhered to.

Abstracts of Title.—The purpose of an abstract is to enable a lawyer passing upon the title to do so conveniently and intelligently. *An abstract is of no particular value unless it is examined and the title approved by some competent person.* It must be borne in mind also that there are a number of very important points which an abstract cannot meet for the reason that the record does not and cannot disclose them. Among these are (1) a forged deed; (2) a false certificate of acknowledgment upon conveyance of a homestead; (3) insanity of a grantor; (4) false returns of service in judicial proceedings; (5) the possibility that there are persons in possession whose claims are not of record. These are not all of equal importance in all jurisdictions. But in one jurisdiction or another each one might be fatal.

Landlord and Tenant.—In order to be liable to pay rent, or for the use and occupation of land, one must be occupying as tenant. One who is in possession claiming adversely cannot be held for rent. The remedy against him is to sue for the profits he has received while wrongfully in possession. One may be a tenant, however, without a formal lease, if he is in possesion in subordination to and acknowledging the title of the landlord. The most important incidents of the relation of landlord and tenant are: (1) that the tenant is estopped to deny the landlord's title, that is, having entered as tenant, he cannot assert any claim of ownership or title adverse to the landlord or claim to hold under a different landlord, no matter how well founded the claim may be, without first giving up possession; and (2) that every letting carries with it by implication a covenant on the part of the lessor that the lessee shall quietly enjoy the premises let, that is, that neither the lessor nor any one claiming under or adversely to him shall evict the lessee. The eviction may take place by actual ouster or by depriving the lessee of the use of a substantial part of the demised premises. In case of such an eviction the lessee may sue the lessor for damages, or he may surrender his term. Except in case of eviction, the lessee cannot surrender without the assent of the lessor. Rent is also an incident of the relation. If none is provided for, and it is not intended that the lessee shall hold gratuitously, he will be liable for the reasonable value of use and occupation from the time he took possession. For the lease of itself gives no estate. It merely gives a right to enter on the land and get possession. When possession is taken under the lease, the lessee acquires an estate. Usually rent is provided for by covenants in the lease. In such case, the covenants provide when it is to be given and when it is payable.

Tenancies may be for years, that is, for a definite period of a year or longer, at will, that is, so long as the parties wish, or periodical, that is, for a certain period, as a month, a quarter, or a year, and then for successive like periods until terminated by notice. A tenancy for a definite, fixed period comes to an end by its own limitation when the period elapses. No notice is necessary. A tenancy at will terminates whenever either party so notifies the other, or does any act manifestly inconsistent with the tenancy, or dies. A periodical tenancy may be terminated by notice given by either party. If from week to week, or month to month, or quarter to quarter, notice must be given at or prior to the beginning of a new period to terminate the tenancy at the end of that period. Where it is from year to year, six months' notice suffices at common law, but this has been altered in some jurisdictions by statute. Tenancies may terminate also, under provisions of the lease, for failure to pay rent, for breach of covenant as to use of the land, and the like, if the landlord enforces the forfeiture. Statutes usually provide to-day that a tenant whose rent is in arrears may be treated as holding over his term.

A tenant who holds over his term is called a tenant at sufferance. If, however, he holds over with the consent of the landlord, he is held to be a tenant upon the same conditions as those in the prior lease. Where one is tenant, but no term is specified, he is considered a periodical tenant, according to the nature of the property and custom with respect thereto. In case of farms, which are usually rented by the year, he would be held a tenant from year to year. In case of houses, which are usually rented by the month, a tenancy from month to month would be presumed.

A tenant is liable for damages, and, if the lease so provides, to forfeiture of his term, if he commits waste, that is, if he destroys or permanently alters, without the consent of the landlord, any appurtenance to the land to the injury of the reversion. He may, however, before or at the end of his term, remove trade, ornamental, or domestic fixtures, which he has placed thereon during the tenancy, if he can do so without destroying them or injuring the land. If he accepts a new lease, after having put on such fixtures, he should be careful to expressly reserve the right to remove them.

Wills.—No one ought to attempt to draw any but a very simple will without legal advice. But the following suggestions and cautions may be of use:—

1. If there is any room for dispute as to the sanity of the testator (person who makes the will), care should be taken to fortify against litigation, not only in the scheme of disposition of the estate, but by seeing to it that adequate proof is at hand as to the condition of the testator at the time the will was made.

2. If the circumstances are such that undue influence may be claimed, great care should be taken to meet such claim. The witnesses should be persons whose integrity is not open to question, and who will carry weight with a jury; and the testator should make a clear and explicit statement to them, in a manner in which they will not be likely to forget, and under circumstances precluding all inference that the testator is under compulsion or coercion at the time.

3. Uncertainty in gifts and in descriptions must be carefully avoided. The will cannot be reformed. The testator will be dead when questions arise under it, and oral evidence of what he meant will not be admissible. Hence one should be absolutely sure of all descriptions, both of persons and of property.

4. Remember that property must be given to some one, either specifically or by a residuary gift (i. e., gift of all that remains after specific gifts). Mere exclusion of an heir without a gift to some one else will accomplish nothing.

5. Bear in mind that shares or gifts may lapse by death of the donees before the gifts take effect, and make proper provision therefor.

6. If a paper or document is referred to, and its provisions are to be part of the will, *it must be in existence* when the will is made, and *must be identified* clearly.

7. There ought always to be a gift of the residue of the estate.

8. If there is any reason to suspect a prior will has been made, insert a clause revoking all prior wills. It is safer to insert such a clause in all cases.

9. *Do not alter the instrument after execution.* If a change is desired, re-execute, or execute a codicil.

10. The witnesses ought to be thoroughly disinterested, clear-headed persons, who will be believed by a jury in case of contest. No one should be a witness who benefits under the will in any way.

11. As a contest by disappointed persons, who, if there was no will, would take as heirs or next of kin, is a possibility, if not a probability, see to it that beneficiaries under the will, who will be charged with undue influence, are not about when it is executed and witnessed.

Form of a Will.—The following short form may be used as a guide:—

I, John Doe, of the city of ....., county of ....., and state of ....., do make this my last will and testament, that is to say:—

1. I appoint Richard Roe of said city of ....., executor of this will.

2. I give and bequeath to John Stiles of ....., county of ....., the sum of one thousand ($1,000.00) dollars.

3. I give and devise to Thomas Jones of said city of ....., all of lot numbered one (1) in block numbered one (1) in said city of .....

4. All the rest and residue of my property, both real and personal, of which I shall die seized or possessed, I give, devise, and bequeath to my wife, Mary Doe.

5. I hereby revoke any and all former wills by me made.

In testimony whereof I have hereunto set my hand this ..... day of ..... 19...

John Doe.

Signed, published, and declared by the above named John Doe as and for his last will and testament, in the presence of us and each of us, who, in his presence, and at his request, and in the presence of each other, have hereunto set our hands as witnesses.

George Jackson,
of ....., County of .....
James Brown,
of ....., County of .....

*Under seal, 10 years. †Unless a different rate is expressly stipulated. ‡Under seal, 20 years. **New York has legalized any rate of interest on call loans of $5,000 and upward, on collateral security. §Six years from last item. (*a*) Judgments, 6 per cent. (*b*) Justice Court judgments, 6 years. (*c*) Witnessed, 20 years. (*d*) Twenty years from time when new suit may be brought, which is 15 years after first judgment. (*e*) Pawnbrokers, 4 per cent. per month. (*f*) Ceases to be a lien after the period unless revived. (*g*) Licensed money lenders may receive 12 per cent. (*h*) Subject to renewal. (*j*) Not of record, 6 years. (*k*) No limit. (*m*) No statute. (*n*) Except witnessed promissory note, 14 years.

Penalties for usury differ in the various States. California, Colorado, Maine, Massachusetts (except on loans of less than $1,000), Montana, and Nevada have no provisions as to penalties. Loss of *principal and interest* is the penalty in Arkansas and New York. Loss of principal in Delaware and Oregon. Loss of interest in Alabama, Alaska, Arizona, District of Columbia, Florida, Idaho, Illinois, Iowa, Louisiana, Michigan, Minnesota, Mississippi, Nebraska, New Jersey, North Carolina (double amount if paid), North Dakota (double amount if paid), Oklahoma, Porto Rico, South Carolina, South Dakota, Texas, Virginia, Washington (double amount if paid), Wisconsin, Hawaii, and Wyoming. Loss of excess of interest in Connecticut, Georgia, Indiana, Kansas, Kentucky, Maryland, Missouri, New Hampshire (three times), New Mexico, Ohio, Pennsylvania, Tennessee, Vermont, and West Virginia. Loss of principal and interest in Rhode Island, also fine or imprisonment.

Interest.—In nearly all jurisdictions it is allowed by law to demand interest on all overdue accounts calculated at a fixed rate from the time the account became due. But the usual business procedure is not to demand the interest unless the creditor is forced to sue for his claim.

By "legal rate" is meant the rate which is usually allowed by law when no rate has been agreed upon by the parties, or in cases in which the law allows interest. "Conventional rate" is the highest rate which may be agreed upon by contract. In Ohio, for instance, the legal rate is 6, while the conventional rate is 8.

Limitations.—Laws of limitation affecting the time at which an action may be begun, measured from the time at which a cause for action occurred. Such laws were passed in the reigns of Edward I. and Henry VIII. The law known as the "Statute of Limitations" was passed in 1624 in the reign of James I. This act has been adopted by the states of the Union with very slight modification.

Generally speaking, actions in which the title to real estate is involved, or those based upon a contract under seal, must be brought within 20 years; upon contracts not under seal, within 6 years; and those based upon personal tort, within 2 years. Some states reduce the longer period to 10 years. Many states make short periods in special cases of administrators and executors in order to expedite the winding-up of estates.

In cases of debt a new promise to pay or a payment on account in many states revives the debt, and the period of limitation would be calculated from the last payment or from the date of the new promise to pay executed in writing. The defense of limitation must be pleaded in the courts of most of the states to be effective.

Judgment.—A temporary or final decision or adjudication of the rights of the parties in an action or a proceeding before a court of justice. This judgment expires or becomes dormant in the states as indicated in the table, and in some states may be revived from time to time. Other modifications are also noted there.

Usury.—Any excess of interest over and above that which is established by law. In some states, as shown above, penalties for usurious rates of interest are provided. When the fact is shown that interest beyond the legal rate has been taken, no plea can justify it. Where a contract has been made involving the payment of a higher rate of interest than the legal rate, no action for usury would lie unless the contracted rate exceeds that allowed by contract.

EIGHT-HOUR LAWS.

ALASKA.—Eight hours constitute a day's labor on all public works, and in all mines and workings, smelting and reduction works, and at coke ovens.

ARIZONA.—Eight hours constitute a day's labor on all public works and in all mines and workings, smelting and reduction works, blast furnaces, rolling mills, etc.

ARKANSAS.—Eight hours are a day's work on public highways and bridges and for railway telegraph operators.

CALIFORNIA.—Unless otherwise expressly stipulated, eight hours constitute a day's work. The time of service of all laborers, workmen, and mechanics employed upon any public works of, or work done for, the State, or for any political subdivision thereof, whether the work is to be done by contract or otherwise, and of employees in mines and smelters, is limited and restricted to eight hours in any one calendar day.

COLORADO.—A day's work for all workingmen employed by the State, or any county, township, school district, municipality, or incorporated town, and for all employees in underground or open cut mines or workings, and in smelting and refining works, is restricted to eight hours.

CONNECTICUT.—Eight hours of labor constitute a lawful day's work unless otherwise agreed. Railroad telegraph operators controlling the movement of trains may work but eight hours, except at stations kept open only in the daytime. Engineers, firemen, machinists and other mechanics employed in State institutions may work but eight hours, except in case of emergency.

DELAWARE.—Eight hours are a lawful day's work for all municipal employees of the city of Wilmington.

DISTRICT OF COLUMBIA.—A day's work for all laborers and mechanics employed by the District of Columbia, or by any contractor or sub-contractor upon any public works of the District, is limited to eight hours.

HAWAII.—For all mechanics, clerks, laborers, and other employees on public works and in public offices eight hours of actual service constitute a day's work.

IDAHO.—Eight hours' actual work constitutes a lawful day's labor for manual laborers employed by the day on all state, county, and municipal works. Labor in mines and smelters is limited to eight hours per day.

ILLINOIS.—Eight hours are a legal day's work in all mechanical employments, except on farms, and when otherwise agreed; the law does not apply to service by the year, month, or week. Eight hours constitute a day's labor on the public highways.

INDIANA.—Eight hours of labor constitute a legal day's work on the public roads, and for all classes of mechanics, workingmen, and laborers, excepting those engaged in agricultural and domestic labor. Overwork by agreement and for extra compensation is permitted.

IOWA.—Eight hours are a day's labor on public roads.

KANSAS.—Eight hours are a day's work for all laborers, mechanics, or other persons employed by or on behalf of the State or any county, city or township, or other municipality.

KENTUCKY.—Eight hours constitute a day's work on all public works of the State.

MARYLAND.—No mechanic or laborer employed by the mayor or city council of Baltimore, or by any agent or contractor under them, shall be required to work more than eight hours as a day's labor.

MASSACHUSETTS.—Eight hours shall constitute a day's work for all laborers, workmen, and mechanics employed by or on behalf of the Commonwealth or any county therein, or of any city or town in the Commonwealth upon acceptance of the statute by a majority of voters present and voting upon the same at any general election.

MINNESOTA.—Eight hours constitute a day's labor for all laborers, workmen, or mechanics employed by or on behalf of the State, whether the work is done by contract or otherwise.

MISSISSIPPI.—Eight hours are a day's labor on highways.

MISSOURI.—Eight hours constitute a legal day's work. The law does not prevent an agreement to work for a longer or a shorter time and does not apply to agricultural laborers. It is unlawful for employers to work their employees longer than eight hours per day in mines and smelters, or as train dispatchers, etc., on railroads, unless the office is open only during the daytime. Eight hours are a day's labor on highways, and on all public works in cities of the second class.

MONTANA.—Eight hours constitute a legal day's work for persons engaged to operate or handle hoisting engines at mines. The law applies only to such plants as are in operation sixteen or more hours per day, or at or in mines where the engine develops fifteen or more horse-power, or where fifteen or more men are employed underground in the twenty-four hours. A day's labor on public works and in smelters, underground mines and in railroad and other tunnels is limited to eight hours.

NEBRASKA.—Eight hours constitute a day's work on public roads and on all public works in cities of first class.

NEVADA.—For labor on public highways, in and about all mines, in smelters, plaster and cement mills, as train dispatchers, etc., on railroads, and on all works and undertakings carried on or aided by the State, county, or municipal governments, the hours of labor are fixed at eight per day.

NEW JERSEY.—Eight hours is the limit of a day's work by any person employed by, or on behalf of the State or any municipality thereof.

NEW MEXICO.—Eight hours constitute a day's labor in all employment by or on behalf of the State or municipality.

NEW YORK.—Eight hours constitute a day's work on highways, and on work done by or for the State, or a municipal corporation, whether directly by contractors or sub-contractors; also for all classes of employees, except in farm or domestic labor, though overwork for extra pay is permitted in private employments.

NORTH CAROLINA.—Train dispatchers, etc., on railroads may work only eight hours except by permission of the corporation commission.

NORTH DAKOTA.—Eight hours are a day's labor on the public roads.

OHIO.—Eight hours constitute a day's work on all public works; also in all engagements to labor in any mechanical, manufacturing, or mining business, unless otherwise expressly stipulated in the contract.

OKLAHOMA.—Eight hours constitute a day's labor on all public works, and in underground mines.

OREGON.—Eight hours constitute a day's labor on all public works, and in underground mines yielding metal.

PENNSYLVANIA.—Eight hours of labor shall be deemed and held to be a legal day's work in all cases of labor and service by the day where there is no agreement or contract to the contrary. This does not apply to farm or agricultural labor or to service by the year, month, or week. Eight hours constitute a day's labor for all mechanics, workmen, and laborers, in the employ of the State or of any municipal corporation therein, or otherwise engaged on public works. This act shall be deemed to apply to employees of contractors. Engineers hoisting workmen at anthracite coal mines may work but eight hours per day.

PHILIPPINE ISLANDS.—Eight hours constitute a day's work on highways.

PUERTO RICO.—No laborer may be compelled to work more than eight hours per day on public works.

SOUTH DAKOTA.—For labor on public highways a day's work is fixed at eight hours.

TENNESSEE.—Eight hours shall be a day's work on the highways.

TEXAS.—Eight hours constitute a day's work on the highways; and by train dispatchers, etc., except at stations where but one operator is employed.

UTAH.—Eight hours constitute a day's labor on all works carried on or aided by the State, county, or municipal governments, in all underground mines or workings, in smelters and all other establishments for the reduction of ores.

WASHINGTON.—Eight hours in any calendar day shall constitute a day's work on any work done for the State, or for any county or municipality, and in underground coal mines.

WEST VIRGINIA.—Eight hours shall constitute a day's work for all laborers, workmen, and mechanics who may be employed by or on behalf of the State, and for telegraph operators directing the movements of trains where three or more passenger or 10 or more freight trains pass in 24 hours.

WISCONSIN.—In all engagements to labor in any manufacturing or mechanical business, where there is no express contract to the contrary, a day's work shall consist of eight hours, but the law does not apply to contracts for labor by the week, month, or year. Eight hours constitute a day's labor on the public highways. Employees on public works and train dispatchers may be employed but eight hours per day.

WYOMING.—Eight hours' actual work constitute a legal day's labor in all undeground mines, in smelters, and on all State and municipal works.

UNITED STATES.—A day's work for all laborers, workmen, and mechanics employed by the United States, or by any contractor or sub-contractor upon any public works of the United States, including dredging and rock excavation in river and harbor work, is limited to eight hours.

CANADA.—Eight hours shall constitute a day's work for all laborers, workmen, and mechanics who may be employed by or in behalf of the Dominion of Canada.

REQUIREMENTS FOR ADMISSION TO THE BAR.

The Committee on Legal Education of the American Bar Association recommended the following provisions "as forming a consistent system that shall both protect the profession and guide the student":—

CITIZENSHIP, AGE, CHARACTER.—No one should be admitted to the bar unless he is of good moral character, is 21 years of age, and is a citizen of the state.

REGISTRATION.—Upon beginning professional study a student should register his name in the office of a clerk of a court of record or in a law school that is incorporated, or is a department of an incorporated university.

GENERAL EDUCATION.—Prior to registration a student should prove that he has received at least the equivalent of a high school education, such proof being made by filing certificates, or by passing examinations, as may be determined by the law examiners.

TERM OF STUDY.—A candidate should not be admitted to the bar until the end of three full calendar years of law study.

BOARD OF EXAMINERS.—In all parts of the state the requirements for admission to the bar should be uniform, and should be administered by a State Board of Law Examiners, appointed by the court of last resort, for three years, part of them being appointed each year; they should recommend an appropriate order of study and should designate the statutes, leading cases, and practical forms with which students must become familiar, and in all other practicable ways should aid candidates to study in a systematic and useful manner.

EXAMINATIONS, REGULATIONS, SCOPE, ETC.—No candidate should be admitted to the bar without examination, except as herein provided.

Law examinations should be held at such times and places as the court of last resort may see fit, due announcement being made as to times, places, and subjects; they should consist chiefly of written answers to printed questions; they should be devoted chiefly to solving and discussing legal problems similar to those arising in office practice and in litigation; and questions should not be so framed as to admit "yes" and "no" answers. A candidate should be permitted, if he desires, to divide the law examination into two parts; the first part to cover the more elementary subjects and to be taken not earlier than one year after registration, and the second part to cover the more advanced subjects and to be taken not earlier than three years after registration.

ADMISSION OF ATTORNEYS FROM OTHER JURISDICTIONS.—Upon petition, the law examiners should relieve from all requirements, save character, age, and citizenship, a candidate who is already a member of the bar of a state in which there are equivalent requirements for admission, or in which, after admission, he has been in active practice for five years.

These recommendations are practically in force in all the states with a few variations.

Proof of good moral character required by all.

Residence within the state and citizenship of the United States is required in Alabama, Alaska, Arizona, Arkansas, Colorado, Illinois, Maine, Michigan, Minnesota, Mississippi, Montana (either), Nebraska, New Mexico, New York, Ohio, Oklahoma, Oregon (either), Rhode Island, Washington, Wisconsin, and Wyoming; citizenship only required in California, Connecticut, Georgia, Hawaii, Kansas, Louisiana, Massachusetts, New Hampshire, Porto Rico, South Carolina, Tennessee, Utah, and Vermont; residence only is required in Delaware, Idaho, Iowa, Kentucky, Maryland, Nevada, North Dakota, Philippines, South Dakota, Texas (six months), Virginia (six months), and West Virginia; District of Columbia, Florida, New Jersey, North Carolina, and Pennsylvania no requirements; Indiana admits any voter.

ALABAMA.—Study of law 3 years; if other than legal qualifications are satisfactory, by written examination; fee, $25; degree of B.L. from Univ. of Alabama admits without examination; attorneys from other states admitted after 5 years' practice before Supreme Court of their own state; fee, $100.

ALASKA.—Examination by district court, 75% average with not less than 65% in any subject; final oral examination, same grade; fee, $25; attorneys from states if practicing in highest court.

ARIZONA.—Three-year law course or equivalent; written examination, 70% average; fee, $10, license, $10; non-resident, $35; outside attorneys, five years' practice; fee, $50.

ARKANSAS.—Written examination, 75%; fee, $5, tax, $10; by diploma from State University; outside attorneys with 3 years' practice before highest court; fee, $10.

CALIFORNIA.—Examination end of first year, 70%; exempted if first year completed in accredited school; must pass final "Bar Examination," 70%; fee, $30; outside attorneys who practiced 4 years of preceding 6; fee, $100; requirements strict.

COLORADO.—Four classes: (1) non-residents practicing 10 of 11 preceding years, (2) non-residents practicing 5 of 6 preceding years, requirements equal to Colorado, (3) non-residents not in (1) or (2), (4) residents not admitted in any state; (1) and (2) admitted by affidavit; fee, $35; (3) and (4) two years college, three-year course approved day school or equivalent; examination oral and written; fee, $10.

CONNECTICUT.—Graduate from approved college or preparatory school or having passed a literary examination, 60%; 3 years in law school or 4 in office; fee, $15; outside attorneys with 5 years' practice; fee, $35.

DELAWARE.—A diploma from a university or college in good standing; or an academic examination necessary; 3 years' law course in office of practicing attorney; written examination; 3 years' practice in another state required from other attorneys.

DISTRICT OF COLUMBIA.—Three years law school or equivalent; after Oct. 1, 1944, school must be approved by court; written examination; fee, $25; outsiders admitted without examination if their states reciprocate.

FLORIDA.—Three years minimum study under preceptor or approved law school; oral or written examination, 75%; fee, $25; graduates of approved Florida schools on diploma; outsiders producing certificate; fee, $50.

GEORGIA.—Examination by 2 practicing attorneys admits applicant to final written examination before judge of Superior Court; 70% average; fee, $15; graduates of the various law schools in the state are admitted without examination; license, $5; attorneys from other states without examination if their states reciprocate.

HAWAII.—Applicants file a written application, giving character and term of study; practice in the Supreme Court permitted members of the bar of the highest court in another state or territory, or those who have studied law two years; fee, $10; Hawaiian citizens may qualify as practitioners in the District Courts.

IDAHO.—High school, two years college; 3-year law course or equivalent, or diploma from Idaho Law School, or school approved by American Bar Association; written or oral examination, 70%; license, $34.50; outside attorneys if practicing 5 of 7 preceding years before highest court; fee, $50.

ILLINOIS.—Preliminary 4-year high school and 2 years college; law school course of 1296 hours or equivalent; written examination; outside attorneys practicing 5 of 7 preceding years, if standards equal in both states; fee, $100.

INDIANA.—Supreme Court has exclusive jurisdiction; 2 years college, 3 years law school or equivalent; written or oral examination, 40 questions; fee, $15; outside attorneys practicing before highest court admitted on certificate; fee, $40.

IOWA.—Power of admission vested in Supreme Court; preliminary education, 2 years college; 3 years law school or its equivalent; written examination, 75%; fee, $5; outside attorneys practicing 5 of 7 preceding years licensed upon proper certification; fee, $50.

KANSAS.—Preliminary, 4 years each high school and college; graduate of State Law School or equivalent; oral or written examination; fee, $35; others, practicing up to 6 months of time of application for 5 years, examined separately.

KENTUCKY.—Standard high school, one year college; legal education of 2 years in approved school; written examination; outside attorneys practicing 5 years admitted where requirements are equal; fee, $25.

LOUISIANA.—High school or equivalent; fee, $25; at least 3 years in law school or equivalent; 3 years' notice of intention required; outside attorneys, graduate of approved law school, by examination.

MAINE.—Education sufficient to admission in third year classes of approved college; fee, $20; 3 years in approved office or law school; written examination, 70% average; outside attorneys practicing 3 years admitted on certificate; fee, $70.

MARYLAND.—Petition court of appeals 3 years prior; fee, $5; 2 years college or equivalent; must pass character committee; 3 years legal study in any approved school, eligible to examination; fee, $25; Maryland residence necessary; outside attorneys admitted without examination if practicing 5 years.

MASSACHUSETTS.—File proof of study, equal one-half of work required for bachelor's degree in approved school; fee, $15; not less than 3 years law course or equivalent; written examination; others, intention to practice in state is necessary; 3 years before highest court, upon proof and recommendation, admits without examination.

MICHIGAN.—Two years in accredited college equivalent to admission to third year of accredited Michigan college; fee, $20; 3 year law course in approved school or 4 years with attorney; written examination, 75%;

non-resident who proves to satisfaction of board he intends to maintain office, practiced 3 preceding years, licensed upon proper recommendation; fee, $50.

MINNESOTA.—Preliminary education equal to 2 years of Univ. of Minnesota requirements; fee, $25; graduate of approved law school or 4 calendar years under practicing attorney; office students examined yearly; all must take examinations; non-residents submitting proof of practicing preceding 5 years before highest court admitted without examination; fee, $100.

MISSISSIPPI.—Applicant must have at least a high school education; fee, $10; admission on examination regardless of school attendance, 70%; graduate of State University on diploma; outsiders, where requirements are equal, practicing 3 preceding years; fee, $10.

MISSOURI.—Four years high school, 2 years college; fee, $25; 3 years or equivalent study of law; proof of 3 years' practice in other state admits.

MONTANA.—Two years at State University or equivalent; proof of 2 years' study of law by 2 lawyers of state; fee, $25; others, practicing before highest court, requirements equal to this state, upon proof of license and character.

NEBRASKA.—Proof of accredited high school, 2 years college; fee, $10; 3 years law school or equivalent; examination written or oral; others practicing 5 of 10 preceding years, if ratings are equal to this state; fee, $35.

NEVADA.—High school diploma, 2 years college or equivalent; legal 3 years' law course or equivalent; fee, $15; if successful, $35 additional; others, practice 3 out of preceding 5 years; proof of character; fee, $100.

NEW HAMPSHIRE.—Two years of college; fee, $10; 3 years' law school or equivalent, examination, 70%; practice in highest court of another state admits here.

NEW JERSEY.—Declare intention 3 years before examination and have same sanctioned by attorney of 5 years' standing; college degree or equivalent; clerkship of 3 years required with attorney of 5 years' practice; 24 months credit may be had by attending law school; written examination; non-residents take examination; if practicing 10 years, preliminary requirements voided. To be counselor, pass examination, reside and practice in state 3 years.

EXEMPTION LAWS.

ALABAMA. A homestead not exceeding 160 acres of land, or a lot in a city, town, or village, with a dwelling house thereon, not exceeding the value of $2,000; personal property to the value of $1,000; may be selected by the debtor; lot in cemetery used as a burial place for family; pew in church; wages to amount of $25 a month. Waiver of exemption is not valid unless joined in by the wife.

ALASKA. No homestead law. Specified articles of personal property, $750 to $1,000; wages for 30 days preceding judgment.

ARIZONA. Homestead of the head of a family not to exceed $2,500; personal property of every family, $500 besides wearing apparel, and half month's wages.

ARKANSAS. For single person, personal property besides wearing apparel, $200; for head of a family, personal property value of $500; for a head of a family outside of any town or city, 160 acres of land not to exceed $2,500 or not less than 80 acres without regard to value; in city or town, not exceeding one acre, $2,500, or not less than one fourth of an acre without regard to value; wages of laborers and mechanics for sixty days.

CALIFORNIA. The homestead on which debtor resides value of $5,000, if he is the head of a family; if not, $1,000. Personal property exempt includes chairs, tables, desks, and books, $200; necessary household and kitchen furniture, sewing machine, stoves, beds, etc.; provisions for family for three months, three cows, four hogs, two horses, oxen or mules; seed, grain, and vegetables for sowing, not above $200 in value; tools and implements of husbandry of the debtor, not exceeding $1,000; the necessary instruments of a surgeon, physician, surveyor, or dentist, with professional library and necessary office furniture; the professional library of attorneys, judges, ministers of the gospel, editors, school teachers, and music teachers, and their necessary office furniture; miner's cabin, not exceeding $500, with all tools and gear necessary for his business, not exceeding $500. Two horses or mules with harness, and the miner's claim worked by him, not exceeding $1,000 in value.

COLORADO. A homestead consisting of house and lot in town or city, or a farm of any number of acres, in value not exceeding $2,000, is exempt if occupied by a householder and head of a family, provided it has been entered on record as a homestead and so specified in the title. Personal property, including wearing apparel of the debtor and his family, pictures, schoolbooks, library, etc., and household furniture, not exceeding $100; provisions for six months, tools, implements or stock in trade, $200; one cow and calf, 10 sheep and necessary food for six months; working animals up to $200; the library and implements of a professional man up to $300; pew in church and burial sites and one half month's wages, but in no case less than $30. Pensions are also exempt. The head of a family may select personal property to the value of $1,000; others, $300.

CONNECTICUT. The homestead actually occupied by the owner not exceeding in value $1,000 is exempt. Personal property is exempt as follows: Libraries not above $500 in value; a cow worth $150; 10 sheep, not exceeding in all $150; poultry not exceeding $25 in value; two hogs and 200 pounds of pork; implements of trade, the horse, harness, buggy, and bicycle of a practising physician, and the boat, not exceeding $200 in value, of a person engaged in fishing, and used for that purpose; necessary apparel, bedding, and household furniture; pew in church and lot in burial ground; one sewing machine; wages due and not exceeding $25, and, under conditions, money due from insurance and mutual benefit societies, are also exempt.

DAKOTA (NORTH and SOUTH). A homestead consisting of not more than 160 acres, with buildings and appurtenances thereon, and personal property defined by statute, aggregating in value not to exceed $5,000 (N. D.), is exempted to a householder. A firm can claim but one exemption, not a several exemption for each partner. Tools and implements of a mechanic to the value of $200, books and instruments of a professional man to the value of $600, are also exempt.

DELAWARE. Family pictures, family Bible, and library; lot in burial ground and pew in church; family wearing apparel and tools and implements necessary to carry on business, the whole not exceeding $75 in value, are exempt from attachment. In addition to the above the head of a family may claim $200 of personal property. In Newcastle county wages of laborers are also exempt. No homestead law. In the county of Kent the amount of exemption is reduced from $75 to $50 and from $200 to $150 on household goods.

DISTRICT OF COLUMBIA. Family wearing apparel; household furniture to the amount of $300; provisions and fuel for three months; tools or instruments necessary to carry on any trade, to the value of $200; library and implements of a professional man or artist not above $300; family pictures and library to the value of $400; one horse, mule, or yoke of oxen; one cart, wagon, or dray, and harness for such team; one cow, one hog, six sheep, farming utensils, with food for team for three months, are exempt from attachment or sale on execution, except for servants' or laborers' wages. There is no homestead exemption.

FLORIDA. A homestead of 160 acres of land, together with improvements, in the country, or a residence and one half acre of ground in a village or city, is exempted to the head of a family; also personal property to the value of $1,000. No property is exempt from sale for taxes or for obligations contracted for its purchase or for the erection of improvements thereon. The wages of every laborer who is the head of a family are also exempt under any process of law.

GEORGIA. Each head of a family, or guardian, or trustee of a family of minor children, and every aged or infirm person, or person having the care and support of dependent females of any age, who is not the head of a family, is entitled to realty, or personalty, or both, to the value in the aggregate of $1,600. Said property shall be exempt from levy and sale by virtue of any process whatever, under the laws of this state, except for taxes, purchase money of the homestead, labor done thereon, or material furnished therefor, or for the removal of incumbrances.

IDAHO. A homestead worth $5,000 is exempted to a householder who is head of a family; either husband or wife may select the homestead. Personal property is also exempted to the value of $300. Exemption does not extend to purchase-money or to mortgages on the property. Any person other than the head of a family is entitled to an exemption of $1,000.

ILLINOIS. A homestead valued at $1,000 is exempted to every householder who has a family; such exemption not covering liabilities for purchase-money or improvement of the homestead. After the death of a householder his family are entitled to the exemption so long as the survivor occupies it, or until the youngest child is 21 years of age. There are also exempted to every person wearing apparel, schoolbooks, family pictures and family Bible, and $100 worth of other property selected by the debtor. In addition to this, $300 worth may be selected by the debtor if head of a family; but such selection cannot be made from any money or wages due; no exemption is allowed when the debt is for the wages of laborer or servant; $50 of wages is exempt to every head of a family if residing with the same.

INDIANA. There is no homestead exemption; any resident householder has exempted real or personal property, or both, to the amount of $600 on any debt founded on contract since May 31, 1879. On debts founded on contracts made previous to that date, exemption is $300. Exemption does not, in any event, affect liens for labor, purchase-money, or taxes.

IOWA. A homestead in country of 40 acres, or in town or city of one half acre, with improvements and buildings to the aggregate value of $500, is exempted to the head of every family. If less than $500 in value, it may be increased to that amount. It is not exempted from execution for the purchase-money thereof, or for debts contracted prior to its acquirement. Upon the death of either husband or wife the homestead passes to the survivor. Professional men are allowed their libraries, instruments, etc., and a team and wagon; printers retain their presses and type to the value of $1,200. The head of a family may claim wearing apparel, tools, a gun, his library, and furniture to the extent of $200 in value. The personal earnings of the debtor for 90 days preceding the execution, certain stock, with food for them for six months, a pew in church and a lot in a burying ground are also exempt. Non-residents and unmarried persons, not being heads of families, can only claim their ordinary wearing apparel and trunk necessary to carry the same to the value of $75.

KANSAS. An independent fortune is exempted in this state. A homestead of 160 acres of farming land, or of one acre within an incorporated town or city, with buildings and improvements thereon, with no limit to value. The head of every family is allowed personal property as follows: the family library, schoolbooks, and family Bible; family pictures and musical instruments in use; pew in church and lot in burial ground; all wearing apparel of the family, beds, bedsteads and bedding, one cooking stove and appendages, and all

other cooking utensils, and all other stoves and appendages necessary for the use of the debtor and his family; one sewing machine, spinning wheel, and all other implements of industry, and all other household furniture not herein enumerated, not exceeding $500 in value; two cows, ten hogs, one yoke of oxen and one horse or mule, or in lieu of one yoke of oxen and one horse or mule, a span of mules or horses; 20 sheep and their wool; food for the support of the stock for one year: one wagon, two plows, drag and other farming utensils not exceeding in value $300; grain, meat, vegetables, groceries, fuel, etc., for the family for one year; the tools and implements of any mechanic, miner, or other workman, kept for the purpose of carrying on his business, together with stock in trade not exceeding $400 in value; library, instruments, and office furniture of any professional man. Residents, not the head of a family, have tools, implements, and stock in trade up to $400. No personal property is exempt for the wages of any clerk, mechanic, laborer, or servant. A lien on the homestead may be created by husband and wife joining in the mortgage.

KENTUCKY. To bona fide housekeepers with a family are exempted from execution and attachment for debt: a homestead to the value of $1,000; two work beasts, or one work beast and one yoke of oxen; two cows and calves; one wagon or cart; two plows and gear; ten head of sheep; provisions for family and provender for stock not exceeding $70 value; the tools and stock of a mechanic who is a housekeeper and has a family, not exceeding $100 in value; libraries or instruments of professional men, which may not exceed in value $500; the wages of a laboring man to the amount of $50, except for house rent and necessaries.

LOUISIANA. A homestead of 160 acres of land, with buildings and improvements thereon, is exempted to the head of a family, if owned and occupied as a residence, together with personal property, the whole not to exceed $2,000; all wearing apparel, implements, stock, etc., with provisions and supplies necessary for the plantation for one year. If the wife own separate property in her own right to the value of $2,000 there is no exemption.

MAINE. Homestead, $500; $100 wearing apparel, bedding, and furniture; $150 library; $300 team; $50 poultry; $100 sewing machine; $10 lumber; cow and heifer, 10 sheep and lambs, plow, wagon, mowing machine, a two-ton boat, the flax, raw and manufactured, from one acre of ground; provisions, fuel, seed, grain, provender for stock, and tools. After the debtor's death his family has the benefit of the exemptions.

MARYLAND. Besides wearing apparel, books, and tools used for earning a living, there is exempt other property to the value of $100. No homestead.

MASSACHUSETTS. Homestead, $800 (must be recorded as such); furniture, $300; sewing machine, $100; library, $50; tools and implements, $100; stock in trade, $100; boats and outfit, $100; one cow, one hog, and six sheep, and wages under $20.

MICHIGAN. Forty acres of land, with improvements, in the country, or house and lot worth $1,500 in town; furniture, $250; library, $150; two cows, five hogs, 10 sheep, team, tools, provisions, and fuel. No exemptions from execution for purchase-money.

MINNESOTA. Eighty acres, with improvements, in country, or lot with dwelling on it, in town; household property, $500; wagon, plows, and farming implements, $300; three cows, 10 hogs, 20 sheep, yoke of cattle, and a horse, or, instead, a pair of horses; one year's provisions, fuel, feed for stock, and seed grain; a miner's or mechanic's tools and stock in trade to $400; the library and instruments of a professional man; $25 in wages of a laboring man, earned within the last 30 days, and, where the debtor is publisher of a newspaper, his complete outfit to value $2,000, and stock $400.

MISSISSIPPI. To householding head of family, 160 acres of land and improvements in country, or house and lot in town, either to value of $3,000; tools and farming implements necessary for two male laborers; library and instruments of professional man to value of $250; two horses or mules or a yoke of oxen; two cows and calves, 10 hogs, 20 sheep; wagon, $100; personal property, $250; one sewing machine; provisions and provender; wages of a laborer, $50 a month.

MISSOURI. To head of family, 160 acres in the country to the value of $1,500, a lot (30 rods) in small town of same value, or lot (18 rods) in city having 40,000 inhabitants, to value of $3,000; 10 choice hogs, 10 choice sheep and their wool, two cows and calves; all necessary farm implements for one man; two work animals and $25 worth of feed; wearing apparel of family; four beds, bedding, tools, and implements of any mechanic; necessary books for professional men and teachers.

MONTANA. House and a quarter acre lot in town, or a farm of 160 acres, neither to exceed $2,500 in value; personal property to the value of $1,400. No exemptions are good against a mortgage, a mechanics' lien, or a claim for purchase-money.

NEBRASKA. Dwelling and 160 acres of land in country, or two adjoining lots in town, value $2,000. If he has no real property, the debtor may retain personal property to value $500. Clothing, furniture, provisions, animals, tools, and other things as per statute, and 90 per cent. wages of laborer. Exemptions are not good against mechanics' lien, mortgage, or purchase-money.

NEVADA. Homestead, $5,000; tools, implements, and other personal property, as per statute; miner's cabin, $500.

NEW HAMPSHIRE. Homestead, $500; $100 furniture; $100 tools; $200 books; $50 fuel and provisions; sewing machine, cook stove, bedding and clothing, one hog, six sheep, one yoke of oxen or one horse, and four tons of hay.

NEW JERSEY. Homestead, $1,000, and $200 household property.

NEW MEXICO. Homestead, $1,000; $10 furniture; $20 tools; $25 provisions.

NEW YORK. Homestead, $1,000; $250 furniture, tools, team, and other personal property; wages, $20.

NORTH CAROLINA. A homestead to the value of $1,000, and personal property worth $500. No exemption is good against taxes, purchase-money, or mechanics' liens.

OHIO. Homestead is exempt to the value of $1,000; if appraised to a higher value, a partition is made, or an appropriate rental is charged. Clothing and necessary furniture are exempted; tools and farming implements to value $100; $50 worth of provisions and three months' wages; one horse or yoke of cattle, harness, and wagon; one cow, two hogs, six sheep, and 60 days' provender, or, instead, $65 in household property; a professional man's books, $100. When resident debtor, being head of a family, has no homestead, he may retain personal property to the value of $500, besides other exempted property.

OKLAHOMA. Exemption to head of a family outside of city or town not to exceed 160 acres; and in a city or town not more than one acre; in addition thereto, certain personal effects and equipment appertaining to the various vocations. These exemptions do not apply to corporations for profit, to a non-resident, or a debtor who is in the act of removing his family from the territory, or who has absconded, taking with him his family. To a single person: wearing apparel, tools, apparatus, and books belonging to a trade or profession; one horse, saddle, and bridle, or one yoke of oxen; current wages for personal service. In certain classes of debts all exemptions are invalid.

OREGON. Homestead 160 acres not in town, $1,500; if in town or city, not to exceed one block, but in no case to be reduced to less than 20 acres nor one lot. Musical instruments, books, and pictures, $75; household effects, $300; clothing, $100, and clothing to each member of the family, $50; team, tools, instruments, library, or whatever is needed in the trade or profession of debtor, $400; 10 sheep, two cows, five hogs, three months' provisions and six months' provender. No exemption is good against a claim for purchase-money.

PENNSYLVANIA. Clothing, books, sewing machine, and $300 worth of other property. Right may be waived. No homestead.

RHODE ISLAND. Furniture and supplies for family, $300; tools, $200; library, $300; wages, $10; clothing; one cow and one hog; debts secured by negotiable paper. No homestead.

SOUTH CAROLINA. Homestead, $1,000; this right cannot be waived. Furniture, wagons, live stock, and tools, to value of $500. Homestead exemption cannot hold against an execution for the purchase-money, a lien for improvements or for taxes. Any person not the head of a family may have clothing, tools, etc., to $300.

TENNESSEE. Only the head of a family can have the benefit of exemptions; $1,000 homestead and a variety of personal property designated by statute, prominent items, being horses, mules, oxen, cows, calves, wagon, tools, lumber, grain, provisions, beds, bedding, furniture, and $30 wages.

TEXAS. Two hundred acres of land with improvements, in the country, or city property to value at time of being designated as homestead (regardless of the value of after improvements) of $5,000; furniture, farming implements, tools, books, five cows and calves, two yoke of cattle, two horses and wagon, a carriage or buggy, 20 hogs, 20 sheep, provision, provender, and many other articles. The exemption of the homestead is not good against taxes, purchase-money, or mechanics' lien; but in this last case the contract must have been signed by both husband and wife. On the death of a husband, the widow and children may have one year's support out of the estate, and if the property be not in such shape as to be exempted by law, enough may be sold to raise an allowance for homestead to value of $5,000 and other property $500. Any person not the head of a family may have exempted clothing, books, horse, bridle, and saddle.

UTAH. Homestead, $1,500; $250 worth of chairs, tables, desks, also musical instruments actually used by the family; necessary house and kitchen furniture, $300; sewing machine, pictures, wearing apparel, farming implements, $300; seed for planting, $200; crops growing or harvested, $200; miner's cabin, $500; also working appliances for same amount.

VERMONT. Homestead, $500; growing crop, clothing, furniture, sewing machine, tools, one cow, 10 sheep, one hog, three hives of bees, poultry, one yoke of oxen or two horses, fuel, provisions, and provender; also the instruments and library of a professional man, $200.

VIRGINIA. The head of a family who is a householder has a homestead exemption to the value of $2,000, which may be in real or personal property, both or either; also clothing, sewing machine, furniture, and animals; books, $100; tools, $100. The value of the exemptions outside of the homestead is varied according to the number in family, and ranges from $50 to $500.

WEST VIRGINIA. Homestead, $1,000, where the property has been granted or devised for the purpose, to the head of a family, or where he has devoted such property to that purpose by having it so recorded; also personal property to value of $200; tools to mechanic, $50.

WASHINGTON. Homestead (must be actually occupied) to the value of $2,000; clothing, books, bedding, and household goods to value of $500; one small boat to value of $50; two cows, five hogs, bees, poultry, fuel, and provisions. To a farmer, two horses, or two yoke of oxen, and farming implements to value of $500. To professional man, library worth $1,000, office furniture, and fuel. To lighterman, his boats, to value of $250. To drayman, his team.

WISCONSIN. Forty acres in the country, or one quarter of an acre in town, with the dwelling thereon; clothing, household furniture, $200; books, two cows, 10 hogs, 10 sheep, one horse, and yoke of cattle, or a pair of horses and mules, farming tools, one year's provisions and provender. To a mechanic, tools $200; professional man, his library, $200; a publisher or printer, his outfit for $1,500. To any head of a family, three months' earnings, not to exceed $60 a month. No exemption good against a mechanics' lien or claim for purchase-money.

WYOMING. House and lot in town or 160 acres of land in the country, either to value of $1,500; tools, team, and stock in trade of mechanic, miner, or other person, $800. Benefit of exemption can only be claimed by a bona fide resident householder.

ONTARIO. The exemptions from execution are, speaking generally: the beds and bedding in ordinary use by the debtor and his family; necessary wearing apparel and a list of domestic utensils necessarily incident to living, not to exceed in value the sum of $150; necessary provender for 30 days not to exceed in value the sum of $40; a cow, six sheep, four hogs, and 12 hens, in all not to exceed the value of $75; tools and implements ordinarily used in the debtor's occupation to the value of $100, or the debtor may elect to receive the proceeds of the sale of such tools up to $100. Under the Free Grants and Homestead Act, there is an exemption from liability for any debt incurred before the issue of the patent and for 20 years from date of location, except where the land itself is mortgaged or pledged or for the payment of taxes.

QUEBEC. The exemptions from execution are: beds, bedding, and bedsteads in ordinary use by debtor and his family; necessary wearing apparel; one stove and pipes, and a number of smaller articles; all necessary fuel, meat, vegetables, fish, flour not more than sufficient for ordinary consumption of debtor and family for three months; four cows, six sheep, four hogs, and food therefor for the winter; tools and implements or chattels ordinarily used in debtor's occupation. No real estate.

NEW BRUNSWICK. Wearing apparel; beds, kitchen utensils; tools of trade to the value of $100 are exempted.

NOVA SCOTIA. Necessary wearing apparel; beds, bedding, and bedsteads of debtor and his family; household utensils not exceeding in value $20; food enough for 30 days' consumption and not exceeding in value $40; one cow, two sheep, and hay and food therefor for 30 days; tools or chattels ordinarily used in the debtor's occupation to the value of $30. No real estate.

PRINCE EDWARD ISLAND. Necessary wearing apparel and bedding for the debtor and his family; tools and instruments of his trade or calling; £5 in money and his last cow are exempted from execution out of Supreme Court; wearing apparel and bedding of debtor and his family; the tools and implements of his trade; one cook stove and one cow, in all amounting in value to $50, are exempt from process out of County Court.

MANITOBA. Household goods to the value of $500; tools, agricultural implements, and necessaries used by the debtor in his trade, occupation, or profession, to the value of $500; homestead to the extent of 160 acres being the residence of the debtor, the buildings and improvements thereon; or the town residence of the debtor to the value of $1,500, provided that no real or personal property shall be exempt from seizure or sale under execution for the purchase price of the same. A debtor cannot waive his exemption from seizure and sale under execution.

NORTHWEST TERRITORIES. Necessary clothing of the defendant and his family; furniture and household furnishings belonging to defendant and his family to the value of $500; also certain personalty exclusive of the foregoing and homestead not exceeding 160 acres; house and buildings occupied by the defendant, also the lot or lots on which same is situate according to the registered plan, to the extent of $1,500; defendant is entitled to his choice from a greater number of articles from the same class.

BRITISH COLUMBIA. Personal property of debtor to the value of $500 is exempt from execution. No goods or personalty, however, is exempt from seizure in respect to debts contracted in regard to the identical goods. The stock in trade of a merchant is not exempt from seizure although under $500, and it can be sold to satisfy a judgment. Registered homesteads are exempt from execution to the value of $2,500.

PROPERTY RIGHTS OF MARRIED WOMEN.

ALABAMA. Married women may hold all property, real and personal, acquired before and after marriage, as a separate estate not liable for the husband's debts, and it may be devised or bequeathed as by a single woman. This separate estate is liable for debts contracted by the woman before marriage, and for contracts after marriage for articles of comfort and support of family. The wife is entitled to dower of one half of husband's real estate, if he leave no lineal descendants and his estate is not insolvent; if insolvent, then to one third; one third if there are any descendants, provided she has no separate estate; if her separate estate is less than the dower interest would be, she is entitled to as much as would make it equal. Women attain their legal majority at 21, but may marry without consent of their parents at 18.

ARIZONA. Married women may carry on business and sue and be sued in their own names. All property acquired before marriage, and all afterwards acquired, by gift, grant, devise, or inheritance, is separate estate, liable for her own but not for her husband's debts. She may control it and dispose of it in all respects like a single woman. The wife must join in all deeds and mortgages of real estate except unpatented mining claims.

ARKANSAS. Married women have absolute and unqualified right in property of every kind and are not liable for debts or contracts of the husband. But a schedule under oath, and verified by some other reputable person, must be made by the husband and wife, and filed in the recorder's office of the county where the property is, and of the county where they reside. The wife may control her property, may carry on business on her sole and separate account, may sue and be sued, may make a will and may insure her husband's life for her benefit. The widow is entitled to one third part of the estate, unless legally relinquished by her.

CALIFORNIA. All property acquired in any manner before marriage, or afterwards by gift, grant, inheritance, or devise, is wife's separate property, controlled by her and not liable for debts of the husband. The husband's property similarly acquired is not liable for debts of the wife. All property acquired after marriage by husband or wife, except as above, shall be common property, but under the husband's control. Dower and curtesy are abolished, but the survivor takes half the common property after payment of debts and expenses of administration. A married woman may dispose of her separate estate by will without the consent of her husband and insure her husband's life for her benefit.

COLORADO. Married women are treated in all respects, as to their property rights, as if they were single. A wife may carry on trade or business, sue or be sued, contract debts, transfer real estate, and in all ways bind her separate property, without the husband's joining. She may make a will, but cannot bequeath more than half her property away from her husband without his consent in writing. The husband cannot by will deprive his wife of over one half of his property. Dower is abolished. The husband is liable for debts of the wife contracted before marriage to the extent of the property he may receive through her, but no further.

CONNECTICUT. Previous to the year 1877, the husband acquired a right to the use of all the real estate of the wife during her life and if he had a child by her and survived her, then during his own life as tenant by curtesy. By the Act of May 20, 1877, the rights of married women are materially enlarged. Any woman married after that date retains her real estate as if unmarried. She may make contracts, convey real estate, and sue or be sued in regard to any property owned by her at the time of marriage, or afterwards acquired. The estate is liable for her debts, and, jointly with her husband, for debts contracted for joint benefit of both or household expenses. The separate earnings of a wife are her sole property. A surviving husband or wife is entitled to use for life of one third in value of real and personal property legally or equitably owned by the other at the time of death.

DAKOTA (NORTH and SOUTH). Married women may transact business in all respects the same as if unmarried. Neither husband nor wife has any interest in the separate estate of the other. The earnings and accumulations of the wife are her separate property and not liable for the husband's debts nor even for household debts contracted by her as her husband's agent. Her separate property is, however, liable for her own debts, contracted before or after marriage, if such debts are contracted on her own responsibility.

DELAWARE. Married women, married since 1873, retain all real and personal property held at marriage, or since acquired from any person other than the husband, as their separate estate, and not subject to the disposal of the husband or liable for his debts. They may receive wages for personal labor, sue or be sued in respect to their own property as if unmarried; and the rents, issues, and profits of their separate estate are not controlled by the husband. The widow is entitled to one third dower of all the lands and tenements whereof the husband was seized at any time during her marriage, unless she shall have relinquished such right for and during the term of her natural life. She may be an administratrix, and the husband's life may be insured for her benefit if premium does not exceed $150.

DISTRICT OF COLUMBIA. Married women may bequeath, devise, or convey property or interest therein in the same manner as if unmarried. Real or personal property belonging to the wife at marriage or afterwards acquired is separate estate. She may sue and be sued in all matters pertaining to her property, and the husband is not liable for any contracts made by her in respect to her personal estate.

FLORIDA. Married women retain all real or personal property owned at marriage or acquired thereafter, and are not liable for the husband's debts, without his consent in writing and legally executed. In order that it shall be free from his debts, the property must be inventoried and recorded within six months after marriage or subsequent acquirement of the property. The wife may sell and convey all real estate inherited by her the same as if she were unmarried; but her husband must join in all sales, transfers, and conveyances of her property, both real and personal. She is entitled to dower in a life estate in one third of all the real estate of which her husband was seized and possessed at his death or at any time during his life, unless she has relinquished the same; also an absolute one third of his personalty.

GEORGIA. Married women retain as a separate estate all property in their possession at the time of marriage, or afterwards acquired, and are not liable for any debts, defaults, or contracts of the husband. By consent of her husband advertised for four weeks she may become a free trader, in which event she is liable the same as if unmarried. The wife may not bind her estate by any contract of suretyship, either in behalf of her husband or any other person. The widow takes dower in one third of all the lands of which her husband was seized at his death; and wife and children, after the husband's death, are entitled to one year's support from his property, all other claims yielding to this.

IDAHO. All property, both real and personal, owned at marriage or afterwards acquired, by either wife or husband, remains a separate estate. All property acquired after marriage is held in common. Separate property of the wife should be inventoried with the county recorder; the husband has control of it during marriage, but cannot create a lien or encumbrance unless joined by the wife, who is examined separately. If the husband mismanages, or commits waste, the district court may, on application of the wife, appoint a trustee to manage her separate property. Upon the death of husband or wife, half the common property goes to survivor; if no direct descendants, all goes to survivor.

ILLINOIS. Married women may own in their own right realty and personalty, may sue and be sued, contract and incur liabilities, the same as if unmarried; but they may not enter into or carry on any partnership business without consent of the husband, unless abandoned by him or he is incapable of giving assent. Beyond the necessaries, the husband is not liable for debts of the wife, except in cases where he would be jointly liable if the marriage did not exist. The estate of both is liable for family expenses, but the wife's separate earnings are her own. A surviving wife or husband takes one third of all the realty of the deceased, unless relinquished in due form. The husband and wife are put upon the same footing as to dower, and the estate of curtesy is abolished.

INDIANA. Married women retain all realty and personalty owned by them at marriage, or afterwards acquired, and are not liable for the husband's debts. The husband is liable for debts of the wife contracted before marriage only to the extent of the personal property he may receive from or through her, or derive from sale or rent of her lands. She may sell personal property but she may not convey or encumber her real estate unless the husband joins. Suits against her separate estate should be brought in the name of both. A widow takes one third of her deceased husband's real estate in fee simple, free from all demands of creditors, where the estate does not exceed $10,000; where the estate is over $10,000 and under $20,000 she takes one fourth; and one fifth if it exceeds $20,000. She also takes one third of the personalty after payment of debts, and in all cases takes $500, without accounting, and may occupy the dwelling and forty acres of land for one year, rent free.

IOWA. Married women may own in their own right real and personal property acquired by descent, gift, or purchase, may sell, convey, and devise the same, may sue and be sued, make contracts and buy goods in their own name. Wife or husband is not liable for the debts of the other before marriage, or for separate debts incurred afterwards. The wife's earnings are her own, and her note is good against her own estate. Women attain majority at 18, or earlier, upon marriage; a female of 14 may marry. The surviving wife or husband is entitled to one third of the real estate of the deceased, free from all claims of creditors. If they leave no children, survivor takes one half, parents the other half.

KANSAS. Married women have the same property rights as men, and may make contracts, carry on business, sue and be sued, and sell or convey real estate precisely as their husbands; their earnings or profits are their own. A note or indorsement made by a married woman will bind her property the same as if unmarried. Homestead is absolute property of widow and children, and neither wife nor husband may bequeath more than half their property without written consent of the other. If either dies intestate and without children, the entire property goes to the survivor.

KENTUCKY. Married women may hold real or personal property as a separate estate free from the control of the husband or liability for his debts. By petition to the circuit court, in which the husband must join, she may acquire the right to transact business in her own name. Unless dower be barred, forfeited, or relinquished, she takes one third of the real estate and one half of the personal property.

LOUISIANA. Married women may hold and control both real and personal property owned at time of marriage; all property or revenues of separate property acquired by either husband or wife after marriage is held in common, and is divided equally between them at dissolution of the marriage either by death or divorce. The wife may carry on a separate business, but her husband will be bound by her contracts, so long as the community of property exists; she cannot sue without the concurrence of her husband, nor bind herself or her property for his debts. There is no right of dower to the wife.

MAINE. A married woman holds real and personal property, acquired in any way except from the husband, the same as if single. She may make contracts, sue and be sued, and do business in her own name; and her property may be taken to satisfy judgments against her. Her property is liable only for her own debts. She joins husband in a deed selling his property to relinquish dower. He joins with her in selling hers only when such property comes from him. A wife, being abandoned by her husband, may be allowed to take and use his personal property. Dower, life estate in one third of all husband's real property owned during coverture; one half if no children. He has same interest in deceased wife's estate.

MARYLAND. Property acquired by a married woman is her own, controlled by herself, and is free from her husband's debts. She conveys by joint deed with the husband, but devises and bequeaths the same as if single. She may be sued with her husband on joint contracts made by them, and the property of both is equally liable. Dower one third, if they have children; one half, if none.

MASSACHUSETTS. The property of a married woman is managed by herself, and is not liable for her husband's debts. She may make contracts, sue and be sued, and do business in her own name, provided a certificate is filed by her or her husband in the office of the town clerk. Contracts and conveyances between husband and wife are not allowed. Her conveyances of real estate are subject to husband's tenancy by curtesy. A wife cannot make a will affecting her husband's right to one half of the personal property, or his tenancy by curtesy in her real estate, without his written consent. Dower as by common law.

MICHIGAN. Married women own and control property the same as if single. A wife may do business in her own name and make contracts, even with her husband. Her separate property is liable for wrongs committed by her. Widow has dower, but there is for the surviving husband no right of tenancy by curtesy.

MINNESOTA. A married woman holds property in her own name. She may make contracts, and her property is liable only for her own debts. She cannot sell or convey real estate further than a mortgage for purchase money or a three years' lease, without her husband joining her. Contracts between husband and wife are void. The surviving husband or wife keeps the homestead for life.

MISSISSIPPI. A married woman holds property acquired in any manner, and the revenues therefrom, for her own use and free from control or liability of her husband. She may convey and encumber the same as if single, but husband joins in conveyance. She may devise and bequeath. Deed from husband to wife is void as to creditors at time of making it. A wife may not encumber her estate by mortgage or otherwise for her husband's debts; she may do business on her own account the same as if single, and is then liable for her contracts, housekeeping, and family expenses. She joins her husband in conveyance of homestead, but not in that of his other property. Dower in property of which the husband dies seized.

MISSOURI. A married woman controls her own property, and holds it through a trustee, free from liability for her husband's debts. She may make contracts, sign notes, and do business in her own name. She may make a will. She joins her husband in his conveyances to release dower. Her dower is one third for life of all lands owned by husband.

MONTANA. A list of married woman's property filed and recorded saves it from being liable for the husband's debts, except necessaries for herself and children under 18. A married woman may become a sole trader by recording her intention. If she invests more than $10,000 in business she must make oath that the surplus did not come from her husband. The husband is not liable for debts contracted by her in business. She is also responsible for the maintenance of her children. A surviving husband or wife takes one half of deceased's property, if no children; one third if there are.

NEBRASKA. A married woman holds her separate property free from the disposal of her husband and from liability for his debts. She may bargain, sell, make contracts, do business, sue and be sued, all so far as her separate estate may warrant; but she cannot become surety for another, not even being allowed to bind herself for her husband's debts. Property coming to the wife from the husband is not privileged as her separate property.

NEVADA. The separate property of a married woman which is controlled by herself is such as she may have owned before marriage or acquired afterwards by gift, devise, or descent. All property acquired otherwise, by either husband or wife, is common property, and under the absolute control of the husband. On the death of the husband the widow receives one half of the common property.

NEW HAMPSHIRE. A married woman holds property owned before marriage or acquired afterwards, except what may come from the husband, for her own use. She may sell, convey and encumber, devise and bequeath, do business, give notes, sue and be sued. Her contracts are binding, excepting that there can be no contracts or conveyances between husband and wife, nor can the wife become security for her husband. Wife is entitled to dower.

NEW JERSEY. The property owned before marriage, and such as she may acquire afterwards by gift, descent, or bequest, is the sole property of a married woman and is not liable for the husband's debts. She may make contracts, but cannot sell or encumber her real estate without consent of husband. She cannot indorse notes or become security. She joins husband in his conveyances and mortgages. Dower and curtesy.

NEW MEXICO. The separate property of a married woman is what she owned previous to marriage, or what she may inherit. All that she acquires afterwards, and the revenues of her separate estate, go into the common property. The husband has control and management of her separate estate and the common property. There is no dower, but on decease of the husband the wife's private property is first deducted; then she receives one half of the common property, after all debts are paid. If there be no children she has a right to all the common property.

NEW YORK. Married women may have real and personal property, buy and sell, and do business in their own names. A married woman is liable for debts contracted in her own trade or business, or when an agreement or contract has been made for the benefit of her separate property, when, by the terms of such instrument, her separate property is to be charged with the liability. Dower.

NORTH CAROLINA. A married woman's separate property is not liable for her husband's debts. She may devise and bequeath, but must have husband's consent to convey. Unless she be a free trader, she can make no contract other than for personal or family necessities or for payment of antenuptial debts, without the consent of her husband. She becomes a free trader, the husband assenting, by filing her intention. Common law dower and one year's subsistence.

OHIO. The property of a married woman is not liable for her husband's debts; beyond a three years' lease or a contract for the improvement of her real estate, she cannot sell or encumber it without the consent of her husband. If a married woman engages in trade, her separate property is liable for the debts she may then contract, and she may sue and be sued the same as if single. A deserted wife must procure an order from court, by which she shall have all property rights as a *feme sole*. Dower in all real estate owned by husband during coverture.

OKLAHOMA. Neither husband nor wife has any interest in the property of the other. Either may enter into any engagement or transaction with the other, or with any other person, respecting property which either might, if unmarried, subject, between them, to rules which control the actions of persons occupying confidential relations. The wife may,

without consent of husband, convey her separate property. Woman retains the same legal existence and personality after marriage as before, and receives the same protection of her rights as does her husband. She may hold and transfer real and personal property; may buy and sell goods, give notes or other obligations, and sue and be sued, same as if unmarried.

OREGON. A married woman holds her property free from the control or debts of her husband. She may make contracts, buy and sell, and give notes, and her own property will be liable. The husband joins in her conveyances. She may make a will, but it must not interfere with her husband's rights of curtesy.

PENNSYLANIA. The property of a married woman is held as her separate estate, but is chargeable for family necessaries ordered by her. A wife cannot make a contract or conveyance without her husband joining her. By obtaining leave from the court she may have the benefit of her own earnings. She may make a will, saving the husband's rights by curtesy. She may deposit money in bank and write checks against it in her own name. Dower, one third of all real estate owned by husband during coverture.

RHODE ISLAND. A married woman's property is held by trustees for her separate use free from her husband's debts. She cannot make contracts of do business. She may make a will subject to husband's right by curtesy.

SOUTH CAROLINA. The property of a married woman cannot be seized for her husband's debts. A married woman can bequeath, devise, and encumber her separate property. She can buy in her own name, and have conveyances made to her, and make contracts, the same as if she were single. A gift from husband to wife is not good against a creditor's claim. Dower rights.

TENNESSEE. A married woman has her separate property free from the husband's control and from liability for his debts. She may encumber, convey, or devise her separate property without being joined by her husband in the deed. Widow has dower in one third of husband's real estate, and a child's share in his personalty. The husband dying intestate, leaving no heirs, the wife inherits all his property.

TEXAS. The property owned by husband or wife before marriage, and what either may acquire afterwards, by gift, devise, or descent, is community property. The husband controls the common property and the wife's separate estate. The common property is liable for the debts of either, and the husband may dispose of it. At the death of either, the survivor takes one half and the children the other half of the common property. The husband joins wife in conveyance of her separate property. She joins him in conveyance of homestead. A married woman cannot do business in her own name, but she may become security for her husband by mortgaging her separate estate.

UTAH. A married woman's separate property is held, managed, controlled, and disposed of by herself. A wife may carry on business, sue and be sued, give notes and make contracts same as if single.

VERMONT. The property of a married woman is held separate, and is not liable for her husband's debts. In conveyance of the wife's real estate the husband must join in deed. A married woman may make a will. Widow has dower in one third the real estate of which the husband died seized.

VIRGINIA. A married woman holds the property owned by her previous to marriage, and what she may afterwards acquire, as sole trader, free from the control of her husband, and from liability for his debts. She may make a will subject to husband's rights by curtesy. Common law dower.

WEST VIRGINIA. The property of a married woman, however acquired, except from the husband, is held for her sole and separate use. Husband must join in conveyances of real estate. Dower.

WASHINGTON. The property owned before marriage by husband or wife, and all acquired afterwards by gift, devise, or descent to either, is separate property. All otherwise acquired is common property, subject to control of the husband. He also controls the separate property of the wife, but cannot sell or convey it without her joining in the deed. To save the separate property of the wife from attachment for husband's debts, there must be an inventory of it on record.

WISCONSIN. A married woman has all property rights the same as if single. She may buy and sell, lend and borrow, make conveyances, and have real estate conveyed to her, and all such business may be transacted between her and her husband as between strangers. She may sue alone, but in being sued she must be joined to husband. Dower, life interest in one third of all husband's realty held during the marriage. Husband has wife's realty for life.

WYOMING. A married woman may carry on business, make contracts, keep her own earnings, hold property, real or personal, receive the rents in her own name, sue and be sued, make a will, free from any control or interference of her husband, the same as if she were single. Her property is not liable for the debts of her husband. Women in this state have the right to vote and hold office.

CANADA. In the provinces of the Dominion, generally, a married woman holds all her property and earnings, free from the control of her husband. It is liable for her debts before marriage, and her husband is not. She may manage it and bequeath it. She is entitled to dower, but there is no tenancy by curtesy. In the province of Quebec the law is modified by the French law. There all the personal property and gains of both parties are put together, and form the community property, which the husband administers. Each can bequeath only his or her interest, and the heirs of each inherit the interest of each.

EPOCH-MAKING DECISIONS OF THE UNITED STATES SUPREME COURT.

MARBURY vs. MADISON. The only point at issue in this case was that of the power of the U. S. Supreme Court to issue a writ of mandamus, but Chief-Justice John Marshall, after giving the opinion that the Court had no such power, went out of his way to lay down the much more important doctrine that whenever a law of Congress was at variance with the U. S. Constitution the courts must cling to the Constitution and refuse to obey that act. Few single events have played so great a part in molding the history of this country as this decision.

McCULLOCH vs. MARYLAND. The question in this famous case was whether or not the states could tax a bank chartered by the U. S. John Marshall, after upholding the right of the U. S. to charter such an institution, declared that such a tax was not constitutional since it tended to put an agency of the Federal government under the control of the states. The most important part of this decision had to do with Marshall's enunciation of the doctrine of implied powers—that Congress, in carrying out the powers specifically granted to it by the Constitution, was justified in exercising other powers if the latter aided in the more perfect execution of the former.

MARTIN vs. HUNTER'S LESSEE. The decision in this case, establishing a very important precedent, was that the U. S. Constitution operated upon states in their corporate capacity; that the law-making bodies of the states were in every case under the U. S. Constitution, and bound by the paramount authority of the U. S. The centralizing influence of this decision was great.

COHENS vs. VIRGINIA. Another decision asserting the supremacy of the U. S. over the states. This time Marshall upheld the right and the duty of U. S. courts to hear cases appealed from state courts. A Virginia court had previously denied this power.

DARTMOUTH COLLEGE CASE. By this decision a charter became a contract as the word contract was understood in common law, and even a state legislature could not break or modify it without the consent of the other party. The importance of this decision is to be found in the fact that charters of private corporations were perpetual unless a time limit was fixed in them.

GIBBONS vs. OGDEN. Could a state grant a monopoly to a private corporation doing an interstate transportation business? John Marshall answered "no"; that this was clearly interstate commerce, and by the Constitution Congress controlled interstate commerce. This decision was the first of a number of decisions widening the meaning of the word "commerce." Marshall's declaration that "commerce" was synonymous with "intercourse" has been always accepted since.

COLLECTOR vs. DAY. By this decision salaries of state officials were declared to be exempt from a Federal income tax.

SLAUGHTER HOUSE CASES. The Fourteenth Amendment had declared that "all persons born or naturalized in the U. S. are citizens of the U. S. and the state wherein they reside." And that "no state shall make or enforce any law which shall abridge the privileges and immunities of citizens of the U. S." When were the privileges and immunities of U. S. citizens abridged? In the

Slaughter House cases the Supreme Court wisely decided that too broad an interpretation of the word "abridge" would have the effect of limiting too much, the power of the states over their own citizens. The effect of the indefinite wording of the Fourteenth Amendment has been unfortunate as it has resulted in endless litigation. The good results of the Amendment have been negligible.

GRANGER CASES. In these cases the Supreme Court upheld the right of the states to control corporations within their boundaries, even though they might be interstate railroads. The result of these decisions was a confusing mass of regulatory laws passed by western legislatures in their efforts to curb the growing power of railroads.

NORTHERN SECURITIES CASE. The Sherman Act had declared every combination a conspiracy in restraint of trade. To get around this definition holding companies were organized for the purpose of controlling the stock of hitherto-competing corporations. But the Supreme Court decided that holding companies came under the Sherman Act, and were therefore illegal.

BRENNAN vs. TITUSVILLE. (153 U. S. 289). A tax upon persons selling goods by sample is inoperative as to persons soliciting orders for a house without the state "Interstate commerce cannot be taxed at all even though the same amount should be laid on domestic commerce." A state cannot demand a license fee from citizens of other states selling goods within its limits, it can levy a tax or demand a license fee if the article offered for sale is in the possession of the seller, even if it is the produce of another state.

DICTIONARY OF TERMS USED IN POLITICAL SCIENCE.

ABSOLUTISM. A system of government in which the sovereignty is lodged in a single authority without legal restraint. Absolute authority may be exercised by an individual in a republican as well as a monarchical form of government.

ADJOURNMENT. A temporary suspension of the meetings of a legisaltive assembly.

ADMINISTRATION. The group of officials entrusted with the execution of the laws. (See Government). The work of actually carrying laws into execution is called administration. The states of continental Europe have a distinct body of law known as administrative law, which applies only to administrative officers.

ADVISORY OPINIONS. Informal opinions rendered by judges in regard to the constitutionality of a bill being considered by a legislative body. Such opinions do not have the force of law, but are given in order to keep legislatures from passing acts which might be declared unconstitutional. The courts of Maine, Massachusetts, New Hampshire, and Rhode Island are authorized to render such decisions.

ALIEN. In international law the term is used to denote a citizen of a foreign state residing or visiting in a country other than his own. Upon naturalization he loses the status of alien.

ALLEGIANCE. A term of constitutional law used to denote the obligation that binds the subject or citizen to his state. It may be natural (by birth), or acquired (by naturalization). Some states have taken the position that natural allegiance can never be thrown off,—"Once an Italian, always an Italian."

ALLOCATION. As used in connection with government this term usually refers to the process of dividing up lands and distributing them among the landless. This may be done, as in Ireland, by parliamentary enactment, or, as in Russia, by direct confiscation.

ALTERNATE. A person designated lawfully to act in place of another, usually at a political gathering.

AMBASSADOR. The highest rank of diplomatic representatives.

AMENDMENT. As used in U. S. constitutional law the term refers to the formal addition of a new clause to a constitution.

AMNESTY. An act of a sovereign power wiping out past offences. It differs from a pardon in the fact that the latter presupposes guilt and the former does not. It may take the form of a general amnesty applying to a number of persons.

ANARCHY. A political and social theory based on the principle that each individual should rule himself without the intervention of government.

APPELLATE JURISDICTION. The power and authority of a superior court to take cognizance of, to hear and determine a cause, upon appeal, for the purpose of correcting or revising the proceedings of a lower court.

APPORTIONMENT. The fixing of the number of representatives to which electoral areas shall be entitled, by virtue of population or some other basis fixed by law.

APPROPRIATION. A legislative act determining the objects for which the public moneys may be spent.

ARBITRATION. The settlement of disputes by reference to parties not interested in the questions involved. Used principally in international disputes, and disputes between employers and employees.

ARCHIVES. The records, files, correspondences, accounts, and other documents arising in the transaction of public business.

ARISTOCRACY. A form of government in which the power resides in the hands of the few, usually the "well-born." Or, a term used to denote the upper class of society whether or not they enjoy special political privileges.

ARMISTICE. A suspension of military hostilities, usually for the purpose of discussing peace.

ASSESSMENT. The authoritative fixing of property valuation for the purpose of taxation.

ATTACHE. A person assigned by a government to the suite of an ambassador or minister.

ATTAINDER. The loss of civil rights because of conviction of treason or some other heinous offence. A bill of attainder is a legislative act imposing punishment.

BALLOT. A slip of paper used by voters in expressing their choice for elective offices.

BALLOT, AUSTRALIAN. The method of secret, written voting, first used in Australia.

BALLOT, SHORT. A ballot containing the names of only a few elective offices.

BELLIGERENCY. A term of international law used to denote a state of armed and legally recognized hostility. In the case of rebels or insurgents a recognition of their belligerency puts them on the plane of organized states in most respects.

BICAMERAL. The division of a legislative assembly into two houses or chambers.

BILL. A proposed legislative enactment formally introduced by a member of the body.

BILL, OF RIGHTS. A document solemnly assented to by a sovereign whereby the rights of the people will be respected. Or, formal constitutional enactments protecting the rights of the people.

BIMETALLISM. The legal parity of gold and silver as units of exchange.

BLOCKADE. A measure of war by which one belligerent aims to cut off the communication of other belligerents. A "paper" blockade is one that can not be enforced, and, according to international law, need not be respected by neutrals.

BOARD. A group of persons appointed or elected for the duty of administering some law or laws.

BOROUGH. A unit of local self-government. In England a borough was an electoral area for the election of representatives to the House of Commons.

BOSS. A term used to denote an autocratic party leader.

BOUNTY. Money paid by the government to private industries for the purpose of encouraging them to continue in that particular business. See Subsidy.

BOYCOTT. An agreement entered into by a number of persons whereby they will have no dealings with another person or association of persons.

BUDGET. The financial statement of a government for a definite period outlining the object and amount of expenditures; the sources and expected amounts of revenue, and the balancing of these two estimates.

BUNDESSTAAT. A term invented by German political scientists and used to signify that form of federal government in which the states are subordinate to the central government.

BUREAU. The largest subdivision of an executive or administrative department.

BUREAUCRACY. A system of government in which administrative officers, usually responsible only to an

autocrat, carry on the government in a high-handed manner. The "bureaucratic" tendency is noticeable in all countries today.

BY-ELECTION. A special election held to fill a vacancy in a legislative assembly. (British term).

BY-LAW. Rules and regulations which govern voluntary associations.

CABINET. The group of advisors constituting the principal executive officers of a state.

CABINET GOVERNMENT. As now used this term implies the existence of a responsibility of the chief executive officers to the popularly elected house of Parliament. The Cabinet remains in power until it loses the confidence of the legislative body, when it must resign.

CALENDAR. A register containing a list of the bills reported from committees.

CAMPAIGN. The period preceding an election devoted to bringing before the people the issues involved.

CANDIDATE. A person who seeks some political office, appointive or elective.

CANVASS. A party or individual survey of the political field preliminary to the election.

CAPITULATION. Restriction placed upon semi-barbarous or non-Christian states interfering with their control over Christian aliens within their borders.

CARTEL. An agreement between belligerents regulating intercourse during war.

CAUCUS. An informal meeting of party members for the purpose of deciding questions of party policy or the choosing of candidates.

CENTRALIZATION. A term used to signify that form of government in which the local governments are subordinated to the central government. There may be degrees of centralization.

CHALLENGE. The formal questioning by an authorized person of another's right to vote.

CHANCELLOR. A high dignitary of government, as The Lord High Chancellor; Chancellor of the Exchequer. In Germany the Chancellor corresponds to the English Premier.

CHANCERY. A court of general equity jurisdiction.

CHARGE D'AFFAIRS. A person acting temporarily in the place of a diplomat of high rank.

CHARTER. The organic law of colonies, granted by the mother-country; or a document granted by a state to public, quasi-public, or private corporations conferring upon them privileges.

CHECKS AND BALANCES. A system whereby the departments of government act as a check against each other, restraint being considered more important than co-operation.

CITY. A local self-governing area which has conferred upon it the greatest amount of power.

CITIZEN. An individual who owes obligations to a certain state, and in return possesses rights not granted to non-citizens.

CIVIL SERVICE. Technically, the whole body of public officials occupying subordinate positions.

CIVIL SERVICE, REFORM. A reform designed to do away with the "spoils system" by providing for competitive examinations and secure tenure of office.

CIVIL SERVICE, COMMISSION. A body appointed to enforce civil service regulations.

CLOSURE. A term used to include all rules of legislative assemblies which shut off debate.

CODIFICATION. The reduction of a body of law to direct and systematize legislative form.

COLLECTIVISM. The ownership by the community of all agencies of production.

COMBINE. The popular name for combination or trust.

COMMISSION. Group of persons appointed or elected to administer law.

COMMISSION FORM OF GOVERNMENT. A system of municipal government which centralizes all legislative and executive authority in the hands of a small elective body.

COMMITTEE. A selected group of persons in a legislative body appointed or elected to consider certain proposed laws and prepare reports of their deliberations.

COMMITTEE OF THE WHOLE. The whole body of a legislative chamber sitting as a committee.

COMMON CARRIER. One engaged in the business of transportation for the general public.

COMMUNISM. A social system in which there is no private property.

COMPTROLLER. A high fiscal officer in a state.

CONCURRENT JURISDICTION. The authority of different tribunals to hear the same kind of cases.

CONCURRENT POWERS. Powers that may be exercised equally by two governments, such as the states and the United States.

CONFEDERATION. A federal form of government in which the component states retain the greater portion of the power. See Staatenbund.

CONFIRMATION. As used in the U. S. this signifies the consent of a legislative body to the acts of an executive.

CONGRESS. The legislative branch of the U. S. government. Or, a group of persons gathered together for diplomatic or other purposes.

CONSTITUTION. The organic law of a state.

CONSTRUCTION. The method of interpreting constitutions. By broad construction is meant that the constitution is stretched to cover many things not specifically mentioned in the document. By strict or narrow construction is meant that the constitution is narrowly interpreted.

CONTRABAND. Goods which may be seized by belligerents if destined for the enemy.

CONTRACT THEORY OF GOVERNMENT. The theory that the state first began when people voluntarily surrendered their rights of complete government to rulers.

CONVENTION. A custom of long standing (British). A group of persons assembled for the purpose of setting on foot some political program.

CORPORATION. "An artificial being, invisible, intangible, and existing only in contemplation of law." (John Marshall). They are either public, as cities, or private, as a manufacturing company, or quasi-public, as a railroad company.

COUNTY. An important subdivision of a state possessing powers of self-government.

CROWN. In English political terminology the term crown is now used to denote the executive department.

CURRENCY. As used in the U. S. currency refers only to paper money.

DARK HORSE. A comparatively unknown person brought forward as a candidate for some important political office.

DECLARATORY STATUTES. Statutes passed to remove doubts or to settle conflicting judicial decisions as to what the common law is upon given points.

DE FACTO GOVERNMENT. As distinguished from a de jure government, one that has been irregularly set up and which has not been generally recognized by other states.

DE JURE GOVERNMENT. The government recognized by other nations as the real government, even though it may not be actually in power at the time.

DEMOCRACY. That form of government in which the people rule. A monarchy may be a true democracy.

DEPENDENCY. A country which is not directly a part of but which is under the control of another country.

DISFRANCHISEMENT. The legal deprivation of the privilege of voting.

DISTRICT SYSTEM. The ordinary method of representation by which the area to be represented is divided into small sections, each electing one representative.

DIVISION OF POWERS. A term used to denote the separation of the powers of government functionally into the legislative, the executive, and the judicial branches.

DUAL GOVERNMENT. A form of political structure, such as the U. S., where the work of government is divided between two organizations, both supreme in their own spheres.

DUE PROCESS OF LAW. A term for which jurists will not make a general definition, but apply it to the case at hand. If an individual has been wronged in the process of a trial he may plead "due process."

ELASTIC CLAUSE. That clause in the U. S. Constitution which states that Congress shall have the power to "make all laws that are necessary and proper for carrying into execution the foregoing powers." (Art. I, sec. 8, par. 18).

ELECTION. The selection by the voters of persons to hold public office.

ELECTORAL COLLEGE. The name given to the meeting of the state electors in the process of choosing a President of the U. S.

EMBARGO. In international law an embargo is a form of reprisal by which ships or other property are seized or detained by a state.

EQUITY. That body of principles which brings about the solution of a case in some way beyond the normal action of the common law.

ESCHEAT. The reversion of property to the state by reason of the lack of competent heirs.

ESTIMATES. The official analysis of necessary expenditures for the ensuing year.

EXCISE. Duties imposed upon the process of manufactures or upon domestic trade.

EXECUTIVE. That branch of the government entrusted with the enforcement of the law.

EXEQUATUR. The official writ of authority granted by an executive to consuls representing that state.

EXPATRIATION. The renunciation or the abandonment of nationality.

EX POST FACTO. A law which in operation punishes persons for the commission of an act which was not criminal at the time of its commission, or increasing the penalties thereof.

EXTRADITION. The legal process of returning persons accused of crime to the state in which the crime was committed.

EXTRATERRITORIALITY. The principle of international law by which certain persons, royal or diplomatic usually, and certain lands are out of the jurisdiction of the state in which they happen to be found.

FABIAN SOCIALIST. A group of English socialists who use and co-operate with existing institutions for their own purposes. Their theory is that socialism will come by process of evolution.

FAVORITE SON. A phrase used to denote a presidential candidate little known outside of his own state who receives the support of that state in the nominating convention.

FEDERAL. That form of government in which the powers of government are distributed among a number of co-ordinate bodies.

FILIBUSTERING. As used in legislative bodies filibustering means the deliberate obstruction of proceedings by such devices as unnecessary roll-calls, etc.

FRANCHISE. An authorization by the state to a corporation to occupy a particular street or other public property with its wires, tracks, etc.

FUSION. The union of two or more parties for the purpose of defeating a majority party.

GENERAL COURT. As now used this term is the official appellation of the legislatures of Massachusetts and New Hampshire.

GENTLEMEN'S AGREEMENTS. Verbal agreements entered into by officials of corporations whereby competition between them will not take place.

GERRYMANDER. A political device used by politicians to unite the electoral areas of the state in such a way that their party will be enabled to elect a greater number of representatives than they would if the districts were symmetrically laid out.

G. O. P. "The Grand Old Party," the Republican.

GOVERNMENT. The agency through which the state puts its will into execution.

GRAFT. Public money wrongfully taken by public officials.

GRANDFATHER CLAUSE. One of the methods resorted to by some of the southern states in order to disfranchise the negroes, basing voting on the citizenship of grandparents.

HABEAS CORPUS. A legal process used to prevent unlawful detention of a person accused of crime.

HENCHMAN. One of the assistants of a political boss.

HIGH SEAS. That part of the water area of the earth over which no state can claim jurisdiction.

IMPEACHMENT. The act of bringing formal charges or accusations against a person holding public office before a tribunal competent to take cognizance of such cases.

IMPERIALISM. The policy of colonial expansion.

IMPLIED POWERS. The doctrine of constitutional interpretation set forth first by John Marshall that incidental powers were to be implied from the express powers granted to Congress.

IMPOSTS. As used in the U. S., this refers only to indirect taxes.

INDICTMENT. A written accusation of crime formally presented by a grand jury.

INDIVIDUALISM. The theory of government best expressed by Thomas Jefferson who stated that "that government is best that governs least."

INFORMATION. A formal charge brought against some person by a state attorney accusing him of committing a crime. Similar to an indictment.

INITIATIVE. A form of direct legislation in which the voters, by petition, propose laws.

INJUNCTION. A court order restraining a person or group of persons from doing something.

INSURGENT. As now used this term refers to members of a legislative body who leave their party.

INTERPELLATION. A formal, written question addressed to a Cabinet officer by a hostile member of Parliament. In France ministers are often overthrown by ministers failing to answer these questions satisfactorily.

INTERVENTION. In international affairs, the interference of one state in the internal affairs of another.

ISOLATIONIST. A term used to describe those persons who believe that the United States should live unto itself as much as possible.

JINGO. A term, of English origin, applied to excessively patriotic persons, who are always willing for their country to "fight at the drop of a hat."

JURISPRUDENCE. The science of law.

JURY, GRAND. The body of persons charged by the state with the duty of bringing indictments against persons accused of crime.

JURY, PETIT. A body of persons charged by the state with the duty if passing upon the guilt or the innocence of persons accused of crime.

JUS SANGUINIS. The practice adhered to by some states of identifying the nationality of the child with that of its parents, no matter where it is born.

JUS SOLI. The practice adhered to by some states of determining the nationality of a person by the place of his birth, rather than by parentage.

LAISSEZ FAIRE. An individualistic doctrine holding that the state should not interfere in the personal affairs of citizens for the purpose of regulating relations between individuals or groups of individuals. Opposes all "social legislation."

LANDSLIDE. An overwhelming party victory.

LAW. Any rule that the courts will enforce.

LAW, CIVIL. That body of national law which is distinct from the "common law."

LAW, COMMON. That body of national law which is distinct from written law.

LAW, CONSTITUTIONAL. That body of rules and principles which determines the form of governmental organization in a state, and assigns to the respective departments their powers and duties.

LAW, CRIMINAL. The body of laws and customs which defines and determines the degree of punishment of offences against the state.

LAW, FUNDAMENTAL. Another term for constitutional law.

LEGAL TENDER. Money which may be used in the payment of debts, and which the creditor is obliged to accept.

LEGISLATION, DIRECT. The enactment of laws by the voters directly without the intervention of the legislature.

LEGISLATIVE REFERENCE BUREAU. An agency of the state whose duty it is to draft bills for members of the legislature. In some cases its duties extend also to investigation.

LIBERAL. A term applied to persons whose political, social, and economic views lie somewhere between the radical on the one hand, and the reactionary or conservative on the other.

LOBBY. A modern term applied to persons who, because of personal interest or of pay, use their influence to have legislators vote for the bills desired by them.

LOG-ROLLING. An expression, peculiarly American, which means, in effect, "you vote for my bill and I will vote for yours."

MACHINE. A political organization.

MANDAMUS. A command issuing from a court directing some corporation or public officer to preform some duty.

MINISTERIAL RESPONSIBILITY. The system, best worked out in England, whereby the ministers are responsible for all their acts to the popularly elected chamber of Parliament.

MINISTER PLENIPOTENTIARY. The diplomatic rank next below that of Ambassador.

MINORITY REPRESENTATION. (See proportional representation).

MODUS VIVENDI. Temporary agreement pending the permanent settlement of an international issue.

MONARCHY. That form of government in which the political head is a king or prince.

MUCK-RACKING. Indiscriminate attacks upon persons holding public office.

MUGWUMP. A term used to denote a person independent in politics, especially one who deserts his party.

NATION. Strictly, a term applied to people of a common race. Broadly, a term applied to persons having a common allegiance.

NATIONALIST. One who adheres to a racial group as a political unit.

NATURALIZATION. A process of formally changing citizenship from one state to another.

NEUTRALIZATION. A term of international law meaning the bestowal "by convention of a neutral character upon states, persons and things which would or might otherwise bear a belligerent character."

NIHILISM. A political theory closely resembling anarchism.

NOMINATION. The choice within a party of persons to represent that party in the general election. Also, the selection of persons to fill public office by executive choice.

OBITER DICTUM. That part of the opinion of a judge which passes upon points not connected in any close degree with the main point or points at issue.

ORDINANCE, EXECUTIVE. Regulations issued by a chief executive or heads of executive departments.

ORDINANCE, MUNICIPAL. Statutory enactments of a city or borough council.

ORIGINAL JURISDICTION. The authority possessed by courts to hear cases instituted for the first time.

PAIRING, LEGISLATIVE. The practice of members of opposite political parties in legislative assemblies agreeing not to vote in the absence of the other person.

PANEL. The list of names drawn for jury service.

PARISH. A local district possessed with some power of self-government, but commonly used, as in England, for the purpose of administering ecclesiastical and charitable affairs.

PARLIAMENT. The name applied to the general legislative body of nearly all countries.

PARTICULARISM. Attachment of persons for their own region or section of a country rather than devotion for the national state.

PARTY. A group of persons united for the purpose of securing political measures considered advantageous to the group.

PATERNALISM. A social theory which holds that the state should take over all functions which, in private hands, have a tendency to divide the people into unequally-privileged classes.

PATRONAGE. Public offices which are within the bestowal of legislators.

PLATFORM. The publicly announced principles of a party or candidate for public office.

PLURALITY. The highest number of votes received by any candidate, regardless of what percentage of the whole number it constitutes.

PLUTOCRACY. The government by the wealthy.

POLICE POWER. The power of the state to take care of the health and safety of its citizens.

POLL. The place where the electors vote (U. S.). Or, the voting itself.

POOLING. The practice of railroads of dividing the business among themselves according to some basis agreed upon, for the purpose of doing away with competition.

PORK BARREL. An expression referring to public funds which are used by legislators for local and selfish interests.

PRECINCT. The smallest political subdivision of an electoral area.

PREFECT. The chief administrative officer of a French department.

PREMIER. The head of a Cabinet in a state having the system of ministerial responsibility.

PRESENTMENT. A charge brought by a grand jury on its own responsibility without the evidence having been put before it by the state prosecuting officer.

PRESIDENT. The chief executive or presiding officer of a state or organization.

PRESIDENT, PRO TEM. One who acts in the place of the regular presiding officer.

PRESIDENTIAL ELECTORS. Persons chosen by the voters of the states to elect a President of the U. S.

PRESIDENTIAL SUCCESSION. The Law of Congress regulating the succession to the presidency, providing that the office, in case of the death or inability of the President and Vice-President to perform the duties of the office, shall devolve upon the members of the Cabinet in order of the establishment of their offices.

PRIMARY. A party election at which candidates for public office are chosen.

PRIMARY, DIRECT. A party election at which the voters vote directly for candidates to fill public office.

PRIME MINISTER. See Premier.

PROPORTIONAL REPRESENTATION. A system devised to allow minority parties to have representation in legislative assemblies in proportion to their voting strength in a large electoral area.

PROROGATION. The formal ending of a session of Parliament.

PROTECTORATE. A state whose sovereignty is impaired by reason of the fact that another state exercises control over it.

PROTOCOL. A term of international law referring to the points of agreement entered into between states serving as the basis for a definitive treaty.

PROXY. A written authority authorizing one person to act as the agent of another in voting. This is only legal in private corporations or fraternal organizations.

QUORUM. The specified number of voters which must be present in a legislative body in order legally to transact business.

QUO WARRANTO. A writ issued by a competent court against a person holding office.

RADICAL. The term applied to persons who believe that the rights of property should give way completely before the rights of persons.

RECALL. A political device which enables the voters to remove from office persons whom they have elected.

RECIPROCITY. A tariff agreement between nations making mutual concessions.

REFERENDUM. The submission to the electorate of proposed statutory or constitutional laws.

REPUBLIC. A state in which the titular head is elected or appointed, by contrast with monarchy.

RESULTING POWERS. Powers resulting from a liberal interpretation of the U. S. constitution as a whole.

RIDER. A bill, order, or resolution attached to another proposed legislative enactment containing subject matter entirely different from that of the primary bill.

RING. A closely-knit group of political leaders who are in politics for their own selfish ends.

SECTIONALISM. The tendency toward the formation of groups based on geographical divisions.

SENATE. A legislative chamber.

SEPARATION OF POWERS. The division of the powers of government among the legislative, the executive, and the judicial departments.

SERVITUDES. In international law this term refers to the restrictions on the jurisdiction of a state over some internal questions.

SHIRT SLEEVE DIPLOMACY. The carrying on of diplomatic relations in a direct, somewhat informal manner, as distinguished from the traditional indirect manner.

SOCIALISM. A theory which upholds the belief that the state should own and operate the means of production and distribution.

SOVEREIGNTY. The original, supreme and unlimited power inhering in all politically independent commonwealths.

SPEAKER. The presiding officer of popularly-elected legislative houses.

SPHERE OF INFLUENCE. A part of a territory inhabited by uncivilized people marked out by one of the European powers as a field for exploitation.

SPOILS SYSTEM. The practice of filling offices with party workers and favorites.

STAATENBUND. A confederation of states in which the central government plays a subordinate part.

STAMPEDE. The mass action of delegates to a nominating convention in hastening to cast their votes for the candidate who seems sure to win.

STAND PAT. A term meaning conservative partisan.

STARE DECISIS. The prevailing principle in courts of law that precedents will generally be recognized as binding.

STATE. A group of people permanently occupying a fixed territory, with a government competent to carry on the business of a sovereign people.

STATUTE. The legislative will of the state embodied in written form.

STEAM-ROLLER. The action of the leaders of a political convention in suppressing freedom of action among the rank and file of the delegates.

SUBSIDY. Government grant to private corporations.

SUFFRAGE. The act of the electorate in choosing representatives or deciding issues.

SYNDICALISM. A radical movement aiming to unite the workmen of the world for the purpose of destroying the capitalist.

TORY. A term, British in its origin, meaning a reactionary person.

TOWN. A local unit of government possessing varying degrees of autonomy.

TOWNSHIP. A subdivision of a county, corresponding to a district in southern states.

TREATY. A formal, written agreement between two or more states.

TRUST. A business company formed for the purpose of controlling the stock of a number of companies engaged in the manufacture of similar articles of commerce.

ULTRA VIRES. A term meaning that a corporation has exceeded the powers granted to it by its charter.

UNIT RULE. The rule prevailing in Democratic national nominating conventions that states must vote as a unit, that is, the vote of the delegates can not be divided among different candidates.

UNITARY STATE. The form of government in which all power is centered in the general government.

VETO. The power given to executives to refuse assent to legislative enactments.

WARD. Territorial subdivision of a city.

WARD-HEELER. Satellite of the political boss of a ward.

WHIG. A party which stood for progress, as contrasted with Tory (England).

WIRE-PULLING. Use of political influence for selfish ends.

CAPITAL.

Capital is "that part of wealth which is devoted to obtaining further wealth." The money used to provide shelter, protection, tools, materials, food, and maintenance of the laborers is capital, according to Mill. Though still in dispute, it is generally conceded that capital, from the standpoint of political economy, ought not to include immaterial things such as health, skill, or strength, nor the free gifts of nature.

Circulating capital is that which performs the whole of its office in a single use.

Fixed capital exists in a durable shape, and a return to it is made at definite periods.

Wage capital is that which provides food, shelter, clothes, and protection to the laborer.

Auxiliary capital provides tools, machines, factories, buildings, and even railroads, canals, roads, and ships as well as raw materials.

History of Capital.—Among savage races and primitive men, weapons and implements for hunting and fishing represent the sole capital. As man advanced to the pastoral stage, flocks and herds constituted a larger and richer capital. In the agricultural stage which followed, his agricultural implements and stock formed a more complicated form of capital. In the industrial development of nations the invention of machinery caused such heavy investments that capital took a new and independent position in production. Since the invention of the steam engine and its perfection (1776) the importance of capital has constantly increased until, in the United States at least, one who is without capital, however skilled he may be, is forced to become the hired employee of others.

The natural result from capital is interest. In the Mosaic law and in the early Christian days there was a deep-rooted objection to interest. It would appear that in those days arts and productions were of the simplest kinds, and in the manufactures there was slight need of credit. Whatever was loaned was for immediate use and to relieve distress. Hence the idea that one who profited by the sufferings of others was to be censured. Even the Greek and Roman philosophers—Plato, Aristotle, the Catos, Cicero, Seneca, and Plautus,—all without giving any good reason, were loud in their condemnation of interest. But interest came to be allowed by Greek and Roman laws, and was generally recognized until the Middle Ages, when the Church took up a crusade against it. And while greater reason for its condemnation is given by Gonzalez Tellez, Thomas Aquinas, and others within the

Church, the Protestant reformers such as Zwingli, Luther, Melanchthon, and Calvin more or less openly approved of it. In 1640, chiefly through the profuse writings of Salmasius, the tide turned in favor of interest, and it was defended and supported by nearly all of the great writers. Bacon, North, Locke, Stewart, Hume, Galiani, Vasco, Beccaria, Mirabeau, and Bentham wrote in support of interest, but Turgot was the first to approach the study of interest in a scientific way.

Theories of Capital.—Turgot's theory, like that of Adam Smith, was unsatisfying and somewhat contradictory. For convenience of reference it has been called the Fructification theory, because it likens capital to rent-bearing land, and interest from capital to the fruit which the rented land bears.

Ricardo's theory deals more with the rate of interest than with the reasons for interest, except that if no interest were given capitalists would not invest. Torrens, McCulloch, and others are among the supporters of Ricardo.

The Productive theory maintains that capital produces wealth and that the investor is entitled to a share of what his wealth produces. This theory was first advanced by J. B. Say in 1803, and it has been supported in recent times by Roscher, Leroy-Beaulieu, Scioloja, and others. Roscher claimed that capital produces more goods. Lord Lauderdale in 1804 taught that capital produces more value. This view is supported by Malthus, Henry Carey, Peshine Smith, Thünen, and Strassburger.

J. B. Say advanced the theory that capital, in some unexplained way, has a use value, and that the capitalist ought to be paid interest for being deprived of its use when he invests it. This theory has been taken up and elaborated by German writers; but modern economists criticise it by asking what possible use he would make of it as capital if he did not invest it.

The Abstinence theory was elaborated by N. W. Senior (1836) from hints given by the writings of both Adam Smith and Ricardo. It holds that as all capital is the result of labor, the surplus represents the results of labor performed not with a view to satisfying immediate needs but with an eye to the future. As the capitalist gained this capital by self-denial and abstinence he ought to be indemnified by interest. Though this theory is now generally abandoned it had the support of such eminent economists as J. S. Mill, Jevons, Cairnes, Roscher, Schiiz, Max Wirth, Rossi, Molinari, and Garnier.

The Labor theory is a modification of the abstinence theory, and holds that the capitalist ought to be paid for labor performed, and regards capital as stored-up labor. James Mill, McCulloch, Courcelle-Seneuil, Rodbertus, and Schäffle support this view.

The Exploitation or Socialist theory holds that all goods are the product of human labor; that the laborer does not hold the full value of his labor; but that the capitalist takes advantage of the needs of the laborer who is compelled by hunger to sell his labor to the capitalist at a less rate than its true value. Adam Smith and Ricardo advanced the idea that labor is the source of value; Hodgskin and Sismondi contributed to the development of the idea; but Proudhon, Rodbertus, Lasalle, and Marx took it up and have been its most ardent advocates.

LABOR.

In an economic sense labor is human effort, either physical or mental or both, directed to some useful and productive end, and is the main factor in the production and distribution of wealth.

Different views of labor have been held at different times by various schools of economists. On the decay of feudalism, the Mercantilists set greater store on the accumulation of the precious metals than on the development of labor. Mercantilism differed from modern protectionism in that its chief aim was to perpetuate cheap labor and cheap agricultural products. The French school of Physiocrats, the founder of which (Quesnay) is by many regarded as the father of political economy, held that all labor except agricultural was unproductive, since the latter alone produces a surplus beyond the immediate needs of the laborer. Hume and Adam Smith advanced a broader conception, and showed that labor is the chief factor in the production of wealth. Adam Smith made a curious distinction between productive and unproductive labor, maintaining that the former includes only such activities as lead to some concrete commodity. According to this reasoning, the workers who supply man's material needs are representative of productive labor, whereas the services of the physician who saves a human life must be classed under the category of unproductiveness. The fallacy of such reasoning was emphasized by John Stuart Mill, who pointed out that labor does not create commodities but utilities. It is the form alone which is changed. Whatever adds to the supply of consumable utilities is essentially productive, the difference between one kind of service and another being merely in degree.

Since the days of the old economists, two lines of thought have been developed. The socialists, led by Karl Marx, argue that, since increase of labor produces increase of wealth, private property in capital and land ought to be abolished that labor may receive its proper share of the value which it alone creates. The other school of economists hold that value is not in direct ratio to the quality of labor, but is regulated by the incidents of supply and demand, and is, moreover, a wise adjustment and interdependence of capital and labor.

Labor is of two kinds, forced and free. Arguments in favor of forced labor are no longer seriously adduced; for since the introduction of free labor into England in the fifteenth century and the abolition of slavery in America during the nineteenth, the progress of economic thought has kept pace with the widening conceptions of labor.

Wages.—In its restricted sense wages is the compensation given for hired services. The Physiocrats and the earlier economists, such as Adam Smith and, to a certain extent, Ricardo, taught that the price of labor should afford the worker neither more nor less than a mere subsistance. John Stuart Mill and Malthus developed the wages fund theory, which more recent

economists have generally discarded. Mill and his followers reasoned that, as labor is dependent on capital, wages must be paid out of and limited by the accumulated wages fund at the employers' disposal; hence increase of capital must be the foremost consideration, since by this means a larger sum can be apportioned for wages. The alternative method of increasing wages would be to cut down the number of participants. The fallacy of this theory was not generally recognized till about 1870, when Thornton and Walker vigorously attacked it, and advanced what is known as the productivity theory. Wages, instead of being paid out of capital, represent the price of a product already created by labor. Economically, the product itself is the reward of labor; and, since increase of wages tends to enhance the efficiency of labor and the value of the product, it is clearly demonstrated that higher wages are essentially economical.

Wages depend on labor supply, ability to bargain, cost of living, and prosperity in a region or industry. Wages tend to follow the cost of living, but sometimes lag behind. Take manufacturing, mining, and rail transportation, for example, to illustrate what is called real wages—a phrase meaning what one's income or wages will buy, not in terms of actual money received. In these three industries the average wages in 1909 were 20.7 cents an hour, but in 1919 they had risen to 50.2. Yet the cost of living too went up, so that the wages actually would buy only 10.7% more goods in 1919 than in 1909. Both wages and cost of living reached a peak in June, 1920.

Manufacturing, mining, and railroading wages made up 27% of the workers' income in 1909, and about 24% in 1939. If we take the years 1923–1925 as rated at 100, then the comparative figures for other years would be as follows: for 1909, 72.5; for 1919, 88.5; for 1929, 104.7; for 1939, 146.1. Actual wages in 1939 were about 45% higher than in 1929; but the cost of living was also much higher, tending to offset any apparent gains. Adjusted to agree with changes in the cost of living, between 1923 and 1929 wages rose 6.2%; with a reduction of 12.7% between 1929 and 1933; and a rise again (mostly from 1937 to 1939) of 73.9%. (Data from the U. S. *Monthly Labor Review* for September, 1940.)

The Bureau of Labor Statistics of the United States estimates the average weekly wage and compares this with the cost of living at various times. The year 1923 is taken as 100. In 1921 wages were 92.2 and cost of living 103.6; in 1923, 99.1 and 99.2; in 1930, 96.8 and 97.0; in 1933, 68.3 and 75.8; and in 1938, 89.3 and 83.0 respectively.

The National Industrial Conference Board, a private corporation, in its *Economic Almanac* for 1940 has a complete table for national income from 1799 to 1938. It has been adjusted to agree with the cost of living.

Year	Income in millions	Income of individuals
1799	677	$216
1849	2,420	235
1900	16,158	480
1920	68,434	567
1930	72,398	634
1933	44,713	495
1938	62,450	580

A less inclusive estimate for national income for 1938 divides the total of $47,589,000,000 into these chief classes: Agriculture, $6,140 million; mining, 1,429; electricity and gas, 1,267; manufacturing, 12,208; construction, 1,359; transportation, 4,439; communications, 944; trade, 8,019; service, 1,341; varied, 6,995; and miscellaneous, 3,450. The wage of .247 in 1914 had risen to .731 an hour in 1940. Under the Fair Labor Standards Act, in October, 1939, the wages of about 650,000 laborers went up to 30 cents from 25 an hour. The Department of Agriculture states that farm wages, including board, were $21.21 in 1909; $43.29 in 1919; $40.61 in 1929; and averaged $27.47 in 1939. So the average per day, 1939, was but $1.30.

The wages of women in factories have been lower than those for men, but lately have risen much above their former levels. Greater freedom of women to bargain for places usually occupied by men has followed the advent of women suffrage. Between 1923 and 1929, however, the wages for women were about 80% of those for male unskilled laborers.

Investigations among the makers of garments in 1939 were carried on by the government in 22 states among 2,287 firms, including 65.4% of all women employed in the garment making trade, and covering the wages of 141,607 workers. The wages range from an average of 38.5 cents an hour for makers of dresses sold by the dozen to a high of 78 cents for unit-priced goods. In shops making garments sold singly, one-third of the workers were unionized; some 40% of the total were in New York City. Some 15% of workers were getting less than 30 cents an hour. Average wages for dozen-priced garment workers were $14.56 a week, with highest in Boston, $18.10, and lowest in Virginia, $9.75. For unit-priced goods, highest was $29.84. Lower costs of living in some localities might make these wages more equal than they seem.

Trades Unions.—One of the most characteristic features of modern industrialism has been the growth of various organizations for the promotion of the interests of wage-earners. The idea is by no means new. The merchant guilds of the Middle Ages had their counterpart in the various clubs of journeymen, while in its elaborate system of caste India for centuries has possessed many of the essentials of trades unionism. But with the rise of new industrial conditions, the lines of demarcation between capital and labor, employer and employed, became more pronounced, and the forces of labor felt the growing need of union to combat the encroachments of the capitalists. As such unions became more numerous and aggressive, rigorous laws were passed against them in England, culminating in the Combination Acts of 1799 and 1800, which made every form of trade combination unlawful. But the principles involved were too deep-rooted; and urged on by the teachings of socialistic propagandists, the trades unionists struggled manfully for recognition till the Trades Union Act of 1871 gave a legal status to their unions. Their rights and powers were further established by the Employers' and Workmen's Act of 1875. The granting of the franchise and the increased political importance of the workman has still further stimulated the

development of labor organizations. Employers have come to regard trades unions as a necessary part of the economic machinery, while the employees no longer plead for concessions in the matter of wages and hours of labor, but frequently dictate the conditions of employment.

In the United States, labor organizations first became prominent about 1830, the same as in England. They began to figure in politics in 1829, when a labor delegate was elected to the assembly of the state of New York. The first national union is said to have been the International Typographical Union of North America, established in 1850. Since then almost every trade has been banded together on local or national lines, and many of these organizations, by virtue of their numbers and corporate wealth, have become powerful industrial and political factors. They have their recognized organs; their representatives are prominent in the legislatures of every state; their claims and demands are voiced in Congress. Generally they realize that it is more effectual to redress their grievances by constitutional means than to have constant recourse to the final weapons of all such unions—the boycott and the strike. Boards of arbitration and reconciliation have been introduced by many trades, and public opinion has been assiduously educated and won over. The modern trades union does not usually seek to gain its ends by restricting the output and interfering with production; it relies rather on the effectiveness of the so-called "common rule," that is, a standard rate, a normal day, and collective bargaining. It insists on the maintenance of a minimum wage and satisfactory conditions in the factories and shops. Some economists hold that the "common rule" tends to improve and develop business enterprise, for with its application arises the necessity of increasing the output, and to do this improvements in equipment and management must constantly be devised.

Knights of Labor.—This general labor organization in the United States was founded in Philadelphia, in 1869, by Uriah H. Stevens, a garment cutter, and embraced all sorts and conditions of persons over 16 years of age, barring only bankers, lawyers, liquor dealers, and gamblers. At first the order was clothed in secrecy, its very name being guarded; but this policy was abandoned in 1882. The original aim of the founders was to bring about a system of coöperative industry in place of the wages system. They later sought to bring about social and political reforms, such as the nationalization of land, unlimited coinage of silver, the prohibition of child labor and convict labor, the establishment of direct legislation, and compulsory arbitration. It was the first organization of workingmen to admit employers, women, and unskilled laborers, and was opposed to the exclusiveness of trades unions generally. From 1878 to 1887 its membership leaped from 10,000 to 800,000. The least desirable element of the working classes gladly swelled its ranks to batten on its funds in emergencies. Strikes were so recklessly indulged in that the resources of the body were almost depleted, and in 1893 the membership had declined to about 40,000. About 1900 the Knights disbanded, some joining the American Federation of Labor and some becoming independent unions.

American Federation of Labor.—One of the most remarkable phases of the industrial movement within the last 50 years has been the federation of unions. These confederations have the same general objects as their constituent bodies, and their relationship is somewhat analogous to that of Congress towards the states therein represented. Among such organizations the most important is the American Federation of Labor, organized in Pittsburgh in November, 1881, under the name of "The Federation of Organized Trades and Labor Unions," with the idea of establishing a federation of trade unionists distinct from the Knights of Labor. Its present name was adopted in December, 1886, on which date it comprised 13 national and international trades unions, 6 local unions, and 6 city federated unions, with a total membership of about 350,000. With the decline of the Knights of Labor, the federation became paramount.

The A. F. of L. is a federation of international, federal, and local unions. The table below shows that membership tends to fall off in times of prosperity and to rise during times of depression. Much of the efforts of the A. F. of L. has been to organize skilled workers in the common trades, not all workers as a whole. In 1939 the membership consisted of 32,631 local unions, 102 national and international groups, with 1,517 other local and trade unions affiliated. Yearly conventions are held to fix policies and elect officers, who govern the organization from a central office in Washington, D. C. Membership in typical years since 1900 is shown below:

Year	Membership	Year	Membership
1900	548,321	1930	2,961,096
1905	1,494,300	1931	2,889,550
1910	1,562,112	1932	2,532,261
1915	1,946,347	1933	2,216,796
1916	2,072,702	1934	2,608,011
1917	2,371,434	1935	3,045,347
1918	2,726,478	1936	3,422,398
1919	3,260,068	1937	2,860,933
1920	4,078,740	1938	3,623,087
1921	3,906,528	1939	4,006,359
1925	2,877,297	1940	4,247,443
1929	2,933,545		

Congress of Industrial Organizations.—Led by the president of the United Mine Workers, in 1936 the Congress of Industrial Organizations (known as the C. I. O.) began to approach the workers in many large industrial plants. Their plan was to organize, not by trades, but all employees of all trades and no trades in one factory, into a large and powerful union. The sit-down strike, during which workers took possession of the plant and refused to leave it, was outlawed by the Supreme Court in 1937. Public opinion tended strongly to condemn the practices growing out of such industrial disputes. The two great labor bodies separated on the matter of organization plans, and all efforts of arbitration and of the federal government failed to unite them. The C. I. O. also tended to take sides in political issues, but joined with the A. F. of L. in censuring certain activities of agents of the National Labor Relations Board.

Collective Bargaining.—Employers have been forced to recognize that labor troubles can not be eliminated by merely raising wages. While the question of wages is the cause of a large per cent of the strikes, the demand for collective bargaining is becoming increasingly important as a cause of misunderstanding between the employers and wage earners. Trade unions, by encouraging their members to demand the right to bargain collectively with their respective employers, have done much to break down the old system of individual bargaining.

A movement toward collective bargaining received its greatest impetus in England during the World War. But even as far back as 1863, references are found to committees representing men in a given shop or department of a plant. Such committees have come to be known as "shop committees." The Reconstruction Committee of the British Government appointed a committee in 1916 which later came to be known as the Whitley Committee, to study the problem of "securing a permanent improvement in the relations between employers and workmen" and to "recommend means for securing that industrial conditions affecting the relations between employers and workmen shall be systematically reviewed by those concerned, with a view to improving conditions in the future."

The Whitley Committee made its first report in March 1917 and a final report in June 1918, recommending a "three-fold system, comprising works committees, district councils, and the national industrial council, in each industry in which employers and employees were sufficiently well organized for the purpose."

It will be noted that the Whitley plan necessitated that the workers be combined in a strong organization and that the employers organize so that collective bargaining could be carried out through the machinery of the labor unions and employers' organizations. In other words, collective bargaining was made a supplement to trade unionism.

The Whitley Committee recognized that the worker is at a great disadvantage when bargaining as an individual with his employer. He has only his services to sell and he can not afford to be unemployed for long periods, because it means that he and his family must go hungry and inadequately clothed. This fear of unemployment will often cause the worker to accept the wages and conditions offered by his employer even though he knows them to be inadequate, because he realizes that he must choose between the employers offer or unemployment.

According to the Whitley plan an attempt is made to adjust disputes when they arise in a given plant, by having the causes of the trouble investigated by the shop committee composed of representatives of employers and employees in the particular shop or department. In case the shop committee fails to effect a settlement, the dispute is carried on to the district council. The national council acts as a court of last resort. Collective bargaining has developed much further in England than in the United States.

In the United States the employers accepted the principle of collective bargaining in general, but many of them have refused to use it in connection with trade unions. They take the stand that they are willing to bargain collectively with the men in their own employ, but that they are unwilling to deal with outside union representatives. In other words, employers who hold this view are attempting to make collective bargaining a substitute for trade unionism rather than a supplement to unionism as is done in England.

Trade Unions and Injunctions.—An injunction is a writ issued by a court of equity restraining the "defendants from doing, or permitting others under their control, to do, an act which is deemed to be inequitable as regards the rights of some other party to such proceedings in equity." The purpose of the injunction, then, is to prevent wrongs or injuries for which there are no adequate compensating damages or when there is no certain pecuniary standard for the measurement of the damage.

There is a feeling on the part of the labor unions that the injunction was used against them in an unjust manner during the period immediately following the signing of the armistice. They felt that each case which went against them served as a precedent for the next decision and that each succeeding decision tended to further limit the legal activities of the workers. There was some ground for the existence of this view on the part of the workers, because during the prosperous years before 1920, when the workers were in an unusually strong bargaining position, there were comparatively few injunctions issued against them. A few of the states had issued orders restraining the workers from certain acts but no federal restraining orders were granted until the latter part of 1919 when the United Mine Workers were enjoined from calling a strike and distributing strike funds. The request for the injunction was based primarily upon the Lever Food and Fuel Control Act, a law enacted as a wartime measure to prevent monopolizing, hoarding and manipulating the supply and distribution of necessities during the war. The court was therefore using wartime measures against labor a year after the war was over. Workers resented this action still more when the court held in one case that the terms of the Lever Act which applied to profiteering were unconstitutional, and so refused to use it against profiteers.

The workers even felt that the protection granted them by the Clayton Act of 1914 had been unjustly taken from them by some of the decisions rendered at this time. The Clayton Act was passed as an amendment to the Sherman Anti-trust Law of 1890 and provided in part that the labor of human beings should not be considered as a "commodity or article of commerce." It also stated that labor organizations were not to be construed as illegal combinations in restraint of trade under the Anti-trust Law. Section 20 provided that no restraining order or injunction should be granted by the judge or court of the United States in a case between employers and employees growing out of a dispute concerning terms and conditions of work, unless necessary to prevent irreparable injury to the party making the application and where there is no adequate legal remedy for such injury. Peaceful picketing was made legal by this section of the act.

Tactics used by the employers during this period were probably due in large part to a reaction after the disturbing consequences of war conditions and were not continued for very long.

International Labor Congresses.—The first international labor congress was held at Geneva, Switzerland, in 1866, when over 60 delegates assembled from England, Germany, France, and Switzerland. The second international congress was held in the following year at Lausanne, and in 1869 the third and more widely representative congress sat at Basal. This congress almost unanimously resolved that all landed property should be held in common, and advocated "the destruction of all states, national and territorial, and on their ruins the founding of the International State of Laborers." International congresses were held at Dresden (1871), The Hague (1872), at which there was a rupture with the socialistic faction, Paris (1886), Berlin (1891), Zurich (1897). After the congress at The Hague in 1872, the socialists worked on more independent lines, and the first avowedly socialistic labor congress met in Paris (1889). A second was held at Brussels in 1891, when America and every European country except Portugal and Russia were represented. Two years later 385 social delegates met at Zurich, when it was decided that anarchists should not be admitted. The fourth congress at London (1896) was still more important, and its 800 delegates included representatives from Argentina and Australia. This congress urged the abolition of (1) the capitalist class, (2) landed property, and (3) standing armies. The miners, too, have held international congresses annually since 1890, but these assemblages have come largely under the dominance of the radical socialists.

Eight Hour Day.—The effort to shorten the hours of labor in all countries has led to the rather general acceptance of eight hours as the proper period for a day's work. The success of the eight hour day has resulted from the pressure of public opinion, because of the alleged advantages of the shorter working day. It is held that shorter hours in industry will provide work for the unemployed; increase the market for commodities by augmenting the consumption power of the population; increase the efficiency of labor; improve the conditions of the worker and make him a better citizen; and increase the opportunities of the workers to enjoy and live a fuller, social, cultural and religious life. According to the 1909 census of manufactures, 76 per cent of the 6,500,000 employees covered by the report were working more than 54 hours per week. Considerable progress was made for the next few years as is shown by the 1914 census of manufacturers. According to this census report, 25 per cent of the employees in industry were working from 60 to 72 hours per week. With the outbreak of the World War and the consequent unprecedented demand for labor, the workers gained many concessions in the way of shorter hours. The 1919 census, shows that 48.6 per cent of the 9,096,372 wage-earners reported were working 48 hours or less per week. In 1914 only 11.8 per cent of the workers were employed in establishments where the prevailing hours of labor per week were 48 or less. Without attempting to give in detail the history of the movement toward the shorter working day, it may be briefly outlined as follows:

1780. London bookbinders worked 14 hours less meal hours.
Trades unions formed by them to reduce the day by one hour.
1786. Day reduced for London bookbinders to 13 hours.
1790. Hours of labor practically unlimited in England.
Children often worked 15 hours a day and over.
1794. Day reduced for London bookbinders to 12 hours.
1796. A board appointed to investigate the condition in the mills at Manchester.
1802. The elder Sir Robert Peel carried a bill to mitigate the worst evils. It accomplished little, but was a precedent for further work.
Hours of only the little children limited to 12 a day.
The English workman labored from 11 to 14 hours.
1806. Unsuccessful strike of London bookbinders.
Shipbuilders and caulkers of New York City organize for ten hour day.
1810. Ten hour day granted to London bookbinders.
1815. Parliamentary inquiry into labor conditions in England.
1817. Robert Owen of New Lanark introduced a ten-and-a-half-hour day in his mill.
1819. Act forbade employment of children under nine in English mills.
Children between nine and sixteen to work 72 hours a week exclusive of meals.
1824. English bill repealing Combination Laws gives trades unions the right to organize.
1825. Sir John Hobhouse carried a bill legalizing Saturday half holiday.
Strikes for ten hour day common in New York.
Artisans in New York work 12 hours a day. Textile workers, from 13 to 15 hours. Women and children often began at 5:00 A. M. and worked 15 hours.
1830. Richard Oastler, "the Factory King," began an agitation for a ten hour day, for which he suffered persecution and imprisonment.
1831. Sir John Hobhouse carried a law forbidding any cotton operatives under 21 from working at night; and limiting the week's work for all under 18 to 69 hours.
Workingmen organized in Boston, Mass., to secure a ten hour day.
1832. Tom Sadler, the factory representative, moved a ten hour bill.
Factory girls in Lowell, Mass., worked 78 hours a week.
1833. Lord Ashley (Earl of Shaftesbury) limited the working hours for children under 13 to 48 a week.
1835. Ten hour day became general in Baltimore, Md., before 1840, as a result of strikes.
1840. English commission took up the question of labor and hours.
Mining act forbade employment of women or boys under ten in underground work.
President Martin Van Buren declared a ten hour day in the navy yard at Washington and in other public works.
Shipbuilders generally adopted a ten hour day.
1844. Sir Robert Peel's government passed factory acts lightening the burdens of operatives.
1845. Mass meeting at Pittsburg, Pa. (June 16), attended by over 5,000 persons, advocated ten hour day.
First national industrial convention of the United States held at New York (October) to agitate for ten hours.
Strikes and mass meetings held in many places, and some successful.
Textile workers in Massachusetts petition the legislature for ten hours.
1847. Ten hour bill passed in England by Mr. Fielden.
Shipbuilders in the United States try unsuccessfully to do away with the ten hour day.
1848. Hours of labor in Paris fixed at 10; and at 11 elsewhere in France.
Law of September 9 makes a day of 12 hours the maximum.
1849. First labor legislation in the United States was the law in Pennsylvania which fixed the ten hour day for cotton, woolen, silk, paper, bagging, and flax operatives, and for masons.
1853. Some mills at Lowell, Mass., adopted the ten hour day.
1856. Public meeting of stone masons held at Melbourne, Australia, for eight hour day.
"Eight hour league" formed at a meeting of the united trades in Melbourne, and all union men forbidden to work more than eight hours after

April 21, 1856. The 22d of April is there yet known as "Eight Hour Day."

1860. Nine hour movement revived in England, but was unsuccessful on account of depression in trade.
1864. English act extended ten hour day to many trades.
1865. Mills at Stourbridge still running 13 hours.
1866. The National Labor Union formed at Baltimore.
1867. Connecticut passes a law that eight hours shall be a day's work unless otherwise agreed.
1869. General Banks (June 24) introduced an eight hour bill which passed both houses of Congress and was signed at once by President Grant. Law went into force in Charlestown navy yard (July 6), though wages were cut one fifth. Those who wished might work ten hours for the old wages.
Boston Eight Hour League formed by Ira Steward and George E. McNeill.
20,000 workmen parade in New York and demand the eight hour day.
Eight hour leagues formed in many places, and strikes are numerous.
1871. Many strikes in England for a nine hour day.
1872. Nine hours granted in England to many skilled workmen.
1873. Depression retards the movement.
1874. Massachusetts enacts a ten hour law for women and for children under 18.
Hours for textile workers in England reduced from 60 to 56½ per week.
Fifteen inspectors appointed in France to carry out the law of 1848. More stringent factory laws passed in France.
1877. Great railway strikes in the United States caused by wages disputes.
Germany limits working hours.
Switzerland passed the Federal Factory Labor Law limiting maximum working hours to 11 in all factories and to ten on Saturdays and public holidays.
1878. English Factory Acts codified.
Many strikes in England over the efforts of employees to revive the ten hour day.
1880. Massachusetts amends Factory Laws.
Employers endeavor to have law repealed. Bureau of Labor statistics conducts an investigation.
1881. Report of Carroll D. Wright, Chief of the Bureau, completely vindicated the ten hour law.
Socialist movement began in England.
1882. Royal commission investigates eight hour law conditions in Australia.
1883. Eight hour clause added to the Knights of Labor demand.
1886. Great labor agitation and strikes in the United States. Haymarket riots in Chicago.
1887. Germany limits the day to ten hours for those under 16.
Labor Day instituted in the United States.
1888. Matchmakers' strike in England leads to the forming of many new unions.
Coal miners in Westphalia strike for eight hours.
Gas workers in England have the day reduced from 12 to 8 hours.
1889. Masons at Leipzig carry a ten hour day.
1902. The hours in English textile factories were restricted to 55½ hours.
1908. Danbury Hatter's Case. The court held the Union liable for the acts of its members.
1909. The English coal miners obtained reductions averaging about four hours per week.
1915. Munition workers in Connecticut won a succession of strikes for the eight hour day.
The coal miners won the eight hour day.
1916. The Adamson act gave the basic eight hour day to the railroad workers.
1917. Eight hour day established in Alaska.
1917. Thirteen states limit hours for women and children.
1918. Germany fixes eight hours for all industries.
1918. President vetoed increase of hours from seven to eight in government executive departments.
1919. Wisconsin establishes a weekly day of rest in factories and mercantile houses.
1922. Engineering Societies reported on the bad effect of long hours of labor.
1924. On August 13 the United States Steel Corporation announced a basic eight hour day.
United States Labor Review reported increased wages and more efficiency under shorter day.
1927. For 72 trades the average hours were 45 a week.
1930. In building trades fifty per cent of workers were on a five day week.
1931. Automobile, clothing, dyeing, radio, and printing trades extended the five day week.
1933. Various codes under the N. R. A. fixed hours and conditions of labor in many trades.
1935. Compulsory limitation of hours and fixed wages declared unconstitutional by the Supreme Court.
1936. All contractors on government work ordered to observe an eight-hour day.
1938. Wages and Hours Law proposed to reduce hours in two years to 44, then to 42, and finally to 40 hours weekly.

Strikes and Lockouts.—A strike is a concerted refusal to work on the part of a body of employees till their demands are complied with by the employer. A cessation of work due to the employer closing down his establishment in order to force his employees into submission is a lockout. In almost all serious labor disputes both strikes and lockouts occur, and are not always easily distinguishable. In actual effect they are the same. Whether it is called a strike or a lockout is largely a question of tactics, each side having due regard to the important factor of public opinion. To defeat the attitude of the men the employer may seek to employ non-union men to fill the posts of the strikers; while the men, on their side, usually try to prevent this by boycotting and picketing.

Previous to the repeal of the combination laws in 1825, strikes in England were prohibited by law. In the United States, strikes were comparatively few before the Civil War. The first strike of serious proportions was that of railway employees in 1877. From 1881 to 1905 there were 38,303 strikes and lockouts in the United States, affecting 199,954 establishments, and throwing 9,529,434 employees out of work. In the building trade alone during that period there were 9,564 strikes, involving 69,899 establishments, 917,905 strikers, and throwing 1,083,699 out of work.

Practically every country experienced an unprecedented number of strikes and lockouts during the World War. This is because strikes and lockouts are manifestations of industrial unrest and they are, therefore, more prevalent in some phases of the business cycle than in others. During periods of great prosperity when prices are rapidly rising, strikes increase in number, and take the nature of offensive strikes. This is because in periods of great business activity, laborers take the offensive in trying to maintain their standard of living by demanding that their money wages be increased at least as rapidly as prices are rising. During periods of depression the employers take the initiative in an attempt to lower wages, while workers act on the defensive in resisting wage reductions. In periods of prosperity, therefore, it is found that the major portion of the strikes result from acts or demands of the laborers, whereas in periods of declining activity the majority of the strikes are due to the acts of employers. The following table shows the total number of strikes and lockouts reported to the Bureau of Labor Statistics in certain years, 1917 and afterwards:

STRIKES AND LOCKOUTS AS TO CAUSES

Cause of Dispute	Number of disputes beginning in—							
	1917	1920	1927	1929	1930	1933	1935	1939
Increase of wages	1,571	1,429	142	101	62	309	368	441
Decrease of wages	36	147	57	72	62	136	178	131
Wages and hours	378	269	43	75	53	107	96	97
Other wage causes	18	121	85	125	62	372	73	20
Decrease of hours	132	62	20	16	5	1	33	8
Increase of hours	18	8	3	....	1	2	12	8
Others as to hours	378	2	9	23	8	6	2	14
Recognition of union	292	308	119	92	120	168	177	360
Recognition and wages	132	87	20	50	24	82	194	242
Recognition and hours	27	6	2	1	3	4	7	11

Strikes increase in times of rising prices, as between 1914 and 1916, and in times of social adjustment as between 1936 and 1940. Arbitration by officials of the National Labor Relations Board brought unions and employers together in 38% of the disputes in 1939, but union men and employers agreed together in 41% of the cases. Kansas, Massachusetts, Colorado, and a number of cities have tried compulsory arbitration, but seldom has this been satisfactory to all concerned.

Strikes in 1939 were called by three groups of unions. The affiliated unions of the American Federation of Labor initiated 50% of reported strikes, with 32% of idle workers, and for 22% of idle days. The Congress of Industrial Organization called 29% of the 2,639 strikes reported, but they had 60% of the striking workers during the year, and these lost 72% of the time of idleness. Unaffiliated groups called 434 strikes, mainly in ladies garment trades in large cities. New York City had 587 of the strikes during the year, more than any 10 other cities combined.

Strikes recently tend to be short. The average of 29 days in 1939 was increased because of a few long, stubborn walkouts. Some 952 lasted less than a week; 593 less than two; 460 from two to less than four; 380 from a month to less than two; 116 from two to three; and only 138 more than three months in 1939. "Sit-down" strikes originated in 1936, with 48; increased to the high point of 477 in 1937, and sank to only 6 in 1939, in which year the men in only two were completely successful.

FURTHER STUDY OF STRIKES IN CERTAIN YEARS
From U. S. Department of Labor

Year	Number	Workers Involved	Men-days Idle	Avg. Men Per Strike	Days Idle Per Man
1927	784	329,939	26,218,628	467	79

1939	2,613	1,170,902	17,812,219	448	15

Federal Control.—More and more government control over industry is being exercised. Since 1937 Labor Relations Board offices have been set up in some 22 cities. To July, 1940, at least 28,000 cases had been considered, affecting at least six million workers. Of these, 48% were closed by agreement of the contestants; 17% were dismissed by the Board; 27% were withdrawn by the complainers; and 8% were closed otherwise. Some 111 cases went to the Circuit Courts of Appeals. The Board was upheld, wholly or in part, in about 90 cases, and not in 21. In 147 instances the Court rendered a decision by agreement.

The majority of cases in the Supreme Court was decided for the Board, but some of the Board orders were modified in one or more respects. The *Fansteel Case* (306 U. S. 240) was most stubbornly fought. The Board was justified in interfering but the Court said it exceeded its own authority in "reinstating men who had engaged in a sit-down strike," which the Supreme Court outlawed, 1937.

In 146 cases the Board supervised elections of employees to determine conditions of joining unions. Contests were frequent between the so-called industrial and the "craft" unions as to jurisdiction. The A. F. of L. and the C. I. O. agreed as to who should organize in many cases. In 43 disagreements, the A. F. of L. gained the vote of the Board in 16; the C. I. O. in 19; in 7 both; and no action was necessary in one. Of cases brought by the A. F. of L., 116 called for industrial unions, and 68 for the craft type.

The National Labor Relations Board aimed to replace strikes by voluntary agreements. When the Board began in 1936, 36% more strikes were recorded than board cases; in 1938, the latter exceeded strikes by 28%. Some 500 agreements were made, including ¾ in the steel industry, and ⅘ in the rubber. The Board often was charged with arbitrary acts, and the Courts issued cautions against going beyond specified powers.

Times of stress increase union demands for wages to keep pace with rising prices. During the first months of 1941 strikes multiplied fast and President Roosevelt created a new board to study the situation.

Strikes cause great loss of wages and profits. In 1921 the total was over four billions, and one strike in New York cost the workers a half million a day. In a peak year for number of strikes, 1919, with over 3,630, four million man days were lost. At $3.00 a day, you can see the cost. In 1937, a high year, over 28 million man days were lost. Wages then averaged over 69 cents an hour. In 1938, however, there were only ⅓ as many strikes as in 1937, when the number was 4,740. Lowest year since 1915 for days lost was 1930, with 3¼ million days; average for each worker, 18 days. Total man days of idle time from strikes in 1939 were about 18 millions.

Arbitration.—Many plans have been put forward with a view to the adjustment of labor disputes, and the prevention of strikes altogether. Many of these hinge on arbitration in some form or other, such, for example, as an arbitration board formed by the National Civic Federation, or by mutual arrangement, or by government authority. The weak point of all unofficial boards is that their services and decisions may or may not be entertained, whereas in the case of an official board no such possibility arises. It is argued that as men discover that commercial wars are unprofitable, and that their interests are promoted by agreement, the days of strikes will pass away without any state interference whatever. But statistics show no clear indication of any such tendency; whereas, in New Zealand, on the other hand, since the inauguration of compulsory arbitration in 1895, there have been no serious strikes, and such as have occurred have, for the most part, been quickly and satisfactorily adjusted.

But it is pointed out by economists that conditions in Australia are different from those in America. The Australian population is more homogeneous, and industrial development is more complex in the United States than in Australia. Attempts have been made in the United States to settle disputes by compulsory arbitration but they have not met with much success. Voluntary arbitration has been more successful. The Erdman Act of 1898 provided for arbitration of railroad disputes. Several disputes were adjusted through the machinery provided by this act, but in 1913 when it was seen that a strike of railroad firemen was inevitable, the Newlands Act was passed in order to provide for additional machinery of arbitration. The pending strike was averted, but in 1916 the Board of Mediation and Conciliation provided for in the Act, failed to effect an agreement in a railroad dispute. The Adamson law, providing for the eight hour day for railroad employees was passed in September 1916 to avert the strike. Under wartime federal control of railroads which began in December 1917, a Board of Railroad Wages and Working Conditions was established to handle disputes. Four railway boards of adjustment were established later. At the termination of federal control of railroads, provided for in the Transportation Act of 1920, the Railroad Labor Board was created to supersede the four adjustment boards. It consists of nine members representing the employers, employees, and the public. It has no compulsory power for enforcing its decisions, but depends upon influencing public opinion by publishing its decisions.

During the period of the United States' participation in the World War, several other adjustment agencies were created for settling labor disputes. The Emergency Construction Wage Adjustment Commission was created in June 1917; the Shipbuilding Labor Adjustment Board was established in August 1917; the President's Mediation Commission was appointed in September 1917; the National Adjustment Commission was created in October 1917; the National War Labor Board was established in March, 1918. These boards were all very successful in effecting adjustment of labor disputes during the war, but they failed to function successfully under peace time conditions and were, therefore, abolished.

An attempt at compulsory arbitration was tried in Kansas after the war. In 1920 the Kansas Court of Industrial Relations was created with mandatory powers. The court consisted of three members, and its functions were administrative rather than judicial. Strikes and lockouts were prohibited and the court had power to take over and operate industry in cases where production was curtailed. In 1923, the Supreme Court of the United States rendered the Kansas Court practically impotent by declaring that it was unconstitutional for the Court to determine wages since it would be denying the freedom of contract and labor.

England passed the Industrial Courts Act in 1919 based upon recommendations of the Whitley Committee. The Act contains no antistrike clause, and arbitration is purely voluntary. The machinery of arbitration is to be used only in cases of emergency when the employers and employees fail to effect an agreement. Collective bargaining and conciliation through government agencies tend to reduce the number and duration of time of strikes.

Labor Bureaus.—Led by Massachusetts, which instituted a "Bureau of Statistics of Labor" in 1869, other states have established similar bu-

reaus. The United States Bureau of Labor (later the Department of Labor) was created in 1885 with Carroll D. Wright as commissioner. The Department of Labor issues various publications from time to time.

Congress also in 1935, by the Wagner Act, set up a National Labor Relations Board of three members. The main objects are to investigate activities of both employers and employees in all labor controversies; and to see that employees have rights to organize and bargain as to wages and other conditions. Cases at once came into the courts. The U. S. Supreme Court, on April 12, 1937, affirmed the provisions of the act, but stated that the application must be confined within the stated purposes declared by Congress. In the five cases then before the Court, freedom of the press was again upheld and the rights of labor to organize and of men to join unions without being discharged for so doing. In three instances workers had been discharged for joining a union. Since products of factories move in interstate commerce, the Wagner Act was held to apply to these cases.

France instituted a labor bureau in 1891, Germany in 1892, and England in 1893. Almost all European countries and the British colonies now possess similar departments; and the exact and unbiased information they supply, apart from other services, has proved most valuable.

Labor Legislation.—Legislation in favor of the working classes is a product of the nineteenth century, for only then was the principle of industrial liberty fully recognized and applied. England led the way with its factory acts, intended to safeguard the life and limb of the worker. In the United States, labor legislation was later and has been much fostered by trades unionism. Among the statutes enacted by the states in the interest of labor, the most common are those referring to (1) the protection of life and health, (2) the hours of labor, (3) child labor, (4) convict labor, and (5) employers' liability.

1. Protection of Life and Health.—Various laws are devised differing in detail, but having for their common object the protection of the work-people from accident, disease, and fire, and the maintenance of sanitary surroundings.

2. Hours of Labor.—In 1892 Congress passed a law that eight hours shall constitute a day's work in the government service. Most states have laws to protect workers. If men are allowed to work for long hours, as sometimes on railways because of some emergency, they must be given a period of rest immediately following. Many states forbid longer than 16 hours of continuous labor. Hours have been reduced 20% in recent years, while efficiency has increased the same.

3. Child Labor.—In most states it is illegal to employ child labor in mines, factories, and workshops before a certain age is reached. The age varies from 12 to 18. In nearly all states children must remain in school until they are 14, but a few states allow them to attend part time from 12 to 16 years of age. Labor of young children in factories and mills is almost unknown in our country now. In 1924 an amendment was proposed to the Constitution, forbidding employment until the age of 18.

4. Convict Labor.—Legislation is commonly directed against the products of convict labor being placed upon the open market, the state preferring to support its prisoners in complete or partial idleness rather than let them work usefully for their own maintenance.

5. Employers' Liability.—The employer is held liable for damage to life or limb as a result of his negligence to carry out the requirements of the common law. He must provide a safe work-place, as well as safe tools and appliances; he must give notice of any hidden danger, and issue and enforce rules necessary for the adequate protection of his work-people. Except in a case where any of these statutes are violated by the employer, an employee is held to assume the ordinary risks of his employment, as well as the risk of injury from the negligence of another employee. The principle of employers' liability was extended in England by the Workmen's Compensation Act of 1897, which in effect abolished the question of contributory negligence. In 1900, and again in 1906, the application of this law was still further extended.

Laws in 1908 made railroads liable for accident to employees. All basic industries now have such provisions. Workers must use due caution, and frequently compensation is refused because they are negligent while on duty. By 1940 all states but one had compensation for industrial injuries. Various forms of insurance provide some protection for men and their dependents. The costs are usually paid by the employers.

Despite all safeguards, in 1938 over 16,000 were killed while at work, and over 90,000 were permanently injured. The records since then show some reduction. Accidents in shops, in the home, and from automobile disasters still make up three large classes of fatal injuries.

6. Minimum Wage.—Several states in the United States have passed minimum wage laws which provides minimum standards of pay for certain groups of laborers. These laws apply only to the lowest wage groups, which are composed of women, miners, and low skilled male workers. Australia was the first country to enact minimum wage laws. Her example was followed by other countries including Great Britain. The United States was rather tardy in enacting legislation of this kind, but in 1912, Massachusetts made the first start by passing the minimum wage law as a result of recommendations of a commission appointed in 1911. In 1925, twelve states had minimum wage laws. In some states, these laws are administered by a commission without powers of enforcement. In others, the minimum wage boards have compulsory powers.

Court decisions tend to favor the principle of minimum wages. The Fair Labor Standards Act, from 1938, provided that wages in shops for goods in interstate trade must be at least 30 cents an hour. The Social Security Act, the Wagner Act, and other laws provide old-age insurance, forbid taking dues for labor unions out of wages by the paying office, raise the age at which children may work part time—usually 14 years or above—outlaw the sit-down strike, employing of women and youths in hazardous occupations, and dismissing employees for union activities. Other grants are made for the public good. Child actors, any working for parents, or on farms when not required to attend school are exempted.

Unemployment.—The labor force, those normally employable, includes about 50% of all over ten years old. It has varied little relatively since 1800. Those unable to obtain work usually number over a million, even in times of prosperity, not including the aged, men on strike, or those who are ill. In 1929 both highest in employed (48 millions), and lowest in unemployment (429 thousand) were attained. Yet 1933 was characterized by highest number out of work since we have had American records, 12,744,000. In April, 1940, after another fairly low point in 1937, the number unemployed was over 8 millions. It is predicted that the labor force by 1980 will reach 67 millions. More jobs must be found to take up the slack that now prevails. After a war or boom all kinds of labor show a surplus when the reaction or normal period comes. Seasonal unemployment also accounts for many cases.

During the great depression of the 1930's, various measures were taken to get men again on the payrolls. The government employed at one time over 4 millions, and for several years not fewer than a million and a half. Between 1929, a low year, and 1940, the force of regular government employees rose from 833,163 to 1,292,905. Nearly all states provided for some form of compensation for men out of work, but at first the grants were very small each month,—in some cases not over $10. The laws provided from $15 in most states to $30, the highest, in Texas. Only six states asked the workers to contribute. Firms contributed from 2.7% to 3%, or a little more, of the normal payroll totals to state funds. The federal treasury also allocated $58,000,000 in 1938 and over $80,000,000 in 1939 to the various states.

The *Economic Almanac* of the National Industrial Conference Board has a number of tables of data on employment. The figures taken from these appear below.

CONDENSED TABLE OF EMPLOYMENT
(Figures in thousands: add 000)

Year	Labor Force	Employed	Unemployed
1900	29,025	27,378	1,647
1910	38,133	37,580	573
1920	41,897	41,339	558
1929	48,354	47,925	429
1933	50,830	38,086	12,744
1935	51,879	42,357	9,522
1937	53,011	46,639	6,372
1939	54,393	45,326	9,067

Estimates by the American Federation of Labor for each year vary by a million in both the employed and unemployed lists,—the former being lower and the latter 900,000 higher for 1929, 1933, and 1939.

EMPLOYMENT IN MANUFACTURING, 1914–1940
(From *Economic Almanac*, 1940)

Year	Employed (Add 000)	Weekly Wages	Hours Weekly	Living Costs
1914	8,769	$12.68	51.5	61.3
1923	10,592	26.61	49.2	100.0 [1]
1930	9,770	25.84	43.9	96.7
1935	9,757	22.23	37.2	82.6
1939	10,243	27.04	37.6	85.2
1940 [2]	10,771	28.09	38.7	85.4

[1] Scale: 1923 equals 100. [2] January, 1940.

PERCENTAGE OF MEN EMPLOYED IN INDUSTRIES IN JUNE, 1939 COMPARED WITH THE AVERAGE FOR 1923-25, USING 100 AS AN INDEX

Group of Industries	Men Employed	Pay-roll
Iron and steel	87.5	80.7
Machinery	95.6	96.4
Railroad repair shops	89.2	89.2

Rubber products	80.2	84.2
All manufacturing	90.6	85.9

BANKS AND BANKING.

A bank is an institution for the custody, loan, exchange, or issue of money. Banks receive from their depositors money on current account or on deposit account. The former is subject to withdrawal by check to suit the convenience of the depositor; the latter can only be withdrawn at the expiration of a certain interval. Interest may or may not be allowed according to the kind of bank and the nature of the arrangement. Banks are authorized to invest and reloan the money intrusted to them, their transactions being subject to state and national laws. Banks perform other services, such as issuing and collecting drafts and bills of exchange, etc., each bank having its own special function.

The history of banking carries us back to dim antiquity. The primitive idea of banking was the custody of other people's money, combined with foreign money-changing. Bills of exchange would seem to have been the first credit transactions of the ancients, and it has been proved that the Assyrians were familiar with these instruments many thousands of years ago; while the *Bunnyas*, or native bankers, in India have negotiated their *Hoondees* for many centuries. In Greece and Rome bankers, or *argentarii*, as they were called by the Romans, received money on current and deposit account, and dealt in foreign bills of exchange. They also loaned the money in their keeping, charging a higher interest than that allowed to the depositor. So firmly established had the banking system become that by the time of Justinian a special body of laws had been formed dealing with the subject. In the Middle Ages, the Jews performed some of the functions of bankers, but owing to the insecurity of property and the instability of commerce, banking was little more than money lending. The bank of Venice was founded in 1157 to facilitate the handling of a forced government loan, the interest of which was punctually paid. But it was not till after the levying of similar loans in 1480 and 1510 that the Bank of Venice may be considered a bank in the modern sense of the word.

Both Florence and Venice had long been famous for their bankers and money lenders, but not till the rise of the Banco di Rialto at

Venice, in 1587, may modern banking be said to have been inaugurated. This bank received deposits on call, and allow depositors the privilege of transferring their credits by written order. Perhaps the first bank to undertake the custody of depositors' money on an extensive scale was the Bank of Amsterdam, founded in 1609. Like the Bank of Hamburg, and the Banco del Giro, founded in the same century, this bank was not authorized to issue notes or to lend money. The credits of these banks, resting on actual coin deposited, prepared the way for the check and deposit system associated with our modern system of banking. The eighteenth century saw the evolution of two distinctive features of modern banking, viz., the issue of bank notes depending for their acceptance and circulation on the credit of the bank, and the granting of deposit accounts on the credit of the customers. Although bank notes had been employed for many centuries in the East, they were unknown in Europe before 1661. In that year the Bank of Sweden issued notes mainly to avoid the shipment of copper coin. The first bank notes issued in England were the receipts given by the London Goldsmiths for money given into their safe keeping, and these receipts (known as "Goldsmiths' notes") freely circulated in the latter half of the seventeenth century.

In the history of banking in the United States, banks of issue figure most prominently. The old Colonial idea of a "bank" was an institution for loans and not deposits, the loans being usually in the form of notes issued by authority of the Colonial governments. When the Continental paper currency collapsed in 1781, Congress chartered the Bank of North America, with power to issue notes, and so provide a circulating medium for the whole country. Three years later the Bank of New York and the Bank of Massachusetts at Boston were chartered; but the issue of paper money by the various states continued till such issues were prohibited by the Federal Constitution. The First Bank of the United States was chartered on February 25, 1791, with an authorized capital of $10,000,000, one fifth of which was subscribed by the government. Its notes were receivable for all dues to the United States government. Congress failed to recharter the bank in 1811, and its business passed to the State banks. Five years later, the Second Bank of the United States was chartered with an authorized capital of $35,000,000, one fifth subscribed by government. Its efforts to regulate the issues of state banks rendered the bank unpopular. Largely owing to the opposition of President Jackson, the bank was not rechartered, and in 1836 it ceased to be a national institution.

I. State Banks.—In the years following 1811 the banks specially chartered by the various states rapidly increased, more especially after the suspension of specie payments in 1814. When President Jackson's campaign (known as the "Bank war") against the Second Bank of the United States began in 1830, the aggregate note issues were $61,000,000, while the total amount of specie in the country was only $30,000,000. In 1834 the note issues rose to $94,000,000 and the specie to $41,000,000. The number of state banks had increased to 713 in 1836, with an aggregate note circulation of over $140,000,000. Unsound principles of banking prevailed, and note issues were frequently expanded beyond all prospect of redemption. In consequence the state banks collapsed at one of the most critical periods of the history of the United States. The panic of 1837, however, had a salutary effect on banking methods, and the note circulation, which had been inflated to $149,000,000 in 1837, shrank to $58,000,000 in 1843, steadily rising again to $202,000,000 in 1861.

The five years' financial crisis from 1837 to 1842 was a memorable epoch in the annals of American development, ranking in importance with the funding of the public debt (1783–1790) and the financing of the Civil War (1861–1865). This crisis decided the fate of the state banks and determined the fundamental policy of all future governments. It took the state banks about 20 years to recover from the widespread disaster. The number of banks increased steadily year by year after 1853, and at the beginning of the Civil War there were about 1,500 state and local banks operating in the Union.

State banks are practically the same as national banks in their operations, except that they have not the privilege of note issue. Previous to 1865 they issued bank notes, but in that year Congress passed a law taxing these notes 10 per cent., which soon resulted in their retirement. In the Eastern States, state banks have virtually disappeared, though they are numerous in other sections of the country.

II. National Banks.—To secure a uniform bank currency, as well as to extend the market for United States bonds, the United States Congress, in 1863, passed a law authorizing the establishment of a number of banks under federal charter, with an aggregate circulation not exceeding $300,000,000. The act was recast in 1864 when the present system was laid down. Each national bank must invest a certain proportion of its capital in United States registered bonds to be deposited at the Treasury. This must not be less than one fourth when the capital is over $150,000 and not less than one third when the capital is below that figure. The provision that no bank was allowed to have a smaller capital than $50,000 was amended in 1900, when the organization of banks with a capital of $25,000 was permitted in towns of 3,000 population. New York was made a central reserve city, and one half of the reserves of banks in reserve cities might be deposited in New York banks. Chicago and St. Louis were subsequently made central reserve cities. The chief amendments to the national banking law were the act of 1874, making the United States Treasury the agency for the redemption of notes, and requiring each bank to deposit with the Treasurer the equivalent of 5 per cent. of its circulation as a redemption fund; the act of 1875, which abolished all limitations upon the volume of circulation, and the act of March 14, 1900, which authorized the issue of notes to the par value of bonds deposited in the Treasury, provided such bonds are not selling at a discount.

All national banks, except the Bank of North

America, Philadelphia, are obliged to have the word "National" as part of their name, others not so chartered being prohibited from using this title. This affords protection to the public by giving assurance that such an institution is safeguarded by national restrictions. A national bank may receive on deposit money subject to check—on which it does not, as a rule, allow interest, make loans to corporations and individuals collect drafts, and, to a limited extent, may purchase and hold real estate. Among its important duties are the buying and selling of exchange; making collateral loans; discounting and negotiating bills of exchange, promissory notes, and other forms of indebtedness.

Ten per cent. of its paid capital stock was formerly the limit which a national bank might loan to any one person. This limit was increased to 10 per cent. of the capital and surplus (provided that 30 per cent. of the capital is in no case exceeded) by an act of Congress in 1906.

National banks are not allowed to establish branches, although they are permitted to operate branches acquired by merger with national banks. This is because the national bank absorbed with its branches must have been established under state charters and acquired its branches prior to its nationalization.

Since the incorporation of these banks only 5½ per cent. of their total number have been closed on account of insolvency, in nearly every case violations of the national bank laws or fraudulent management being the reason.

National Bank Notes.—The issue of circulating notes by the national banking associations was first authorized for a term of twenty years by a law that was enacted February 25, 1863, and which was recast in the act of June 3, 1864, entitled "An Act to provide a national currency secured by a pledge of United States bonds, and to provide for the circulation and redemption thereof." This act, with subsequent amendments, was embodied in the Revised Statutes of the United States in 1873. The law has been amended from time to time, and is now contained in what is known as the "National Bank Act."

National bank notes are of equal value throughout the length and breadth of the United States, and complete protection is given to the holder; for each bank must secure unmatured interest-bearing United States bonds, in registered form, equal in amount to the total issue of the notes desired. Thus a safe and sound currency, circulating without discount or distrust throughout the country, is provided.

To provide against too great a contraction in the currency, the total amount of national bank notes outstanding is not allowed by the government to be reduced more than $9,000,000 in any one month, except that notes secured by bonds called for redemption may be retired.

In payment of taxes, excises, public lands, and all other dues to the United States except duties on imports, national bank notes shall be received at par in all parts of the United States. With the exception of the redemption of the national currency and the interest on the public debt, they are also receivable for all salaries and other debts and demands owed by the United States to corporations, associations, and other individuals within the United States. They must not be counted in the "reserve" of a national bank, as they are not legal tender. The notes of each national bank must be received at par by all other national banks. The Treasurer, but not the assistant treasurers, may redeem the notes in "lawful money" of the United States.

III. Federal Reserve Banks.—The Federal Reserve Act became a law on December 23, 1913, when it was signed by the President. Beyond any question, this Act is one of the most important laws ever passed by the Congress of the United States. Its purpose, as stated in the preamble of the bill, is "to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes."

For a generation or more it has been generally admitted that our banking and currency laws were inadequate and unscientific, and attempts have been made, more or less spasmodically, to reform them. This legislation, which was not in full force for three years, gave to the people a new banking and currency system which, while designedly not revolutionary in nature, does, nevertheless, add what may be called a superstructure to the present national banking system.

The Act provides for the division of the entire continental United States, except Alaska, into twelve districts, known as Federal reserve districts. In each of these districts a city is designated as a Federal reserve city, and in each of these cities is to be a bank known as the Federal Reserve Bank of Boston, or Chicago, as the case may be. The twelve cities so designated are Boston, New York, Philadelphia, Cleveland, Richmond, Altanta, Chicago, St. Louis, Minneapolis, Kansas City, Dallas, and San Francisco. Every national bank in each district is required to become a member of the system. State banks and trust companies may also join, although not compelled to do so. Member banks must subscribe for stock of the Federal reserve bank of their district to the amount of 6% of their capital and surplus, one half of this being paid in practically at once, and the other half subject to call. The capital stock of each Federal reserve bank must be not less than $4,000,000, and is entitled to 6% cumulative dividends.

The Federal reserve banks receive deposits only from member banks and from the United States Government. The deposits carried by member banks are the reserves of those banks, except their cash reserves.

Next to the mobilization of reserves, as mentioned above, the most important function of the Federal reserve banks is that of rediscounting for member banks. All paper rediscounted must have a maturity at the time of rediscount of not more than ninety days and must be commercial paper, that is to say, notes, drafts, and bills of exchange issued or drawn for agricultural, industrial, or commercial purposes, or the proceeds of which have been used or are to be used for such purposes.

The next most important service rendered by the Federal reserve banks is that of issuing what is known as Federal reserve currency. This

currency is an obligation of the United States Government, issued through the Federal reserve banks. When a reserve bank wants currency it delivers to the Federal Reserve Board, or its agent, commercial paper to the amount of currency desired. It pays interest to the Federal Reserve Board for the currency received, and also must carry a reserve of gold equal to 40% of the currency received and outstanding. Therefore, back of each dollar of Federal reserve currency, there is 100% of commercial paper and 40% of gold.

We have here an elastic currency, a currency that expands as business expands, and contracts as business contracts. It is a scientific currency, similar in principle to that which the experience of the world has demonstrated to be sound and responsive to the demands of business.

At the head of the Federal reserve system stands the Federal Reserve Board, in Washington. This Board is composed of seven members, the Secretary of the Treasury, the Comptroller of the Currency, and five citizens appointed by the President of the United States for ten year terms, subject to confirmation by the Senate. This board is given powers greater, perhaps, than are possessed by any other board or commission in the country, except the Supreme Court of the United States. In addition to exercising general supervision over the Federal reserve banks, the board has power to permit or require one reserve bank to rediscount for another reserve bank; to suspend, for not over 30 days, the reserve requirements; to supervise the issue and retirement of reserve notes; to remove any officer or director of a reserve bank; to permit national banks to act as trustee, executor, administrator, or registrar of stocks and bonds; to suspend, for cause, and operate a reserve bank; to examine, at its discretion, the accounts, books, and affairs of each Federal reserve bank and each member bank, etc. It will thus be seen that the powers granted the Federal Reserve Board give that body great influence and authority over the banking and currency systems of the country. Present tendencies as indicated in the banking acts of 1933 and 1935, especially the latter, is to curtail the powers of the Reserve Board and increase the powers of the Treasury Department.

The table given below shows the progress of the Federal Reserve system in significant years. The year now ends in December.

IV. Bank of England.—This greatest of financial institutions is situated in the center of London, and covers an area of about four acres. Its corporate name is, "The Governor and Company of the Bank of England," and its management is in the hands of a governor, deputy governor, and 24 directors, who are elected by the shareholders. Every Thursday the directors meet, and the influence of this gathering is felt throughout the world. The bank is a private corporation. Over 925 persons are employed. "Bank of England" notes are issued by it, and no interest is allowed on deposits. Every night since the riot of 1780 a guard of soldiers has been marched into the bank for its protection.

The institution was devised and founded by William Paterson, the first charter being issued on July 27, 1694, by authority of an act of Parliament. It was stipulated that the entire subscribed capital ($6,000,000) was to be lent to the government at 8 per cent., and an allowance of $20,000 for management. The bank was granted the privilege of issuing "bills payable in coin on demand," and transferable "to bearer on demand." At first these promissory notes had to be indorsed on transference, but in 1704 this statutory requirement was repealed, and from that time the banks in England have issued notes of £5 and upwards. The original charter was for only eleven years, but it has been constantly renewed, the last renewal being in 1844. By the act of Peel's government, the Bank of England was divided into two separate departments—the "issue" and the "banking." The monopoly of the bank to issue notes in London and within a radius of 65 miles (granted in 1826) was left untouched, and is in force to this day. The "issue department" deals only with the circulation of notes, some $150,000,000 being constantly in the hands of the public. The "banking department" differs from other banking concerns, having the management of the public debt and paying the dividends upon it. It also holds the government deposits, assists in the collection of the revenue, and is universally recognized as the bank of other banks. At present the currency of England is largely in the hands of this bank, and the reserves of all London banks are kept there.

In the bank's weekly published statements is given the discount at which it will handle first-class paper. The rate of interest allowed by all

the London joint-stock banks on deposits is usually at the rate of one and one half per cent. less than the rate of discount given by the Bank of England. The rate of interest on overdrafts, the discount rate throughout Great Britain, and the interest rates allowed by London banks on cash balances of foreign correspondents are all established by the rate of discount allowed by the Bank of England. It also fixes the rate of discount on documentary bills, as to the rebating of interest on account of anticipating repayment. The influence of this rate of discount is felt by all international bills of exchange, and it often acts as a protection to the gold held by the bank itself, increasing the value of money in London, encouraging imports, and checking exports of gold.

The Bank of England is known as the "Old Lady of Threadneedle Street."

V. Bank of England Notes.—The only form of paper money—or bank bills—in general use in Great Britain; their promise to pay, in paper money,—similar to our national bank circulation. Notes are printed and all the machinery of issuing, redeeming, cancellation, etc., is performed by the "issue department." A debt due to the Bank of England from the government is the security of the notes to the sum of £11,015,100; £7,434,900 may be issued against securities, but there must be a deposit of coin or bullion against all additional notes issued. The use of one fifth silver is granted by law, but only gold is used. Bank of England notes are legal tender except in Scotland and Ireland.

VI. Bank of France.—After Napoleon had become First Consul, he desired a financial institution that would be subservient to the government, as well as of use to it, and therefore established in 1800 the Bank of France. Its central, or head, office is in Paris, where the interest rates used throughout the country are regulated. These same rates are used in the transaction of the business of discounts and advances at the branches or auxiliaries of the central bank, in or connected with all the principal cities and towns of the country. The rate of discount has never been raised by the bank above 9 per cent.

The government nominates the gevornor and two sub-governors, while the stockholders, with the exception that three of the regents must be chosen from the treasury disbursing agents, select the general council, consisting of 15 regents and three censeurs.

While very largely under control of the government, shares held by individuals represent ownership in the Bank of France.

Bank notes can be issued by no other institution in the country, and are under the supervision of the regents, who are held responsible and must report to the government. While the bank makes it a point to keep on hand a large amount of bullion and coin, its general assets and credit are the only security for the notes; but if necessary the bank would be supported by the credit of the government. While redeemed in specie, these notes are legal tender. Payments are generally made by bank notes or specie, since checks are seldom used in France. As a result, a large issue of bank notes is demanded.

BUDGET ESTIMATES OF FRANCE
(Money in francs: add 000)

Year, Jan. 1	Revenues	Expenses
1935	46,991,968	47,817,012

French per capita debt, 1927, 7491 francs; 1930, 7202; 1935, 8249; 1939, 10,520.

VII. Bank of Germany.—The Reichsbank, or Imperial Bank of Germany. In 1765 the king of Prussia founded a state institution called the Royal Bank, which in 1846 became a bank of issue. This was succeeded by the Imperial Bank of Germany, on December 31, 1875, which continued in operation until 1924 when the new Reichsbank was organized. Like the Bank of France, the old Reichsbank ownership was represented by shares held by individuals, but in reality it was under government control. The Reichsbank was in Berlin, but had many branches throughout the empire. When its discount rate reached 4 per cent., all other banks had to agree; if lower, they could cut under not more than one quarter of 1 per cent. The rate of discount before the war was never higher than 7 per cent, and only once in 30 years, for a brief period, did it reach that point.

Discounting bills, both inland and foreign, formed a large part of the bank's business. It also received, held, and disbursed government funds, received deposits, and issued circulation, but was obliged by law to keep in its vaults the value of one third of its outstanding notes in cash, which consisted of bullion, coin, or notes of the imperial treasury. Discounted bills had to represent the remainder. Upon presentation at any of the branches, its notes had to be paid in gold, as they were not legal tender. They were part of the general liabilities of the bank, and had no prior claim upon its assets. The note issue was bound by three limitations. First, in excess of what was covered by its cash reserve, no more than 472,829,000 marks (known as its "Kontingent") could be issued, although this could be increased by the "Kontingent" of a smaller bank of issue, which passed to the Reichsbank when the former went out of business; second, any excess above this list was taxed 5 per cent. per annum; third, the previously mentioned holding of one third cash.

The New Reichsbank.—On August 30, 1924, laws were passed by the Reichstag providing for the establishment of a new bank of issue in Germany. These laws were drafted in compliance with the Dawes Committee plan for financial reorganization and currency stabilization.

The new Reichsbank has a practical monopoly of the note issue for a period of 50 years. Notes

issued by the bank are called reichsmarks. These reichmarks are exchangeable for the present circulation at the rate of one trillion marks for one reichsmark.

The capital of the new bank must amount to at least 300,000,000 and may not exceed 400,000,000 gold marks. The organization of the new Reichsbank is very similar to that of the old bank, but certain foreign powers exercise supervision acting through the board of managers. There is a general board composed of seven foreign and seven German members. The president of the bank is elected by majority vote of the general board. The president then appoints the members of the managing board, who must all be of German nationality. The managing board exercises the predominating influence in the administration of the bank.

In addition to note issue, the bank has other important functions, such as conducting the country's clearing system; furnishing a discount market by discounting good commercial paper running 90 days or less; and acting as the fiscal agent of the government.

SUMMARY OF ORDINARY GERMAN FINANCING

(Figures in millions of Reichsmarks: add 000)*

Year March 1	Ordinary taxes	Excises	Customs	Totals
1935	4,970 *	2,100	1,150	8,220
1936	6,170	2,230	1,250	9,650

Germany	30	160
Italy	567	200
Russia	716	1,000
Argentina	405	431
Japan	384	164

VIII. Clearing House.—Previous to the establishment of the London Clearing House in 1775, each banker was obliged to send his clerk to every other banker in London in order to collect his dues. In that year a "clearing house" or common center of exchange was decided upon, where the representatives of each bank could meet daily for the exchange of bills and the settlement of differences. Eventually the clearing house and each bank making use of it opened an account at the Bank of England, and at the close of each day the balances are now adjusted by transfers from one account to another. What each bank owes the clearing house is shown by the total, and if the amount held by any particular bank is larger than the total amount against it, the clearing house owes it the balance, and it is called a "creditor bank." But if it owes more than the amount of checks which it holds against the other banks, it must pay that amount to the clearing house, and is a "debtor bank." Of course, the total amount of debits will just offset the credits at the close for the day of the clearing house transactions, since that merely acts as a medium for settlement. Naturally checks drawn by a bank's depositor in favor of another depositor of the same bank do not pass through the clearing house. To enjoy full privileges, a bank must be a member of the clearing house association, and the expenses are shared among the banks.

The country banks are represented in the London Clearing House by their London agent. The more important provincial towns have clearing houses of their own. The great public usefulness of such institutions may be inferred from the fact that checks aggregating about $45,000,000,000 pass through the London Clearing House each year. In the United States similar institutions have been established in over 100 cities, the most important being the New York Clearing House, founded in 1854.

IX. Savings Banks.—Organized under state laws or, if in the District of Columbia, under Federal laws, with the expectation that the deposits received shall be chiefly the savings of small earners,—laborers, wage-earners, and small salaried persons in general. These are supposed to be unable to intelligently invest money for themselves, and a suitable form of investment for their small savings is not easily found. The "Board of Investment" or "Finance Committee" is elected for the purpose of safely investing the aggregate savings deposited in the bank. In some states the legal restrictions controlling the investment of savings bank funds are very lax and unsafe, in others very strict and conservative. Of the latter class are those of New York, Massachusetts, Connecticut, and possibly Vermont, Maine, and New Hampshire.

According to the rules and regulations of the bank, interest ranging from three to five per cent. is paid on money deposited. Savings institutions consider safety before profit, and afford a sound investment.

The rise of modern banking really dates from the establishment at Venice of the Banco di Rialto, in 1587. Daniel Defoe originated the modern "savings bank" idea, suggesting it in 1697. But "father of savings banks" is the title given to Rev. H. Duncan, of Ruthwell, Dumfriesshire, who, in 1810, established one which accumulated $5,800 in four years.

Mutual savings banks numbered 634, and stock banks 1,466 in 1914; in 1933, 576 mutual and 219 only of stock banks. Statistics following are from reports of the Controller of the United States Currency:

ALL U. S. SAVINGS BANKS SINCE 1820
(In column 4 add 000)

Year	Number of Banks	Number of Depositors	Total Deposits	Average to Depositor
1820	10	8,635	1,138[1]	132[1]
1830	15	16,931	2,537	150
1840	61	78,701	14,052	178
1850	108	251,364	43,431	173
1860	278	693,870	149,278	215

[1] All over $500 called $1,000; over 50 cents called $1.
[2] From 1915 to 1935, the first figures in each set are for mutual banks, those owned by depositors; second in each set, for stock banks, those owned by others than the depositors. Both are combined after 1935. In 1939 there were, besides, $11,045,000 in private banks, with 23,476 depositors.

In European countries savings banks have been principally encouraged by public authorities. The prevailing type in Germany is the municipal savings bank. Similar banks are common in France, Austria, and Italy; there are also a few in Denmark, Sweden, Russia, and Japan. Many of these banks pay as much as four per cent. interest, and are thus a great attraction to small depositors. In England postal savings banks were established under an act of 1861, and largely took the place of the trustee savings banks. In 1870 Belgium reorganized the state savings bank and made the post office the medium for the collection and payment of deposits. Postal savings banks were introduced into Italy in 1876, the Netherlands in 1881, France and Sweden in 1882, Austria in 1883, and Hungary in 1886. Japan, Russia, and the British colonies have postal banks.

X. Legal Investments for Savings Banks.—Circulars of bond houses often contain expressions such as "Legal for New York savings banks," "Legal for Connecticut savings banks," given that a bank official will know that he may in strict compliance with the law purchase such bonds, and, since that is true, the private investor may feel safe in purchasing the same. For in what stocks, bonds, etc., a savings bank may invest the money of its depositors is specifically regulated by the laws of the greater number of states. Of all the eastern states, New Hampshire, Maine, Vermont, Connecticut, Massachusetts, and New York, in climax order, most strictly limit their savings banks investments, while there is very little limitation upon those of Maryland, Pennsylvania, and New Jersey, and practically none upon those of Rhode Island. Naturally the investments of the first named are generally considered the safest for the public.

XI. Trust Company.—A corporation chartered under state laws to receive and execute trusts. *Usually* with powers to carry on a general commercial banking business, and to act in many different fiduciary capacities. These fiduciary capacities may include acting as executor under a will; administrator of the estate of a deceased person; guardian of the estate of an infant, or spendthrift; trustee under a will, a deed of trust, or a mortgage. They have become general as transfer agents for large corporations; caretaker of the estates of incompetents; and in many cases underwriters of loans for other corporations or municipalities. Unlike national banks they are not subject to government control, though they may perform the functions of ordinary banking institutions, but may not issue bank bills. The laws regulating the transactions of trust companies differ widely in the various states. The first corporation in the United States with the powers of trustee is the Farmers' Insurance and Loan Company (later the Farmers' Loan and Trust Company) chartered in New York in 1822. Eight years later the New York Life Insurance Company was established, and in 1836 the Pennsylvania Company was incorporated as a trust by the State of Pennsylvania. The number of such companies increased more rapidly after the Civil War.

The growth of trust companies has been rapid; in 1890 there were only 149 in the United States; in 1900 this number had further increased to 290; by 1910 this number had further increased to 1091, or more than ten times the number in 1880. Within the past two decades, from 1910 to 1930, the growth of trust companies has again increased, due to the licensing of national banks to act in this capacity. Again, this increase is due largely to the fact, that many corporations have been chartered as trust companies instead of banks, in order to benefit by the greater latitude allowed to the former under the laws.

Trust companies receive deposits subject to check, allowing as a rule interest of from two to three per cent. on such accounts. It is probably due to this fact that their business has increased so extensively in recent years. Another reason is that their public usefulness is being more generally recognized, and it is becoming more usual to appoint a trust company as executor, trustee, guardian, or administrator than to appoint private individuals; for the company is regarded as a permanent institution, and consequently more to be relied upon.

STATISTICS OF ACTIVE BANKS IN THE UNITED STATES
(Money sums in thousands: add 000)

Items Accounted For	1920 30,139 banks	1925 28,841 banks	1930 24,079 banks	1935 16,053 banks	1939 15,146 banks

Cash	1,076	951	866	785	1,042
Balances with other banks	7,291	8,956	10,312	11,613	19,584
Other assets	2,559	3,018	3,829	3,353	3,073
Total assets	$52,828	$61,898	$73,462	$60,387	$73,601
Liabilities					
Capital	$ 2,703	$ 3,170	$ 3,889	$ 3,605	$ 3,205
Surplus, undivided profits	3,251	4,181	6,392	4,230	5,184
Circulation	688	648	652	222	.....
Total deposits	41,725	51,995	59,847	51,586	64,577
Bills payable, rediscounts	3,285	925	606	61	27
Other liabilities	1,427	1,131	1,968	671	704
Total liabilities	$53,079	$62,050	$73,354	$60,375	$73,647

In the above table all active banks, not in receivership, in 1939 were made up of national banks (5,209); state banks (including commercial and trust companies doing banking business, 9,321); mutual savings banks (552), and private banks (64).

In 1938, 15,341 banks held licenses. In 1921, 505 banks failed; in 1929, 659; in 1935, 34; in 1939, 42. In 1933, from Jan. 1 to the 4th of March, 408 closed, and 2,113 failed to open after the "bank holiday." Licensed, July 1, 1933 to Dec. 31, 1936, 1,242.

Reserves with Reserve Agents are included in balances with other banks, as were also exchanges for clearing house purposes and all cash items. Since 1933, cash in hand has been included with Other Assets. Under Liabilities, reserve accounts are included as surpluses. Capital includes also capital notes and debentures in banks other than national.

A few other changes in accounting make totals, as reported in tables printed in the past, seem inconsistent with present items. Trust companies are now listed officially under commercial banks.

STATISTICS OF ALL ACTIVE NATIONAL BANKS

The fiscal year of national banks ends on June 30. National banks include all those chartered and supervised by the federal government. Most of these now join in insuring their depositors. Statements concerning classification of assets, found at the bottom of page 1238 also apply to the national banks in the table on the page above. On page 1238 national banks are, of course, included in the totals of all banks.

LOAN INSTITUTES.

Various organizations, for the most part co-operative, are designed to provide a safe investment for the savings of persons of small means, and to loan funds to members at reasonable rates, for the purpose of housebuilding and the like. They exist under various designations, such as homestead aid associations, mutual loan associations, coöperative banks, coöperative savings and loan associations, building societies, etc. In Great Britain such associations are incorporated by registration by the registrar of friendly societies, with whom their rules must be filed. A society is there permitted to borrow to the extent of two thirds of the amount advanced on mortgages; for sums beyond this the members of the managing committee are personally liable. In the United States, building and loan associations are in many states placed under the same laws as savings banks, while in others they are free from special regulations.

Building and Loan Associations.—Incorporated under the laws of many of our states, this form of bank encourages real estate investments, owning of homes, and saving of money, by assisting those of limited means to accumulate money for improvements on lands, paying incumbrances thereon, and erecting buildings. Over 700,000 homes have been acquired by this means. A large percentage of shareholders in the local associations are working people.

To join a Building and Loan Association, a person has to subscribe for one or more shares whose final value is usually $200. By so doing he pledges himself to pay a stated sum in fixed periodical installments, and must suffer prescribed penalties if he fails to do so. These payments he agrees to make until the shares are fully paid, that is, reach their stated values, these requirements being more quickly met because of the proportion of the earnings of the institution allotted to the shareholders' credit. When an association has on hand money to loan, a shareholder may borrow from it money upon real estate up to the face value of his

MEMBERSHIP AND TOTAL ASSETS
OF BUILDING AND LOAN ASSOCIATIONS

Year.	Number of Associations.	Total Membership.	Total Assets.
1895	5,770	1,545,129	$579,627,765

1939	New York	591,791	422,334,142

shares, paying a small premium in addition to legal rate of interest. The plan of fixing the premium is now generally adopted; but formerly the shareholders were offered at stated intervals the loanable money of the association, it being awarded to best bidders. Using the shares as collateral, some associations loan money to members up to a certain percentage (say 90 per cent.) of amount paid in.

When all the required payments upon shares have been made, the return of his money, plus his share of the earnings of the association, may be demanded by the subscriber.

In the United States the first institution of this kind was organized in Frankford, Pa., in 1831, and in the next twenty years a number of similar associations were established in Philadelphia, though none were incorporated till 1849. After the Civil War their numbers rapidly increased until in 1876 there were in Philadelphia alone over 450 associations.

In England building and loan associations are known as "building societies"; the first originating in Birmingham in 1781. Their numbers increased considerably during the nineteenth century, and special legislation was enacted in 1838 and 1874. Similar societies exist in most European countries; in Germany they are called *Baugenossenschaften.*

Money.—Money is both an accepted medium of exchange and a measure of value. Any article of value will suffice for the purpose, but stamped metal, and especially gold and silver or their representative in paper notes, are the most convenient and universally acceptable. In primitive forms of commerce object was bartered for object, as is occasionally done to-day in many parts of the world. But soon the need was felt for some fixed standard of value so as to render exchanges easier and more equitable. For this purpose objects which were in popular demand either for use or ornament became the first media of exchange. Various commodities and objects have been utilized as money; tin was used in Britain and Syracuse; lead in Burma; iron in Sparta; furs in Siberia and Alaska; skins and platinum in Russia; silk and other fabrics of fixed length in China, Tibet, and certain parts of Africa; nails in Scotland; soap in Mexico; bullets and wampum in Massachusetts; logwood in Campeche; tobacco in Virginia. Various kinds of eatables have also been employed as money; rice grains by the ancient Koreans as well as by the modern Filipinos; grains of salt in Abyssinia and at Laos; cubes of pressed tea in Mongolia; codfish in Newfoundland; sugar in the West Indies; cattle in Germany and Rome. In the early days of Rome money of wood and leather was in circulation. The next stage in the development of money was in the selection of objects whose value was determined by their rarity, and even in our times we can find numerous instances of these primitive forms. The Pelew islanders treasure up as current money a certain number of obsidian or porcelain beads and terra-cotta prisms. In the island of Yap blocks of aragonite take the place of money; this rock, being unknown on the island, has to be sought for in the Pelews, and the larger the block the greater its value. This illustration will serve to show that the rarity of a substance is not enough to answer all the essentials of money. A condition of suitable money is that it may be easily handled, and though small in size may represent a high value, either real or fiduciary. Such, for example, are the teeth of the Wapiti deer (*Cervus canadensis*), which the Shoshone Indians and the Bannocks of Idaho and Montana still utilize in their transactions. Such also is the skin-money of the ancient Scandinavians and Carthaginians, the cocoa-seed money of the ancient Mexicans, the animal skull-money of the Mishmee, etc.

Several kinds of shells are still used as money; the *Dentalum entalis* by the Indians of the northwest; the *Venus mercenaria*, transformed into wampum, by the Indians of the Atlantic coast, etc., and in particular the cowry shell, which is commonly used in various parts of Asia, Africa, and the islands of the Indian and Pacific ocenas. In Bengal about a century ago 2,400 to 2,560 cowries were worth a rupee. But the cowry most widely circulates in tropical Africa, which fact is largely explained by its rarity; in consequence the rate of exchange is much higher in Africa than in Asia.

The origin of true money must however be traced to metals. Iron or bronze plates were used as money in Assyria, among the Mycenians, and the ancient Britons. Metal plates of varying form are still generally employed as money in Africa, for example, the *loggos* or pickaxes of the negroes of the Upper Nile, the iron plates of the natives of the Ubangi district, the spearheads of the Jurs, the X-shaped bronze objects made in Lunda and current all over the Kongo, and rings of copper in central Africa; while up to fifty years ago in Cambodia thin iron rings about six inches long and weighing about seven ounces each were used as money.

In regard to primitive money it will be noted that it could easily be transformed into articles of utility (lance-iron, arrowhead, sword, shovel and the like). In China the first bronze money was in the form of a knife, the handle of which terminated in a ring; eventually the blade disappeared altogether leaving only the ring, which was transformed into the well-known Chinese money, pierced with a square hole, called *sapec* or "cash." In central Africa brass or copper wire which may be readily utilized is employed as money. Silver bars, which are cut up into pieces as required, are also current money in China, just as they were in Russia in the fifteenth century.

Whatever article or substance is invested with the functions of money the result is the same in that it fixes the measure of value for all commodities; not only for those actually bought and sold but for all those which are marketable. Some economists hold that money is more important as a measure of value than even as a medium of exchange. Money also serves as a standard of value, enabling us to estimate the relative value of commodities at different periods. This function is distinct from, though subordinate to, that of money as a measure of value, for the latter function is that of a common denominator for one and the same time.

It is important that money should be stable in value, hence the choice of the precious metals among civilized nations. Precious stones,

though answering many of the requisites of money, lack the essential qualities of divisibility and uniformity. Stability of value becomes the more important when deferred payments are to be taken into account; and the precious metals perform this function better than any other commodity.

The value of money is largely dependent upon the law of supply and demand. The supply is obviously the quantity of money in existence; the demand is determined by many factors, chief of which are (1) the volume of exchanges to be effected; (2) the rapidity of circulation, stimulated greatly by savings banks; (3) the universal employment of credit. The latter in particular exercises a dominant influence on the demand for money. The elaborate organizations which owe their origin to the use of credit do the greater part of their transactions without the actual interchange of money, balances alone being settled in specie. Money as a medium of exchange is thus greatly economized by the establishment of such agencies.

The early American colonists experienced much difficulty with regard to their currency, for as the supplies of money drawn from England were much in excess of their exports to that country it followed that their metallic wealth rapidly left these shores, driving the colonists back on other devices. Articles of food and produce were made "legal tender" in some states; the wampum of the Indians was used in others. Another plan adopted by the colonists was to increase the nominal value of the English current coins. A similar device is employed to-day in the Azores, the continental Portuguese money being rated at 25 per cent. in advance of its face value.

The paper money first issued in Massachusetts in 1690, though serving to form the habits of the people, collapsed altogether about the time of the Revolution, for the paper was practically irredeemable. In 1782 as much as $500 of this paper currency had to be given in exchange for one Spanish silver dollar. Specie, secured through foreign loans, for a time bolstered up the circulation. The chartering of the Bank of North America at Philadelphia in 1782, and the coinage of money by the Federal government, gradually overcame these difficulties. Of foreign coins which circulated in the country first place must be given to the Spanish dollar, which even as late as 1857 was accepted as legal tender in all of the United States post offices. Specie payments were suspended from January 1, 1862, to January 1, 1879, and during the greater part of that period gold and silver coins were not in circulation except on the Pacific coast, where, it is estimated, the specie circulation generally was about $25,000,000. (The monetary system of the United States will be found fully treated in the Dictionary of Financial Terms.

The stock of money in the United States between 1890 and 1939, as reported by the U. S. Mint, was as follows:

Year.	Gold Coin and Bullion.	Silver Dollars.	Subsidiary Silver.	Federal Reserve Notes.	National Bank Notes.	Total including Others.*
1890	$ 695,563,029	$380,083,304	$ 76,825,305		$185,970,775	$ 1,685,123,429
1895	636,256,023	547,777,049	76,954,434		211,691,035	1,819,359,557
1900	1,034,384,444	566,131,027	82,863,742		309,640,444	2,339,700,673
1905	1,367,655,088	568,228,865	114,824,189		495,719,806	2,883,109,864
1910	1,636,043,478	568,227,508	155,158,748		713,430,733	3,419,591,483
1915	1,985,539,172	568,272,478	185,430,250	$ 84,260,500	819,273,593	3,989,456,186

* These others include United States notes, minor coin, and Federal Reserve bank notes.

Paper Money.—Primarily paper money was representative, that is, it was metallic currency in another and more convenient form. Such is the function of the United States gold and silver certificates, each of which represents an equivalent amount of specie deposited in the treasury. But paper money in the strict sense of the term is based on credit, and is merely a promise to pay without any absolute guarantee being afforded that the promise will be fulfilled. So long as "inconvertible" paper money is not issued in excess of public demands, its value does not tend to depreciate, but immediately the supply becomes excessive paper is at a discount, gold and silver being correspondingly at a premium. Unlike metallic money, there is always the danger of overissue regardless of the actual requirements of the community. Modern history furnishes examples of excessive issues of paper money, notably the *mandats* and *assignats* of the French Revolution, the "greenbacks" of the Civil War, the irredeemable currency of Italy, Russia, and Austria. The effect of overissue is usually disastrous to commerce and international credit.

Paper money in America was first issued by the colonists; Massachusetts, as already referred to, issuing bills aggregating £7,000 in 1690, and soon increasing to £10,000, to pay the soldiers who had served in the war with Quebec. What was originally only intended as a make-

shift became a practice. Rhode Island issued paper money so recklessly that in 1750 it had depreciated to one twenty-fifth of its par value. Parliament in 1751 vetoed the further issue of such money on the part of the New England colonies, and in 1754 extended the veto to the remaining colonies. To carry on the Revolutionary war, paper money was issued again and again, the amount authorized by Congress aggregating $41,000,000 by 1779, while the states on their own accord issued paper amounting to $209,000,000. The ratio of paper to silver was 40 to 1 in 1780; and at this ratio the central government paid $119,000,000 for paper retired and destroyed. By the funding act of 1790 paper was accepted in exchange for government stock at one per cent of its face value. In this way $6,000,000 was received and canceled.

The first paper money ever issued by the government of the United States was authorized by the acts of July 17 and August 5, 1861. The notes issued were called "demand notes," because they were payable on demand at certain designated subtreasuries. They were receivable for all public dues, and the secretary was authorized to reissue them when received, but the time within which such reissues might be made was limited to December 31, 1862. The amount authorized by these acts was $50,000,000. An additional issue of $10,000,000 was authorized by the act of February 12, 1862, and there were reissues amounting to $30,000. The demand notes were paid in gold when presented for redemption and they were received for all public dues, and these two qualities prevented their depreciation. All other United States notes were depreciated in value from 1862 until the resumption of specie payments. The act of February 25, 1862, provided for the substitution of United States notes in place of the demand notes, and the latter were therefore canceled when received. By July 1, 1863, all except $3,770,000 had been retired, and nearly three millions of this small remainder were canceled during the next fiscal year. These notes were not legal tender when first issued, but they were afterwards made so by the act of March 17, 1862.

The principal issue of United States paper money was officially called United States notes. These were well-known "greenbacks" or "legal tenders." The act of February 25, 1862, authorized the issue of $150,000,000, of which $50,000,000 was in lieu of an equal amount of demand notes, and could be issued only as the demand notes were canceled. A second issue of $150,000,000 was authorized by the act of July 11, 1862, of which, however, $50,000,000 was to be a temporary issue for the redemption of a debt known as the temporary loan. A third issue of $150,000,000 was authorized by the act of March 3, 1863. The total amount authorized, including the temporary issue, was $450.000,000, and the highest amount outstanding at any time was $449,338,902 on January 30, 1861. There are still outstanding $346,681,016.

Single and Double Monetary Standards.—The needs of exchange have given rise to various systems of currency, in which gold, silver, and paper are generally combined. When only one metal is used as a standard of value the system is termed "monometallism"; when the use of both gold and silver at a fixed relative value is authorized as legal tender to any amount, it is known as "bimetallism."

Most of the great powers have adopted a monometallic system, gold being received at the mints without limit and converted into coin. Where a gold standard obtains, silver and baser coins have merely a subsidiary value, and are regarded as tokens, that is, their nominal value is in excess of their intrinsic value. These subsidiary coins are usually legal tender only up to a limited amount, and the quality issued from the mints is likewise restricted and determined by circumstances. Gold is invariably the standard of value under a monometallic system, though this is not absolutely essential. When the gold mines of California and Australia were producing an enormous output, the Belgian government about 1851 demonetized gold and substituted silver as the standard.

Under a bimetallic system if the market ratio between gold and silver differs from the legal ratio, one of the metals is sure to be shipped abroad. To meet such a contingency bimetallic countries reduced the fineness of the silver currency, and introduced a token coinage. This provision, combined with the issuing of certificates to represent the larger coins, placed the subject of bimetallism in a new light, and the question was narrowed down as to whether gold alone or gold and silver in conjunction provided the better standard of value, the question of circulation being no longer potent.

It is the fundamental requirement of bimetallism that both metals should be on exactly the same legal footing, and not merely that they should circulate conjointly. In the United States the present currency is not bimetallic; for the silver dollar, though not limited in legal tender, is yet limited in amount, and cannot be freely coined at the instance of any individual.

The question as to the respective merits of a single or a double monetary standard has given rise to much controversy. The arguments for and against bimetallism may be briefly stated. The bimetallists contend that (1) bimetallism would assure the maintenance of a par value between the two metals; (2) steadiness of exchange between gold-using and silver-using countries; (3) a more stable standard of value than is possible in a gold standard, since bimetallism rests on a broader basis and a decline in prices is less likely to occur. The monometallists argue (1) that bimetallism has been thoroughly tried by individual nations and found unsatisfactory, owing chiefly to one or other metal being exported when its bullion value was greater in some other country, since law cannot fix values; (2) that international bimetallism, if such could be brought about, would not be a guarantee of a universal ratio being either established or maintained; (3) the evils for which bimetallism is proposed as a remedy are of small consequence, and so far as affording relief goes it is held that bimetallism is only theoretical besides being more complicated and artificial, and would break down in practice; while some contend that (4) changes in prices have either no relation to the money supply at all, or else their influence is not so disturbing as the bimetallists claim, while their

compensations more than counterbalance their disadvantages.

To the argument that one or other metal would be likely to be exported, the bimetallists reply that the demand for the use of metals for coinage far outstrips any other demand; and furthermore the law can and does influence the value of metals, and the commercial ratio would perforce adjust itself to the legal ratio. This point is refuted by their opponents, who successfully argue that the French law of 1801, which fixed the ratio between gold and silver at 15½ to 1, did not control the market ratio. To this the bimetallists rejoin that the area was too restricted, and that if an international bimetallic system could be brought about, such a possibility would be absolutely eliminated.

Between 1871 and 1873 Germany substituted a gold standard, being enabled to do this by reason of the enormous indemnity paid by France, $54,600,000 of which was paid to Germany in gold coin. In 1873 the coinage of silver was suspended by the Paris mint, while in the United States, silver had almost entirely gone out of use, and Congress suspended the coinage of the standard silver dollar. The opening up of new silver mines, together with the huge surplus stock of silver thrown upon the market by Germany, caused the price of silver to rapidly decline. Public pressure was brought on Congress, and in 1878 an act was passed providing for the purchase of silver and the coinage of silver dollars. In twelve years 368,000,000 standard silver dollars were issued, but the price of silver began to fall, for it was not possible to keep this enormous quantity of silver in circulation. The government therefore by an act of March 14, 1900, extended the policy of issuing silver certificates, each representing actual coins deposited in the treasury. This act limited the denominations to $10 and under, except that ten per cent. of the total value of such certificates may be issued in denominations of $20, $50, and $100 at the discretion of the secretary of the treasury. Neither silver certificates nor silver dollars are redeemable in gold.

The Sherman Act of 1890 forced the Treasury to buy 4,500,000 ounces of silver a month for coinage to support legal tender notes. In 1893 the panic caused Congress to repeal the act and suspend coining of silver. Then about $260,000,000 in bonds were created to sustain a diminishing gold reserve. A dominant issue in the political campaigns of 1896 and 1900 was the coining of silver, as advocated by Bryan and his followers, in a ratio of 16 to 1 in value. Any owner of bullion was supposed to get this coined "free" at any U. S. mint. The actual ratio, as between the two metals, was 31.60 to 1 in 1895 and 80.39 in 1938. In 1938 about 33.7 cents worth of silver went into a dollar.

Following Great Britain in 1931, most nations went off the gold standard. On Feb. 1, 1934, the U. S. gold dollar was demonetized to 15 5/31 ounces of fine gold troy instead of the previous 25.8 ounces, and the value rose from $20.67 to $35 an ounce, giving the government a handsome profit. Gold was then withdrawn from circulation and melted into bullion bars, now deposited at Fort Knox, Ky. Since 1938 our surplus purchases of silver have been stored at West Point, N. Y.

Below is a report of the Director of the U. S. Mint as to money stocks of various nations. The money is in terms of the various currencies.

MONETARY STOCKS OF THE CHIEF NATIONS IN 1938

DICTIONARY OF COINS AND COINAGE

FOREIGN AND DOMESTIC

ABYSSINIA. The current coin is the Maria Theresa dollar of Austria. But a new coin, the Menelik dollar, or talari, worth about 2 shillings or nearly 50 cents of United States money, weighs 28.075 grams of .835 fine silver. The half, quarter, eighth, and sixteenth (guerche or piaster) of a talari are of silver. The besa (one hundredth of a talari) and the half and quarter guerche are of copper.

AFGHANISTAN. The rupee seems to be the usual currency. The mint at Kabul was for some years under the supervision of a European. The smallest silver coin yet minted is the kiran of the value of half the Kabuli rupee, but a smaller coin of the value of a British threepence is to be issued. In addition a gold coin of the value of the British sovereign ($4.86), new silver coins of the value of the British crown ($1.21) and half crown, and a large bronze coin of the size of the British crown and the value of about 10 cents were determined upon, but have never yet been issued as currency. Small copper "pice" are coined and of these 72 are reckoned as equal to a Kabuli rupee.

ALGERIA. The money is the same as that of France.

ANGEL. An old English gold coin bearing the figure of an angel. First struck in the reign of Edward IV. in 1465; equal in value to 6s. 8d., later to 8s., and afterward to 10s. or $2.43. Last struck by Charles I. in 1634.

ANGELET. An old English gold coin; a half-angel.

ANGELOT. (1) An old French gold coin first struck in 1340 by Philip VI.; equal to a half-angel. (2) A gold coin struck by Henry VI. of England for use in his French dominions.

ARGENTEUS. A Roman silver coin introduced by the emperor Caracalla and equal to a denarius and a half. It took the place of the denarius, and later became a copper coin plated with silver. Equal to 25½ cents.

ARGENTINE REPUBLIC. The silver peso fuerte or dollar of 100 centavos has a par value of 4 shillings or about 97 cents of United States money. The 5-dollar gold coin weighs 8.0645 grams .900 fine and contains 7.25805 grams of pure gold. The silver dollar weighs 25 grams of .900 fine and contains 22.5 grams of fine silver. Silver coins of 50, 20, and 10 centavos, with both nickel and copper fractional pieces, are also struck. The paper dollar is worth about 44 cents of United States money.

AS. A Roman copper coin varying in value from 12½ to 1 cent.

AUSTRALIA. The legal currency is that of Great Britain. Accounts are kept in pounds, shillings, and pence.

AUSTRIA-HUNGARY. By the law of August 2, 1892, the monetary system was reformed on a gold basis and the coins under that act are: gold 20-crown piece of 6.775067 grams of .900 fine and containing 6.09756 grams of pure gold equals 16s. 8d. or $4.06 United States money; gold 10-crown piece equals $2.03; gold ducat equals 11 crowns 29 heller, or 9s. 4¾ d., or $2.28; silver crown of 5 grams .835 fine and containing 4.175 grams of pure silver equals 100 heller, or half a gulden, or 10d., or 20 cents; nickel 20-heller equals 10 kreuzer of the old coinage, or 2d., or 4 cents; nickel 10-heller equals 5 kreuzer (old), or 1d., or 2 cents; bronze 2-heller equals 1 kreuzer (old), or 0.2d., or about 4 mills; bronze 1-heller equals ½ kreuzer (old), or 0.1d., or about 2 mills. Silver gulden or florins are still legal tender.

BAHAMAS. British silver and bronze coins are legal tender for all sums. American half-dollars and quarter-dollars are current at the rate of 2s. and 1s. respectively.

BAHREIN ISLANDS. Coins in use are British sovereigns, Indian rupees worth 16d. or 33 cents, Austrian (Maria Theresa) dollars worth from 19d. to 27d. or from 39 to 45 cents, and Turkish lire worth from 18s. 4d. to 19s. 4d. (about $4.45 to $4.70).

BARBADOS. British gold, silver, and bronze coins are circulated as well as 5-dollar notes of the Colonial Bank.

BASUTOLAND. The currency is exclusively British.

BECHUANALAND PROTECTORATE. The currency is British money.

BELGIUM. Belgium belongs to the Latin Monetary Union. The standard coin of value is the franc of a par value of 25.22½ francs to the English pound sterling, or about equal to 19.3 cents of United States money.

BERMUDA. The currency is British. Silver is legal tender for any amount. There is no paper money in circulation except a few Bank of England notes.

BOKHARA. The Russian ruble is current everywhere. The Bokhara silver tenga is valued at 10 cents of United States money.

BOLIVIA. Gold standard was adopted September, 1906. The unit of account will be the gold peso, weighing 1.5976 grams .916 fine and worth about 97.3 cents of United States money. The boliviano in use at present has a nominal value of 96 cents, but is actually worth about 49.9 cents.

BORNEO, BRITISH. The decimal or dollar system is in use. The coins are ½ cent and cent in bronze; 1, 2½, and 5 cents in nickel. The rest of the money is in the shape of notes of 25 cents, 50 cents, and 1, 5, 10, and 25 dollars.

BRAZIL. The milreis of 1,000 reis has a par value of 54.6 cents of United States money. In December, 1905, the government was authorized to coin silver into 2, 1, and ½ milreis pieces, weighing 20, 10, and 5 grams respectively of silver .900 fine.

BULGARIA. There are a few gold coins of 100, 40, 20, and 10 leva or francs, but 10 and 20 franc foreign pieces supply the demand. The 5 leva (francs), 2 leva, 1 lev, and ½ lev are of silver; the 20 stotinki (centimes), 10, 5, and 2½ are of nickel; and the 10, 5, 2, and 1 stotinki are of copper. The franc is equal to 19.3 cents.

CANADA. The value in Canada of the money of the United Kingdom is fixed by law as follows:—

Sovereign or pound	equals	$4.86
Crown	equals	1.20
Half-crown	equals	.60
Florin	equals	.48
Shilling	equals	.24
Sixpence	equals	.10

Canada has no gold coinage of its own, the English sovereign and the United States gold eagle of $10, with its multiple and half, are legal tender. Notes or bills are issued exclusively by the government for $4, $2, $1, and for 25 cents. No bank is allowed to issue notes for a less sum than $5.

CAPE OF GOOD HOPE (CAPE COLONY). The currency is exclusively British. All accounts are kept in pounds, shillings, and pence.

CENT. A coin of the United States and of Canada, equal in value to one hundredth of a dollar. In the United States the word *cent* dates from the act of 1786.

1787. A mint was established at New Haven, Conn., and "Fugio" or "Franklin" cents were coined.
1791. Pattern cents with the head of Washington were struck in England.
1792. Congress authorized the issue of a cent of 264 grains of copper, and a corresponding half-cent.
1793. These coins issued, but the cent was reduced to 208 grains.
1796. Weight of the cent reduced to 168 grains and the half-cent proportionately. New design.
1808. The Head of Liberty changed.
1816. Head of Liberty again changed.
1815 and 1835. No copper coins issued.
1851. Three-cent piece of ¾ silver authorized—12⅜ grains.
1853. Weight of 3-cent piece reduced to 11.52 grains.
1857. Half-cent discontinued. Old large copper cent reduced to 72 grains of the proportion of 88 parts copper to 12 of nickel.
1864. Bronze cent authorized; weight, 48 grains and composed of 95 parts copper and 5 parts tin and zinc. The 1-cent and 2-cent pieces made a legal tender for sums not to exceed 10 and 20 cents. The 2-cent piece weighed 96 grains.
1865. The 1-cent and 2-cent coins were made legal tender for only 4 cents. The 3-cent coin was ordered of ¾ copper and ¼ nickel and to weigh 30 grains. Legal tender for not more than 60 cents.
1866. A 5-cent piece authorized of ¾ copper and ¼ nickel, to weigh 77.16 grains and to be legal tender for sums not exceeding $1.
1873. The 2-cent piece discontinued. The 5-cent piece weighing 77.16 grains and the 3-cent piece of 30 grains were to consist of ¾ copper and ¼ nickel, and a 1-cent piece of 95 parts copper and 5 parts tin and zinc to weigh 48 grains were authorized. Legal tender for not more than 25 cents.
1890. The 3-cent piece was discontinued.
1909. Lincoln cent, new design, authorized.

The rare cents are those of 1793, 1799, 1804, and the copper cent of 1856. The rare half-cents are those of 1793, 1831, 1840 to 1848, and 1852.

CEYLON. A decimal coinage, using the rupee of India with cents in place of annas and pice.

CHILE. The gold coins of Chile are the 20, 10, and 5 peso coins called respectively the condor, doblon, and escudo. The 10-peso piece weighs 5.99103 grams .916 fine and contains 5.49178 grams of pure gold, and is valued at $8.65 of United States money. The silver peso weighs 20 grams of .835 fine silver and is worth about 36.5 cents of United States money. The 2½, 2, 1, and ½ centavo are of bronze.

CHINA. The monetary unit of China is the copper cash, of which about 17½ equal 1 cent of United States money. Another coin largely used is the "hundredth of a dollar" or the "10 mills" piece. Its face value is about 6 mills and its intrinsic value about ¼ cent in United States money. The Haikwan or customs tael is 1 tael weight (1.3 oz.) of pure silver and is equal to about 83.2 cents. The dollar, equal in value to the Mexican dollar, is commonly used. By the treaty with England (1902) China promised to take steps to make her coinage uniform, but results of any effort are not yet apparent.

COLOMBIA. The gold dollar is the monetary unit and weighs 1.59765 grams .916 fine and its value is the same as the United States dollar. Gold coins are 1, 2½, and 5 dollars. The silver coins are the dollar (.900 fine), the half dollar (.835 fine), the peseta of 20 cents, and the real of 10 cents (.900 fine). Thirty-three grams of silver are considered equal to 1 gram of gold.

CONGO INDEPENDENT STATE. The legal money is that of Belgium, but on the Upper Congo the currency consists of brass rods.

COSTA RICA. The gold colon is the monetary unit. It is of .900 fine gold, weighs .778 grams, and is equal to 46.5 cents of United States money. Fractions of the colon are of silver and include the 50, 25, 10, and 5 cent pieces of .750 fine silver.

CRETE. Cretan money is similar to that of Greece. The drachma of 100 lepta is equal to the French franc of 19.3 cents.

CROWN. An English 5-shilling silver coin, equal in value to $1.21 of United States money. A half-crown is 2s. 6d., equal to 60 cents of United States money.

CUBA. There is no Cuban currency or paper money. The Spanish gold dollar is worth 90½ cents; the silver dollar, 80 cents; and the American dollar, 99 cents. The peso is worth 60 cents; the half-peso, 30 cents; the peseta, 12 cents; the real, 6 cents; and the half-real, 3 cents. The French louis is worth $3.82.

CYPRUS. English gold coins; and Cyprus silver and Cyprus copper piasters, half-piaster, and quarter-piaster. Of these, 9 piasters equal 1 English shilling or 24 cents of United States money.

DENMARK. The monetary unit is the krone of 100 öre, of a value of 26.8 cents. The 20 and 10 kroner pieces are of gold. The 2-kroner silver piece contains 12 grams of pure silver. The öre is equal to about ¼ of a cent of United States money.

DOLLAR. The monetary standard of value of the United States and Canada. It contains 100 cents and is equal to 4s. 1.3d. of English money. Established in the United States by resolution of Congress, July 6, 1787. The silver dollar and the decimal system were established by act of Congress, August 8, 1786. The coinage was begun April 2, 1792, when the mint was established. The weight of the silver dollar has varied as follows.—

Act of April 2, 1792, 371¼ grains of pure silver or 416 grains of standard silver.
Act of January 18, 1837, 412½ grains .900 fine, containing 371¼ grains of pure silver.
Act of March 3, 1849, gold dollars were 25.8 grains .900 fine of 23.22 pure gold.

Act of February 12, 1873, this latter was made the unit of value in the United States.
Act of September 26, 1890, suspended the coinage of gold dollars.
Act of February 28, 1878, ordered the secretary of the treasury to buy every month silver bullion to the value of not less than $2,000,000 nor more than $4,000,000 to be coined into standard silver dollars.
Sherman act of July 14, 1890, repealed the last mentioned law and ordered the monthly purchase of 4,500,000 ounces of silver and the coinage of 2,000,000 ounces. This act was repealed in 1893.
The gold dollar of 25.8 grains (or 1.6718 grams) .900 fine is the monetary unit according to the law of March 14, 1900.
The silver dollar weighs 412.5 grains or 26.730 grams .900 fine and contains 371.25 grains or 24.057 grams of fine silver.

EAGLE. A United States gold coin; a 10-dollar gold piece. An eagle weighs 258 grains or 16.71818 grams .900 fine and contains 232.2 grains or 15.0464 grams of fine gold. The eagle is worth in English money £2 1s. 1d. A double eagle is a 20-dollar coin, and a half-eagle a 5-dollar gold piece.

ECUADOR. The gold condor is equal to the English sovereign ($4.8665). It contains 7,3224 grams of fine gold. It is composed of 10 sucrés (each equal to 48.7 cents).

EGYPT. The monetary unit is the gold Egyptian pound of 100 piasters. It weighs 8.5 grams .875 fine and contains 7.4375 grams of fine gold and is worth $4.943 of United States money. There are also 20, 10, 5, 2, and 1 piaster silver pieces; 1, ½, one fifth, one tenth piaster pieces in nickel; and one twentieth and one fortieth piaster in bronze. Most of the gold coin in Egypt and Sudan is English.

FALKLAND ISLANDS. Same as in Great Britain.

FARTHING. An English bronze coin of which 4 make a penny. A farthing is equal to half a cent of United States money.

FIJI ISLANDS. Money is the same as in Great Britain.

FINLAND. The markka of 100 penni is equal to a franc or 19.3 cents of United States money. There are 20 and 10 markka gold pieces; 2, 1, ½, and ¼ markka pieces in silver; and 10, 5, and 1 penni pieces of copper.

FLORIN. An English 2-shilling silver coin, equal in value to 48½ cents of United States money. A Netherlands gold coin of the value of 40.2 cents.

FORMOSA. Coinage is the same as in Japan.

FRANC. A French silver money of account which is the unit of the French monetary system. It has also been adopted as the unit of currency by Belgium and Switzerland, and for the lira of Italy and the drachma of Greece. It is of the value of 19.3 cents in United States money.

FRANCE. The franc of 100 centimes is the monetary unit. It is equal to about 19.3 cents of United States money. The 20-franc, and the 10-franc pieces are of gold. Silver coins are 5 francs, 2 francs, 1 franc, ½ franc, and 20 centimes. The bronze coins are the 10 and 5 centime pieces.

FRENCH INDO-CHINA. The silver pieces are piaster (worth about 48 cents), ½ piaster, one fifth piaster, and one tenth piaster. The Mexican dollar has the same value as the piaster.

FRENCH WEST AFRICA. The use of French money is compulsory.

GAMBIA. The legal currency is British, but French 5-franc pieces are freely circulated to the extent of about £90,000.

GERMANY. The mark of 100 pfennige has a value of 23.8 cents of United States money and nearly that of the English shilling. The thaler is 3 marks. The 10-mark gold piece is called a krone; and the 20-mark and doppel-krone. Silver coins are the 5 marks, 2 marks, 1 mark and 50 pfennige. The 10-pfennige and 5-pfennige pieces are of nickel. The smaller coins are of bronze.

GIBRALTAR. The legal currency is that of Great Britain, but Spanish money is freely circulated.

GOLD COAST. A silver currency has been lately introduced on a British standard, but cowries are still used for small purchases.

GREECE. The drachma of 100 lepta is equal to the franc or 19.3 cents of United States money. The gold coins of the United States, Great Britain, Austria, Germany, Denmark, Russia, Spain, Turkey, and Egypt are legal at a reduction of ¼ per cent. from their nominal value.

GUATEMALA. The dollar or peso of 100 centavos has a value of about 49.9 cents of United States money. The real of nickel has a nominal value of 12½ cents. The half-real and quarter-real are also of nickel.

GUIANA, BRITISH. The colonial currency is in gold dollars worth 4s. 2d. or of the same value as the United States dollar. Some British gold, silver, and bronze coins are in circulation.

GUINEA. An English gold coin formerly in use. The guinea is now only a money of account and is made up of 21 shillings or one shilling more than a pound or a sovereign.

HAITI. The gourde or dollar has a nominal value of 97 cents, and is equal to 5 francs but has a fluctuating value. The 10, 5, 2, and 1 gourde pieces are of gold; the 50-centime, 20-centime, and 10-centime pieces are of silver; the 3-centime, 2-centime, and 1-centime pieces are of bronze.

HONDURAS. The silver peso or dollar of 100 cents weighs 25 grams .900 fine. The other silver pieces are 50, 25, 20, 10, and 5 cents.

HONDURAS, BRITISH. United States gold was adopted as the standard on October 15, 1894. The British sovereign and half-sovereign are legal tender for $4.86 and $2.43 respectively.

HONG-KONG. The following are current in Hong-kong:—

Mexican dollar equals 100 Hong-kong cents, equal to 54.2 United States cents.
British dollar equals 100 Hong-kong cents, equal to 53.8 United States cents.
Chinese tael equals 10 mace or from 75 to 83 United States cents.
100 candareens equal 1,000 cash or about 80 cents.

Hong-kong 50, 20, 10, 5, and 1 cent pieces imported from England. The mil or cash is no longer coined.

INDIA, BRITISH EAST.

Pie equals .33 farthing or ¼ cent.
3 pie equal 1 pice, or 1 farthing, or ¾ cent.
12 pie or 4 pice equal 1 anna, or 1 penny, or 2 cents.
16 annas equal 1 rupee, or 1s. 4d., or 33 cents.
15 rupees equal £1 or $4.8665.
100,000 rupees equal 1 lac of rupees.
10,000,000 rupees equal 1 crore of rupees.

ITALY. Money is similar to that of France, the names being altered to the Italian form. The lira of 100 centesimi is the same as the franc (equal to 19.3 cents of United States money). The 20-lire and 10-lire pieces are of gold; the 5-lire, 2-lire, and 1 lira are of silver; the 20 and 25 centesimi of nickel; the 10, 5, 2, and 1 centesimo of bronze.

JAMAICA. The legal currency is that of Great Britain, but various United States coins are freely circulated. Notes of the Colonial Bank and of the Bank of Nova Scotia are current.

JAPAN. The yen is the standard of value but is not coined. It is equal to 49.8 cents of United States money. The gold coins are 20, 10, and 5 yen pieces; the silver are 50, 20, and 10 sen pieces; the 5-sen piece of nickel; and the 1-sen and 5-rin of bronze. The sen is the hundredth part of a yen, and the rin is the tenth of a sen.

KOREA. The coinage is the same as that of Japan, excepting that Korean characters are inscribed instead of Japanese.

LEEWARD ISLANDS. The legal currency is that of Great Britain.

LIBERIA. The coins are those of Great Britain, but accounts are usually kept in dollars and cents of the United States. There is a Liberian coinage in silver and copper. The silver coins are 50, 25, and 10 cent pieces; copper, 2 and 1 cent pieces.

MADAGASCAR. The only legal coin is the 5-franc piece with subdivisions in silver, and copper 5 and 10 centimes. Italian, Belgian, and Greek coins are also current. The natives used to cut the coins into small parts and weigh them to make fractional parts, but the government is now withdrawing these pieces from circulation at the rate of 30 grams of silver for each 5-franc piece.

MALTA. The legal currency is that of Great Britain.

MARIA-THERESA THALER OR DOLLAR. An Austrian silver coin. It is still coined with the date of 1780 for circulation in Abyssinia and Zanzibar. It is equal to $1.02 of United States money, nominally, but its value fluctuates. In Bahrein it is worth from 19d. to 27d.

MARK. A silver coin of the German empire containing 5 grams of silver, or 0.20784 of that of a United States silver dollar. Silver coins of the value of 2 marks, and

gold coins of the value of 5, 10, and 20 marks are also current. The gold coins contain 0.3584229 gram of fine gold per mark, the value of which is consequently $0.23821 in United States money.

MAURITIUS. The standard coin is the Indian rupee with annas and pice. All accounts are kept in rupees.

MEXICO. The monetary unit since March, 1905, is the silver peso or dollar, the legal value of which is fixed at .75 gram of pure gold. The silver peso weighs 27.073 grams .9027 fine and .0793 copper, and contains 24.438 grams of fine silver. It is divided into 100 centavos. The 50, 20, and 10 centavo pieces are of silver .800 fine and .200 copper. The bronze coins are 2 and 1 centavo pieces. The 5-centavo piece is of nickel. The Mexican dollar is equal to 49.8 cents of United States money.

MONTENEGRO. Montenegro has no coinage of its own. Austrian paper money, Turkish silver, and French and English gold circulate freely. There are three banks, the Bank of Montenegro at Cettinje and the banks of Podgoritza and Niksic at these places.

MOROCCO. The blankeel or muzoona is equal to 6 floos, or 0.08 English pence, or about 0.16 cents of United States money. The ounce or okia is equal to 4 blankeels or 0.64 cents, and the mitkal is equal to 10 ounces or 6.4 cents. Spanish dollars, pesetas, and Moorish coins minted in France are current. In silver, the dollar is equal to 10 dirhems. The dirhem is usually worth about 7½ cents.

NEPAL. The silver mohar is valued at 6 annas and 8 pies of British India currency. Copper pice, 50 of which make a silver mohar, are also coined. The rupee of India is current everywhere.

NETHERLANDS. The monetary unit is the 10-florin gold piece, which weighs 6.720 grams .900 fine and contains 6.048 grams of fine gold. The florin weighs 10 grams .945 fine and contains 9.45 grams of pure silver. The florin is worth 40.2 cents of United States money. The gulden, guilder, or florin of 100 cents; the rijks daalder or 2½ guilders; and the cent, ½ cent, and 2½ cents are the other common coins.

NEWFOUNDLAND. A decimal system is used, of which the legal coin is the gold dollar of 100 cents, equal to 4s. 1.3d. of British money.

NEW GUINEA, BRITISH. The legal currency is that of Great Britain.

NEW ZEALAND. The legal currency is that of Great Britain.

NICARAGUA. The system is the same as that of Honduras, though Mexican, Chilean, Peruvian, and other South and Central American coins are issued. The silver peso or dollar is worth about 49.9 cents of United States money.

NIGERIA. No uniform currency exists. British coins have been introduced and are freely used.

NORTHERN NIGERIA. The barter system prevails, but is being gradually displaced by the use of British coinage.

NORWAY. The Norwegian krone of 100 öre is equal in value to 26.8 cents of United States money. The 20-kroner gold piece weighs 8.960572 grams .900 fine, containing 8.0645 grams of pure gold.

ORANGE RIVER COLONY. The currency is exclusively British.

PANAMA. The monetary unit since September, 1904, is the gold balboa, weighing 1.672 grams .900 fine, and is legally equivalent to the gold dollar of the United States. The peso and its divisions are of silver. Two silver pesos of Panama currency are reckoned as one United States gold dollar.

PARAGUAY. The peso or dollar of 100 centavos has a nominal value of 97 cents of United States money. Five gold dollars of Paraguay equal 1 pound sterling of $4.8665.

PENNY. An English bronze coin, equal in value to 2 cents of United States money. A penny weighs 145.83 grains or 9.45 grams of a mixture of copper, tin, and zinc.

PERSIA. The monetary unit of Persia is the krân, a silver coin of fluctuating value, now worth about 10 cents. Gold coins are the 10 toman, 5 toman, 2 toman, 1 toman, ½ toman, and the ¼ toman; a gold toman being worth about $1.75, while a silver toman is worth only about 80 cents. Accounts are reckoned in dinars, of which 1,000 make a krân.

PERU. The libra, of gold, is of the same value as an English sovereign ($4.8665). The 5-sol piece (gold) is half a libra. The silver sol (one tenth of a libra), one half sol, one fifth sol, one tenth sol, and one twentieth sol; the 2 centavo and 1 centavo (100 centavos equal 1 sol) are of bronze.

PIASTER. (1) The unit of the Turkish currency, a silver coin worth about 4.4 cents in United States money. (2) The Spanish dollar or peso, worth about 97 cents.

PORTUGAL. The milreis or 1,000 reis is equal to $1.08 of United States money. The 10, 5, 2, and 1 milreis are of gold; the 10, 5, and 2 testoon pieces are the silver 1,000, 500, and 200 reis pieces; the 100 reis and 50 reis are of nickel; while the 20, 10, and 5 reis are of bronze.

POUND SCOTS. Equal to only one twelfth of a pound sterling. It, too, was composed of 20 shillings, each of which was equal to only an English penny.

POUND STERLING. An English money measure consisting of 20 shillings, 240 pence, or 960 farthings. It was originally equal to a pound weight of silver. It is equal in value to $4.8665 of the money of the United States or Canada. There is no coin by this name.

ROUMANIA. The legal unit is the lëu, equal to the franc or 19.3 cents of United States money. The 20, 10, and 5 leï pieces are of gold; the 20, 10, and 5 bani (centimes) are of nickel.

RUPEE. An East Indian silver coin. It is current in Bahrein Islands and in other remote places with a fluctuating value. In India it is largely only a money of account. Nominally it is equal to 33 cents of United States money, or 1s. 4d. of English money, or 16 annas of East Indian money.

RUSSIA. The ruble of 100 kopecks is the legal unit of money. A ruble is worth 51.5 cents of United States money. The imperial of 15 rubles, the half-imperial of 7½ rubles, the 10 rubles, and 5 rubles are of gold.

SALVADOR. The dollar of 100 centavos is worth about 49.9 cents of United States money.

SANTO DOMINGO. The United States gold dollar has been the standard of value since 1897. The silver coinage and the paper money which are in circulation are debased and depreciated.

SERVIA. The dinar is equal to a franc or 19.3 cents of United States money. The 20-dinar gold piece is the milan-d'or. There is also a 10-dinar gold piece. The 5, 2, 1, and ½ dinar are of silver; the 10 and 5 paras are of bronze; and the 20, 10, and 5 paras of nickel.

SEYCHELLES. The currency is based on the Indian rupee with annas and pice.

SHILLING. An English silver coin weighing 87.27 grains or 5.6552 grams .925 (or 37–40) fine and containing 80.727 grains or 5.231 grams of fine silver. An English shilling equals 24 cents of United States money.

SIAM. The tical, a silver coin, worth about 29 cents of United States money; the salung, equal to ¼ of a tical; the fuang, or ⅛ of a tical. Three dollars are equal to 5 ticals. The tical is made up of 64 atts, 4 ticals make a tamlung, and 80 ticals make a catty.

SIERRA LEONE. The legal currency is that of Great Britain.

SOMALILAND PROTECTORATE. The currency is based upon that of India, the rupee having the same value as there.

SOVEREIGN. An English gold coin of the value of $4.8665 in United States money. It weighs 123.274 grains or 7.9881 grams .916 (or eleven twelfths) fine and contains 113.001 grains or 7.3224 grams of fine gold.

SPAIN. The peseta of 100 centesimos is equal to 19.3 cents of United States money. The 20, 10, and 5 peseta pieces are of gold; the 5 peseta and 1 peseta pieces are of silver and are of the same weight and fineness as the French equivalents.

STRAITS SETTLEMENTS. By Order of Council (February 11, 1907) a Straits Settlements dollar of 312 grains or 20.217 grams .900 fine was authorized. Other subsidiary coins are 50, 20, 10, and 5 cents silver; and cent, half-cent, and quarter-cent in copper. The value of a dollar has been fixed at 56.8 cents in United States money.

SWEDEN. The krona or crown is equal to 26.8 cents of United States money and is made up of 100 öre. There is a 20-kronor gold piece and a silver krona.

SWITZERLAND. The franc is equal to 19.3 cents of United States money and is made up of 10 batzen or 100 rappen or centimes. The 20-franc piece is of gold; the 2-franc, franc, and ½-franc are of silver.

TASMANIA. The legal currency is that of Great Britain.

TONGA (FRIENDLY ISLANDS). Since May 1, 1905, British coin is the only legal tender. Accounts are kept in dollars, shillings, and pence.

TRANSVAAL COLONY. The currency is British. Money of the late South African Republic is also current.

TRINIDAD. There is a Colonial Bank and a branch of the Union Bank of Halifax, each of which issues 5-dollar notes. The British currency is legal.

TUNIS. Pieces similar to those of France and coined in France.

TURKEY. The piaster of Turkey is equal to 4.4 cents of United States money. The Turkish lira or gold medjidié is equal to 100 piasters or to $4.40 of United States money.

UGANDA PROTECTORATE. Currency is based on the Indian rupee of 1s. 4d. or 33 cents, with silver and copper fractional pieces. Cowrie shells are used by the natives but are not accepted by the government.

URUGUAY. Uruguay has no gold coins. The peso of silver, 25 grams in weight and .900 fine, worth 93 cents of United States money, and the fractional ½ peso, peso, and one tenth peso are of silver. One, 2, and 4 centesimo pieces are of bronze.

VENEZUELA. The bolivar is valued at 19.3 cents of United States money. Five bolivars are equal to one Venezuelan silver dollar. The Venezuela peso is not in circulation, but is a money of account, equal to 4 bolivars.

WINDWARD ISLANDS. Currency is that of Great Britain, but United States coins circulate freely.

ZANZIBAR. The Maria Theresa dollar is the unit, under the Sultan's authority but the British Indian rupee circulates almost universally. The dollar is the standard unit of business value, and has a fixed value of 2 rupees 2 annas, and the rupee is worth 47 cents.

Stock Exchange.—An association of stockholders designed for organized speculation and investment in securities. The primary function of a stock exchange is to provide a regular market for stocks, bonds, and other securities, and to establish prices based on the most reliable and accurate information. The stock exchange exercises an enormous influence on commerce, both domestic and international, and is so highly organized and delicately adjusted that it reflects movements and influences from every corner of the globe. Furthermore, the leading exchanges of the world are so intimately related and interdependent that whatever affects one affects the others.

The modern stock exchange was foreshadowed in London nearly 200 years ago, when, during the South Sea Bubble in 1720, the London brokers carried on their work at Garraway's Coffee-house in 'Change Alley, and other temporary quarters. This association developed into the London Stock Exchange, whose records, however, do not date farther back than 1798. The Paris Bourse was established in 1724, Vienna in 1761, and the New York Stock Exchange in 1792. The first definite organization in America was really formed early in the eighteenth century, when a number of stockbrokers drew up and adopted a constitution in Philadelphia.

The membership of the London Stock Exchange is nearly 6,000, the entire body of members being re-elected annually. The qualification for membership is that the applicant must be a British subject, guaranteed by three members to the extent of £500 each. The Bourse at Paris, as at Berlin and Vienna, is restricted as regards trading membership; in the latter Exchange trading is confined to a *Sensale* consisting of 40 licensed brokers elected from the members of the stock exchange at large. The London Stock Exchange is the leading financial mart of the world. The transactions consist of (1) investments; (2) speculative purchases and sales of shares, on margins or "covers"; (3) speculation on the rise and fall of the quotation of shares, in which there is no expectation of actual delivery and payment; (4) "option" dealing, or trading in what are called in the United States "put" and "call," and "straddle" contracts, or "privileges."

As generally understood, a "stock exchange" is any place, even in the open air, where securities are bought and sold, but in the largest cities such transactions are carried on in a special building, or some part of one, occupied for that purpose.

The New York Stock Exchange is a voluntary association of about 1,100 members, and is not an incorporated stock company, like the London Exchange. It occupies one of the finest building in New York not many yards away from the cottonwood tree opposite No. 60 Wall Street, where on May 17, 1792, twenty-four brokers assembled and signed an agreement fixing the rates of commission, and creating a protective league. Subsequent meetings were held at the Tontine Coffee-house, Wall and Water streets, but not until 1817 was the New York Exchange organized on present lines. In 1827 it was housed at Merchant's Exchange on Wall Street on the site of the old Custom-house. Thence in 1854, after having been removed to 43 Wall Street and back again, it was located at William and Wall Streets; in 1856 at Lord's Court at William and Beaver Streets; and in 1865 on its present site.

By a decision of the New York Supreme Court, stock exchanges may enact such rules and regulations governing their affairs as seem necessary for the carrying on of their business, provided such rules and regulations are not contrary to the law of the land.

Stock Exchange Clearing House.—As actual deliveries to each and every broker caused much over-certification of checks, the "clearing-house" system was introduced for simplifying the delivery of securities sold between members of a stock exchange. This system was successfully operated in Europe before its introduction in America, and was established in Philadelphia and Boston before its adoption in New York in 1892.

The New York system is based on daily deliveries, the European on the "fortnightly settlement" plan.

Each stock exchange member at the close of a day's business delivers a "clearance sheet" on which his sales and purchases of active securities are recorded. That as little money as possible may be handled in the settlement, the clearing house reconciles all deliveries between different parties and adjusts the cash differences by paying or receiving the balances due, thus delivering all intermediate parties who are "even" in stock.

Each day a delivery price is fixed for each stock, the clearing house basing its reckoning thereon in assigning the receipts or deliveries. It is generally the even price, most nearly that of the last of the day for the stock in question.

Bonds are cleared only on special occasions.

For clearing each 100 shares of stock of $100 par value a charge of 2½ cents is made, and only 100-share lots or multiples thereof are cleared.

To facilitate the borrowing of money on the stock exchange is a very important duty of this clearing-house system. If Rice & Co. bought 500 shares of Labrador and Florida at 100, the next day they would, in the ordinary course of business, be obliged to pay perhaps $50,000 to take up the stock, and then make a loan with their bank, furnishing a margin of 20 per cent., thus necessitating a cash outlay of about $10,000. But they in turn, at an agreed rate of interest, loan these 500 shares to Travers & Co., the clearing house just offsetting the next day. As may be seen, no money changes hands in the transaction, and Rice & Co. are not obliged to first pay for the 500 shares of stock before loaning them to Travers & Co.

Stock Exchange Seat.—The interest in a stock exchange which enables a person to buy or sell securities thereupon is not called a share of stock, but a "seat," to own which one must be duly elected a member of the exchange, pay his initiation fee, and share in the exchange's assets and liabilities.

The business transacted naturally affects the demand for seats, which vary in price accordingly. The record price on the New York Exchange up to February 18, 1929, was $629,000; but the quotation was $2,750 in 1871; $13,000 in 1896; $95,000 December 27, 1934. On this exchange the initiation fee is $2,000; on the Boston Exchange, $500; up to January 1, 1935, the record price for a seat at Boston was $45,000. Permission is sometimes given a member to transfer or sell his seat to another person.

Commissions for the sale or purchase of securities can be charged by the owner of a seat only in accordance with the rules of the exchange. Between members rates are less than for others. If Alfred White owns a "seat" but does not wish to go upon the "floor" to personally buy or sell securities, he may employ some other member to act for him, paying him a reduced commission amounting to $2.00 for 100 shares; from which the term "two dollar man" originated.

Bond.—A coupon-bearing (or registered) note under seal. The instrument by which a government, municipality, or corporation contracts and agrees to pay a certain sum of money on a particular date, though sometimes reserving the right for earlier payment. Quarterly, semi-annual, or annual interest is represented by the coupons. A note is simply a definite promise for the payment of money signed by the party bound without the formality of witnesses or seal, while a bond, according to the rule in many jurisdictions, must be witnessed in the same way as a deed or other formal conveyance of property, and requires a seal.

Usually a government or municipality simply issues its promise to pay under seal in the form of a bond, although to pay the principal or interest, or both, certain revenues are sometimes pledged; but it is unnecessary to mortgage property to secure the issue, as is generally done in the case of a "corporation bond."

When corporations have issued the limit of stock legally permitted, but require additional money; or when the issuing of stock at satisfactory prices does not bring in sufficient funds for the capital of the corporation, it issues "bonds." If a prosperous company earning and paying, for instance, 10 per cent. dividends upon its stock, requires more money for extensions and additions, and were to issue more stock, that would be the same as borrowing money at the rate of 10 per cent. But having found that the needed money can be raised by the issue of bonds bearing 5 per cent. interest, it makes such an issue, with the expectation that the increased capital will return earnings as great as that already invested, or 10 per cent. Therefore, the difference between the amount of the sale of bonds bearing interest at 5 per cent., and the anticipated earnings of the new capital, or 5 per cent., would result in increasing the rate of dividends upon the stock already issued.

Government Bonds.—Only the interest-bearing obligations of the United States were formerly understood by this term, but now it includes the government issues of Great Britain, Germany, Japan, etc. Our government bonds sell at a lower interest return—equivalent to a higher price—than those of any other nation. Of those bearing only 2 per cent. interest, the lowest rate of any issue, there are outstanding over $600,000,000, this being accounted for by the fact that the government maintains the standard of gold payments and is believed to be able to meet its obligations; that the bonds cannot be taxed by the government, state, or other municipality of the Union; and that national banks may deposit them with the government to secure circulation (the issuing of national bank notes).

Coupon and registered bonds are issued by the government. Registered bonds cannot legally be transferred into coupon bonds, but coupon bonds may be changed into registered bonds of the same loan. If this is to be done, send them to the "Secretary of the Treasury, Division of Loans and Currency." The conversion is made without charge by the department. The "transfer books" close on the 15th day of the month preceding interest payment on the 4 per cent. loans of 1925. In all other cases the books are closed during the whole month immediately preceding dates of interest payments. If bonds are not received for transfer before or on the day named for the closing of the books, the interest for that quarter will be paid to the parties whose name appears in the old bonds, as they cannot be transferred until after the books are reopened.

Whether the interest is held in the form of money, draft, or check, and whether the bonds are owned by a corporation or an individual, the interest upon United States government bonds is taxable, according to a decision to that effect handed down by the United States supreme court in 1906. Transactions in government bonds are carried on more largely through bankers than upon the stock exchange, the quotations in such cases varying somewhat from those upon the latter place.

If the low interest is no objection, government securities of the United States, Great Britain, and many other nations are probably the safest investment that can be made, as they are in constant demand among insurance companies,

banking institutions, etc., and always afford a ready market. Furthermore, they are less affected than any other securities by industrial and political conditions.

By the financial bill which became law on March 14, 1900, the United States government for the first time in its history has issued bonds payable specifically in United States gold coin. Three classes of bonds, viz., those bearing interest (1) at 5 per cent. per annum payable on February 1, 1904; (2) at 4 per cent. per annum payable July 1, 1907, and (3) at 3 per cent. per annum payable August 1, 1908, were surrendered for exchange into 2 per cent. consols.

Of the bonds above mentioned the consols of 1930 and the Panama Canal bonds are payable, principal and interest, in United States gold coin of the present standard value. The 3 per cent. bonds of 1908–1918, the 4 per cent. bonds of 1925, and the 3 per cent. certificates of indebtedness are payable in "coin."

INSURANCE.

Insurance in some form or other is probably as old as maritime commerce. Certain it is that the first risks to be insured against were incidental to the dangers of the deep. From insuring vessels against loss by fire, shipwreck, or piracy, marine insurance was extended to cover the lives of the mariners, and more particularly of the merchants, who in those days used generally to accompany their merchandise shipped to Mediterranean ports. These merchants before embarking would pay a premium to some underwriter to guarantee payment of their ransom in the vent of capture by Moorish or other pirates. Gradually the field of insurance became widened, and a *policy* was issued to any person who paid the necessary *premium*.

One of the primary objects of insurance was to safeguard creditors, especially those who advanced money with which to purchase some lucrative post, (for until comparatively modern times appointments were usually bought and sold). The Chamber of Insurance was founded in 1574 by royal patent for the purpose of regulating and registering all such contracts. This Chamber was destroyed in the great fire of London, 1666, and was succeeded by the "Office of Assurances." Policies could there be registered verbatim, but presumably the bulk of the transactions related to marine insurance.

I. Life Insurance.—The object of life insurance as a provision for wife and children does not seem to have prevailed before the beginning of the seventeenth century; and the earliest record of insurance with such an object is dated 1622. Life insurance seems to have been invariably underwritten by private individuals up to 1699, that being the year in which the first association was established, viz., "The Society of Assurance for Widows and Orphans." In 1706 another English society was founded, called "The Amicable Society for a Perpetual Insurance." This was to consist of 2,000 members, each of whom paid an entrance fee of ten shillings and a yearly subscription of £6, 4s. The same amount of premium was paid by each member irrespective of age, but no person was admitted under 12 or over 55. It was not till 1807 that varying rates of premium were introduced. This society was amalgamated with the "Norwich Union" in 1864. It is interesting to note that the Amicable was the only insurance society to survive the South Sea Bubble.

Life Insurance (or Assurance, as it is frequently called in England) is primarily to cover the pecuniary loss that would otherwise be occasioned by the death of the individual insured. It includes a saving or investment element known as endowment insurance. Life insurance computations differ radically from those of fire and marine insurance, for the following reason: while in fire and marine the risks of loss do not greatly change from year to year, and there may never be a loss, in life insurance the risk of loss, i.e., the chance of death, increases steadily, and the death loss is certain to occur within some definite period. To obviate the serious disadvantages of a premium that increases from year to year, the "level" premium is computed, i.e., a premium without change, so adjusted that the overpayments of the earlier years and their interest earnings make up the deficiencies of the later years. The fund thus set aside constitutes the reserve held against the policy and provides for whatever return is made to a policyholder who does not keep up his policy to the end. Whole life policies provide for the payment of the sum insured whenever death occurs; the premiums may be continuous during the existence of the policy, or commuted to a limited number of payments (say 10 or 20) of larger amount. Endowment policies provide for payment of the sum insured at a definite time, or before that time in case of death. Term policies only provide for payment on death within a stated period.

State supervision of insurance began about the middle of the nineteenth century. In 1849 the first general insurance act was passed by New York state, and its insurance department inaugurated in 1859, or four years later than Massachusetts had established its insurance department and adopted the Actuaries' Table of Mortality, based on the combined experience of seventeen British companies. In 1868 the New York Insurance Department adopted the American Experience Table of Mortality now in general use. State supervision and insurance departments are now general. In England and Canada a mortality table known as "Hm" or Twenty Offices Table has been used. The latest British authority is the "Om" (1893) Table.

STATISTICS OF LIFE INSURANCE

Summary of All Companies of the United States (Money figures in millions; policies, in thousands)

Year.	Assets (Dec. 31).	Liabilities.	Total Income.	Paid to Policyholders.	Total Policies (Dec. 31).
1890	771	679	401	90	5,203
1900	1,742	1,493	642	169	14,385
1905	2,706	2,373	642	265	22,494
1910	3,876	3,386	781	387	29,968
1915	5,190	4,938	1,043	545	44,034
1920	7,320	6,989	1,764	745	66,500
1925	11,538	10,867	3,018	1,243	97,630
1930	18,880	17,862	4,594	2,247	122,212
1931	20,160	19,116	4,850	2,607	122,759
1932	20,754	19,774	4,653	3,087	115,763
1935	23,216	22,220	5,072	2,535	117,370
1938	27,756	26,511	5,357	3,744	124,478

Financial Condition of Companies
(Money figures in thousands)

Pacific	943,051	6,559,201	171,150	843,325

II. Fire Insurance.—Those taking out fire insurance may benefit by the following suggestions:—

That you may understand your rights, become familiar with the laws of the state under which you are insuring. No matter how much the insurance is above the value of the property, you can, in most states, collect only the amount of the actual damage; but in New Hampshire and some other states, in accordance with the "valued policy" in effect there, you may, should the buildings be totally destroyed by fire, collect the amount of the loss, without regard to the amount of insurance placed thereon; and so the company will most probably not insure the property for more than it is worth.

Permission must be obtained from the agent to allow premises intended for occupancy to remain vacant longer than is provided for in the policy.

If the foundation of a building is impervious to fire, or if it would be of no value to the insured should the building be destroyed by fire, the item of foundation may be specifically omitted from the policy.

An accurate list of all the furniture or personal property insured, giving the probable value of each article, should be made, and kept in a place secure against fire. By some people the bills of all articles of furniture and property covered by such an insurance are filed away, that, should a dispute arise over the adjustment of a claim, they may be produced as evidence. If a change is made in the location of furniture or moveable goods covered by such an insurance, the agent must be notified.

The insurance policy should not be kept in the building insured therein.

Read the policy through, noting the date of expiration, as the agent may not at the time inform you that it has expired, and so your property may go unprotected. Make sure that it contains a clause permitting other insurance, and also a clause covering loss or damage from lightning.

Carefully fulfill the conditions of the policy.

Premiums should be paid promptly.

Notify the agent immediately in case of loss.

It is less expensive in the long run to take out a policy for some period like three years than one for a shorter time.

The policy should bear this or a similar indorsement if the property is mortgaged:—

"Payable in case of loss to ....., mortgagee, as his interest may appear."

Below are given data covering transaction of both United States and foreign companies:—

Fire and Lightning Insurance
(Money sums in millions and tenths)

	1920	1932	1938
U. S. Companies	124	174	161
Foreign companies	45	38	37
Gross ins. sold—			
U. S. companies	$71,409.1	111,727.0	[1]
Foreign	28,785.6	21,079.0	
Net premiums	450.9	508.0	368.5

Various Forms of Insurance in 1939
(Sums in thousands: add 000)

Form of policy	Premiums	Losses
Accident	46,297	19,834
Auto Collision	6,598	3,584
Auto fire and theft	1,828	616
Auto liability	206,874	112,920
Auto property damage	56,063	29,136
Auto, unspecified	4,956	2,368
Burglary and theft	25,934	7,661
Credit	2,858	2,224
Engines, machines	3,827	1,136
Fire	1,028	404
Fidelity	40,319	12,414
Health	17,741	11,860
Liability	78,785	33,147
Livestock	680	461
Plate glass	4,712	5,092
Property damage	625	1,095
Sprinkler, water	625	243
Steam boiler	8,131	950
Surety	47,482	10,871
Workmen's compensation	159,250	88,577
Other forms	1,001	474

Many other forms of insurance are available today. Statistics given above do not cover 180 mutual fire companies with $333,000,000 assets. In 1939 losses paid were: for windstorms, over $17,000,000; riots, explosions, $745,000; hail, $4,144,000; ocean marine, $20,000,000; inland marine, $19,000,000; aircraft, $469,750; rain and floods, $240,000; earthquakes, $8,550. Fire losses, in U. S., increased from $74,600,000 in 1880, to $160,000,000 in 1900; $214,000,000 in 1910; and $172,000,000 in 1915. In 1939 the loss reported was about $280,000,000, according to National Board of Underwriters.

III. Assessment and Fraternal Insurance.—A very old form of insurance commonly main-

tained by Granges and secret orders. As each member is assessed for his proportion of the expense of the society and the death losses, the annual premium to be paid by the insured is not a fixed sum, but is subject to change. It is probably the cheapest kind of insurance, but also the most uncertain, many associations having failed, while the assessments are sometimes high. It is taken out principally in small amounts and by persons of limited means.

IV. Industrial Insurance.—Insurance for small amounts, payments on the premium being usually made each week, taken out by those who cannot or who do not wish to insure for so large a policy as, perhaps, $1,000. While it does not essentially differ from ordinary insurance, the cost is nearly double, and it is criticised by many as encouraging the insurance of children and infants, which is objectionable, especially among the very poor. In many cases a burial fund is provided by such insurance.

V. Accident Insurance.—By this form of insurance, taken out largely by travelers or by those whose work is perilous, the one taking a policy may, in case of accident to himself, recover from the company. The payment—according to the policy—is so much per week during the time of disablement, and is usually limited to a fixed number of weeks, or it is a given sum if death results from the accident, or smaller stated sums if the loss of sight or of a limb, or a lesser permanent injury, is suffered. The latter payments would be in addition to the weekly payments on account of disability.

Accident insurance in England owes its rise to the sudden development of railway traveling about the middle of the nineteenth century. In the United States it dates from the formation of the Travelers Insurance Company of Hartford, Connecticut, in 1863. Originally the premiums were uniform, regardless of age or occupation; but now all occupations are grouped into classes of varying degrees of risk. As a rule no person under 18 or over 65 is accepted for this form of insurance.

Accident insurance has been made an advertising feature by many periodicals, a fixed insurance covering the purchaser of the current issue until the appearance of the next number.

VI. Liability Insurance.—In regard to certain classes of securities, notably those of street railways, this subject should be considered by investors. Even though the corporation named is thought to be of good financial standing, accidents are quite likely to occur, especially where grades, curves, etc., are necessitated, and the company may be called upon to pay out for damages a sum equal to its earnings for some time to come, perhaps even suffering financial disaster. But unless there is special state legislation to the contrary, a mortgage has prior right over a claim for damages. In regard to a railroad the opposite is true. But most railroads are such large corporations that the loss resulting from accidents would scarcely be enough to cause them financial distress.

"Liability insurance" is quite generally carried by gas and electric light companies, and they do not, besides, offer much risk of accident to the public the responsibility for which would rest with the company.

A very desirable and not expensive class of insurance called "Employers' Liability Insurance" is carried by many corporations, insuring against loss to the company by accident to employees.

PUBLIC FINANCE.

Public finance is the science which deals with the receipts and expenditures of the state. It is intimately related to political science and political economy, drawing largely from both and yet contributing to both. The leading German authorities on the subject treat public finance as an integral part of political economy, although as a science the former is much older. Under medieval governments the methods were simple, for expenditures were met from the personal revenues of the ruler, or by gifts, fees, penalties, etc.; there being no separation of the income of the state from that of the sovereign. But as soon as a direct levy was made in order to secure a revenue for public needs beyond the upkeep of the royal household, public finance both as a science and an art began to be studied. The greatest impetus given to the subject previous to the nineteenth century was by the writings of the German Cameralists; but in England and France public finance was more or less neglected, the only section on the subject to receive any attention being taxation. Public finance falls naturally under four heads, viz.: Public Expenditure, Public Revenue, Public Indebtedness, and Financial Administration.

I. Public Expenditure.—Expenditures may be classified as follows: (*a*) those for the common benefit, including the general expenditures for the support of the administrative and legislative departments, including the diplomatic corps and everything necessary thereto, the expenses of money circulation, national defense and maintenance of order, education, construction of public buildings, building and maintenance of roads, waterways, harbors, canals, lighthouses, signal stations, weather bureau, life-saving stations, etc.: and (*b*) those for the benefit of individuals. The second category may be sub-divided into (1) expenditures conferring a special benefit on certain classes, because of their incapacity or dependence, and treated as common benefit, e.g., relief of poverty and sickness, pensions, care of the defective; (2) expenditures conferring a special benefit on some and a common benefit on all, e.g., the administration of justice, the postal service, and special rights such as copyrights and patent rights, the laying out of streets, building of sewers, etc.; (3) those conferring a special benefit only on individuals, e.g., all of the great industries carried on by the state or by cities, all government and municipal monopolies and the like. There is a certain process of evolution by which all these expenditures tend to belong to the first class.

Under a federal government like that of the United States expenditures must be apportioned between the central and the state governments, and further between the latter and the local governments. The table shows expenditures of the Federal government for certain typical years ending June 30, the totals being in thousands:

Fiscal Year.	Civil and Miscellaneous.[1]	War Department.[1]	Navy Department.[1]	Indians.	Pensions.[2]	U.S. Veterans' Bureau.	Postal Deficiency.	Interest on Public Debt.	Others and Total Expenditures.
1900	$ 131,689	$ 134,775	$ 55,953	$10,175	$ 140,877	.....	$ 7,231	$ 40,160	$ 520,861
1905	127,968	126,094	117,550	14,236	141,774	.....	15,065	24,646	567,279
1910	171,581	189,823	123,174	18,504	160,696	.....	8,496	21,343	693,617
1915	200,533	202,160	141,836	22,130	164,388	.....	6,637	22,903	760,587
1916	191,753	183,176	153,854	17,570	159,302	.....	5,500	22,901	734,056
1917	1,141,123	377,941	239,633	30,598	160,318 [3]	$ 3,326	.....	24,743	1,977,682
1918	6,075,053	4,869,955	1,278,840	30,888	181,138	68,863	2,221	189,743	12,696,702
1919	6,523,641	9,009,076	2,002,311	34,593	221,615	105,085	344	619,216	18,514,880
1920	2,663,412	1,621,953	736,021	40,517	213,344	107,730	115	1,020,252	6,403,344
1921	1,559,115	1,118,076	650,374	41,471	260,611	357,007	130,128	999,145	5,115,928
1925	667,715	370,981	346,142	38,755	218,321	516,167	23,217	881,807	3,063,105
1929	890,240	425,947	364,562	34,087	229,781	581,213	94,700	678,330	3,298,859
1930	994,774	464,854	374,166	32,067	220,609	602,738	91,714	659,348	3,440,269
1931	1,130,346	487,718	354,071	37,489	1,013,041 [4]	[4]	145,644	611,560	3,779,868
1932	2,137,111	478,889	357,821	32,608	1,053,114 [4]	[4]	202,876	599,277	4,861,696 [5]
1933	2,265,878	450,766	349,732	27,225	944,672 [4]	[4]	117,380	689,365	4,845,018
1935	4,437,652	489,155	436,448	27,419	373,805 [4]	[4]	63,970	820,926	8,216,066
1936	6,254,317	618,919	529,032	28,876	399,066 [4]	[4]	86,039	749,397	9,736,506
1937	5,915,914	628,348	556,884	36,933	396,047 [4]	[4]	41,879	866,384	9,277,299

[1] To 1915 the Civil Expenditures made by War and Navy Departments are included in this column; afterward, under respective departments.

[2] Includes only Army and Navy pensions for service prior to World War. Does not include salaries, or payments to World War veterans by War Risk Insurance Bureau and Veterans' Bureau.

[3] From 1917 to 1921, expenditures by Bureau of War Risk Insurance, and those for vocational rehabilitation.

[4] Combined in expenditures of Veterans' Administration, not including those for civil service and Canal Zone retirement funds. Army and Navy pensions (including fees of examining surgeons) amounted to $220,608,931 in 1930; to $373,804,501 in 1935; and to $416,720,951 in 1939.

[5] Figures for 1932 and afterward include money advanced on account of the Reconstruction Finance Corporation.

II. Public Revenue.—The main sources of public revenues are threefold: (*a*) taxes, that is, revenue collected from all the citizens by compulsion on the ground that what is necessary for and beneficial to all should be contributed to by all; (*b*) fees, that is, revenue collected by compulsion and which confers some special benefit upon the persons from whom it is levied; and (*c*) "prices," that is, contractual revenue or, in other words, wealth created by the state for itself. Revenue is also derived from gifts, property by reversion, fines and penalties, and the like, but these minor sources play a comparatively insignificant part in public finance.

In the days of feudalism the needs of the state were provided for without the use of money; but with the growth of public functions came the need of public revenues. At first extraordinary payments, that is, those beyond the receipts from domains, were of a voluntary nature, as is clearly shown by their names—*beden, benevolences, dona, petitiones.* As the requirements became permanent the demands grew also permanent and eventually became compulsory. This change has invariably been coincident with the growth of constitutionalism and popular representation; and the revenues, which originally were at the absolute disposal of the monarch, gradually passed under the control of the representatives of the people. Compulsion is now a universal feature of taxation, while the uniformity of the revenue systems of various countries is accounted for by the fact that the same principle underlies them all, viz., that common necessity and benefit beget common obligations. Modifications in the forms of taxation are owing to the search for new measures, but the justification remains the same. "Prices," as Professor Seligman calls them, represent the value of commodities or services made or rendered by the government expressed in terms of money. These contractual revenues or "prices" merely represent a change in form of the wealth already owned, the state converting into money privileges, services, and material things which it has brought into being.

In addition to a revenue system being adequately productive and capable of yielding a steady income, it must likewise be elastic, permitting of expansion in case of sudden need.

Under a federal form of government it is necessary that the constituent states should have independent revenues, for lack of financial independence tends to beget a loss of political independence. In the United States this is provided for by leaving direct taxation to the state and local governments, while customs, duties, to a large extent excise duties, are left to the Federal government. Regarding the legal theory in the United States of what constitutes the just measure of taxation, Judge Cooley says: "What is aimed at is, not taxes strictly just but such taxes as will best subserve the general welfare of political society."

The table (omitting last 000) on the next page shows the major governmental receipts in certain fiscal years from 1900 to 1939:

III. Public Indebtedness.—Public indebtedness consists of both funded and unfunded debts. A funded debt is one which provides capital for permanent needs or for purposes of war, and covers a longer period. An unfunded or floating debt is generally for some temporary need, such for instance as the payment of the current dues of the treasury, and is of relatively shorter duration. No sharp line, however, can be drawn between these two classes.

A state may borrow in only two ways: (*a*) by compelling people to lend, (*b*) by offering terms to which people assent. The first may

be termed forced loans; these are mostly obsolete, but irredeemable paper money is commonly spoken of as a "forced loan." The second may be styled contractual debts, which may be divided into two groups, viz., contracts containing provisions intended to insure additional confidence, and those where confidence is so assured that no such provisions are taken. The first group may be subdivided into two classes: (1) where confidence rests upon the fact that the loans are not expended but are detained to meet the debt charges, such as voluntary deposits with and without interest, statutory deposits including guarantee funds of various kinds with and without interest, insurance, deposits of coin or bullion to secure circulating notes, and estates in hands of the courts pending litigation; (2) where confidence rests on the fact that definitely specified revenues are set aside for the payment of the debt, based either on the revenues of a particular period, or on prices, fees, or special taxes. The second group comprises contracts which call for (*a*) repayment of the principal only, e.g., redeemable notes not legal tender and not assured by any deposit; (*b*) payment of principal and interest, e.g., bonds and annuities, and (*c*) payment of interest only, e.g., perpetual bonds and permanent annuities. As a rule the leading nations are able to secure loans without resorting to any special method of gaining confidence, their credit alone being sufficient. The greater part of European debts consists of "perpetual bonds," which fix no date at which they mature, but are redeemable whenever the debtor state chooses.

The first debts of the United States were in the form of simple perpetual bonds with no limitations. After the war of 1812, a time limit was set within which it was promised not to redeem the bonds. The "limited option" debt was introduced by the United States government in 1862, the bonds being made "redeemable at the pleasure of the United States after five years, and payable twenty years from date of issue." These were termed "five-twenties." A like plan was followed in the so-called "ten-forties." Next in importance to perpetual bonds are the "terminable annuities"; but life and other terminable annuities are being replaced by perpetual bonds. The favorite European form of public debt is that of lottery loans, but as this partakes of the nature of gambling it is a form which finds no favor in Great Britain or the United States.

Balance in general fund	2,817
Net debt	38,440

IV. Financial Administration.—Financial administration is concerned with the preparation of the budget, the control of the public funds and expenditures, and the collection of the revenues. The importance of correct methods of fiscal administration has been more

generally recognized in Europe than in the United States or Great Britain, where the subject has been largely left to publicists and jurists.

The Budget.—The establishment of this is the most conspicuous feature of modern fiscal systems, with the right of the people's representatives to vote taxes and appropriations. In America comparatively little advance has been made beyond the first fiscal methods that were established. But in European countries the budget has reached a higher development, due largely to conflicting interests of the legislature.

In England the fiscal year commences April 1, and ends March 31. Each administrative department prepares its "Estimates" for the coming year in the fullest detail, and upon these minute statements the Chancellor of the Exchequer bases his estimate for presentation to Parliament; he at the same time presents a brief showing how he expects to raise revenues to meet the proposed expenditures, and what new taxes, etc., if any, are needed. This statement forms the budget. Neither directly nor indirectly can Parliament increase the appropriations requested by the Ministry, nor can it add new appropriations.

In the United States the reports of the administrative officers, the president, and the secretary of the treasury, are made to Congress, but no formal budget is presented as in England. The finances are regularly dealt with by two separate committees, viz., the "Committee on Ways and Means" and the "Committee on Appropriations," dealing respectively with taxation and appropriations. There is no constitutional control of these committees, nor is there anything theoretically to prevent any member of the House from presenting an entirely new set of bills on his own account without reference to the committees.

Since the establishment of a protective policy the United States government has been in possession of large funds which are independent of the expenditures. The revenue laws are necessarily sundered from appropriations. The system has its advantages, but it entirely prevents any systematic supervision of the finances as a whole, and permits of no gauging of the relative proportions of the various appropriations. Unlike England, where credits expire at the end of the fiscal year, in the United States they usually remain in force until the whole sum is used up or till the object is attained. The chief advantage of the American system is that it permits greater scrutiny by the legislature of the specific items of each appropriation.

In England after the budget has been voted the funds are deposited with the Bank of England, subject only to the order of the comptroller and auditor general. No payment can be made without (1) an act of Parliament, (2) a requisition by the treasury issued to the comptroller general, (3) a credit-grant for the amount authorized by the act, (4) a treasury order, for the money to be transferred to the paymaster general of the service. When the expenditures have been made, the various accounts, with their vouchers, are examined by the Parliament Committee of Public Accounts.

In the United States the executive officers hold direct control of the funds, subject to the orders of Congress. The original system of control, audit, and record was very complicated and was changed by the Act of Congress of July 31, 1894. Six auditors are now appointed: (1) For the Treasury Department, (2) for the War, (3) for the Interior, (4) for the Navy, (5) for the State, etc., (6) for the Post Office. This division of accounts is a distinct gain both in speed and simplicity.

CUSTOMS DUTIES.

These duties are levied upon commodities when they cross the national frontier, or enter within a customs area. Duties on goods entering a city are called *octroi*, and are more of the nature of excises. Originally customs duties were levied both on imports and exports. With the exceptions of Turkey, European nations have almost altogether abolished duties on exports; Russia, Italy, Austria, and Switzerland still retain a few export duties on indigenous products. The German customs duties yield nearly 27 per cent. of the gross receipts, the English 25 per cent., the French and the Italian 15 per cent. The purposes of customs duties are both fiscal and political. The difference between a protective tariff and a revenue tariff may be described as follows: A *protective tariff* is primarily designed to prevent importation, entirely or partially, and to raise the prices of imported commodities so as to protect and encourage the native product. A *revenue tariff* is fixed so as not intentionally to leave any trace upon native industries, and it based on principles like those of the excise, the duties being laid upon commodities of great consumption and tax-bearing capacity. Strictly speaking, however, there is no such thing as a tariff for revenue only, for the effect of all customs duties on trade is very far-reaching. With the exception of England, Holland, Belgium, Switzerland, Norway, and Denmark, the protective principle is generally applied to every customs tariff.

In fixing the protective tariff there is always the danger that if the duties are so high as to afford absolute protection, loss of revenue will result from the foreign commodities which perforce are excluded. As soon as it is found that the importation of any article begins to fall off it is a sure indication that the tariff has exceeded the highest revenue-producing limit.

The customs tariff was the only source of tax revenue which the new Federal government had after the War of Independence. The first tariff act was passed July 4, 1789. Until 1812 the tariffs were virtually revenue and not protective tariffs. New industries then began clamoring for protection and from 1816 onward a protection sentiment was sedulously fostered. The only serious reaction against this policy was in the so-called free-trade period from 1846 to 1860. The duties on classified articles ranged from 5 per cent. to 100 per cent. *ad valorem*, but many of these duties were reduced in 1857. On March 2, 1861, Congress passed the Morrill tariff, which increased protective duties, particularly on woolen goods and iron. On the outbreak of the war a series of new tariffs was made, imposing duties upon commodities hitherto

free, and raising the protective duties. The act of 1864 enumerated nearly 1,500 articles at an average rate of almost 50 per cent. This tariff was not appreciably changed until 1883. The only noteworthy changes down to 1894 were the acts of 1870, 1873, and 1883, and the McKinley Act of 1890, the latter removing duties on purely revenue articles but increasing the protective features. The Wilson bill, a Democratic measure, became a law in 1894, without the president's signature. It reduced many duties, removed the duty on wool, and provided for an income tax. The latter feature was declared unconstitutional by the Supreme Court, business depression caused a falling off of imports, and the measure was pronounced a failure. The Dingley Act of 1897 followed the leading provisions of the McKinley Act. The duties, especially on wool, woolen goods, pottery, and cutlery, were higher than in the Act of 1890. Lumber was again dutiable, and hides were taxed for the first time. The Payne Act of 1909 removed the duties on hides and reduced those on lumber and other articles. Many rates remained unchanged; others were increased,—the average being a slight reduction. The Underwood Act of 1913 removed all duty from food animals, unmanufactured lumber, wheat and its products, wool, and many other articles. The average ad valorem rate was about 26 per cent.—a decrease of about 28 per cent. from the Payne Act. The Fordney-McCumber Tariff of 1922 raised the rates appreciably above those fixed by any previous act. Under the Fordney-McCumber Act 63.8% of goods was dutiable. The Hawley-Smoot Act, effective June 18, 1930, revised many rates, increasing the list to 67.8% or 50.7% *ad valorem*, compared with 38.5%. President Hoover reluctantly signed the bill which was passed after months of bickerings in both a special and the regular sessions. Adjustments were made in 1934. American fruit, steel, and machinery were traded with Canada for wheat, livestock, and dairy produce. Agreements with Switzerland, Holland, Finland, and other countries followed.

UNITED STATES TREASURY.

The United States Treasury department was created by act of Congress in 1789. The Secretary at its head has control over the administration of the finances and currency, and in addition supervises the national banks, the construction and maintenance of public buildings, the public health and marine hospital service, the life-saving service, secret service, etc. He is assisted by three assistant secretaries. The business of the department is distributed among the following offices and bureaus: the comptroller and the assistant comptroller of the treasury, six auditors, the treasurer, the register, the comptroller of the currency, the commissioner of the internal revenue, the bureau of engraving and printing, the marine hospital service, and the mint. The director of the mint supervises the mints and assay offices throughout the country. The bureau of engraving has charge of the preparation of designs, bank notes, stamps, bonds, and other national securities.

A national treasury influences not only finance, but all branches of industry and commerce. The banking transactions of a country are largely affected by those of the treasury. National treasuries vary in different countries. The British exchequer is limited in its fiscal functions; those of France and Germany have a national bank associated with them; while in the United States the treasury combines within itself both fiscal and banking functions. Considered as a bank the United States Treasury, with its branches all over the Union, is the largest banking institution in the world.

Sub-Treasury.—The first was established in 1846, in Wall street, New York, where it is still located. There are now nine, established in Boston, New York, Philadelphia, Baltimore, New Orleans, St. Louis, Cincinnati, Chicago, and San Francisco.

The larger proportion of the Government's money transactions with the people are conducted through the New York sub-treasury, which is in direct charge of the Assistant Treasurer of the United States. Among its many duties are the redemption of mutilated paper money, refunding and redeeming Government bonds, payment of checks issued in settlement of government bond interest, pension expenditures.

Money from the custom-houses, post offices, and other departments of the Government are received by the sub-treasuries. By telegraphic transfers of money from one part of the country to another they are of great service. Gold deposited at one sub-treasury may be credited by telegraph to a person at another sub-treasury point. For sudden needs, currency may be so transferred. For such accommodation the Government makes a charge.

Australian gold is often used by London in payment of its own debts in New York, since when received at San Francisco it may, through the sub-treasuries, be immediately credited to persons in New York.

Income Tax.—The United States has been far behind other countries in the development of the income tax. The federal government first imposed an individual income tax at the time of the Civil War, but it was a war measure and was therefore repealed soon after the war. In 1894, another income tax law was passed but was held unconstitutional before it ever went into effect. The United States first taxed corporate incomes in 1909.

The ratification of the constitutional amendment in 1913, giving Congress power to impose an income tax without regard to the constitutional rule of apportionment, was followed immediately by an income tax law which has been extended and revised many times. The present United States income tax law is contained in the revenue act of 1940. According to the 1940 act, a normal and surtax is imposed upon the individual net incomes of citizens and residents (section 12), except for certain credits and deductions allowed. For example, the normal tax does not apply to corporate dividends or to interest on United States obligations. A single person is allowed a personal exemption of $1000, while the head of a family or married person living with husband or wife is entitled to an exemption of $2000 with $400 additional for each person (other than husband or wife)

dependent upon or receiving support from the tax payer. The exemptions are different for non-resident aliens.

State employees after 1939 were subject to tax, and federal employees subject to state tax. Certain incomes and gifts are exempted. Beyond the normal tax of 4% on net incomes over $4,000, others called surtaxes are added. These are shown in the table below. If a man has an income of $9,000, for example, his normal tax will be $360, and his surtax $200 more plus 8% on all above $8,000 or $80, making his total tax of both kinds $640.

TABLE OF SURTAXES

Surtax Net Income	Per Cent	Total Surtax
$0 to $4,000	None	None
4,000 to 6,000	4	$80
6,000 to 8,000	6	200
8,000 to 10,000	8	360
10,000 to 12,000	10	560
12,000 to 14,000	12	800
14,000 to 16,000	15	1,100
18,000 to 20,000	21	1,880
20,000 to 22,000	24	2,360
26,000 to 32,000	30	5,240
32,000 to 38,000	33	7,220
38,000 to 44,000	36	9,380
44,000 to 50,000	40	11,780
50,000 to 60,000	44	16,180
70,000 to 80,000	50	25,880
90,000 to 100,000	56	36,780
100,000 to 150,000	58	65,780
250,000 to 300,000	64	158,780
500,000 to 750,000	70	467,780
1,000,000 to 2,000,000	73	1,377,780
2,000,000 to 5,000,000	74	3,597,780
5,000,000 up	75	.....

The Revenue Act of October, 1940 provided taxes on estates and gifts as shown below:

FEDERAL ESTATE TAX RATES

(Including 10% defense tax effective June, 1940)

Estate ($40,000 Exempt)	Rate	Tax Including Defense Tax
$40,000	None	None
50,000	2%	$220
110,000	12	5,852
440,000	20	64,372
1,040,000	29	205,876
10,040,000	65	$4,277,812

FEDERAL GIFT TAX RATES

(Including 10% defense tax effective June, 1940)

Gift ($40,000 and $4,000 [a] Exempt)	Rate	Tax Including Defense Tax
$44,000	None	None
74,000	4½%	$990
114,000	9	4,455
444,000	15	54,945
1,044,000	21¾	183,645
5,044,000	39¾	1,586,145
10,044,000	48¾	4,094,145
50,044,000	51¾	$26,699,145

[a] $4,000 excluded for each beneficiary for each year.

SUMMARY OF THE LEADING FINANCIAL EVENTS.

1860 B. C. Money is mentioned as a medium of commerce in Genesis xxiii., when Abraham purchased a field as a sepulcher for Sarah.

c. 700 B. C. Egibe's bank at Babylon mentioned.

690 B. C. The coinage of money is ascribed to Lydians, possibly about this date.

594 B. C. Taxes levied by Solon, the Athenian legislator.

480 B. C. Darius levied a land tax by assessment.

445 B. C. The law of 1491 B. C. enforced by Nehemiah.

350 B. C. Livy first mentions the *argentarii* or Roman dealer in money.

269 B. C. The Romans gave their silver the name of "moneta."

808 A. D. Bank in Italy said to have been established by the Lombardy Jews.

928. Athelstan enacts regulations for the government of the mint.

994. England. One pound equals three of modern money. Three principal taxes in Anglo-Saxon times were (1) the "ship-geld," a tax imposed on each shire for naval purposes; (2) the "danegeld" (see 1068); (3) the "fumage," or "hearth tax."

1067. England. Taxes in specie are introduced by William I.; he raises them arbitrarily.

1068. England. The danegeld tax is revived; land is taxed at one shilling; this tax disappeared after 1163.

1108–1137. France. Under Louis VI. the communes are freed from court interference on the payment of a tax.

1125. England. Henry I. takes severe measures against false coining.

1133–1322. Tax called "scutage," or "land tax," rose with Henry III., of England; fell into disuse, 1322.

1157. Founding of the Bank of Venice; this bank was destroyed by the French invasion in 1797.

1173. The public funding system originated in Venice.

1188. England. Taxes on movables began with the "Saladin tithe"; this tax was one tenth of rent and movables, paid by all except crusaders.

1189–1334. Tax on rents and movables continued in England.

1194. Insurance first used in Italy.

1194. Richard I. of England levied a tax on all plowed land, known as the "carucage," i.e., the amount of land that could be covered by one plow (caruca) in a season.

1224. England. Tax of 1194 merged in the tax on movables (see 1188).

1257. The English gold coin first appears.

1275. "Ancient customs" toll slightly raised; granted Edward I. of England by parliament.

1312–1327. England. Tallage was tax collected from tenants of the royal demesne, on occasions of unusual expense.

1334. England. Fifteenths and tenths tax.

1341. English parliament prohibits usury.

1345. Founding of the Bank of Geneva.

1345. Failure of the Florentine bankers for large sums, including 1,500,000 gold florins owed them by Edward III. of England.

1350. France. Philip VI. enforces the gabelle tax (salt tax).

1350–1354. France. John II. debases the coinage.

1377. The first poll-tax imposed in England.

1377. England. Tallage of groats, a tax of four pence, granted the king by parliament.

1382. France. The malleteers revolt against a bread tax.

1401. Founding of the Bank of Barcelona (the earliest existing bank).

1407. Founding of the Bank of Genoa.

1483. Charles VIII. of France made the "taille" (tallage) permanent; this tax was both real and personal.

1483. "Vingtiemes," or twentieths, a tax which was first used with the taille; the former disappeared with Charles VIII. of France.

1504. The true English shilling first coined by Henry VII.

1522. Loans for the public service were raised by Wolsey in England; and again in 1525.

1523. Insurance policies first used in Florence.

1545. England. The coin is debased; the rate of interest fixed at 10 per cent.

1548. France. Bordeaux revolts against the salt tax.

1556. England. Founding of the Royal Exchange, London; opened 1687.

1560. Insurance first used in England. First life insurance company, The Amicable; established 1706.

1560. A shilling is struck in Ireland worth nine pence; but it is to be current at twelve.

1574. In Holland money is made of pasteboard.

1587. The Banco di Rialto established in Venice. This marks the inauguration of modern banking.

1601. First law of insurance in Britain enacted.

1609. The Bank of Amsterdam founded. This was probably the first modern bank to undertake the custody of depositor's money on a larger scale.

1619. The Banco di Rialto was absorbed by the Banco del Giro. The latter loaned 5,000,000 ducats to the government of Venice.

1619. Founding of the Bank of Hamburg, the oldest bank in Germany. Modeled on the Bank of Amsterdam.

1621–1664. In New York taxation under the West India Company first took the form of indirect taxes on goods imported and exported.

1623. Word *interest* first used in an act of parliament of James I. for a lawful increase as compensation for the use of money lent. Rate fixed by this act was

£8 for the use of £100 for a year in place of usury at £10 before taken.
1634. General Court of Massachusetts established following principle: towns shall have respect to levy every man according to his estate; poll taxes came into use later.
1635. Founding of the Bank of Rotterdam.
1640. The first louis d'or pieces are struck in France.
1651. Commonwealth lowers the yearly rate of interest in England to £6 on £100.
1656–1658. Cromwell, advised by Samuel Lamb, establishes a public bank.
1660. England. Interest rate of 1651 confirmed.
1661. The Bank of Sweden issued bank notes to avoid the transportation of copper coin. This is the first recorded instance of the use of bank notes in Europe.
1662. Milled shillings coined in England.
1663. England. Guineas first coined from gold brought from Guinea.
1663. A goldsmith, Francis Child, opens a bank in England.
1667. First run on London bankers.
1667. Insurance against fire in London, began the year after the great London fire.
1672. England. Charles II. closes the Exchequer, and seizes £1,200,000; a commercial panic follows.
1680. Hoare's Bank begun, England.
1688. Window tax established in England.
1689. England's public debt was £664,263.
1689. Ireland. James orders the issue of a coinage of brass money.
1690. Paper money first issued in the American colonies by Massachusetts.
1690. Rise of the English funding system.
1692. Establishment of a permanent land tax in England.
1694. Bank of England projected by William Patterson, a Scotch merchant, to meet the difficulty experienced by William III. in raising the supplies for the war against France; this date marks the establishment of the national debt of England.
1695. England. A recoinage act is passed; causes a commercial panic.
1695. Founding of the Bank of Scotland with an original capital of £100,000 sterling.
1695. France. A variable tax of the ancient monarchy was the "capitation," of system of poll taxes; was continued up to the Revolution.
1696. Office for insuring buildings opened in England.
1696. Run on Bank of England.
1696. First regular insurance office in London, the Hand-in-Hand.
1702. England's national debt £16,394,702.
1708. Bank monopoly established in England by forbidding a company exceeding six persons to act as bankers.
1710. Sun fire-office established in England.
1710. Louis XIV. of France revived the vingtieme, as a war tax; it remained up to the Revolution.
1710–1720. South Sea Bubble.
1713. Rate of interest in England reduced to £5 (yearly) on £100.
1716. The Sinking Fund Act is passed to redeem the debt of the Bank of England.
1716. Oldest county bank, Wood's at Gloucester, England, opened.
1716. The first bank of issue was established in France by John Law. This bank survived only until 1721.
1718. France's shares in Law's Mississippi scheme rise from £500 to £18,000.
1718. Law's Bank becomes the Royal Bank of France, with exclusive authority to coin money, and to receive all taxes and government imports.
1720. France. Failure of the Mississippi scheme; Royal Bank suspends payment; panic follows.
1720. First marine insurance companies are the Royal Exchange and the London Insurance.
1720. First fire-office in Scotland.
1721. Irish house of commons rejected a bill to establish a national bank.
1727. Establishment of the Royal Bank of Scotland at Edinburgh.
1728. First insurance in the colonies was at Boston by the Sun. (English Company.)
1733. England. Fifty tons of half pence and farthings are sent from the Tower to Ireland.
1736. Founding of the Bank of Copenhagen.
1738. Bank post bills issued in England.
1741. New Exchange at Bristol is erected.
1745. England. Run for gold upon rebellion in the North.
1746. British Linen Company incorporated as a bank by royal charter.
1749. France. Tax is levied of one twentieth of all incomes including those of the privileged orders.
1750. First fire-office in Germany.
1752. Insurance done in Philadelphia.
1765. Founding of the Bank of Berlin.
1775. Continental paper money issued during the American Revolution; first issued.
1775. Establishment of the London Clearing House.
1776. Founding of the Bank of Caisse d'Escompte, France.
1776. Louis XVI. suppressed the Corvees; taxes which were both real and personal; they were reestablished but disappeared in 1793.
1780. Founding of Bank of North America in Philadelphia.
1781. France. Necker's "Compte Rendu," the first public exposition of the revenue and expenses of the state, is published.
1783. Establishment of Bank of Ireland at St. Mary's Abbey.
1784. Founding of the Bank of Massachusetts.
1784. Founding of the Bank of New York.
1786. Establishment of the double standard in the United States with a ratio of 1 to 15.25.
1786. Founding of the Bank of St. Petersburg.
1787. Founding of the Bank of the East Indies.
1787. First savings bank instituted at Berne, Switzerland.
1789. United States. The first customs tariff act, July 4.
1790. First United States refunding act approved. Under it the state debts and the foreign and domestic debt of the nation were consolidated and refunded in three classes of bonds.
1790. The taille is suppressed in France.
1791. The First Bank of the United States is chartered by Congress with an authorized capital of $10,000.000, one fifth of which is subscribed by the government.
1792. Adoption of the ratio of 1 to 15 and establishment of a mint with free and gratuitous coinage in the United States; the silver dollar equal to 371¼ grains fine, the eagle to 274½ grains fine.
1792. Duties laid on spirits distilled within the United States, followed by an act further regulating these duties and imposing a tax on stills.
1792. Savings bank opened in Basel, Switzerland.
1793. £10 notes issued in England.
1794. First fire insurance policy issued in the United States at Hartford, Ct.
1794. France. The "maximum," fixing the prices of commodities, is repealed.
1794. The execution of the laws of 1792, imposing a tax on spirits and stills, leads to the Whiskey Rebellion.
1797. Cash payments suspended by the Bank of England.
1797. £1 and £2 notes issued in England.
1797. Bank Restriction Act in England.
1798. The first direct tax in the United States is levied upon the 16 states.
1798–1806. Income tax introduced in England; set aside in 1816; restored in 1842 as a substitute for the indirect taxes.
1799. A "Benevolent Institution" begun by Rev. Joseph Smith of Wendover.
1801. Stock Exchange in Capel court, London, established.
1803. The Bank of France founded; establishment of the double standard on the basis of the ratio of 1 to 15½, notwithstanding the fact that the market ratio is then about 1 to 15.
1803. Bi-metallic currency recommended for Germany.
1803–1804. A "Charitable" bank instituted at Tottenham.
1807. Prussia. Establishment of general industrial freedom; new industries were taxed; this tax was called the "industry tax."
1807–1812–1822–1824. United States. Efforts to refund.
1809. Bramah's machine for numbering notes adopted in England.
1810. Introduction of the silver standard in Russia on the basis of the ruble if 17.99 grams of fine silver, followed in 1871 by the coinage of imperials, or gold pieces of 5 rubles, of 5.998 grams; therefore, with a ratio of 1 to 15. This ratio was changed by the increase of the imperial to 5 rubles, 15 kopecks, and later to 1 to 15.45.
1811. Prussia. A poll tax of one half thaler from every person over 12 years of age was instituted for the meal tax in all places except the larger towns.
1814. Bank opened at Edinburgh, Scotland.
1815. Great depreciation of paper money in England, reaching 26½ per cent. in May. Course of gold, £5 6s. and of silver, 71½d. per ounce standard. In December the loss was only 6 per cent.; gold at this period was quoted at £4 3s., and silver at 64d.
1816. Abolition of the double standard in England, which had had as its basis the ratio of 1 to 15.21, and adoption of the gold standard on the basis of the pound sterling at 7.322 grams fine in weight. Coinage of divisional money at the rate of 66d. per ounce. Ex-

treme prices, £4 2s. for gold and 64d. for silver; in January £3 18s. 6d., and 59¼d. in December. Substitution for the ratio of 1 to 15.5 in Holland, established by a rather confusing coinage of the ratio of 1 to 15⅞.

1816. First fire-office in France.

1819. Abolition of forced currency in England. Price of gold, £3 17s. 10½d., and of silver, 62d. per ounce in October, against £4 1s. 6d. and 67d. in February.

1820. Prussia. The tax of 1811 developed into a classified poll tax.

1825. Great commercial panic in England, following which a law was passed permitting country banks, outside of a radius of 65 miles from London, to organize joint stock companies, with the right to issue bank notes.

1827. First fire-office in Russia.

1832. Introduction of the monetary system of France in Belgium, with a decree providing for the coinage of pieces of 20 and 40 francs, which, however, were not stamped. Silver, 59¾d.

1834. Substitution of the ratio of 1 to 16 for that of 1 to 15 in the United States by reducing the weight of the eagle, ten-dollar gold piece, from 270 grains to 258 grains.

1834. Establishment of joint-stock banks in England.

1835. Introduction of the company rupee, a piece of silver weighing 165 grains fine, in India, in place of the sicca rupee. Creation of a trade coin—the mohur, or piece of 15 rupees—containing 165 grains of fine gold. Silver, 59-11/16d.

1837. The fineness of the United States gold coins was raised from .899,225 to .900 and the silver coins from .892 4 to .900, giving a ratio of 1 to 15.988, and fixing the standard weight of the silver dollar at 412½ grains. Silver, 59-15/16d.

1844. Peel's bank charter act in England.

1844. Introduction of the double standard in Turkey, with the ratio of 1 to 15.10. Silver 59½d.

1847. Discovery of the gold mines of California.

1847. Abolition of the double standard in Holland by the introduction of the silver standard on the basis of a one-florin piece 0.945 grams fine, the coinage of which had already been decreed in 1839. Silver, 59-11/16d.

1847. Commercial panic in England.

1848. Replacing the ratio of 1 to 16 in Spain, which had been in force since 1786, by that of 1 to 15.77.

1848. Coinage in Belgium of pieces of 10 and 25 francs in gold, a shade too light. These pieces were demonetized and withdrawn from circulation in 1884. Silver, 59½d.

1850. Introduction of the French monetary system in Switzerland without any actual coinage of gold pieces. Silver, 60-1/16d.

1851. Discovery of the gold mines of Australia.

1851. Prussia. Introduction of an income tax placed on all persons having an income of over 1,000 thalers.

1851. There were 574 savings banks in Great Britain.

1852. England. Gold bullion in the bank (resulting from the discovery of gold in Australia), £21,845,390.

1853. Lowering of the weight of silver pieces of less value than $1 to the extent of about 7 per cent. in the United States, and limitation of their legal tender power to $5. Silver, 61½d.

1853. Maximum of the production of gold reached in California when it amounted to $65,000,000.

1854. Modification of the ratio of 1 to 15.77 in Spain by raising it to 1 to 15.48, and by lowering the piaster from 23.49 grams to 23.36 grams fine.

1854. Introduction of the silver standard, as it existed in the mother country, in Java, in place of the ideal Javanese money, and coinage of colonial silver pieces.

1854. Introduction of the gold standard in Portugal. Before this period the country had the silver standard, with a rather large circulation of gold coins stamped, on the basis of 1 to 15½ in 1835 and 1 to 16½ in 1847. Silver, 61½d.

1854. Founding of the New York Clearing House.

1857. Conclusion of a monetary treaty between Austria and the German states, in accordance with which 1 pound of fine silver (one-half a kilogram) was stamped into 30 thalers, or 52½ florins of South Germany, or 45 Austrian florins, resulting in 1 thaler equaling 1¾ German florins or 1½ Austrian florins. Silver, 61¾d.

1861. Law decreeing the coinage of gold pieces of 10 and 20 francs exactly equal to French coins of the same denominations is passed in Belgium. Silver, 61¾d.

1861. Reform of the land tax in Prussia; building tax was separated from it, all old taxes of a similar sort were merged in the new one; in the cities this tax is assessed according to the rental of the buildings, and in the country according to the size of the lands connected with the houses.

1861. Post office savings bank established by the British parliament; interest at 2½ per cent.

1862. Adoption of the French monetary system by Italy. Silver, 61-7/16d.

1863. First accident insurance company established in United States was the Traveler's, of Hartford, Ct.

1863. United States enacted a law authorizing the formation of a system of National banks. This act was recast on June 3, 1864.

1865. Formation of the Latin Union including France, Belgium, Switzerland, and Italy on the basis of a ratio of 1 to 15½. Silver, 61-1/16d.

1865. First appearance of assessment system of life insurance in the United States.

1865. Founding of the Bank of Italy.

1866. Failure of the banking house of Overend, Durney & Co., London, for £19,000,000.

1867. An international monetary conference held at Paris; adoption of the gold standard.

1867. Failure of the Crédit Mobilier, and disappearance of the capital.

1868. Adoption of the French monetary system by Roumania, with the exclusion of the 5-franc silver piece, which was, however, stamped in 1881 and 1883. Silver, 60½d.

1868. Admission of Greece into the Latin Union. The definite and universal introduction of the French monetary system into the country was effected only in 1883.

1868. Adoption of the French monetary system, with the peseta or franc as the unit, by Spain. The coinage of gold alphonses d'or of 25 pesetas was made only in 1876.

1870. Alaskan gold mining successfully commenced.

1871. Establishment of the double standard in Japan with the ratio of 1 to 16.17 by the coinage of the gold yen of 1.667 grams and of the silver yen of 26.956 grams, both with a fineness of .900.

1871. Replacing of the silver standard in Germany by the gold standard. Coinage in 1873 of gold pieces of 5, 10, and 20 mark pieces, the latter weighing 7.168 grams fine. Silver, 60½d.

1873. Increase of the intrinsic value of the subsidiary coins of the United States. Replacing of the double standard by the gold standard. Reduction of the cost of coinage of gold to one fifth per cent., the total abolition of which charge was decreed in 1875. Creation of a trade dollar of 420 grains with a fineness of .900. Silver, 59¼d.

1873. Suspension of the coinage of 5 franc pieces in Belgium.

1873. Limitation of the coinage of 5 francs on individual account in France.

1873. Suspension of the coinage of silver in Holland.

1873. Formation of the Scandinavian Monetary Union. Replacing of the silver standard in Denmark, Sweden, and Norway by that of gold on the basis of the krone. Coinage of pieces of 10 and 20 kroner, the latter weighing 8.961 grams, with a fineness of .900.

1873. Check bank in aid of persons not having a banker, opened in Pall Mall, England.

1873. The unrestricted coinage of silver suspended in the countries termed the Latin Union.

1874. Introduction of the system of contingents for the coinage of 5-franc silver pieces in the Latin Union. Silver, 58-5/16d.

1875. Suspension of the coinage of silver on individual account in Italy. Silver, 56⅞d.

1875. Introduction of the double standard in Holland on the basis of the ratio of 1 to 15.62 by the creation of a gold piece of 10 florins, weighing 6.048 grams fine, with the maintenance of the suspension of the coinage of silver.

1875. The Imperial Bank (Reichsbank) of Germany was established with the right to issue notes not covered by bullion in the vaults, to the amount of $62,500,000.

1876. Great fluctuations in the price of silver, which declined to 46¾d., representing the ratio of 1 to 20.172 in July. Recovery, in December, to 58½d. Average price, 52¾d.

1877. Coinage of 5 franc silver pieces by Spain continued later, notwithstanding the decline of silver in the market. Silver, 54¾d.

1877. Replacing of the double standard in Finland by that of gold on the basis of the mark or franc.
1878. The first international monetary congress meets.
1878. Act of United States Congress providing for the purchase, from time to time, of silver bullion, at the market price thereof, of not less than $2,000,000 worth per month as a minimum, nor more than $4,000,000 worth per month as a maximum, and its coinage as fast as purchased into silver dollars of 412½ grains. The coinage of silver on private account prohibited. Silver, 52-9/16d.
1878. Meeting of the first international monetary conference in Paris. Prolongation of the Latin Union to January 1, 1886.
1879. Suspension of the sales of silver by Germany. Silver, 51¼ d.
1881. Second international monetary conference in Paris. Silver, 51-11/16d.
1882. International monetary conferences opened at Cologne.
1884. Stockbrokers' rents to the city of London abolished; took effect, 1886.
1885. Introduction of the double standard in Egypt. Silver, 48⅜d.
1885. Great commercial depression in France; attributed to government prodigality.
1885. Prolongation of the Latin Union to January 1, 1891.
1885. International monetary conference opens at Paris.
1886. Great decline in the price of silver, which falls in August to 42d., representing a ratio of 1 to 22.5, and recovery in December to 46d. Modification of the coinage of gold and silver pieces in Russia. Silver, 45⅝d.
1887. Retirement of the trade dollars by the government of the United States in February. Demonetization of the Spanish piasters, known as Ferdinand Carolus, whose reimbursement at the rate of 5 pesetas ended on March 11. New decline of silver in March to 44d., representing the ratio of 1 to 21.43. Silver, 44⅝d.
1888. The bimetallic league hold a conference at Manchester.
1888. France. Panama Canal shareholders resolve to issue bonds for 340,000,000 francs to complete the canal.
1889. France. The Banque Parisienne assumes the entire cost of the issue of the bonds and construction of the new Panama Canal shares.
1889. The Comptoir d'Escompte, supported by Messrs. Rothschild and other bankers, is organized.
1889. March 8. France. A financial panic occurs; the Bank of France advances 100,000,000 francs to the Comptoir d'Escompte to meet the withdrawal of deposits; 75,000,000 francs are taken out of the bank.
1889. France. The Société des Métaux stops payment; copper drops heavily in Paris, London, and New York.
1889. France. The Tribunal of Commerce decides the Panama Canal Company to be a commercial company.
1889. France. A fall occurs in the shares of the Comptoir d'Escompte through speculations in copper.
1889. A monetary congress held at Paris.
1890. United States. Repeal of the act of February 28, 1878, commonly known as Bland-Allison law, and substitution of authority for purchase of 4,500,000 fine ounces of silver each month, to be paid for by issue of treasury notes payable in coin (Act of July 14, 1890). Demonetization of 25,000,000 lei in pieces of 5 lei in Roumania in consequence of the introduction of the gold standard by the law of October 27. Silver, 47-11/16d.
1891. Introduction of the French monetary system in Tunis on the basis of the gold standard. Coinage of national gold coins and bullion. Silver 45-1/16d.
1891. Reform of the "Industry" and "Income" taxes in Prussia.
1891. The impending failure of Baring Brothers of London, and the consequent financial disaster, was averted by the timely help of the Bank of England.
1892. Replacing of the silver standard in Austria-Hungary by that of gold by the law of August 2. Coinage of pieces of 20 crowns, containing 6,098 grams fine. The crown equals one half florin. Meeting of the third international monetary conference at Brussels. Production of gold reaches its maximum, varying between 675,000,000 and 734,000,000 francs. Silver, 39-13/16d.
1892. Annual meeting of the bimetallic league.
1893. Huge demand for gold forces United States to sell bonds valued at about $300,000,000. Silver coinage halted in British India, and the French trade dollars on individual accounts. Price of silver in London falls to 30.5d. In the United States the silver purchase clause of the Act of July, 1890, is repealed. The English Commons rejects bimetallism.
1894. In France new Panama Canal shares are issued to the value of about 30,000,000 francs.
1895. A bimetallic league formed in Paris.
1895. Chile adopts gold standard, and Russia decides to coin 100,000,000 gold rubles in 1896.
1896. Costa Rica adopts gold standard.
1896. Russia decides to resume specie payments.
1896. Both England and the United States propose an international conference on bimetallism.
1897. Russia and Japan adopt the gold standard.
1897. Peru suspends coinage of silver and prohibits its importation.
1898. Ecuador limits the tender of silver coins to 10 sucres in total value.
1899. India established gold standard at rate of 15 rupees to an English pound sterling.
1900. United States and Ecuador adopt gold standard.
1901. San Domingo adopts United States gold standard.
1902. Siam adopts gold standard.
1903. Colombia and the Philippines adopt the gold standard.
1905. Mexico adopts the gold standard.
1907. Financial distress began in March and culminated in a panic on October 22 in New York.
1908. Political disturbance in Spain due to shortage of money and offers from America for gold.
1908. German financial reform bill estimates the annual revenue of $119,000,000.
1908. Deficit of Great Britain for 1909 estimated as $100,000,000.
1909. Tax increases in Buenos Aires cause strikes.
1913. United States Federal Reserve Act passes.
1914. United States levies new taxes of $100,000,000 to cover deficit due to loss of revenue in Europe.
1916. Federal income tax law becomes effective.
1917. First and Second Liberty Loans.
1918. War and excess profits taxes of 1917 consolidated into single war excess profits tax.
1918. Third and Fourth Liberty Loans.
1919. Victory Loan.
1920. Congress passes Transportation Act.
1924. United States loans Germany, Japan, and France large sums of money.
1925. Reserve banks give to Great Britain credit for $200,000,000 to help maintain gold standard.
1926. Money situation in Belgium, France, and Italy improves.
1927. Unusual movements of gold and "easy" money.
1928. Money rates show unprecedented fluctuations.
1929. Sudden slump in stocks in October causes huge selling and billions of losses.
1930. Money rates at Federal Reserve banks in January were from 4½ to 5; December 2½ to 3.
1931. Gold withdrawal causes great alarm. Great Britain and France in financial troubles. France and United States agree on shipments of gold abroad.
1932. United States within about half billion of end of gold reserve through shipments abroad.
1933. On day of inauguration, Pres. Roosevelt closes all banks, after which many were liquidated. New legislation establishing the N. R. A., Reconstruction Finance Corporation, Securities Act, and other measures hastily passed by Congress.
1934. Gold withdrawn from circulation as money. Content of the dollar reduced from 25.8 grains fixed in 1900 to 15.5/21 grains, or 59.06% of its value from March 4, 1900 to Jan. 31, 1934. Value of silver $1.29 an ounce, weight of dollar unchanged.
1936. Stocks and business show considerable recovery, only to drop into a new depression in 1937.
1938. Railroads given freight rate increase. Spending of huge sums in government "pump priming" had some temporary effect.
1939. Government stores of gold reached new all-time high of over 16 billions.
1940. Employment and business increase under stimulation of munitions and airplane manufacture.

DICTIONARY OF BUSINESS AND FINANCIAL TERMS.

Comprising Those Used in Stock and Trade Transactions.

ACCEPTANCE. When a person against whom a time draft is drawn is presented therewith before due it is given to him for "acceptance." This he does by writing across the face of the draft the word "Accepted," followed by his signature. The draft is then said to have been honored, and has become a proof of indebtedness against him, in much the same way as a promissory note. Similarly, the person drawing the draft has become the indorser. Therefore, if the "drawer" has been granted use of the money by his bank, which is to collect the draft, or if it is negotiated in the interim, and the "acceptor" fails to pay, the "drawer" must make it good. Usually, when a draft is "accepted," it is dated, and a place of payment named. If that is not done, the draft is payable at the "acceptor's" place of business.

ACCOMMODATION PAPER. Instruments which the maker, drawer, acceptor, or indorser signs as an accommodation to another, with no financial consideration, unless, as is sometimes the case, a commission is paid. That is, a person signs such an instrument for the purpose of loaning his credit to another, without expectation of return. Corporations cannot legally give "accommodation paper."

ACCOUNT SALES. A statement of an account given to a customer by a broker, agent, or commission merchant.

ACCOUNTS PAYABLE. Open accounts, showing the sums due to others, but not proved by notes or acceptance, or other written obligation.

ACCOUNTS RECEIVABLE. Open accounts against customers, which are on the books of a firm, corporation, etc., but which are not shown by written forms of indebtedness.

ACCRUED DIVIDEND. Sold only in case of "guaranteed stocks" or stocks where the dividend is certain and fixed. Bears the same relation to a stock as "accrued interest" does to a bond.

ACCRUED INTEREST. If a bond is sold by the person holding it before the date when interest is due, the buyer gives the value of the bond, together with the amount of interest then due. This is made up to him when the interest is paid by the issuant of the bond. Terms used in the same sense as "accrued interest" are "with interest," "and interest," or "interest added." The legal rate of interest in the state where the note is made payable is understood if no rate is mentioned in a note drawn payable "with interest."

ACKNOWLEDGMENT. A certificate given by the proper officer, showing that the maker of a written instrument has declared before him that such instrument is his willful act and deed.

ACTIVE ACCOUNT. Brokerage accounts which show many transactions; bank deposits against which checks are frequently drawn.

ACTIVE PARTNER. Distinguished from "silent partner" and "special partner" as one who is actively engaged in the business, and who incurs full liability.

ACTIVE STOCKS or BONDS. Securities which frequently change hands.

ACTUARY. One skilled in the theories and mathematical calculations on which life insurance is founded and conducted. His most important work is the study of death rates and the measuring of probabilities based on these calculations. He also computes mathematically the reserve upon policies, premiums, surplus, and dividends.

ADMINISTRATOR or ADMINISTRATRIX. One who takes charge of the goods and estate of a person dying without a will. Appointed by the Probate Court or other proper authority.

ADMITTED TO QUOTATION. When a security is admitted to quotation, it is allowed to be dealt in upon the Unlisted Department of the Stock Exchange. The term "listed" is used in place of "admitted to quotation" when a security is placed upon the regular list by the Governing Committee.

ADVANCE. A rise in prices is signified in the expressions, "the market has advanced," "rent has been advanced." The word is also used to indicate that a payment has been made or that money has been loaned.

ADVICE. If a check is sent to some bank, with a letter containing the words "for the credit and advice of Anthony Thompson," the bank is directed to credit the amount to Anthony Thompson and notify him (send him "advice") that it has done so.

AGENT. A person who represents, acts for, or in behalf of another, who is called his "principal." A "special agent" is one whose duties and authority are restricted to a single transaction. A "general agent" is "one appointed to do acts of a class" (definition given by United States Supreme Court); for instance, one employed to purchase writing paper at wholesale, without restriction as to where or of whom he should buy. To avoid personal liability on the part of the agent, he should sign any negotiable instrument or contract under seal with the name of his principal, by himself as agent. For instance, "Edward Willis, by Oscar Larned, Agent"; not "Oscar Larned, Agent, for Edward Willis."

AGIO (spelled in various ways). The rate of exchange between the moneys of two countries. In the same country, the percentage of difference in values between two different moneys. For example, in some countries a paper currency may not be accepted at its face value in exchange for metallic currency, and the percentage by which the latter exceeds the former in value is called "agio." "Disagio" is the percentage in value at which the paper currency is accepted below the metallic currency; the premium upon a better currency being represented by "agio," and a discount upon a depreciated currency, by "disagio." The latter term is used also for the wear and tear or "abrasion" of a metallic currency.

ALLONGE. A slip of paper attached to negotiable instruments, such as checks or promissory notes, to receive further indorsements when the back of the original paper is entirely covered with indorsements.

ALL OR NONE. A condition imposed by the bidder for an issue of securities, recognizing that, if his bid is accepted, he is to take the entire issue—no lesser amount. Or the seller may impose the same condition upon the successful bidder.

ANCILLARY RECEIVER. When property is situated in some other state than that in which the "receiver" (principal one) gets his authority, it may be managed by a second or assistant receiver, called "ancillary receiver."

ANNUAL INTEREST. Interest payable once a year. Interest payable semiannually or quarterly is considered more desirable.

ANTI-STOCK WATERING LAWS. That a dollar shall be invested for every dollar of stock issued is required by these laws.

APPRAISED VALUE. Value an appraiser sets upon a property.

APPRAISEMENT. The value set upon a property or the placing of a value upon it.

APPRAISER. A person appointed by law or named by an individual to estimate values.

ARBITRAGE. Purchasing a security in one market and selling for a better price in another. When advantage of the difference in current quotations of two markets is taken by purchasing a security in one and selling the same in the other, the difference, less certain expenses, is called the "arbitrageur's" profit. At times the sale is made in one market before the purchase in the other. "Arbitrage" business is carried on between London and New York, chiefly by "international banking houses"; between different American markets; and between New York Stock exchanges.

ARBITRARY. On the theory that a branch road delivering freight to a main line is entitled to more than its mileage proportion of the through rate, a fixed sum, or "arbitrary," is paid for by a main line of railway to a branch or connecting line, for freight originating on the latter, without regard to its proportion of the through rate on such freight.

ASKED PRICE. The price asked for a security or commodity—the price at which it may be purchased.

ASSAY OFFICE. A branch of the United States Mint next to the Sub-Treasury on Wall street, New York City. (Assay offices are found also in other parts of the country.) Here gold or silver, presented in any form, is assayed, parted, refined, and gold and silver bars are manufactured. The government stamp certifying to weight and fineness is given to all such

that pass through the "assay office." Work for others than the government must be paid for.

ASSAY OFFICE BAR. A bar of fine gold or silver manufactured at a government "assay office" for the United States government; so named to distinguish it from a "commercial bar," i. e., one made without government regulation.

ASSENTED STOCKS or BONDS. When a corporation is reorganized and the security holders are asked to give "assent" to a certain plan; if stock is "assessed"; or in like cases where the consent of each share or bondholder is desired, it is customary to choose some banking house or trust company to receive the securities and to stamp on each the fact that the holder has "assented" to the plan or paid the "assessment." Should more than one assessment be required, "first assessment paid," "second assessment paid," etc., will be stamped on the security. The above are briefly referred to in financial columns and stock exchange sheets as "ass't pd.," "1st ass't pd.," etc.

ASSESSED VALUATION. Value fixed for taxation upon the property of a municipality by authorized officials. Rules for fixing the assessment vary in different states. In Massachusetts, property is assessed for nearly its marketable or real value; but in many Western states the assessment is based upon about one third, or even less, of the real value.

ASSETS. Cash and debts receivable, property, real estate, patent rights, trade-marks, machinery, merchandise, material, and stock being manufactured—everything of any supposed value belonging to a person, business, or corporation—are called "assets."

ASSETS CURRENCY. A proposed issue of bank notes secured by the general assets of the issuing bank instead of by government bonds.

ASSIGN. To convey in writing any right or interest. Term commonly used when a merchant, unable to pay his debts, transfers his property to another for apportionment among his creditors.

ASSIGNAT. Paper currency issued in France during the Revolution of 1789, the security being confiscated church land, all the national domains, and other property. Over 45,000,000,000 francs were issued.

ASSIGNEE. Person to whom some right or interest is transferred by writing. When a merchant voluntarily conveys his property to another for changing into cash and apportionment among his creditors, that other is called an "assignee for the benefit of creditors." When a state court under the state insolvency law, appoints a person to take possession of the property of an insolvent debtor, sell it for cash, and distribute it among the creditors, that person is called an "assignee in insolvency."

ASSUMED BONDS. When a corporation passes into the control or ownership of another company the bonds that have been issued by the first are assumed by the second, which becomes responsible for the payment of the principal and interest of these bonds now called "assumed bonds." "Divisional issues" is the term used of such securities in railroad finance. When referred to as "guaranteed bonds," the guarantee appears upon the bonds themselves.

AT THE MARKET. An order to buy or sell at the best market price offered, without actual price limit.

AT THE OPENING. An order to buy or sell, without actual price limit, at the best market price offered immediately after the opening of the exchange.

ATTORNEY IN FACT. Person who acts under the authority conveyed by power of attorney.

ATTORNEY'S OPINION. Written statement or approval given by a lawyer in regard to bonds which have been examined by him before their issue. All bonds should be so attested, the attorney thoroughly describing the bonds and stating clearly that he has not only examined and approved all the papers necessary to establish the legality of the issue, but one of the executed bonds as well.

AU BESOIN. Frequently appears in bills of exchange where a person is named who may be referred to for payment if the original person (drawee) refuses. Literal meaning, "in case of need."

AUCTION SALES. Auction sales of securities, having no connection whatever with the stock exchange, are held in auction salesrooms of private banking firms, when any one may be present. There is no restriction as to securities which may be offered for sale in this way, and many securities not listed upon the stock exchanges are sold, in addition to those which the law provides must be sold at auction.

AUDITOR. A person whose profession is to audit or examine and report upon the accounts of a firm, corporation, etc., to compare charges with the vouchers, prepare a balance sheet, and certify whether the financial condition is, or is not, as represented.

AVAILABLE ASSETS. Property not previously given as security for an indebtedness, which is available for sale or use.

AVERAGING DOWN. To buy at a lower price than the previous purchases in order to lower the average cost to the stockholder.

AVERAGING UP. To buy or sell more of a certain stock as the market advances and so increase the average price of the whole.

AWARD. The acceptance of a proposition to buy. A term customarily used in reference to some issue of bonds for whose purchase bids have previously been submitted.

BAD DELIVERY. A security not complying with the regulations of the stock exchanges regarding "good delivery."

BALANCE. Difference between the debits and the credits of an account. The sum due from one party to another after settling accounts.

BALANCE OF TRADE. When we have sold to the merchants of Great Britain merchandise of more value than they have sold to us, the "balance of trade" is in favor of the United States. If the condition is a temporary one, the natural result is the selling in the United States of "exchange" on Great Britain at a discount, or the shipment of gold to adjust the balance. As other factors, such as interest and principal due on account of securities of one country held in the other, are to be considered, the "balance of trade" does not always determine the debtor country.

BALANCE SHEET. A statement showing the balances of the open accounts of a business. On one side of the account are the assets; on the other, the liabilities and capital invested. The two sides should foot up equally, in other words, should balance.

BANK ACCOUNT. Having chosen your bank, find out the smallest sum of money which it will receive on deposit. Obtain an introduction to one of the bank's officers. Tell him, or the person to whom he may assign you, the amount you will probably keep on deposit, whether you will wish to borrow from the bank at intervals, and the kinds of loans. As a rule, large banks do not wish small accounts. Next present your deposit to the receiving teller, together with a "deposit slip" or "ticket," which is furnished by the bank. Be sure the blanks are filled out, showing the character, amount, date, etc., of the deposit, and that your name is written at the top. The teller will give you a "pass book," showing on the debit side the sum deposited. Before you leave his window notice if this is correct. The pass book should be returned to the bank the first of every month. When given back to you with the canceled checks be very sure to check it up yourself to see if the amount of your deposit is equaled by the addition of the total amount of the checks paid, the balance reported by the banks to your credit, and the sum of the checks drawn and not yet presented to the bank for payment. Canceled checks should be saved. A check book is generally furnished at the bank's expense. That your checks may be identified, you will sign in a book or on a signature card, kept for the purpose. If acting as agent, trustee, or attorney for some other person or persons, do not open a bank account in your own name for their benefit unless you have formal proof of the relationship.

BANK BALANCE. The sum of one's credit in a banking institution; also a bank's debit or credit at "clearing."

BANK BOOK or PASS BOOK. This book is proof of the bank's indebtedness to a depositor. In it is made by the bank a written entry of each sum deposited by a customer. It should be returned to a savings bank once or twice a year; to a national bank, "bank of deposit," or trust company, once a month. All changes or additions must be made by the bank, none by the depositor. Formerly a list of all checks paid during the month was entered on the credit, or right-hand page of the book. Now it is customary to write the list on a separate sheet of paper, entering on the credit page only the total amount. The deposits are entered on the left-hand or debit page. These are added, the total amount of the checks paid deducted, and the remainder, or balance, entered upon the credit page. This gives the sum of money to the credit of the depositor at that time, and is carried

forward to the left-hand page, and added in with the next period's deposits. The total amount of deposits should be equaled by the sum of the checks paid and the amount still to the credit of the depositor, who, when the book is returned to him, should satisfy himself that no mistake has been made by the bank. To do this he checks off what has been paid during the period, a process facilitated by a comparison of check numbers with the stubs. In this way may be easily noted the checks drawn by the depositor but not yet presented to the bank; and their total amount added to the sum total of the checks paid as given by the bank. When these are added to the balance still to the depositor's credit, all together should equal the sum of the deposits for the period; due allowance being made for interest (if any) and for collection charges.

BANK COMMISSIONER. A person appointed by the state to examine into the affairs of chartered banks and to have certain supervision over them. The duty of the bank commissioner and his assistants, which is to see that the savings banks and trust companies within the state are complying with the laws that regulate them, is accomplished by examinations into the affairs of each institution, at stated intervals. Questions, such as whether a particular investment may be legally bought, may be submitted by banks and trust companies to this board of commissioners, whose broad powers include the authority to pass upon and decide such difficulties.

BANK DISCOUNT. Simple interest, reckoned upon the face value of a note or other obligation, paid to one who loans money, in advance.

BANK DRAFT or **BANKER'S DRAFT.** A "draft" which one bank or banker draws against another.

BANKER. A custodian of the funds of others. Term should not be used in regard to those whose exclusive business is note broking, stock broking, etc., nor in cases where custodianship of money is not involved.

BANKER'S BILLS or **BILLS OF EXCHANGE.** Drawn by a banker in one country against one in another, with whom he has credit. Distinguished from "commercial bills" or "bills of exchange," which are drawn by shippers of merchandise.

BANKER'S CHECK. A check which one banker draws upon another.

BANKER'S NOTE. A promissory note of a banking firm not incorporated, or of a private banker.

BANKER'S STERLING. "Exchange" on Great Britain bought at some bank or banking house. To be distinguished from regular "bills of exchange" held, with bills of lading, by sellers or exporters to show the sum due them.

BANK NOTE. A substitute for real money. A promissory note issued by a bank payable in lawful money to bearer on demand.

BANK OF DEPOSIT. By this term bankers understand an institution which receives deposits subject to check, but allows no interest on the account, in contrast to trust companies, savings banks, and similar institutions, which do allow interest on deposits. The former class is represented by state and national banks.

BANK OF DISCOUNT. A bank whose deposits and other funds are, to a great extent, used to discount bills of exchange, notes, etc. Of this kind are national banks, but not savings banks.

BANK OF ISSUE. Money of its own in the form of "bank notes"—paper money which circulates as currency—may be issued by those banks given authority under the law to do so. Such a bank is called a Bank of Issue. Of this kind are national banks. Until 1865 "State Bank Notes" were issued by state banks, but at that time an act taxing such notes 10 per cent. was passed by Congress, with the result that they were quickly retired.

BANKRUPT. One who according to the laws of bankruptcy has been judicially declared unable to meet his liabilities. When advantage is taken of the National Bankruptcy Law, the debtor gives up all his property to be divided among his creditors, thus compelling them to make a settlement. When this is done he is given a legal discharge, absolving him from further liability. If it is afterwards discovered that the "insolvent" person has concealed property, thus defrauding his creditors, the law as a rule allows the latter to take possession. The forcing of an insolvent person into bankruptcy by creditors is called "involuntary bankruptcy." But a "wage-earner" or a "person engaged chiefly in farming or the tillage of the soil" cannot be so forced. Also, the insolvent person cannot be declared a bankrupt in an involuntary proceeding unless he owes debts amounting to at least one thousand dollars, has committed an act of bankruptcy, and the fair valuation of all his property is less than the sum of his debts. The action of "voluntary bankruptcy" is brought about by the debtor or the "insolvent," who may, unless a corporation, take advantage of the present Federal law to be adjudged a bankrupt.

BANK STATEMENT. A tabulated statement of their condition made usually once a week by banks in the larger cities belonging to the Clearing House Association. The New York Bank Statement, awaited with great interest by financial men, is issued to the public each week. A statement is tabulated by each national and state bank in the city belonging to the Clearing House Association, showing the average of each item for the period covering all the preceding business days of that week and the last business day of the previous week. These averages are received by the Clearing House manager, who obtains in like manner the average of each item for the combined statement. The "bank statement" never gives the actual conditions at the date of issue, since only the averages for the time covered are given. "Non-member banks," that is, banks which, although not members of the Association, "clear" through those which are, issue a separate statement. Since trust companies and their resources are not directly included in the "bank statement," its value is greatly lessened, and the true condition of the banking institutions is not obtainable. At times sudden withdrawals, or deposits, by the trust companies—large moneyed firms and institutions carrying accounts with the Clearing House banks—are made on purpose to render the statement misleading, in order to influence the loaning rates of money, and to affect the prices of stocks through a change in loaning rates.

BARGAIN. In England a term signifying a transaction between two members of the London stock exchange.

BAR GOLD. Gold in the form of bars of the British standard is 11-12 fine. The mint value of gold per ounce is 77s. 10½d., and the Bank of England is compelled by law to pay 77s. 9d. per oz. for all gold offered. It obtained, on September 20, 1906, the record price of 78s. 1d. for £200,000 bar gold. Gold imports are favored by the difference when the market price of "bar gold" falls below 77s. 10½d. in London. To make gold imports permissible in America, the fall of "sterling exchange" here must be greater the more the price of gold advances in London.

BARING PANIC. When, after a period of riotous speculation on the London Stock Exchange during the fall of 1830, the banking house of Baring Bros. was on the verge of collapse, dismay spread throughout the entire financial world; for untold misery would be caused by the failure of this great firm, with the many other moneyed institutions which would be carried down therewith. Such a world panic was averted by the wise and prompt action of Mr. Lidderdale, then Governor of the Bank of England, who obtained a loan of gold from St. Petersburg and the Bank of France. Against this the Bank of England, to temporarily accommodate the public, made an issue of paper money. Many leading bankers of London were persuaded by the Governor to write and subscribe a large guarantee fund, taking over the total assets of Baring Bros. The Bank of England liquidated, and ultimately a large surplus was returned to Baring Bros.

BAROMETER STOCKS. Daily, except on Sundays and stock exchange holidays, the average price of certain stocks is taken, and the rise and fall is a good indication of the trend of the market.

BAR SILVER. Silver that has not been and may never be minted into coin, but which comes from the smelter in the form of bars. The commercial value of the 371¼ grains of fine silver in a silver dollar was 72½ cents in 1907. "Bar silver" is bought and sold in London as a hedge against business transactions. The lowest price of silver in the world's history was 21 11-16 pence (about 43 cents) per oz., when it dropped to that in London on November 27, 1902. In New York, on September 3, 1890, the price was $1.21.

BEAR. One who sells stocks or securities for future delivery in anticipation of a fall in the market. A person is a "bear" on the particular security whose price he believes is about to fall, but is not necessarily so on others. The "bear," while naturally a seller, may be so for the purpose of buying at a lower price later on.

BEAR CLIQUE. A combination formed to depress market prices in general or the price of one security in particular.

BEARING THE MARKET. A forcing down, or depressing, of prices by artificial means.

BEAR MARKET. A "bear market," or general fall of prices, is the result of a predominating influence of the "bears."

BEAR PANIC. "Bears" on a certain stock and those who have gone "short" of it, when its price suddenly and rapidly advances, try frantically to "cover" or buy in what is needed to fill their contracts.

BEAR RAID. If there is much "long" interest at the same time that those who are "short" of the market wish to "cover," advantage may be taken by the "bears" to "sell short," and so force prices down that those who are "long" will of necessity sell. This will permit the "shorts" to "cover," or buy in, at a profit.

BELOW PAR. Below the face value.

BELT LINES. Short, connecting lines of railroad between one railway terminal and another. To connect railroads approaching a city from different directions, it has usually been necessary to follow a circular or belt course around a certain section of the city, and so the name "belt line" originated. If one belt system encircles another, they are often distinguished by the terms "inner belt" and "outer belt."

BERLIN DISCOUNTS. The discounting rates of good "commercial paper" at Berlin.

BETTERMENT or IMPROVEMENT. The cost of additional rail or other improvements on a road is as a rule charged first to a "betterment account" or "improvement account." It depends much upon the financial condition of the company, how it is treated at the end of the fiscal year. By a prosperous one it would probably be charged directly to "operating expenses," while by a company of limited financial resources it might be charged to "capital account" or "construction account." That the capitalization of a "betterment" should be only in proportion to the increased earning ability which the "betterment" has conferred upon the property is the opinion of many experts.

BIDDING UP. Bidding each time a little more than the previous actual sale, so as to create an advance in prices.

BID PRICE. The price bid or offered for any security.

BIDS AND OFFERS. A modern name for "puts" and "calls." In the New York Stock Exchange all offers to buy or sell securities are, unless otherwise stated, for 100 shares of stock or for $10,000 par value of bonds. Rules for the making of bids and offers are as follows: for delivery upon the day of contract, "Cash"; for delivery upon the business day following the contract, "Regular way"; for delivery upon the third day following the contract, "At three days"; not less than four nor more than sixty days is the limit for "buyer's" or "seller's options." If made without stated conditions, bids and offers are considered to be in the "regular way." A smaller variation than one eighth of one per cent. is not permitted in making bids and offers. If the par value of the securities is ten dollars or less per share, the bid and offer shall be in dollars or fractions thereof; if higher, bids and offers shall be made on the basis of a percentage of the par value of the securities dealt in. That the purchase money be paid on delivery may be rightfully required by the party delivering. Payment may be required at the time and place of transfer, if the deliveries are made that way. Under the Illinois statutes, transactions of "bids and offers" are prohibited.

BIG FOUR. Cleveland, Cincinnati, Chicago, and St. Louis Railway Company.

BIG KATY or KITTY. Missouri, Kansas, and Texas Railway Company preferred stock.

BIG NPR. (NIPPER). Preferred stock of the Northern Pacific Railway Company.

BIG STEEL. United States Steel Corporation preferred stock.

BIG THREE. The New York Life Insurance Co., The Equitable Life Assurance Society, and The Mutual Life Insurance Co., of New York—the three largest life insurance companies of New York City.

BIG UNION. Preferred stock of the Union Pacific Railway Company.

BILL. "Bill of Exchange." Bank bills or government notes are referred to by "bill" in the language of the clearing house. The expression is used also of promissory notes, the ordinary statement of a creditor's claim, as a butcher's bill, etc., or of any paper requiring money settlement.

BILL AT SIGHT. Same as "Draft" or "Sight Draft."

BILL-BOOK. Record of drafts, notes, etc., by a bank.

BILL BROKER. Sometimes called "bill merchant." In England, one whose business is to handle "bills of (inland) exchange," promissory notes, etc.

BILL OF CREDIT. Paper money issued by authority of the Government, and designed to circulate as money. As provided by the Constitution of the United States only the United States legislature, and none of the constituent states shall have the power to borrow money and "limit" bills of credit.

BILL OF EXCHANGE. Said to have been invented by Jews or Lombards in the fourteenth century in order to withdraw their property from the countries from which they were expelled. A written order from one person to another, requiring the latter to pay on demand or at a stated time, a certain sum of money "to order" or "to bearer," and charge to the account of the drawer. The order generally expresses that it is drawn for value. A bill of exchange is commonly termed a "draft."

BILL OF LADING. A written receipt for goods accepted for shipment by land or water transportation companies.

BILL OF SALE. A paper conveying from one party to another interest or right in personal property.

BILLS PAYABLE. Unpaid evidences of a person's indebtedness such as acceptance, notes, etc., held by others against him. From his standpoint they are bills "payable"; from the standpoint of those to whom they are due, they are "bills receivable." When, instead of a cash payment for a sum due, a promissory note, or some such instrument is given, they become "notes payable," or "notes receivable."

BIT. Used upon the Pacific Coast to indicate 12½ cents, the common term for a "quarter" or 25c. being "two bits."

BLACK FRIDAY. On September 24, 1869, Wall Street had one of the greatest upheavals it has known. A "corner" in gold, manipulated by Jay Gould and his partner, James Fisk, till it reached 162½, was suddenly broken by the Government purchasing with gold $4,000,000 of its own bonds. May 11, 1866, is also known as "Black Friday," because of the failure of the large London banking house of Overend & Gurney, and the disaster which followed.

BLANKET MORTGAGE. A rather vague term usually meaning a mortgage covering several different properties or a collection of properties, given to secure a single debt. It may also be given to secure indebtedness previously created in different forms. An underlying lien (indebtedness having prior claim) is usually implied by such a mortgage. This term is sometimes improperly used as synonymous with "general mortgage."

BLIND POOL. A name sometimes given to a corporation whose operations are known only to its own officials, and withheld from the stockholders and the public. Also, a "blind pool" is formed when, for a definite time, a group of corporations, or individuals, place certain specific interests in the control of one person, usually one of the group, and it is agreed that their interests shall be conducted by that one with no instructions from the others except those set forth at the beginning.

BLOCK. A large number of shares in a stock company bought or sold in a lump is called a "block of shares" or a "block of stock."

BLOTTER. First or temporary transactions are recorded in the "blotter," or book of original entry, and later "posted"—transferred—into books of more permanent record.

BONDED DEBT. Bonds comprising the fixed indebtedness of a municipality or an incorporated company. What bonded indebtedness may be placed upon a property with fairness to both shareholders and bondholders is a question worthy of serious consideration. That the property of a corporation should only be mortgaged to the extent of the minimum value placed thereon in a time of public adversity—its "unchangeable value"—is the general opinion. With such exceptions as those of some communities in the

Far and Middle West, where the assessed valuation in proportion to the marketable value of the property is very much less than in the East, no municipality should ever have a net indebtedness of more than 5 per cent. of its assessed valuation.

BOND OF INDEMNITY. When a corporation has issued a new security in place of one lost, it is protected against the finding and presentation of the first security at some future date by a "bond of indemnity." It is the business of "guaranty and indemnity" companies to furnish such bonds, at a reasonable price, when the loss of the security has been satisfactorily proved. This bond is really a form of insurance. A bond of indemnity is used to protect an employer against loss from the handling of funds, securities, etc., by an employee—as the cashier or treasurer of a bank.

BOND RESERVE. As bonds are supposed to be quickly convertible into cash in case of necessity, banks have, of late years, invested some portion of their funds in such securities. "Bond reserve" is the term used for an investment of this kind.

BONUS. This term is most generally used of stock thrown in with the sale of bonds or other stock. It is also used of a premium given for a loan or a charter or other privilege granted to a corporation; or an extra dividend to the shareholders out of accumulated profits.

BOOM. A strong advance in the market price of any security or commodity, accompanied by much excitement.

BOTTOMRY. The mortgage of a vessel as security for the repayment of a loan negotiated for the use of the ship.

BOURSE. In continental Europe, a market or exchange for a specific kind of merchandise, such as cotton, grains, etc.; or for securities generally. The Paris Bourse, or Stock Exchange, was established in 1726.

BREAK. "Break in the market," a decline in prices both great and unexpected.

BREAK EVEN. To come out just even. A transaction completed without profit or loss.

BROKER. A middleman who negotiates purchases, sales and contracts for others and receives a fixed fee or "brokerage." He generally contracts in the name of his principals instead of his own. There are various kinds of brokers—stock, real estate, oil, etc.

BROKERAGE. The "commission" or "fees" paid to a broker.

BUCKET SHOP. An office or place where facilities are given for gambling small amounts in "margins" (q. v.) and run by unreliable brokers, not permitted to be members of a stock exchange. However, the stock itself is rarely purchased or sold for the customer. Should the order be actually executed upon a bona fide exchange, an order for the same amount is put in by the bucket shop. For instance, the bucket shop would buy an amount equivalent to the customer's sale, or would sell an amount equivalent to his purchase. In other words, the customer wagers his money upon a given stock going up or down, and the bucket shop accepting the wager gambles the other way; and, as is almost invariably true, the gambling establishment—in this case the bucket shop—wins in the long run. As it is natural for the average person to buy with the expectation that stocks will go up, the bucket shop thrives best on a declining market. The daily transactions of this unwholesome business, centering in New York, are sometimes almost as large as those of the New York Stock Exchange itself; it is surmised that a few unscrupulous financiers control a large percentage of this business, and that under their management orders are received at a common center from branch offices throughout the country.

BULL. A person operating in anticipation of a rise in prices, or with a view to bring about such a rise.

BULL CLIQUE. Persons who unite in mutual efforts to advance market prices in general or the price of one or more securities.

BULLION. In discussions relating to currency, this term signifies both coined and uncoined metal when reckoned by weight. For export purposes and in general use, uncoined gold or silver usually in bars or ingots is understood.

BULLION VALUE. Should a gold five-dollar piece be worn so that its weight has been reduced to $4.75 worth of fine gold, the latter is its bullion value, the term signifying the commercial value of the precious metals as distinguished from the face value of coined money.

BULL MARKET. A "bull market" exists when the influence of the "bulls" is predominant in the market.

BUSINESS PAPER. "Commercial paper" or "paper" are terms used of all classes of acceptances, notes, bills of exchange, etc., no matter for what purpose given. Several other terms used to designate particular kinds of "promises to pay" have come into general use. "Business paper" signifies the notes, acceptances, etc., taken in exchange for goods delivered, in distinction from notes given in exchange for money to use in business. "Business receivables" and "trade paper" are terms often used in reference to "business paper."

BUY AT THE OPENING. An order to purchase at the lowest possible price as soon as the stock exchange opens.

BUYER'S OPTION. Under such a contract the buyer of a security has, by giving the seller one day's notice, the right to demand delivery any time within the period covered by the contract, but need not receive delivery until the end of the specified time. "Buyer 5," "buyer 18," etc., briefly express the understanding, the number of days provided for in the agreement being indicated by the figures. The time must not be less than four nor more than sixty days, according to the rules of the New York Stock Exchange.

BUYING ORDER. An order to buy certain securities, with or without price limit, given to a broker and good only for the date for which it is given unless specified differently.

CALL. A notice that the amount of a bond will be paid; a demand for the payment of money, or for subscriptions to stocks or bonds. By this kind of contract, its possessor may at a fixed price and within a stated time, demand from the signer thereof a certain amount of stock (grain or other commodity). In New York, this privilege may be exercised any time within the life of the "call"; in London, only upon the last day of the time limit. Calls are dealt in much more extensively in London than in America. If the rights of the call are exercised, the stock is accompanied by all dividends paid upon the stock in the meantime.

CAPITAL ACCOUNT. If expenditures upon a property result in the increased earning capacity of the corporation, they may be paid for from increased capitalization; if not, they should be paid for from the earnings of the company, and charged to operating expense." For instance, should a stone building replace a wooden one, but the business of the corporation be not increased thereby, the expenditure should be charged against the earnings of the property, as it represents a "replacement." But if additional buildings are erected and the earning capacity of the corporation is increased by their use, the expenditure may be properly met by further capitalization, as it is an "improvement."

CASH DIVIDEND. Money or its representative given in payment of a dividend.

CASHIER'S CHECK. A check, signed usually by the cashier, which is drawn by a bank against itself and payable when presented at the bank drawing the same. One would use a cashier's check when for the case in hand the check of a known bank would be accepted more readily than his own. Or a person unable to draw a check because without a bank account of his own may obtain a cashier's check by paying the amount in cash, plus, perhaps, a small sum charged by the bank for the accommodation. By the bank itself this check is used in payment for supplies, expenses, in discounting notes, paying for securities, bills of exchange, etc., and also for dividends to stockholders, but a special form may be used for this purpose.

CERTIFICATE OF DEPOSIT. The written acknowledgment of a bank that the person named therein has placed with them a stated amount of money on deposit. It may be made payable either at a specified time or on demand, and usually draws interest. Declared by the courts of California to be a negotiable instrument in substance and effect the same as a promissory note. The money so deposited cannot be withdrawn by check, but the "certificate of deposit" must be presented by the holder thereof or by some one to whom it has been properly indorsed. Like a money order or cashier's check, this certificate may be used to transfer funds from one point to another.

CERTIFIED CHECK. That the person who draws a check has sufficient funds on deposit in the bank to pay it when presented is certified when an expression such as "Accepted," "Good when properly indorsed," or "Good through the Clearing House," followed by his official signature and the date, is written across the check by some competent bank officer. When a check is so certified, the amount of the check is deducted from the sum to the credit of the depositor. If not used, a certified check may be returned to the bank and canceled. The bank is under no obligation to certify checks, but does so merely to accommodate. Except in the case of a "raised check," a bank may be held for payment after certification. National banks are prohibited from "over-certifying" checks; that is, certifying, as an accommodation, that a depositor has to his credit more money than is the case, with the expectation that the depositor will make good the deficit sometime during the day.

CHATTEL MORTGAGE. A mortgage given and recorded in much the same way as a mortgage on real estate, but distinguished therefrom as being a mortgage on live stock, movable goods, or personal property.

CLEARING HOUSE BALANCES. The amount needed to settle the differences between all banks "clearing" through a certain association. The transaction between the clearing house and one bank is referred to as "balances."

COLLATERAL or **COLLATERAL SECURITY.** Something deposited with the evidence of debt to satisfy the claim of the lender should the borrower fail to meet the indebtedness when due. A security for the payment of money or for the performance of agreements. The collateral is usually about 20 per cent. more in value than the amount of the loan, such additional value being termed the margin. If the value of the collateral decreases to the amount of the loan, and the debtor is unable to pay off part of the loan or deposit additional security, or if the debtor is unable to make payment when the loan matures, the lender has the right to sell the collateral and deduct from the proceeds the amount due for principal and interest, the borrower receiving the balance, if any.

COLLATERAL LOAN. When a corporation or individual has deposited with the holder of a note certain securities which may be sold by the latter if the note is not paid when due, a "collateral loan" is made. If the securities are sold, the creditor retains sufficient to liquidate the debt, and the balance, if any, is handed to the debtor.

COLLATERAL NOTE. When mortgages, stocks, bonds, or other securities are given to secure a promissory note, it becomes a "collateral note." Such may be given by corporations, firms, or individuals, and among many railroad companies they are a common form of borrowing.

COMMERCIAL AGENCIES. Bradstreet's and Dun's, the two principal "commercial agencies" of this country, have their main offices in New York. Books giving the credit standing or rating of practically all the business men, firms, etc., who might possibly need credit throughout the United States and also in other parts of the world, are furnished to subscribers by these agencies. Special information in regard to any person in any part of the territory covered will be supplied to subscribers. In addition to all this, they give the public general information in regard to crop and business conditions, the number of failures during a certain period, etc. The first mercantile agency was established in New York in 1841.

COMMERCIAL PAPER. Many kinds of acceptances, notes, bills of exchange, etc., are covered by this very general term. Note brokers further distinguish the various kinds of "commercial paper" as "business paper," "mercantile paper," "corporation paper," etc.

COMMISSION. The brokerage or compensation given to an agent for his services as a middleman. The New York Stock Exchange has fixed rules for commission charges: (1) All commissions must be reckoned on a par value of securities; (2) transactions for parties or partners not members of the Exchange, or for firms of which the Exchange member or members are special partners only, not less than one eighth of one per cent. commission shall be charged; (3) on business for members of the Exchange, if a principal is given up, the commission must be not less than one fiftieth of one per cent., otherwise, not less than one thirty-second of one per cent. The committee on commissions, with the approval of the governing committee, fixes, from time to time, the rates on mining shares and subscription rights charged to both members and non-members. The foregoing rules do not apply to government or municipal securities.

COMMISSION HOUSE. A firm which does not speculate on its own account but transacts business wholly on a commission basis.

COMMON CARRIER. One who, for hire or reward, transports from place to place the goods of those who wish to employ him. The term includes all transportation companies engaged in the passenger, freight, or express business. Pipe lines for the transportation of oil or other commodity except water or gas also come under this heading in the "Rate Bill" passed by Congress.

COMMON STOCK. That portion of the capitalization of a corporation on which dividends may be paid after the requirements of the bonds, floating debt, and "preferred stock," if any, have been met. It is the equivalent of the English "ordinary stock." Common stock generally carries voting power.

COMPTROLLER OF THE CURRENCY. The chief officer of that bureau of the Treasury to which is intrusted the execution of all the laws passed by Congress relating to the issue and regulation of a national currency secured by United States bonds, and who really has control of all national banks.

CONSOL CERTIFICATES. Ownerships in the "Consols" of Great Britain and Ireland are represented by these certificates, issued by the National City Bank of New York, and traded in in America in place of the original "consols," thus greatly simplifying such transactions.

CONSOLIDATED EXCHANGE. A distinct association from the New York Stock Exchange, although situated in the same city. Its proper title is "The Consolidated Stock and Petroleum Exchange of New York" and the membership is about 1500. Two thousand dollars is approximately the price of a seat. The rate of commission is one half that of the New York Stock Exchange, that is, 1-16 per cent. instead of 1-8 per cent. and the transactions amount to probably not much more than 10 per cent. of those on the larger exchange.

CONSOLIDATED FIRST MORTGAGE. The same as "first and consolidated mortgage," in its common use in relation to bond issues.

CONSOLIDATED MORTGAGE BONDS. A corporation bond whose security is a mortgage on the entire property formed by the consolidation of several smaller properties. This mortgage may be a first mortgage upon the property so consolidated. If previous mortgages have been issued by one or more of the companies, it would be a general mortgage bond as well as a consolidated mortgage bond. In the case of a railway company, consolidated mortgage bonds are to be distinguished from divisional bonds—mortgages upon the separate properties consolidated. The term is commonly used for an issue which is to refund (take the place of) other issues not yet due, but having a prior lien, it being expected that the funded indebtedness of the company will be finally consolidated by the new debt. In such a case, the new issue is not only large enough, as a rule, to retire the prior indebtedness, but also to furnish money for necessary improvements.

CONSOLS. A contraction of *consol*idated annuities; the name given to the leading Government securities of Great Britain known as "Consolidated Threes" or "Three Per Cent. Consolidated Annuities." The right to pay the principal at its pleasure is reserved by the Government. The fund dates from 1757, and the account is kept at the Bank of England. The stocks are transferable and their market value constantly fluctuates, the price being regarded as a criterion of national prosperity and public confidence. "Two Per Cent. Consols" is the name given to the United States Government 2 per cent. bonds redeemable after 1930.

CONSTRUCTIVE MILEAGE. A relatively greater mileage allowance granted by a main line to a branch connecting line of railway in connection with freight originating on the latter and destined to some through point on the main railroad.

CONVERTIBLE BOND. A bond which is, under certain conditions, convertible at the will of the holder into other securities—usually stocks—and which is generally issued by the same corporation. The annual interest charge becomes contingent instead of fixed if the stock is "converted."

CONVERTIBLE PAPER MONEY. Paper money which the holder has the right at any time to present for redemption at its equivalent in metallic money.

CO-OPERATIVE BANKS. The one great difference between "building and loan associations" and "co-operative banks" is that from the latter a member has the right, by giving due notice—perhaps thirty days—and upon certain other conditions, of withdrawing the accumulations upon his unpledged shares.

COPPER or **COPPERS.** The product of the mine is called "copper." Shares of stock in the various copper companies are referred to as "coppers." These are also distinguished by the expressions "copper the metal" and "copper the stock." The copper industry of the world is dominated by the entire production, including what we have from adjoining countries. The average price is 15.70 cents per pound, and for 1906 our estimated production was about 413,834 tons. "Coppers" is a name often given to our pennies.

CORN. The commission for corn is the same as on other grains, but its margin is about three cents a bushel, and 5,000 bushel lots is its trading unit for future delivery.

CORNER. A buying up of the whole, or the available part of any stock or commodity, so as to control the selling price, as a "corner" in cotton.

CORPORATION. An association of persons for the purpose of carrying on some business or enterprise, who are exempt by law from personal liability beyond the amount already invested. The different ownerships are represented by shares of stock. Semi-public enterprises such as electric lighting, gas, street railways, etc., must be conducted lawfully by incorporated companies in order that the state may have some control. To form a corporation, a charter must be obtained from the legislature of a state, or from such officers as may be authorized to grant charters or even, under certain conditions, from Congress. With some exceptions companies may incorporate under the laws of a state other than the one in which the business is conducted. Many states have enacted laws conveying great privileges in the charters, and receive a large revenue from them, since corporations, as a rule, select that state which grants the most privileges. The three "charter bartering states" most liberal in the range of the charters granted, conveying upon corporations rights to do things in other states often prohibited by the laws of those states, are New Jersey, West Virginia, and Maine. It is necessary to name a resident "attorney in fact," given the usual powers of such attorneys, when companies organize under a different state than the one in which their business is conducted. That the principal office, containing the stock and transfer books, etc., of any company incorporated therein shall be located within its confines is required by some states. A "certificate of incorporation," following the form used by the state where the corporation is organized, and usually accompanied by a copy of the constitution and by-laws, must be filed with the secretary of state or some other properly designated person.

COTTON. Five hundred pounds is the average weight of a contract bale, the buying and selling unit being 100 bales, or 5,000 pounds. "Points" is the term used to record fluctuations, there being 100 "points" in a cent. If it declines fifty "points," it means one half cent per pound, or $2.50 on each bale, and $250 on the 100 bales. Members of the New York Cotton Exchange are charged a commission of $7.50 per 100 bales for the "round turn," i. e., buying and selling; non-members are charged $15. The usual margin charged by brokers is one half cent per pound, or $250 on each 100 bales. But this varies according to circumstances.

COUNTRY BANKS. Not located in a "reserve" or "central reserve" city, and not allowed to hold the "reserve" of any other national bank. Their reserve need be only 15 per cent. of their net deposits, two fifths of which must be kept in their own vaults. With the approval of the comptroller of the currency, the balance may be deposited with a bank in either a "reserve" or "central reserve" city.

COUPON. The small certificate attached to the part of the bond which represents the principal sum, the interest upon the bond for a certain period being represented by each coupon. Enough coupons are attached to represent the interest for the entire length of time before the bond matures. As the coupons, or certificates, severally become due, they are cut off and presented at the place named for payment.

COUPON BONDS. Those which have attached interest coupons or notes made payable to the bearer, to be presented for payment at stated intervals as the interest becomes due.

COUPONS, COLLECTION OF. Care should be taken in transmitting coupons from one point to another, for, like a five dollar bill, good in the hands of any one, they are usually made payable to "bearer." As banks have the safest and most thorough systems for coupon collecting, the best thing for an individual to do is take the coupon to his local bank about a week before it matures, and request them to collect it for him.

CREDIT. Transfer of property or goods in expectation of future payment; also the time allowed for such deferred payment, as a short credit, or a long credit. In bookkeeping, credit for money received or its equivalent is entered on the credit or right hand side of the account.

CREDIT CURRENCY. Called so when the general assets of a bank are the only security for the currency which it issues, as is true of the Bank of France. As against all additional notes above a certain fixed amount issued by the Bank of England there is a deposit of gold coin and bullion, such notes are substantially "gold certificates." The nearest approach to real money that is not actual money are the United States "gold" and "silver certificates," as each one is represented by an equal sum of gold or silver deposited to secure it.

CUMULATIVE. Generally used in reference to preferred shares of stock. Common or other stocks can receive nothing until the unpaid dividends on the preferred, which have accumulated from year to year, are paid. The chances of dividends upon common shares is naturally lessened by a "cumulative issue."

CURB. A market in the open (on the curb) where are handled new securities not yet listed upon the large exchange, or securities not traded in there; although any security may be dealt in upon the "curb." Many regular stock exchange houses in New York conduct a "curb" department. Marginal transactions in only the very best "curb" securities are permitted by most houses. There is no fixed rate for commissions on "curb transactions."

CURB BROKER or **CURBSTONE BROKER.** One who transacts business upon the "curb" or by going from office to office, and who is usually not a member of the stock exchange.

CURTAILING A NOTE. This is done by making a partial payment upon a note when due, or by giving a new note for the lesser amount after such a payment has been made. The same effect would be gained by making partial payments from time to time upon a "demand note."

DAILY BALANCES. Deposits of a certain amount are encouraged by this method. Depositors whose "daily balances" are over a certain amount—perhaps $300 or more—are allowed interest on them by most trust companies and occasionally by other banking institutions. That is, if it is found at the close of a business day that the total amount which a depositor has had to his credit unchanged for the preceding 24 hours equals $300, or whatever the amount agreed upon may be, interest for the day is allowed upon such an amount on sums evenly divisible by $100, but not for the fractional amounts above the even hundreds. No interest is allowed for the day if the deposit is less than the agreed amount.

DEBENTURE. Although the security ordinarily understood by this term is "debenture bond," it is used of municipal issues such as we call "bonds" throughout Great Britain and her colonial possessions in general. Where there is no "trust deed" securing the issues of railroads in Great Britain they are called "debenture issues." In Canada "debenture" is used of a municipal issue, "bond" of a corporation security.

DEBENTURE MORTGAGE. Comparatively few of these investments are dealt in at present. Formerly, if a "farm mortgage company" wished to issue "debentures," it would place with some trust company, perhaps $110,000 par value of mortgages upon real estate, and then issue "debentures" (or "debenture mortgages") worth $100,000, with a rate of interest smaller than that upon the original mortgages. In buying one of these, the investor was supposed to run less risk than in purchasing any specific mortgage.

DEED. In law, any instrument bearing a seal. In common usage, a sealed document (ordinarily a printed form filled out in writing) whereby the title of real estate is transferred from one to another. There are two kinds of deeds generally used in conveying real

estate. By a "quitclaim deed," the one giving it transfers only his own right and interest in the property, and in no way holds himself responsible for any defects in the title. By a "warranty deed" the property conveyed is guaranteed by the party giving the deed to be free from any defects of title, and if any such are found, the one accepting the deed is entitled to recover.

DEFERRED DIVIDEND. One not payable until the end of a certain time or until some definitely named event has occurred. Used by life insurance companies of the dividends kept by the company and paid to the policyholders at intervals of perhaps twenty years.

DELIVERIES. Upon the New York Stock Exchange, securities sold for "cash" must be delivered before 2.15 P. M. on the day sold, except on the half holidays observed by the Exchange, when the time limit is 11.30 A. M. They must be delivered before 2.15 P. M. on the following business day, if sold in the "regular way." Should the securities or any portion thereof not be delivered before the time specified, they may be brought "under the rule." If the buyer refuses until the following day a delivery offered after hours, interest for the extended time may not be demanded by the seller.

DEMAND LOAN or **CALL LOAN.** With this form of note or promise to pay, the lender has the right to demand payment at any time, and the borrower has equal right in making payment. In each case Sundays and legal holidays are excepted and payment will presumably not be made nor required on the same day the note is given. In New York notice that payment is to be made or demanded is usually given before 1 P. M. and payment made before 2.15 P. M. on the same day. Friday loans generally hold over until Monday. A "demand note" is payable without "grace," and bears legal interest after payment has been demanded, unless otherwise stated in the note.

DEMURRAGE. The per diem charge made when a car, vessel, or any such vehicle of transportation is delayed beyond the time allowed, for either loading or unloading.

DEPOSIT. Made when a person gives into the safekeeping of an individual, bank, or other corporation, securities, money, titles to money, or anything of value. "Pay to the order of the Third National Bank of Springfield, Mass.," followed by the signature of the depositor, is the simplest form of indorsing checks for deposit. Those who carry a deposit "subject to check" should beware of an "overdraft." Banks usually credit checks to the depositor at once, even though not able to collect them for several days, but sometimes they are unable to collect them at all, and then the checks are returned and charged against the depositor's account.

DEPOSITS ("BANK STATEMENT"). Money itself is not necessarily understood by "deposits" as referred to under "Bank Statement." The increase in deposits following an expansion of loans is explained by the fact that the amount a depositor wishes to borrow from his bank is accredited to his account, instead of being paid to him in cash. Credit is the base of such proceedings, and its importance in connection with financial and business affairs should be kept continually in mind. The amount to the credit of the government, itemized as "United States Deposits," is shown separately by the statement of the associated banks of New York, enabling the "reserve" required to be estimated. When not so divided, everything to the credit of others which may be withdrawn is included in "deposits."

DEPRECIATION. The falling off in the value of property, on account of wear and tear, or through machinery becoming antiquated, or in the case of a mine, etc., reduction in the life of a property. Some manufacturing concerns set aside from their profits each year 10 per cent. of the cost value of all the machinery and 6 per cent. of the cost value of the buildings to cover depreciation. The location, etc., of real estate regulates the amount written off for depreciation. Unless the depreciation of the property is counterbalanced by some way of setting aside each year a definite amount for that purpose, it will be found by the share and bond holders of the corporation that their dividends and interest have not been the actual profits of the corporation, but a payment, bit by bit, of their principal sum.

DISCOUNT. A deduction made for interest in purchasing a security not yet due; the difference between the price given and the par or face value. When it is necessary to give for one dollar in gold more than that sum in paper money, the latter is said to be "at a discount." The face value of a note less the "discount," is termed the "proceeds" or "net avails." The term "discount" is used in Great Britain and continental Europe in much the same way as our "time money."

DIVIDEND. A distinctive sum of money, share, or percentage. The term is used in many ways. The profits received by the owners of stock in a corporation, that is, the proportion of its earnings which they receive, are called dividends, and are distributed in proportion to the par value of the stock. The payments received by the creditors of a bankrupt are known as dividends, as are also payments made from time to time to the depositors or shareholders of a bank in liquidation. A certain amount of "undivided profits" is usually held as a reserve or "surplus fund," which is virtually equal to an increase in the capital stock. Corporations generally declare dividends at stated intervals, say the first of January and the first of July of each year. A company is said to have "passed its dividend" if none is declared at an appointed time.

DRAFT. A written order from one person to another to pay to the order of a third person, a stated sum of money; or bill of exchange. The writer of the order is called the "drawer"; the one who is to pay the money, the "drawee," and the bank or other party to whom the promise to pay is made, the "payee." Drafts are often made payable to the drawer, when the word "myself" is used. If that is done the drawer must indorse it in order to render it negotiable. By indorsement a draft may pass from hand to hand like a note. There are two kinds of drafts, "time" and "sight" (or demand). If the former, they are presented to the party against whom they are drawn for "acceptance." If "grace" is allowed for a "sight" draft, it must be presented for acceptance; but an ordinary "sight" draft is payable on presentation. The laws of the state where the draft is payable regulate its payment.

EARMARKED. A term used in England to denote gold deposited with the Bank of England for safe custody, but which the Bank may not employ for any purpose of its own. "Earmarked" gold is held on behalf of the government of India, as well as of the National Bank of Egypt, and notes are issued both in India and Egypt against this security.

EXCHANGE. A method of settling accounts or making payments between parties residing at a distance from each other. When the instrument is drawn in one country and payable in another, it is called "foreign exchange"; when drawn and payable in the same country it is termed "domestic exchange." In England the latter is known as "inland exchange." In the State of Michigan the term "foreign exchange" applies to all bills drawn or payable in any other state of the Union, as well as in any foreign country. A in New York owes B in London $1,000. B in London draws a "bill of exchange" on A in New York and deposits it with his London banker. Suppose on the other hand, C in London wishes to remit $1,000 to D in New York; by purchasing in effect the order drawn on A, the transaction is simplified, one debt being made to offset the other. In practice the London banker would forward the bill drawn by B to his New York agent for collection, the agent holding the sum at the London banker's disposal. C therefore would be given an order against the New York agent for $1,000, so there would be no necessity for any actual money being shipped at all. The price of "exchange" is determined by supply; if there is too much, "exchange" is at a discount; if too little it is at a premium. The final adjustment of "exchange" is made by gold; that is, when more money is to be remitted than is covered by available bills of exchange, bullion is shipped to make up the difference. London is the chief financial center for international business, and if, for instance, a merchant in New York wished to make a payment to a firm in China or Brazil, he would purchase a bill of exchange on London. "Exchange" quotations are recorded in the newspapers: e. g. "Sterling 4.87¾" signifying that $4.87¾ must be given in order to purchase "exchange" on London for one pound sterling. "Domestic" business is conducted in much the same manner, New York being the common financial center for "domestic exchange."

EXPRESS MONEY ORDERS. This method of remitting money by mail differs from "postal money orders" in several ways, no written application is

needed. They may pass from one person to another by continual indorsement, as they are unlimited in number, and if not presented within one year are still valid. Without the necessity of a duplicate being forwarded by the issuing office, they are payable upon presentation and at all offices of the company—not as by government method, at some special office. The rates are practically the same as those of the United States Post Office and sums up to $100 may be sent by one money order.

FACE VALUE. The principal. The value of a security as it appears in the security itself, without regard to any coupons.

FEE SIMPLE. Term used of a landed estate which belongs to the owner, his heirs, and assigns forever.

FIAT MONEY. Money issued by a government having the supposed power of forcing its acceptance in payment of debts within its own dominions, or which it declares shall be accepted as legal tender at its face value. "Fiat money" as commonly understood has no real value, or at the most is not worth its face value, in which case the "fiat money" is the difference between the real and the face value.

FIDUCIARY. Involving trust or confidence, especially of a financial nature. Banks, trust companies, etc., are "fiduciary institutions."

FINANCE. To furnish the funds required for an enterprise is to finance it.

FINANCIAL BILL. Called also the "Currency Act" and the "Gold Standard Act." This Act of Congress, approved March 14, 1900, included in its purposes the refunding of the public debt; maintaining the parity of all forms of money coined or issued by the United States; the defining and fixing of a standard of value, which last was declared to be the dollar, consisting of twenty-five and eight tenths grains of gold, nine tenths fine, all other forms of money coined or issued by the United States to be maintained at a parity of value with this standard under the jurisdiction of the secretary of the treasury.

FINE GOLD. That free from impurities. The United States Mint price of an ounce of fine gold is $20.672, which equals its value in England of 84s. 11.45d.

FIRST AND GENERAL MORTGAGE BONDS. An issue secured by a "first mortgage" on part of the property and a "general mortgage" on all of it.

FIRST MORTGAGE. A mortgage having prior claim or preference over others that may be placed upon the same property.

FIRST MORTGAGE BOND. A bond secured by a first mortgage and having first claim upon the earnings of a corporation.

FIRST MORTGAGE TRUST BOND. Under certain conditions this form of "collateral trust bond" may be indirectly a first mortgage; for it is one whose security is a deposit of other bonds, they, in turn, being secured by a first mortgage.

FIRST UNITED STATES BANK. In 1791, Congress granted a charter authorizing a United States Bank, its object being to take public money on deposit, regulate the currency, and act as official agent of the government. Its capital was $10,00,000, and at one time its circulation was about $4,500,000 and its deposits about $8,500,000. The government held one fifth of the capital, the public at home and abroad, the balance. The foreign holders were not allowed to vote by proxy, and so, although in the majority, could not obtain control. The right of inspection was held by the secretary of the treasury. So long as notes were kept repayable in coin, they could be received for public dues. The main office was in Philadelphia, branches being established in most of the important cities. The charter, obtained through the efforts of the first secretary of the treasury, Alexander Hamilton, was for only twenty years, and although the bank was a very successful institution, its constitutionality had been questioned, political opposition to its return was excited, and the renewal defeated. The bank, liquidating, returned to the shareholders $434 for each $400 share.

FIVE TWENTIES. Bonds subject, at the pleasure of the issuer, to redemption after five years from date of issue, but not due until twenty years therefrom.

FIXED CHARGES. As generally understood, the "fixed charges" of a corporation include rentals, taxes, insurance, interest upon its bonds and floating debt, and sinking fund, if any, although this last may be shown under a separate heading. Occasionally the first three items are given under a separate heading, but unless they are included in "operating expenses" this should not be done. Insurance is placed by railroad companies under "general expenses." By some prominent accountants only "bond interest, taxes, and rentals" are considered as "fixed charges"; but on permanent property at least, fire insurance and "sinking fund" should be included.

FLOOR. Where trading is done; used in connection with an exchange.

F. O. B. Stands for "free on board," meaning that no extra charge will be made for packing or for delivery on board a vessel or car.

FORCED LIQUIDATION. Used on the stock exchange when, to obtain necessary funds, owners of stock are compelled to convert the same into cash.

FORCED SALE. The compulsory sale of a debtor's property by a creditor, or mortgagee; the amount received being its "forced sale value."

FORECLOSURE. If the interest or principal of a debt secured by a mortgage is not paid by the "mortgagor," or if some other condition set out in the mortgage is not fulfilled by him, the property so secured may be taken and sold to cover the debt. After the foreclosure expenses, the indebtedness secured by the mortgage, and other liens have been satisfied, the "mortgagor" receives the balance if any. The power to sell is contained in the mortgage itself in most states, but in a few such a sale is prohibited, and an order from the court must be obtained.

FOR THE ACCOUNT. In England securities purchased for delivery on "account day," as the "fortnightly settling-days." "For money" is the term used of a security bought for immediate delivery.

FULLY PAID or FULL PAID. Further payment may not be legally demanded; there is no more due. When a stock has been issued in exchange for its face value in cash, property, or other equivalent, it is fully paid.

FUNDING. Providing a fund for the payment of the interest or principal of a debt—usually of the unbonded debt of some public body. For instance, if a city cannot pay its outstanding debts, which are in the form of notes due at different times, it must either renew or extend them, which is expensive, or else it may issue bonds, and pay off the notes by this method of "funding." A saving to the city will be made, as the money is usually obtained at a lower rate of interest.

GARNISHMENT (GARNISHEE). Called in Massachusetts "trusteeing." This term is used when property or credits of a debtor held for or owed him by some one else are attached for payment. If Smith has been unable to collect a sum owed him by Grant, by a legal process he attaches the latter's bank account for the amount due; in other words, he "garnishees" the account.

GOLD BANKS. None of these are in existence today, owing to the Act of February 14, 1880, which authorized the conversion of "gold banks" into "currency banks." But under the National Banking Act, associations called "Gold Banks" or "National Gold Banks," to issue bank notes payable in gold, may be and have been formed. Following the rule for taking out ordinary circulation, such banks must deposit with the treasurer of the United States interest-bearing bonds, *payable in gold*, but not more than 80 per cent. of the par value of the bonds deposited. These notes are redeemable in gold coin of the United States and are payable in the same upon presentation at the bank of issue.

GOLD BASIS. In a country that is on a "gold basis," the monetary standard is gold, and values are measured in the same way.

GOLD BONDS. This term is used in America of bonds that may be paid in United States gold coin of the fineness and weight of the present standard.

GOLD CERTIFICATES. The secretary of the treasury has been authorized by the United States government to receive deposits of gold coin or bullion of $20 or over, for which he issues certificates, or receipts, each equal to not less than $10, and which the treasurer and all assistant treasurers of the United States may redeem in gold. If the amount of gold coin and gold bullion in the treasury reserved for the redemption of United States notes falls below one hundred million dollars, the issue of gold certificates must be suspended by the secretary of the treasury, who may also suspend such issue when and for as long as the aggregate amount of United States

notes and silver certificates in the general fund of the treasury is greater than $60,000,000. To take care that at least one fourth of all outstanding certificates are in denominations of $50 or less is also the duty of the secretary of the treasury. The gold certificates in circulation amounted to $7,963,900 in 1880, $200,733,019 in 1900, and $802,754,199 in 1910. These may be used as a part of a national bank's reserve; are receivable for taxes, customs, and all public dues, but are not legal tender.

GOLD COIN OF THE UNITED STATES. Redeems Gold Certificates, Treasury Notes of 1890, and United States Notes. Issued by the treasurer of the United States and all assistant treasurers. If not below the standard weight and limit of tolerance prescribed by law, it is legal tender at its face or nominal value for all public and private debts. It is legal tender in proportion to its weight, if below the standard and limit of tolerance.

GOLD COINAGE. No charge is made for the coinage at any of the United States mints, for the benefit of the depositor, of gold bullion of standard equality. If it is not standard, a charge for refining, parting, copper alloy, etc., is made. Gold bullion of practically any amount is received for coinage by the mints, although legally they may refuse less than $100 worth.

GOLD EXCHANGE. Organized in 1864 as a result of speculation in gold during the Civil War. The memorable collapse known as "Black Friday," caused by a bull movement in gold, took place in the "Gold Room" as it was called.

GOLD PRODUCT OF THE UNITED STATES

1900	3,829,879	troy	ounces	worth $79,171,000
1905	4,265,742	"	"	" 88,180,700
1910	4,657,018	"	"	" 96,269,100
1915	4,888,000	"	"	" 101,036,000
1920	2,476,000	"	"	" 51,187,000
1925	2,412,000	"	"	" 49,860,000
1930	2,286,000	"	"	" 47,248,000
1938	5,089,811	"	"	" 178,143,400

GOLD PRODUCT OF THE WORLD since 1492, as estimated by the United States Mint, is as follows:

Years.	Gold.	Years.	Gold.
1492–1520	$107,931,000	1901–1910	$3,780,803,900
1521–1560	204,697,000	1911–1920	4,268,982,398
1561–1600	189,012,000	1921–1930	3,791,705,192
1601–1640	223,572,000	1931	560,650,527
1641–1680	239,655,000	1932	498,163,970
1681–1720	313,491,000	1933	525,070,547
1721–1760	580,727,000	1934	958,033,090
1761–1800	511,675,000	1935	1,049,973,580
1801–1810	118,152,000	1936	1,152,569,390
1811–1820	76,063,000	1937	1,229,140,430
1821–1830	94,479,000	1938	1,316,112,455
1831–1840	134,841,000		
1841–1850	363,928,000		
1851–1860	1,332,981,000		
1861–1870	1,263,015,000		
1871–1880	1,150,814,000		
1881–1890	1,060,056,000		
1891–1900	2,101,241,400		

GOLD RESERVE. With a view to preserving the equality of all forms of governmental money, and being in a position to redeem all the government legal tender notes at par on presentation, a "gold reserve" of $150,000,000 is kept by the secretary of the treasury in accordance with an Act of Congress, 1900. United States Government Bonds would be issued to replenish the reserve should it fall below $100,000,000.

GOOD WILL. The prospective material value of a business as a profit-producing enterprise, the future turnover being gauged by the results to date and the likelihood of their continuance. Defined by some as the benefit or advantage, beyond the mere value of capital, funds, or property used, acquired by an establishment. The bonded debt of a plant less its valuation at forced sale is another definition.

HEAVY. The market is heavy when owing to a steady advance too many securities are offered and so cause a fall in price.

HEDGE. To lessen a risk by speculating or wagering on two opposite chances; to reduce anticipated loss by selling or buying.

HIGH FINANCE. Extensive jugglery with other people's money.

HOLDING COMPANY. A financial combination "holding" or owning the shares of another company or companies, in order that through the ownership of their stock it may control the "sub-companies," each of which keeps its individual existence, but with managing officials appointed by the "holding company." Maine, New Jersey, and West Virginia have enacted laws especially to attract such companies, and they are generally incorporated in one of these states. The object, as a rule, is to practically consolidate two or more companies where it would not be possible to bring about actual consolidation by acquiring all the outstanding stock, or where a direct consolidation would be illegal.

IMPROVEMENT MORTGAGE BONDS. Commonly understood to refer to a "junior mortgage." An issue of bonds to provide funds for additions, betterments, improvements, etc., is secured by an "improvement mortgage." The issue is usually large enough to replace earlier mortgage bonds and also to provide for future improvements. The term "improvement bonds" is often used of "street improvement" and "public improvement" bonds among municipal issues.

INACTIVE ACCOUNT. A bank account not often credited with deposits, and against which checks are drawn at long intervals. Also used of a broker's account showing that the customer's purchases and sales are infrequent.

INACTIVE STOCKS OR BONDS. Securities difficult for the public to find the market value of, as they are bought and sold very irregularly, and are hardly ever quoted.

INCOME. In finance, the term is usually restricted to the yearly monetary return from investment; and interest return from real estate, mortgages, stocks, bonds, or from any money invested outside of one's own business.

INDORSE. The "payee" is the person to whom a draft, note, or check is made payable. To make any one of these of value to some other person, the "payee" indorses it by writing his name on the back exactly as it is written on the face. If the check is made payable to "J. Stanley Bridge," the back must be signed that way, and not "James S. Bridge" nor "J. S. Bridge." Should the face of the note give the wrong initial or otherwise be in error, and a new check issued in the right form be not easily obtainable, the "payee" may sign his correct name in addition to the one as given on the face of check. A check drawn to "Mrs. Frank Allen" should be similarly indorsed by her and her own name "Bertha Allen" written underneath. Should the holder of a check that has passed through the hands of several people, having been indorsed by each in turn, find upon presentation at the bank for payment that there is no deposit to meet it, he may fall back upon any one of the previous indorsers, not necessarily upon the one immediately preceding. For it must be remembered that the indorser of a check, draft, etc., may be held liable for its amount, unless he has added the words "without recourse," which may sometimes, but not always, be done.

INDORSEMENT IN BLANK. Only the name of the indorser is written upon the back of such an instrument, making it good in the hands of any legitimate holder. By writing the name directly above the indorsement the holder may make it payable to himself or to any one he wishes.

INDORSEMENT IN FULL. On the back of this instrument is written the name of the party to whom it is indorsed for payment, followed by the name of the indorser.

INDORSER. A person who becomes liable for the payment of a note, check, etc., by writing his name across the back, thus indorsing it.

INHERITANCE TAX. A state tax upon property imposed on inheritance. Upon assuming the duties of their offices, executors and administrators should at once, in states where an inheritance tax has been established, examine the laws in regard thereto, or take competent legal advice concerning them. The two kinds of such taxes are "direct inheritance" and "collateral inheritance." Property descending directly to a child or other lineal descendant, or to very near relatives such as father, mother, brother, husband, or wife, is subject to "direct inheritance tax," while all other inheritances come under the "collateral inheritance tax." The latter is in force in most of our

states, while the former is in force in England and is being rapidly adopted here. As a rule, the tax increases with the distance in relationship and with the amount of property inherited. Legacies to educational, charitable, and religious institutions within the state which imposes the tax are usually exempted.

INSTALLMENT. The payment made upon a security at regular intervals until the full amount is satisfied.

INTEREST. Premium paid for the use of money is called the "interest," and is generally expressed in percentage, based upon a year. If the use of $100 for six months brings $2.50 interest, that is the same as $5 for one year, and is expressed as "5 per cent." or "5%." The New York method of computing interest is as follows: the actual number of days elapsed is taken in reckoning the time. An interest table based on 365 days in the year is used; that is, the rate for one day is found by dividing the yearly interest rate by 365. By the Boston method, as it is called in that city, an interest table based on there being 360 days in the year is used, the time elapsed being computed as so many months and so many days,—30 days reckoned to each month; the rate for one month is 1-12 the yearly rate. The employment of both methods of calculation often leads to confusion on the part of the two parties to a transaction. The legal day terminates at midnight, hence any loan of money through the midnight hour calls for one day's interest. A loan at 4 P. M. repaid early the next morning would be reckoned as one day. Because seven midnights have passed between September 22 and September 29, the time is reckoned as seven days. This explains why the day on which the loan is made is not included in computing the number of days for which interest runs. The taking of interest for the use of money was not made legal in England until 1546, the rate being fixed at 10 per cent. "Interest" is used for the speculative side of the market, e. g. "long" interest, meaning those long of stock. It is also used in connection with one's ownership in a property.

INTERIM CERTIFICATE. Until the properly printed, lithographed, or engraved certificate for a given security is ready for the purchaser, a temporary or "interim" certificate is issued to him, sometimes by the corporation itself, but more often by some trust company.

INVENTORY. An itemized list or schedule of goods or property owned with their estimated market value; the annual account of stock on hand, furniture, and fixtures, etc.

INVESTMENT. The purchase of some species of property for the purpose of obtaining interest return upon money. It differs from speculation in that the safety of the principal is the first consideration, and any increase in the value thereof only secondary. Investment may be strictly defined as giving the possession and control of one's assets to another.

IRREDEEMABLE DEBENTURES. Those which, differing from bond issues, have no fixed dates of maturity, but, more like a stock, are perpetual and "irredeemable." In Great Britain railroads suffer from the disadvantage of "irredeemable debentures," their high interest rate being a perpetual charge upon the companies, the irredeemable feature preventing the "refunding" of the issue into lower interest-bearing securities.

JOINT AND SEVERAL NOTE. A note reading "We jointly and severally promise to pay," and signed by each of the parties or by a firm, as "Richards & Co.," is a "joint and several note," as is also an ordinary promissory note beginning "I promise to pay," if signed as above. Each signer is liable not only for his own share of the payment, but for the entire amount in the event of the other signer or signers being unable to pay.

JOINT NOTE. In such a note the words "joint and several" must not be inserted in the wording, "We promise to pay." It is signed by two or more persons or by a firm, as Clark & Somer. The holder must get judgment against all the signers if the note is not paid at maturity, taking out a "joint" execution against them all. He can then satisfy the judgment from the property of any one of the signers.

JOINT STOCK COMPANY. A term used more often in Great Britain than in America. The ownership in such a company is usually represented by shares of stock. These companies are of two kinds. One includes all corporations where the stockholders own the shares into which the joint stock or capital is divided. The other kind is an exaggerated form of partnership. Shares of stock are not owned, but a certificate showing his joint interest in the establishment is given to each participant, all of whom are, as in a partnership, personally liable for the debts of the company—not having the limited liability of a shareholder in an ordinary corporation. But unlike a partnership, each certificate owner has not the right to transact business for the company and the death of a member does not end the partnership. Some of our large express companies—Adams, United States, etc.—organized with the right to issue transferable shares representing beneficial interests in the company, are good examples of this second class.

JUDGMENT DEBT. A debt legalized by decree of a court.

JUDGMENT NOTE. An ordinary promissory note containing a power of attorney to appear and confess judgment for a debtor, given by him when he wishes to avoid having a lawsuit brought against him.

KITING, KITE FLYING, or KITING CHECKS. Accommodation paper used to sustain an imaginative balance in a bank, the custom which banks have of at once giving a depositor credit for uncollected checks of other people, being responsible for this practice. Two persons exchange checks for the same amount, which are properly deposited in the respective banks. But each has immediate use for a part or all of the money, expecting that the checks will not be collected before the following day, and planning to make good the amount before that time. If a man has two bank accounts, he may follow the same method by depositing in one bank a check against the other, thinking to make it good at the latter bank the next day.

LATIN UNION. The franc is adopted as a common monetary unit by France, Italy, Switzerland, Belgium, and Greece, which form the Latin Union. The unit in Italy has the same value as the franc, but is called the "lira"; the "drachma" is the term used in Greece. The gold franc equals 19.3 cents United States money.

LAWFUL MONEY. Money declared by the government to be legal tender in payment of obligations, and which cannot be refused in payment of a debt unless expressly stipulated otherwise in the contract. "Every form of money which is endowed by law with the legal tender quality." Under the revised statutes of the United States, national bank notes, silver certificates, and gold certificates are not so endowed. "Lawful money" includes gold coin, silver dollars, United States notes and Treasury notes.

LEGAL RATE OF INTEREST. States have established a fixed rate of interest, and any higher charge may be penalized by the courts as "usury." By charging borrowers a commission in addition to the interest, the legal rate is often evaded. The legal rate in some states is designed merely that creditors be not allowed to exact unfair rates from debtors, and the borrower and lender may agree upon any rate of interest without interference. On a "collateral call loan" of $5,000 or more, in New York State any rate of interest is permitted by law. Interest greater than the legal rate of the state wherein it is located cannot be charged by any national bank, and it may not charge more than 7 per cent. if there is no state limitation. All interest above 10 per cent. was declared unlawful during the reign of Henry VIII., this being reduced to 8 per cent. during the reign of James I., and to 5 per cent. during the time of Queen Anne.

LEGAL TENDER. Money which the government declares lawful in payment of a debt, and which must be accepted by a creditor. The legal tender qualities of all forms of money in the United States are stated by law as follows: "Gold coins, standard silver dollars, subsidiary silver, minor coins, United States notes, and Treasury notes of 1890 have the legal tender quality as follows: Gold coin is legal tender for its nominal value when not below the limit of tolerance in weight; when below that limit it is legal tender in proportion to its weight; standard silver dollars and Treasury notes of 1890 are legal tender for all debts, public and private, except where otherwise expressly stipulated in the contract; subsidiary silver is legal tender to the extent of $10, minor coins to the extent of 25 cents, and United States notes for all debts, public and private, except duties on imports and interest on the public debt. Gold certificates, silver certificates, and national bank notes are non-legal tender money. Both kinds of certificates, however, are receivable for all public dues;

and national bank notes are receivable for all public dues except duties on imports, and may be paid out for all salaries, demands, etc., owing by the government within the United States, except interest on the public debt and in the redemption of the national currency.'' Only gold and silver coins were here recognized as legal tender before the Civil War. When money became scarce in Massachusetts during Colonial days, wampum was made legal tender. In Virginia, tobacco was so used, and in Maryland, tobacco and Indian corn.

LETTER OF CREDIT. It is unnecessary for persons traveling to carry with them large sums of money, for by a letter of credit (issued in favor of more than one person if so desired) they may obtain money at any of the important points throughout the world, and in the coin of the country where desired for use. Certain banks and banking houses make a practice of issuing such letters. Approved securities or money equal to the amount of credit desired are deposited, and a small sum paid for the accommodation. The customer is then given a written order which, when presented at certain banks or banking houses in the cities where the traveler expects to go, entitles him to receive sums of money whose total shall not exceed the face value of the letter of credit. The signature of the holder is the means of **identification.** ''Circular'' or ''foreign traveler's letter of credit'' are the terms for those issued for use outside of the country. ''Domestic traveler's letter of credit'' for those within. ''Commercial letters of credit'' ''foreign,'' or ''domestic,'' are also issued; for example: a merchant in New York purchases merchandise in Hongkong. Procuring a ''commercial letter of credit,'' he forwards it to the seller in Cairo, who, upon presentation in his city to the banking house named in the ''letter'' may, if properly identified and presenting documents showing the actual shipment of the goods, obtain the money.

LIEN. A mortgage or other claim against property held by the possessor until his demand or debt is discharged. The ''first lien'' is equal to a first mortgage; that is, no one has a prior claim. The ''second lien'' equals a second mortgage, etc.

LIMITED or LIMITED COMPANY. Limited liability, the shareholders being free from personal liability beyond the sum invested.

LIMITED PARTNERSHIP. The partner who manages the business of such a firm must be fully liable for all its debts. The others are ''special partners,'' liable for the indebtedness of the firm only so far as the amount contributed by them to the capital, taking no active part in the management of the business. The idea of such a partnership was borrowed from the French. In 1822, it was first introduced in this country by the legislature of New York.

LIQUIDATION. The converting of one's assets and accounts into cash to pay off one's indebtedness as far as possible; the winding up of a business. On the Stock Exchange it is used when stockholders sell out their stock for money. In either case, the liquidation may be either ''voluntary'' or ''forced.'' ''Liquidation on speculative accounts'' means the closing out of such accounts.

LONDON QUOTATIONS. Only the bid and asked prices are given in London, while with us the number of shares, etc., traded in and the prices realized are given. The following shows how the stock exchange quotations are given in fractions of one pound:

1-32	equals	0 shillings	7½	pence
1-16	equals	1	3	
3-32	equals	1	10½	
5-8	equals	12	6	etc.

LONG. If a person owns more of a security than he has contracts to deliver, he is ''long'' on that security. In reference to ownership, the word is used simply as the opposite of ''short.'' An advance in price was anticipated by those who are ''long.'' If plenty of stock was offered for sale and profits were taken by the holders, the expression ''Much long stock came out'' is used.

MAINTENANCE OF WAY AND STRUCTURE. This heading is included under the general classification of ''Operating Expenses'' as laid down by the Interstate Commerce Commission. It comprises: repairs and renewals of bridges, buildings and fixtures, cattle guards, culverts, docks, fences, railroad crossings, signs, telegraph and wharves; renewals of rails and ties, repairs of roadway; printing and stationery in connection with these; also minor expenses (''Other Expenses'') for keeping the line in good condition.

MARGIN. The difference between the cost and the selling price of a given security. ''Marginal'' transactions are prohibited on the London Stock Exchange, as the custom lends itself to much abuse. Instead of buying the stock outright, the investor deposits so much money, possibly at the rate of $10 a share, with a special broker, and the latter ''carries'' the stock on commission, crediting his customer with any advance and debiting him with any fall in the market price. It is understood that in the event of a decline in price, the client will supply more cash to prevent his margin from being ''wiped out.'' More shares of stock can be bought in this way than if purchased outright, affording a greater profit if stock advances, but, accordingly, a greater loss if it declines. Many stock exchange failures have been caused by ''marginal dealings.'' For to handle such quantities of stock as are required by this business, the broker is probably obliged to borrow large sums. In a panic, he may be called upon for more ''margin,'' and calling in turn upon his clients, who are unable to give it, the failure of the broker results. The average rate charged by brokers for carrying marginal accounts is perhaps 4½ per cent. to 5 per cent., but it varies largely according to circumstances.

MARKET. The demand as indicated by price offered or obtainable. The term is of constant occurrence in financial parlance. The price or rate of purchase is referred to by ''the market is high'' or ''low''; to ''sell at the market'' means to sell at the best price obtainable. The place of sale, without reference to price or rate, is indicated by ''sell in the market.'' The prevailing rates at which money can be borrowed is implied by the ''money market.'' When prices are low and purchasers difficult to find, the ''market is bad.''

MATCHED ORDERS. Orders to buy and sell the same stock at the same price, with a view to ''manipulating'' the market, by giving an artificial activity.

MECHANIC'S LIEN. A lien on real property allowed by law to the suppliers of material and to workmen engaged in the construction or alteration of buildings. A claim by the contractor would take precedence over such a lien in some states, while in others the contrary is true.

MIDDLEMAN. An intermediary who negotiates between a buyer and a seller, receiving a remuneration for his services. Factors, agents, and brokers are three classes of ''middlemen.''

MONETARY STOCK OF THE UNITED STATES. Below are shown tables of money stock in various years, and total coinages of gold and silver.

Year June 30.	Total Money.	Money in Treasury.	Money in Banks.	Federal Reserve.	General Circulation.	Per Capita.
1914	$3,797.8	$338.4	$1,630.0	.....	$1,829.4	$18.44
1918	6,906.2	363.5	882.7	$2,061.0	3,599.0	33.96
1920	9,158.5	490.7	1,047.3	2,200.2	4,420.3	41.50
1925	8,299.4	363.9	990.8	3,637.8	3,876.9	33.58
1929	8,538.8	373.1	799.1	3,419.4	3,930.1	32.47
1930	8,306.6	247.2	853.8	3,537.3	3,668.2	29.76
1935	15,114.0	2,865.9	760.0	6,680.0	4,808.1	37.79
1936	17,402.5	2,496.4	987.7	8,664.9	5,253.5	40.89
1937	19,376.8	3,444.5	920.8	9,485.1	5,626.3	42.71
1938	20,096.9	2,302.6	991.5	11,333.4	5,469.4	42.02

(All but figures in last column in millions).

COINAGE OF THE MINTS FROM THEIR ORGANIZATION TO DECEMBER 31, 1938.

Denomination.	First Authorized.	Act Discontinuing Coinage.	Pieces.[1]	Amount.[1]
GOLD COINS				
Panama-Pacific ($50)	Jan. 16, 1915		3,019	$150,950.00
Double eagle ($20)	Mar. 3, 1849		174,105,606	3,482,112,120.00
Eagle ($10)	Apr. 2, 1792		57,683,485	576,834,850.00
Half-eagle ($5)	Apr. 2, 1792		78,911,869	394,559,345.00
Quarter eagle ($2.50)	Apr. 2, 1792	Apr. 11, 1930	20,216,590	50,541,475.00
Panama-Pacific ($2.50)	Jan. 16, 1915		10,017	25,042.50
Philadelphia ($2.50)	Mar. 3, 1925		200,226	500,565.00
Three dollar piece	Feb. 21, 1853	Sept. 26, 1890	539,792	1,619,376.00
One dollar	Mar. 3, 1849	Sept. 26, 1890	19,499,337	19,499,337.00
Louisiana Purchase ($1)	June 28, 1902		250,258	250,258.00
Lewis-Clark ($1)	Apr. 13, 1904		60,069	60,069.00
Panama-Pacific ($1)	Jan. 16, 1915		25,034	25,034.00
McKinley ($1)	Feb. 23, 1916		30,040	30,040.00
Grant ($1)	Feb. 2, 1922		10,016	10,016.00
Total gold			351,545,358	$4,526,218,477.50
SILVER COINS				
Dollar ($1)	Apr. 2, 1792	Feb. 12, 1873	855,611,127	855,611,127.00
Trade dollar	Feb. 12, 1873	Mar. 3, 1887	35,965,924	35,965,924.00

[1] All data from Annual Report, Director of the Mint, Dec. 31, 1938, p. 60–65.

TOTAL STOCK OF MONEY IN CERTAIN YEARS.

(In thousands: add 000)

On June 30.	Gold.	Silver and Minor.	U.S. Notes.	Federal Notes.	National Bank Notes.	Totals.
1913	$1,870,762 [1]	$700,421 [1]	$346,681		$759,158	$3,777,021
1918	3,162,808	809,519	346,681	$1,847,580 [1]	724,205	6,906,237
1920	2,865,482	620,191	346,681	3,405,877	719,277	8,174,528
1925	4,360,382	909,537	346,681	1,942,240	733,366	8,299,382
1930	4,534,866	976,939	346,681	1,746,501	698,317	8,306,564
1933	4,317,554	965,387	346,681	3,028,397	970,601	10,078,417
1935	9,115,643	1,323,414	346,681	3,492,854	769,096	15,113,035
1939	16,110,079	2,318,624	346,681	4,763,989	189,292	23,754,736

[1] Gold includes both gold and gold certificates; in the silver are included minor coins, $56,951 in 1913 and $127,711, for example, in 1934 in value; in federal notes are included Federal Reserve notes and Federal Reserve bank notes.

The fineness of United States gold coins is .900 to .916 2-3, silver coins .900; five-cent piece, 75 per cent. copper and 25 per cent. nickel; one-cent piece, 95 per cent. copper and 5 per cent. tin and zinc. Troy weights are used, and while metric weights are by law assigned to the half and quarter dollar and dime, troy weights still continue to be employed, 15.432 grains being considered the equivalent of a gram, agreeable to the act of July 28, 1866. The weight of $1,000 in United States gold coin is 53.75 troy ounces, equivalent to 3.68 pounds avoirdupois. The weight of $1,000 in standard silver dollars is 859,375 troy ounces, equivalent to 58.92 pounds avoirdupois, and the weight of $1,000 in subsidiary silver is 803.75 troy ounces, equivalent to 55.11 pounds avoirdupois. The space required for the storage of 1,000,000 standard silver dollars is 250 cubic feet. The standard silver dollars in the vaults of the treasury and the several subtreasuries, June 30, 1904, amounting to about $462,000,000, required 115,500 cubic feet of space. The commercial value of an ounce of fine silver June 30, 1910, was $0.54077, and the commercial value of the silver in the silver dollar on that date was 41.825 cents.

MORTGAGE. Used of both the instrument by which the mortgage is effected (called the "mortgage-deed"), and of the act of mortgaging. The mortgage duly signed and sealed is given by the "mortgagor"—more correctly spelled "mortgageor" (the borrower)—to the "mortgagee" (the lender) or to a third party who holds it as trustee for the lender. It confers to the latter the right, after following certain formalities, of possessing the property described therein should the borrower fail to meet his indebtedness, in case the mortgagor fails in his obligations.

NARROW MARKET. Used when there are very few transactions in stock or other commodities.

NATIONAL BANK EXAMINER. A person (or persons) appointed by the comptroller of the currency, with the approval of the secretary of the treasury, who is given power to thoroughly examine all the affairs of every national bank, and who must give to the comptroller a full and detailed report of the condition of each bank examined.

NEGOTIABLE. Negotiable paper, from the financial standpoint, should be in writing and signed, containing an unconditional order or promise to pay a certain sum of money at a determinable time to order or to bearer; the drawer should always be named or indicated in a bill of exchange (including check). A "negotiable" instrument, such as a check, draft, or note, payable to the order of a person, etc., can be transferred from one person to another by indorsement; a "non-negotiable" instrument or security is one which is good only in the hands of the one to whom it was originally issued, except where the corporation or person issuing the same agrees otherwise. If the words "or order" are omitted in a note made payable to Charles Willis, it is "non-negotiable," since only to Charles Willis was the note made payable, and he would not have the privilege of transferring his rights to any one else.

NEGOTIABLE SECURITIES. Any investment security possessing the essentials of negotiability, including all forms of commercial paper; drafts, bill of exchange, corporation, municipal, and government bonds.

NEW YORK COTTON EXCHANGE. Founded 1870. The largest exchange in the United States for trading and speculating in cotton.

NEW YORK EXCHANGE FUNDS or MONEY. Since New York is the great financial center of this country, payments are constantly being made through that center, causing incessant transmissions of funds between that point and all other points of the country. Therefore New York Exchange is rarely at a discount, and a check on New York is acceptable at all points.

NEW YORK PRODUCE EXCHANGE. Transactions here take place in pork, lard, grain, etc., and since April 15,1907, trading in certain industrial, mining, and miscellaneous securities. But in its "list" is not included any security listed upon the New York Stock Exchange. It is similar to the Chicago Board of Trade.

NON-ASSESSABLE. In case of the failure of the corporation, or for any other reason owners of "non-assessable" stock are not legally obliged to make additional payments upon the same. National bank notes being "assessable," their owners can be compelled to make further payments, should failure occur. If the stock is "non-assessable" that fact is generally stated on the certificate. Assessability or non-assessability is largely regulated by the laws of the state under which the corporation is chartered. "Double liability" is all that any stock may carry. If the laws demand the issuance of "fully paid" stock, and it can be proved that a stock was not "fully paid" when originally issued, showing that fraud exists, assessments may be made.

NO PROTEST. Written on a note or draft to signify "no protest" if the instrument be dishonored.

ON CALL. "Subject to call." Referring to money, etc., which may be demanded for immediate payment.

OPTION. A stipulated privilege in time contract of demanding its fulfillment within specified limit.

OUTSTANDING ISSUE. That which a company has already placed upon the market—stocks, bonds, or any other security.

OVER THE COUNTER. Used when sales of securities (particularly bonds) are made without the medium of the stock exchange, directly by bankers. Sales of all descriptions outside the stock exchange.

PAR. Of equal nominal and actual value; the actual face value of any security regardless of its denomination. Par often signifies a value of $100, but not necessarily so; mining stocks, for instance, are often issued in shares of low denomination, that the subsequent manipulations may pass unnoticed. Be sure therefore to find out the actual par value in dollars and cents before purchasing a security, and then, on the basis of a par value of $100 reckon its selling price. The difference in rules between different stock exchanges must also be considered. On the New York Stock Exchange stocks are usually quoted on the basis that either the par value is 100, or else shares sufficient to equal 100 have been put together. On the Boston Stock Exchange quotations are based upon the par value regardless of whether it is more or less than $100.

PARITY OF SILVER. $1.2929, since to be at a par with gold according to the present standard United States ratio of gold to silver (1 to 15.988) pure silver must be worth commercially $1.2929 per fine ounce.

PAR OF EXCHANGE. The coin or standard of value in the country expressed in the coin or standard of another. Gold bullion of an agreed fineness is taken as a basis of calculation. $4.866+ is taken as the "par of exchange" between this country and Great Britain, that is, the English "pound sterling" is equal to $4.866+ in United States gold coin.

PASS A DIVIDEND. Not to make payment of a dividend at the regular time.

PAYABLE IN GOLD. Bonds and securities on which the borrower undertakes to pay the interest or principal, or both, "in gold." The following wording is generally used in this matter: "Payable in gold coin of the United States of the present standard of weight and fineness"—thus affording protection should less conservative coining laws be passed during the life of the investment.

PAYABLE ONLY THROUGH THE CLEARING HOUSE. In times of financial distress, it is necessary for banks to retain some actual cash. Therefore, in place of cash, checks stamped "Through the clearing house," "Payable only through the clearing house," or with a similar expression, are sometimes accepted. While a person satisfies the law in regard to legal tender in accepting such a check, he does so as a matter of accommodation, since banks are legally required on demand to pay checks in money which is legal tender. To meet such demands banks must keep some money in their vaults. But by postponing the payment of a check until "clearing house hour" of the following business day, possibly no money would be needed, as through the machinery of the clearing house the differences between the banks in time adjust themselves.

PAYABLE TO BEARER. Checks or other negotiable instruments drawn in this way may be passed from hand to hand without indorsement, as they are good in the hands of any bona fide holder.

PAYABLE TO ORDER. "Pay to the order of Richard Booth," "Pay to Richard Booth or order," are the forms used in checks or other negotiable instruments of this kind. To make it good in the hands of any other than Richard Booth, it first must be indorsed by him. Unless the words "to order" or "to bearer" are specified, the instrument is payable only to the person mentioned therein and to no other; in other words it is not negotiable.

PERSONAL CHECK. One drawn by a depositor, not by a bank.

PERSONAL PROPERTY. Distinguished from "real property." Securities, household furniture, live stock, chattels, all movable property, and harvested crops are included.

PIT. The equivalent of the New York Stock Exchange's "Post." Four portions—called the "Pits"—of the building of the Chicago Board of Trade are set aside for exclusive dealing in grain, wheat, oats, and provisions, respectively.

POINT. The term for one per cent. If a security advances five per cent., it rises five points. One twentieth per cent. per pound equals one "point" in coffee trading, fluctuations being recorded on that basis. A decline of ¼ of a cent per pound of cotton is equal to 25 "points" or $1.25 on each bale, as a cent is divided into 100 "points" in cotton.

POOL. (1) A combination of persons agreeing to buy or sell, increase or depress the price of one or more securities, and to divide the loss or profit. By a decision in the suit of Franklin, Scott & Co., stock brokers, versus certain others, any member of a pool may be held liable for the full extent of its losses. (2) The term is used also of a movement to prevent competition and to insure mutual profit by division of business and territory, and the fixing of a monopolistic price. (3) An agreement as to a division of earnings between competing railways so that the temptations of the big shippers may be resisted, and a stable rate maintained. "Traffic pools" are arrangements for the division of business; "money pools" for the distribution of receipts.

POSTAL MONEY ORDER. A government order for the payment of money, issued at one post office and payable at another. In the United States, a money order for any amount up to $100 may be drawn. International money orders, payable in almost any part of the world, may also be procured. The person desiring to cash a money order must be able to prove his indentity. If wrong payment is made through no fault of the remitter, payee, or indorser, the department will see that the amount is made good to the sender. The law forbids more than one indorsement on a money order; but to identify a payee or guarantee the payee's or indorser's signature, one or more additional names may be written upon the back.

POWER OF ATTORNEY. Written or printed authority given by one person to another empowering him to sign a paper or document, etc., or to otherwise act in his name and stead, the same force and value to be attached as though made by the person delegating the authority. The instrument must be signed and witnessed or acknowledged before a justice of the peace, or commissioner for oaths. The power may be "general" which means that the attorney is empowered to act without restriction, or it may be a "special" power to do some particular act.

POWER OF SALE. If a debt secured by property is not paid, the lender has the right to sell the property, if such a clause has been stipulated. "Power of sale" is occasionally given by will to executors that cash may be realized from the sale of the testator's property.

PREFERRED CREDITOR. Such a creditor is legally entitled to receive payment in full before anything is paid to other creditors not preferred.

PREFERRED SHARES or STOCK. The equivalent of American "preferred stock" in England is "preference shares," and the equivalent of our "common stock" is "ordinary stock." But when this last is divided into two parts, "preferred" is applied to the first part, "deferred" to the second; also referred to as "B" and "A" stocks respectively. They share equally if the company is wound up, but in regard to dividends, the former ranks ahead. A dividend is usually declared upon the "ordinary stock," then the relative amounts for the two classes are stated. These stocks are rarely cumulative, such being referred to as "non-contingent preference stocks."

PREFERRED STOCK. Stock which takes a dividend and has a claim prior to other capital stock. Such comes after the bonds and floating debt, if any, but ranks ahead of "common stock" before which it is issued, and, as the name denotes, over which it has preference. Usually the preferred stockholders have the right to be paid out of the assets of a corporation which is winding up its affairs before the common shareholders receive anything, although in various corporations the form of preference differs, as do also the conditions governing the payment of dividends on "preferred stock." Common stocks generally sell at a lower price than the preferred, although sometimes the earnings of a corporation are so extensive that the former receives a higher rate of dividend and sells at a greater price. Sometimes "class A" and "class B" or "first preferred" and "second preferred" stocks are issued, both ranking ahead of the common shares, but differing from each other somewhat in the nature of their preference.

PREMIUM. The price or percentage of a security above its face or par value. A share of stock selling at 106 would be selling at 6 per cent. or $6.00 per share premium, if its face value were $100; but if the face value were more than $106, the stock would be selling at a discount. If it is necessary to give more than one dollar in some other money for a dollar in gold, the latter is at a premium in relation to that particular money. Currency was at a premium of 4 per cent. in 1893, when it was so scarce that certified checks were given at the rate of $104 for $100 in currency. "Premium" is also used of the price paid for an option; of the payments upon insurance policies; and is understood by "Agio" and "Bonus."

PRINCIPAL. (1) The face value of a bond or any other security on which the interest or premium is calculated. (2) One who commissions another to act for him, as distinguished from an agent.

PROFIT AND LOSS. Sometimes abbreviated to "P. & L.". The profits and losses of a concern are given under this heading in bookkeeping, and entered on the credit and debit side of the account as required.

PROMISSORY NOTE. By this the payment by one person to another of a stated sum of money at some future time is promised in writing; frequently called a "note of hand."

PROMOTER. One who plans the organization of a corporation or industry; defined by the New York legislature as "every person by whatever name, who brings together the persons to become interested in the enterprise, aids in securing subscriptions, and sets in motion machinery which leads to the promotion of a corporation." Really the intermediary or middleman between the corporation which needs funds and those having money to invest in securities.

PROTEST. (1) A formal declaration in writing made by a notary public that a negotiable instrument has been dishonored, either by non-acceptance or non-payment. In case of legal action, protesting is good evidence. State laws differ in regard to the necessity for protesting, some holding that the mere fact of presenting is in itself sufficient evidence. To protest an instrument, a notary public again presents it to the one responsible for its payment, on the same day making a note on the paper itself to the effect that it has been dishonored. A certificate of protest is then made out by the notary, who attaching the dishonored paper, writes the fact that he has presented it, the time and place of presentation, and the reasons for protesting. If payment is refused upon presentation by the notary, "notice of protest" should be sent to the last indorser, and through him to any previous indorser. The indorser or maker of the instrument should pay the fee charges of the notary. If it is utterly impossible to make collection, the fees are charged to the holder of the note. If there are no indorsements, it may not be desirable to "protest," in which case the words "waive protest," or a similar expression, may be written on a separate slip of paper and presented with the instrument. A notice of protest mailed at the general post office at the proper time is usually considered by law sufficient notice to the makers or indorsers. (2) A solemn declaration in writing made by the master of a vessel before a consul, or other authorized official to the effect that any damage or loss sustained by a disaster was not the fault of her ship, or any of her officers and crew, but was solely owing to the perils of the sea or to other unavoidable causes. (3) A declaration made by a person that a certain tax or duty which he is called upon to pay is unjustly and illegally demanded, and that its payment, if made at all, was not voluntary.

PROXY. A person formally authorized and deputed to act or vote for another. At a meeting held by the various stockholders of a corporation, officers are elected to whom is delegated the business of the corporation. A stockholder is entitled to one vote for each share, and if he is unable to be present at the meeting, he may authorize a "proxy," to vote his stock for him.

PUT. A privilege which one person buys of another to "put" or deliver to him a certain amount of stock, grain, etc., at a specified price and date. The "put" may be exercised any time during its life in New York, but only on the last day of the time limit, in London. A "put" as executed in New York reads somewhat as follows: "For value received, the bearer may deliver me on one day's notice, except the last day when notice is not required, 500 shares of the capital stock of the ..... Mining Co., at $150 per share any time within 30 days from date." This is followed by the signature, time of expiration, and an agreement that if the rights of "put" are exercised, the stock shall be accompanied by all the dividends paid thereon in the meantime. A "put" and "call" may be combined in one contract, giving the holder the option of either buying or selling at the fixed price.

QUOTATIONS. The current prices of stocks, bonds, or commodities. The "bid" or "asked" prices of the securities, or the prices at which they are sold, is the meaning on the stock exchange. Unless otherwise designated quotations refer to "common stocks."

RATE OF EXCHANGE. The price of one country's money reckoned in that of another.

RATING. The financial credit or standing of a corporation, firm, or person.

REAL PROPERTY. This includes all crops not considered of annual planting,—trees, grass, etc.; land and buildings; air or space above the surface; and everything, such as minerals, etc., below. The term also signifies the right to use other land, as by a right of way.

REBATE. A deduction, for example, a "rebate" of interest for immediate payment.

REFUNDING. Issuing of new bonds to supersede the ones falling due, and which the company or municipality is unable to pay off in cash.

REGISTERED BOND. The name of the owner is filled out on the face of a registered bond, and to be transferred from one person to another the bond must be indorsed by the person in whose name it is registered, and sent for transfer to some specified office or municipality, when a new bond will be made out to the holder. The bond may be passed from hand to hand by the use of a "transfer in blank," and any holder may fill in his or her name, on the back of such a transfer, sending it when convenient to be transferred. There are two forms of registered bonds, the first having both principal and interest registered, the second only the principal. No interest coupons are attached to the first kind, but as it matures the interest in the form of a check is mailed directly to the holder; to collect the principal sum the instrument must be correctly indorsed and presented to the proper authority. To a bond of the second kind coupons payable to bearer are attached and collected as with the ordinary coupon bond; but the principal sum of the bond itself is registered, and must be indorsed and forwarded to the proper authority for collection.

RESERVE. Lawful money of the United States equal in amount to at least 25 per cent. of the sum of their deposits in all respects must be kept on hand at all times by national banks in the "central reserve cities"—New York, Chicago, and St. Louis. Thirty-nine other prominent cities are known as "reserve cities," and while the national banks therein must maintain this 25 per cent., one half of the amount may be deposited with national banks in the "central reserve cities." Fifteen per cent. of their deposits must be maintained by those known as "country banks"—national banks not located in the "central reserve" or "reserve" cities. But three fifths of this amount may be kept in national banks in the cities mentioned. According to a ruling made by the secretary of the treasury on September 29, 1902, a 25 per cent. "reserve" maintained against deposits of public money secured by government bonds is no longer necessary. Nevertheless the banks still maintain such a reserve. Because of this ruling the 25 per cent. is now figured both ways in the weekly statement of the New York Clearing House Association banks; the public money being considered as any other deposit, and secondly in accordance with the ruling of the department.

RESUMPTON OF SPECIE PAYMENT. The Resumption Act, approved January 14, 1875, authorized the secretary of the treasury to provide for the redemption in coin of United States notes, or "greenbacks," commencing January 1, 1879, and for that purpose to use surplus revenues and to sell bonds at not less than par in coin.

SCALPING. Making a quick and small profit. The expression "scalping points off the deal" refers to those who, taking advantage of the rise in prices, buy and sell accordingly, making small profits, although not understanding just what the deal is that occasions the rise.

SECOND MORTGAGE. That placed upon property on which there is already an existing mortgage. If the owner of the property cannot pay the interest on the second mortgage, the holder thereof may foreclose the property under his own mortgage, paying what is due to the holder of the first mortgage.

SECURITIES. Written or printed papers which are an evidence of debt or property; e. g., all kinds of mortgages, stocks, bonds; in fact, all forms of investment.

SEIGNIORAGE. The profit resulting from the difference between the commercial value of the metal contained in a coin and its face value. There is no seigniorage on the coinage of gold bullion, since that is not purchased by the government, which coins it for private account, the face value of the coins equaling the commercial value of the bullion. But on the coinage of silver dollars on a ratio of 16 to 1, the commercial value of silver being far below the coinage value, a profit, or seigniorage, results.

SELLER'S OPTION. Under such a contract the seller of a security may deliver the same to the buyer

on one day's notice any time within the period specified in the agreement, but need not deliver the same until the end of the time indicated. This must be not less than four nor more than sixty days on the New York Stock Exchange. "Seller 6," seller 15," etc., indicate such a transaction, the numbers referring to the number of days agreed upon in the contract.

SELLING ORDER. An order to a broker to sell a certain security—the price of which may or may not be limited,—good for the day it is given, unless otherwise stated.

SELLING SHORT. Selling for future delivery something not yet owned, in the belief that the market price of the security or commodity will decline so that it can be bought at a less price in time to fill the order.

SHAVING A NOTE. Said of a promissory note that is discounted at a greater rate than the "legal interest."

SHORT COVERING. One makes a "short covering" or "covers his sale" when, having "sold short" on a security, he buys it at what he considers the proper time, that he may deliver according to a former agreement.

SILVER CERTIFICATES. Any person possessing standard silver dollars may in accordance with the act of February 28, 1878, deposit the same in sums of $10 and upwards at the United States Treasury, and receive for them certificates which, though not legal tender, are receivable for all public dues. The issue of denominations smaller than $10, viz., $1, $2, and $5, was authorized by the act of August 4, 1886. The circulation of these silver certificates has almost superseded that of the standard silver dollars which they represent. The silver certificates in circulation were $5,789,569 in 1880, $408,465,574 in 1900, and $465,581,977 in 1908. At his discretion, the treasurer of the Philippine Islands may receive deposits of standard silver coins of one "peso" (two silver pesos equal to one United States gold dollar) not less in amount than twenty pesos, issuing in turn "silver certificates" in denominations not less than two nor more than 10 "pesos," these certificates being receivable for taxes, customs, and all public dues in the Philippine Islands, and when so received may be reissued. They may also be counted as part of its "lawful reserve" when held by any banking association in the islands. The coin deposited for certificates must be kept in the treasury and held only for the payment on demand of such certificates.

SILVER COINAGE. United States coinage of silver since 1873, from report of Director of the Mint.

Years Calendar	Ounces Used	Dollars Coined	Subsidiary Coinage
1873–1880	114,151,137	$100,674,788	$49,466,089

1931	195,919,987	56,842,265
1932	164,892,802	46,506,363
1933	169,159,054	59,200,666
1934	190,398,156	91,929,942
1935	220,704,231	142,535,205
1936	253,695,856	115,175,382
1937	274,573,873	124,077,392
1938	267,913,031	116,641,296
Totals	16,714,819,121	$15,254,018,861

SINGLE STANDARD. A monometallic standard (usually gold) by which values are measured, in contradistinction to a "bimetallic standard."

SINGLE TAX, THE. A tax levied upon a single object of taxation, instead of upon several objects, for the support of government, especially the entire rent of land. This theory was made prominent by the Physiocrats about 1750, and was popularized by Henry George, who advocated the abolition of all taxes upon industry and its products, and the assumption of the annual rental value of all the land irrespective of the improvements in or upon it.

SINKING FUND. A process of wiping out or sinking a debt by setting aside from time to time sums to be used in payment of the whole or part of the principal. The money may be used to buy in, or pay off, from time to time, according to agreement, some of the debt itself; or may be invested in other securities to increase in amount, and applied to the payment of the debt at its maturity.

SIXTEEN TO ONE. Sixteen ounces of silver and one ounce of gold shall, according to the ratio of "16 to 1," be each coinable into an equal number of standard dollars, the mint values of sixteen ounces of silver and one ounce of gold being considered equal. In reality, the standard ratio of the United States is 15.988 to 1.

SPECIE. "Metallic money" is the generally accepted dictionary meaning. Coin of any denomination and of any metal, as distinguished from notes and bills, is understood by the United States Mint. The word is also applied to gold and silver bullion in the term "specie payment." Gold and silver coin, gold and silver certificates, and gold clearing-house certificates, are included in the "specie" of the lawful money reserve of a national bank.

STERLING. The common term for any English coin of standard value. In such phrases as 2¼ million sterling, "pounds sterling" is understood.

STERLING EXCHANGE. Exchange on Great Britain, "Sterling at Paris 25.21" signifies that at the time of the quotation twenty-five francs and twenty-one centimes, French money, was equal in value to the "pound sterling," English money; and that twenty-five francs and twenty-one centimes per pound sterling would be paid by the purchaser in Paris of a "bill of exchange" on London.

STOCK. The parts or shares into which the property of a corporation is divided. In Great Britain "shares" are dealt in according to their specific denominations, but a "stock" can be dealt in and transferred in multiples of one pound, and sometimes less. Most British railway issues are in the form of "stocks" and not "shares."

STOCK CERTIFICATE. An engraved, lithographed, or printed form, correctly filled in, sealed and signed by the proper officers, and giving the owner's name, with the number of shares of stock it represents. Blank stock certificates are usually engraved, since a security must be engraved if dealt in on the principal stock exchanges of the world.

STOCK DIVIDEND. This term is used when the profits of a corporation are retained as additional capital, instead of being paid to stockholders as a cash dividend, new stock being issued pro rata to those already holding stock of the same company. Although the market quotations may apparently show that the receiver of a stock dividend is richer than before, this is not true, since his proportionate interest in the entire capital is the same as before the stock dividend was declared.

STOCK JOBBER. In the United States a speculator who forces the prices of securities up or down for his own gain. In England, a jobber is an intermediary between other members, and is distinguished from a broker who, although a member, deals directly with the public. The term "stock jobber" in England dates back to 1688.

STOP LOSS ORDERS. Or "stop orders," given to a broker in the possibility that there may be a sudden decline in the price of the security owned. If the price of the security drops to that named in the customer's stop order, the broker offers the same for sale, obtaining for them the best price possible.

STOP PAYMENT. If a check is lost, notify the bank against which it is drawn, giving the number it bears, the date, the sum for which drawn, and to whom payable, with the request that if the same is presented no payment be made.

SURPLUS. The amount of profits which may be carried forward into the next business period.

SUSPENSION OF SPECIE PAYMENT. From January 1, 1862, to January 1, 1879, when this occurred, practically all gold and silver disappeared from circulation except on the Pacific Coast, where about twenty-five million specie, it is estimated, was generally in circulation. There was so little small change that Congress authorized the use of postage stamps, then "postal currency"—a modified form of the first, and finally paper money in fractional amounts of a dollar.

TICKER. Reliable information concerning the prices of securities and commodities dealt in upon the principal exchanges of the world is furnished by this small printing machine, operated by telegraph. On a narrow strip of ribbon called the "tape," which unwinds automatically as needed, and passing between the type-bearing wheels, runs out into a basket set for the purpose, are printed the quotations, the name of each security being greatly abbreviated. The ticker was introduced in 1867.

TIME DEPOSIT. Money deposited in a banking institution with the understanding that it shall remain for a definite time. Such deposits usually carry a higher rate of interest than current accounts.

TIME DRAFT. In a time draft, a certain day is named for payment; or it may be payable at the end of a stated length of time after sight—that is, after its presentation for acceptance.

TIME PAPER. Such notes, drafts, etc., as are payable at certain future dates.

TRADE DISCOUNT. That allowed by the wholesaler or manufacturer on goods purchased by retailers or others in the trade.

TRANSFER OF STOCK. The transference from one person to another of ownership in a corporation. The holder of the certificate fills in a blank found upon the back thereof, giving the name and address of the next owner, then signing his or her name. The certificate is then sent to the transfer agent, and, the old certificate being canceled, a new one is issued in the name of the new owner, and delivered according to instructions sent with the old certificate. Husband and wife should always transfer to one another through the medium of a third person, unless authority for direct transfer is given by state law. A certificate in the name of a married woman, properly signed and witnessed by her, is acceptable for delivery on the New York Stock Exchange, unless the transfer books of the particular company are closed, when they require a joint execution of the assignment by both husband and wife before a notary. "Charles Smith, minor, under guardianship of Horace Warren," is an example of the wording of a certificate to a person under guardianship. "Incompetent" in place of "minor" is written if the person is insane.

TRUST. As popularly understood, this signifies a combination of competing businesses or industries, that monopolistic control can be obtained. "Legal trust" denotes that a number of concerns have united, the stocks of each individual company being exchanged for certificates of the newly formed trust, issued by the trustees. These also place a manager over each constituent company.

TRUSTEE. One who has the legal custody of money or property—"holding it in trust." Used most frequently of an individual, bank, banking-house, trust company, etc., who acts as "trustee" of a mortgage.

UNDERWRITING. Guaranteeing insurance (especially marine insurance), or an issue of securities, in consideration of receiving a certain premium per cent.

UNITED STATES DEPOSITORY. Any national bank may be authorized by the secretary of the treasury as a "depository" for the moneys of the United States government. This is done that a part at least of the large sums of money which the government often accumulates may get into use; for if such should go into its hands and so out of circulation, there would be a scarcity of money for actual use, and it is to prevent this that the plan has been adopted. National banks are employed as depositories by the government for other reasons than the above. In places where sales of public lands occur, "permanent depositories" are located to receive the proceeds of such collections or sales; and also where the principal offices of internal revenue collectors are stationed. Post office money orders and United States Court funds are kept in "special depositories." Any bank accepting the above appointment must deposit adequate security with the treasury department of the United States government.

UPSET PRICE. The bottom price at which a security, etc., will be sold.

WAREHOUSE RECEIPT. When commodities are stored with a warehouse company, it issues a receipt in written evidence thereof. A merchant importing a quantity of dutiable goods may for a certain length of time keep the same in a "bonded warehouse" without paying duty; or for a limited time goods subject to internal revenue taxes may be stored therein awaiting payment of taxes.

WASH SALES. These are against the rules of the exchanges. One broker orders another to sell at a fixed price a certain quantity of stock, but buys it back when sold on the stock exchange. The sale is reported on the ticker, giving a false impression of the activity of the stock, since it did not actually change hands.

WATERED STOCK. The face value of such an issue of stock is greater than the value of the property represented thereby at the time of the issue. An increase of stock will not increase the property value of a corporation unless it is exchanged for real value.

WITHOUT RECOURSE. Without liability or responsibility. If the original signer of a check or note fails to pay the same, every indorser thereof is responsible for its payment except under certain conditions when responsibility may be avoided by the indorser's prefixing the words "without recourse" to his signature.

WOMAN'S SIGNATURE. Women are often careless in signing their names, not making it clear whether married or single. To business letters the best way for a married woman to sign her name is for example—Janet E. Clark (Mrs. Andrew B. Clark), or, Janet E. Clark, wife of Andrew B. Clark. An unmarried woman should prefix (Miss) before her signature. In checks, etc., and all legal documents, a woman must, of course, use her legal signature, which in the above instance would be Janet E. Clark. But when a married woman executes papers transferring title to something which she acquired under her maiden name, it is customary to put in the instrument she signs a clear statement of the fact.

BIOGRAPHICAL DICTIONARY OF AUTHORS

ABBOTT, JACOB (1803–1879). Author of more than 200 books that enjoyed great popularity among the young. Educated at Bowdoin College and Andover Theological Seminary. Taught and preached in Maine, Massachusetts, and New York for many years. After 1848 wrote exclusively. Best known for the Rollo series of books for boys, interesting didactic tales of heroism, also ten volumes of *Franconia Stories*, and 22 biographies, and the *Young Christian*. Born at Hallowell and died at Farmington, Maine, where he lived mostly after 1839. His brother, John S. C. Abbott (1805–1877), also wrote a series of historical biographies. His *Mother at Home* was long popular in many lands; his *Napoleon Bonaparte* is readable but unscholarly.

A'BECKETT, GILBERT ABBOTT (1811–1856), founded *Figaro* in London, similar to *Punch*, to which he contributed all his life. Best known for his three score of plays, notably dramatizations of the shorter stories of Charles Dickens in collaboration with Mark Lemon.

ABENEZRA (1093–1167). Very learned Jewish commentator on grammar and the Hebrew Scriptures, and translator from Arabic to Hebrew. Browning's *Rabbi Ben Ezra* is an attempt to interpret in poetry the optimism of a man like Abenezra.

ABOUT, EDMOND F. V. (1828–1885), French journalist and novelist; member of French Academy. Educated in Athens. One of brilliant but "undisciplined" school of writers. Liberal and after 1870 a republican, and the *Nineteenth Century*, his paper, became a power. Several dramatic light pieces or farces now famous.

ABU NUWAS (c. 756–810), greatest Arab poet of his age, wrote realistic descriptions of the aristocrats of Bagdad with their lightness and love of wine. One collection of his poems contains nearly 5,000 verses. He ridiculed the popular *casida* or elegy form.

ACCOLTI, BERNARDO (1465–1536). Immense throngs of learned people gathered to hear him recite improvised verses. His works, entitled *Virginia*, first published at Florence in 1513, have several times since been edited and translated. Known as the "Unique Aretine" from his birthplace, Arezzo. His father, Benedetto, wrote a Latin history of the first crusade, which gave Tasso much material for the *Jerusalem Delivered*.

ADAM DE LA HALE (LA HALLE) (c. 1238–1288), French troubadour, wrote *Jeu de Robin et Marion*, often called the first French musical play with secular material, precursor of comic opera. It is a

dramatic pastoral with music at intervals and popular refrains. His *Le jeu Adan* (Adam) introduced himself, his father, and others of Arras, his native town, in a comic satire. He made a satirical farewell to Arras, and an unfinished poem in honor of Charles of Anjou.

ADAM, GRAEME MERCER (1839–1912). Canadian author of Scotch birth. Known for his *Outline History of Canadian Literature, The Canadian Northwest.* Founded the *Canadian Bookseller* and *Canadian Monthly* and *National Review*, which flourished for a time. After 1892 lived mainly in New York City and Chicago.

ADAMS, CHARLES FOLLEN (1842–1918). An American poet whose German dialect pieces are known for their simple humor and pathos. Served in Union army and was wounded at Gettysburg. His best poems are found in the volume with the title, *Leedle Yawcob Strauss*, and in *Dialect Ballads*.

ADAMS, FRANKLIN P. ("F. P. A."), (1881–). Columnist and humorist. His column "Conning Tower" in the *New York World* gained celebrity. Wrote a musical skit with O. Henry, called *Lo*. Best known for *Tobogganing on Parnassus*, 1910; *By and Large*, 1914; *So Much Velvet*, 1924.

ADAMS, HANNAH (1755–1832). Claimed as first woman in United States to become a professional author, though her books brought her more fame and friends than money. Mastered much learning by herself, including a fair knowledge of classic languages. Wrote *Views of Religious Opinions, History of New England, Evidences of Christianity*, an *Autobiography*, and other treatises.

ADAMS, HENRY (1838–1918). Historian, essayist and scholar, became best known for his *Education of Henry Adams*, in which he attempted to show how imperfectly the literature and education of the eighteenth century adapted the man of our age to his environment. His *Mont Saint Michel and Chartres* is a valuable study of the life and temperament of the Middle Ages. His nine-volume history of the period from 1801 to 1817 takes high rank, expressly for its study of early diplomacy in America. He wrote several scholarly biographies, and a novel, *Democracy*, anonymous till after his death.

ADAMS, SAMUEL HOPKINS (1871–). American journalist, graduate of Hamilton College, became connected with the New York *Sun*, the McClure publications, and *Collier's Weekly*, for which in 1905 he wrote a sensational exposure of quack medicines, and in 1915–1916, a similar series on advertising for the New York *Tribune*.

ADAMS, SARAH FLOWER (1805–1848). The author of *Nearer, My God to Thee* and many other celebrated poems, chiefly religious, also wrote *Viva Perpetua*, a long dramatic piece based on the life of the early Christians, some of which is truly noble in conception and inspiration.

ADAMS, WILLIAM TAYLOR. See OLIVER OPTIC.

ADDISON, JOSEPH (1672–1719). English poet and essayist. Some of his earliest poems were occasional and complimentary addresses, and he was asked to commemorate the battle of Blenheim. The resulting poem made him famous; it was entitled *The Campaign*. He also received several government offices and grants. In 1709 Steele started the *Tatler*, and Addison became a contributor almost at once. On March 1, 1711, the first number of the *Spectator* appeared, and the last on December 20, 1714, but for a year and a half meanwhile the *Guardian* took its place. This paper, at first a daily, contained an essay, at times comment on foreign affairs, some notices of books, and a few advertisements. It was a broadside of small dimensions, but almost every householder welcomed its morning appearance. Addison's style was urbane and clear, free from great prejudice, but touched with occasional satire and humor. His later life was saddened by an uncongenial marriage with the Dowager Countess of Warwick, whose son gave him much annoyance.

ADE, GEORGE (1866–). For 13 years after his graduation from Purdue University, Ade was a journalist, mainly in Chicago, where he acquired a knowledge of life and manners reflected in his light, humorous, and sophisticated stories, sketches, and operettas. *Doc Horne*, his early story now famous, his *Fables in Slang*, probably his most popular treatment of the American vernacular, and his light pieces like *The College Widow* and *The County Chairman* won him, with many others of similar style, an established fame and fortune.

"A. E." See RUSSELL, G. W.

AESCHINES (*ĕs'ki-nēz*) (389–314 B. C.). Opponent of Demosthenes, his fellow orator, he was accused of betraying the Phocians, whom both had agreed to support. Barely acquitted of charges of wrong in 343, he stirred up a sacred war in 339, when he secured favorable terms with Philip on the latter's entry into Athens. Demosthenes again attacked him in 337, when it was proposed to crown the former with laurel for his services to Greece, and finally, in 330 secured a condemnation, and Aeschines withdrew to Rhodes. His three great orations, *Against Timarchus*, who supported Demosthenes; *On the False Embassy*, in which he defended himself against the charge of deceit, and *Against Ctesiphon*, who proposed the laurel crown, are his best, they being examples of fiery invective and argument.

AESCHYLUS (*ĕs'ki-lŭs*) (525–456 B. C.). Greek tragic dramatist, precursor of Sophocles and Euripides. See GREEK LITERATURE.

AESOP (*ē'sop*) (c. 620–c. 560 B. C.). A real or mythical author of *Fables*, from which the modern type has derived. Many legends concerning him were current in the Middle Ages, and a life was composed in the fourteenth century, but an earlier manuscript has been found in Florence. Records of his reciting fables at various points have survived. It is said, for instance, that he persuaded the men of Athens not to overthrow their ruler Peisistratus when he recited his fable of *The Frogs Asking for a King*, which shows the danger of changing one ruler for another untried. Early manuscripts of his *Fables*, if any existed, have been lost. Phaedrus about the fourth century adapted 42 of the stories. Finally, Maximus Planudes collected versions which have come down to us. Doubtless many stories were added to the original store of Aesop. Modern literature owes a tremendous debt to these and similar fables. (See under Fable, pages 32 and 879.)

AIDE, CHARLES HAMILTON (1830–1906). After serving in the English army, he settled in the New Forest, and there wrote a series of novels of polite society, the best remembered being *Rita, The Marstons, Passages in the Life of a Lady*. His poems include *Eleanore* and *Songs without Music*.

AINSWORTH, WILLIAM HARRISON (1805–1882). Next to Walter Scott he was the most popular novelist of his period in England. His first story attracted Scott, who encouraged him to proceed, and his next, *Rookwood*, with its vivid account of the ride of Dick Turpin, was long a great favorite. Among forty or more fictions, his best known now are *Jack Sheppard, The Tower of London*, and *Windsor Castle*. Early in life he was first interested in law, then in publishing, and later in editing *Ainsworth's* and the *New Monthly Magazine*.

AIRD, THOMAS (1802–1876). Carlyle said that his collected poems, published in 1848, had in them "a healthy breath as of mountain breezes." His *Devil's Dream* and his sketches of nature have won a great fame among the simple folk of Scotland.

AKENSIDE (*ā'ken-sīd*), **MARK** (1721–1770). Studied theology, but became a doctor, and finally was appointed physician to the queen. Through his friends Dyson and Dodsley, the publisher, contributed to the *Museum, or Literary and Historical Register*. His *Pleasures of Imagination* drew for ideas on Addison and other essayists of the age. At first an independent in politics, he is caricatured as the republican physician in Smollett's *Peregrine Pickle;* but finally both Dyson and he became Tories.

AKSAKOV, SERGEI T. (1791–1859). Leader of the greater Russian coterie, he was influenced to write by Gogol. Aksakov pictures Russian life before the liberation of the serfs with unerring fidelity and great literary charm. His works became classics among his own people. Among them are *Chronicles of a Russian Family, Recollections, Recollections of Gogol*. Two of his sons became authors and patriots in the Panrussian cause.

ALARCON (*ä'lär-kōn*), **JUAN RUIZ DE** (c. 1581–1639). Spanish dramatist, born in Mexico, but educated in Spain. His most famous play *Verdad Sospechosa* or *Truth Suspected*, in English, formed the basis of *Corneille's Menteur*. *El Teiedor de Segovia*, or in English, *The Weaver of Segovia*, is an intimate picture of Spanish life, manner, and sentiment. Though intent on didactic aims, his work is full of brilliant and natural dialogue.

ALAS, LEOPOLDO (1852–1901). Spanish novelist, critic, and professor of law at Oveido, where the scene of his chief novel, *La Regenta*, is laid with remarkable

fidelity. Through ruthless analysis this story gained a place among the best of the age.

ALCMAN (flourished in 7th cent. B. C.). As founder of Doric poetry, regarded as first among nine lyric poets of Greece in early times. Wrote songs in various measures, the chief being hymns, processionals, and love-songs, the invention of which was attributed to him, and the maiden songs of *Parthenion*, fragments of which were discovered in an Egyptian papyrus in 1852. Very little of his now remains.

ALCOTT, LOUISA MAY (1832–1888). Early she resolved to make money to relieve the poverty of her family, which suffered from too much musing and philosophy of her father, A. Bronson Alcott. She began as a doll's dressmaker, taught school for a time, and once went out at domestic service. After writing some sketches and essays for periodicals, she entered the Union service as a nurse for a time in 1862–1863 at Georgetown, D. C., out of which experience her letters home were revised as *Hospital Sketches*, and at once established her fame. Much of her work was based on her own experience and those of relatives and friends. She is the "Jo" of her own *Little Women*, the most perennially popular book for girls yet written in America. *An Old-Fashioned Girl, Little Men, Jack and Jill, Eight Cousins* are favorites still, though her own choice, a novel called *Moods*, is no longer much read. Wholesome everyday life, common joys, and the inevitable pathetic form the staple of her work.

ALDEN, HENRY MILLS (1836–1919). Scholar, author, and editor of *Harper's Magazine* from 1869 till his death. His deep philosophical essays, *God in His World* and *A Study of Death* have been widely read. Profoundly influenced the literature of his time because of his high editorial standards.

ALDEN, ISABELLA MACDONALD (1841–1930). Under name "Pansy" wrote 75 books for the young, editing also the juvenile paper called *Pansy*, 1873–1896. Her stories translated into various languages enjoyed immense popularity. *The Prince of Peace*, her life of Christ, gained many favorable notices.

ALDEN, RAYMOND MACDONALD (1873–1924), son of the preceding and Rev. G. R. Alden, was a professor of English at Leland Stanford University for many years, and wrote numerous critical and informative books in his field.

ALDRICH, BESS STREETER (1881–). Representative author of stories of the Middle West, including *Mother Mason, The Rim of the Prairie, A Lantern in Her Hand.*

ALDRICH, THOMAS BAILEY (1836–1907). American journalist, editor, and author, born at Portsmouth, N. H. His first success, *Story of a Bad Boy*, partly autobiographical, revives some of his early impressions of New Orleans and Portsmouth. From about 1855 to 1890 connected with various periodicals, including the editorship of the *Atlantic Monthly*, in which he was eminently successful. As a graceful and artistic poet, descriptive and emotional, he ranks very high in our literature. His short stories like *Marjorie Daw* (1873), *Quite So* (1872), and *Goliath* (1893) illustrate his graceful and humorous style, together with the surprise ending characteristic of much of his lighter work, and this became a vogue in later short narratives.

ALEARDI, ALEARDO (1812–1878). Italian patriot and descriptive poet, who among other works, published a fine ode to the maritime cities of Italy (1856), and two years later one on his own misfortunes after his imprisonment for part in a political uprising. Eventually became a professor of art at Verona and later a senator.

ALEMAN, MATEO (1547–1609?). Spanish novelist whose picaresque *Guzman de Alfaracha* went through 16 editions in five years and set the fashion for a time along with *Don Quixote* of Cervantes. Came to Mexico City about 1608, issued there a work on reform of Spanish spelling, and then dropped from notice. May have lived till 1617.

ALFIERI (*ahl'fe-ay're*), **VITTORIO, COUNT** (1749–1803). Of his 19 patriotic dramas, *Saul* is still regarded as his masterpiece. His work is marred as artistic drama by his special pleading against tyranny, but he inspired many young men to seek for an independent and united Italy. See ITALIAN LITERATURE.

ALGER, HORATIO (1834–1899). An American Unitarian clergyman, who moved from New England to New York City in 1866 and tried to improve the conditions among newsboys and others. Many of his more than 100 stories reflect his experiences. His Luck and Pluck, Ragged Dick, and Tattered Tom series have been read by countless boys, and hundreds of thousands of copies have been sold. Noted for sturdy ideals and strict notions of honor though they are, sometimes the stories might lead boys to expect too much material reward from doing what is right.

ALISON, SIR ARCHIBALD (1792–1867). Voluminous but careful historian, who spent 15 years in collecting material for his *History of Europe*, which was soon translated into most of the languages of Europe and into Arabic and Hindustani. The first 10 volumes, completed in 1842, went through 10 editions, but the last 4, covering the period from 1815 to 1856, were not so popular. His *Principles of Population* replied to the arguments of Malthus.

ALLEN, GRANT (CHARLES GRANT BLAIR-FINDIE) (1848–1899). Of Irish descent, born in Canada, taught for a time in Jamaica, and then lived in England. His specialty was scientific works in popular style, such as *The Evolution of the Idea of God*, and, in novel form, *The Devil's Die* and *The Woman Who Did*. The last of these treated in 1895 the problems of sex, receiving within the next few years the generous flattery of many imitations.

ALLEN, ELIZABETH AKERS (1832–1911). American author now largely known for her *Rock Me to Sleep, Mother*, issued in 1860.

ALLEN, JAMES LANE (1849–1925). For years he taught Latin and English, mainly at Bethany College in West Virginia. His short stories in the volume entitled *Flute and Violin* (1891) still take high rank for delicacy of thought and sentiment. Most of his writing has the blue-grass region of Kentucky as a rich background. His *Kentucky Cardinal* tells with great imagination and force the story of a bird, to which *The Choir Invisible* is the sequel. Of his later works, *The Reign of Law* relates the account of a youth who found a newer insight into science at odds with his old-fashioned faith. Allen reminds one somewhat of Hawthorne.

ALLIBONE, SAMUEL AUSTIN (1816–1889). American merchant who later became a librarian and bibliographer. Characterized by an accurate and wide learning, for years his *Critical Dictionary of English Literature, Prose Quotations*, and *Poetical Quotations* were recognized as standard works.

AMICIS, EDMONDO DE (1846–1908). Though his account of army life, *La Vita Militaire*, was long famous, his reputation now rests quite largely on his travel descriptions of visits to London, Spain, Holland, Turkey, and Morocco.

AMIEL, HENRI FREDERIC (1821–1881). Having become an appointee of the democrat party as a professor of philosophy at Geneva, he felt somewhat isolated from literary and artistic groups, who were aristocratic, and so he composed his elaborate *Journal Intime*. This has consoled many lonely people in various lands. Mrs. Humphrey Ward made the English translation.

AMMIANUS MARCELLINUS (c. 330–c. 400 A. D.). A noble Greek of army training, settled in Rome. Late in life wrote a history of Rome from about 96 to 378, but only 18 of 31 books remain, covering from 353 to 378, and continuing the history from Tacitus. Fine pictures of life and society, predicting the fall of Rome 20 years later.

ANACREON (*a-năk'rê-ŏn*) (c. 560–c. 476 B. C.). Early Greek lyric poet of love lyrics and possibly hymns. Later authors mention five books of his works, but only brief quotations now remain. Was a soldier and seeker of court society. The English Cowley wrote what he called "anacreontiques," and Tom Moore in 1800 imitated the style of the fragments attributed to Anacreon.

ANDERSEN, HANS CHRISTIAN (1805–1875). Though he tried at times to be actor and dramatist, Andersen achieved his great success as writer of delightful *Fairy Tales*, several volumes of which appeared between 1835 and 1872. All translated by Mary Howitt into English and by many others into nearly every modern language. He also wrote poems, books of travel, and novels with some success.

ANDREEV, LEONID N. (1871–1919). Russian author, at first a law student, and then a journalist. From 1901 to 1917 he issued a large number of works of great merit. The *Red Laugh*, founded on the Russo-Japanese War, is an indictment of all warfare; *To the Stars* is a four-act poetic drama; *Silence and other Stories* contains some of his best narratives;

and *The Sorrows of Belgium*, written during the World War, is an eloquent tribute to courage of the Belgians. Works known in America because of excellent translations are the *Life of Man*, a mystery play, and *He Who Gets Slapped*, a morality.

ANEURIN (c. 600). Welsh bard who described the battle of Cattraeth (called Degston in the *Saxon Chronicle* according to Stephens) in which the English suffered defeat. He named it *Gododin* from the name of his own clan near the Firth of Forth. Some seek to identify him with the historian Gildas.

ANNUNZIO (*ăn-nōōn'dzē-ō*), **GABRIELE D'** (1863–1938). Italian patriot, poet, and dramatist, who held Fiume under his command for 15 months after the World War, defying Italy and all Europe. Wrote many bitter articles claiming Italy entitled to extend her frontiers toward the east. Ardent Fascist. His early novels before 1900 are greatly admired, but his dramas are probably his best work, such as *Francesca da Rimini*, giving the medieval setting and atmosphere in perfection; *La Gioconda*, in which Eleanora Duse attained great popularity; *La Nave*, one of his attempts at historical drama, this one portraying the early glory of Venice as a naval power.

ANSTEY, F. (1856–1934). Pen name for Thomas Anstey Guthrie, English attorney and author of droll, clever, and immensely entertaining short stories. He wrote, among others, *Topsy-Turvy*, *The Black Poodle*, and *The Tinted Venus*.

ANTIMACHUS (fl. c. 400 B. C.). Developed the learned type of epic, prepared an edition of Homer, founded the Alexandrine school of Greek literature. His main work is the *Thebais*, an elaborate epic narrating the expedition of the Seven against Thebes.

ANTIN, MARY (1881–). Born in Russia, but lived in the United States after 1904; married Professor A. W. Grabau in 1901. Her books, notably *The Promised Land* and *They Who Knock at Our Gates*, tell the story of first impressions the immigrants get of American life.

ANZENGRUBER, LUDWIG (1839–1889). Popular Austrian author of plays of peasant life, some gloomy and some comic, short tales of the village called *Wolken und Sonn'schein*, and *Das vierte Gebot*, a problem play not unlike Ibsen's *Doll's House*.

APION (fl. first cent. A. D.). One of embassy from Alexandria that complained to Caligula at Rome against the Jews; answered by the learned Josephus in his *Contra Apionem*. Taught rhetoric and grammar at Rome. The story of Androclus and the lion, a favorite in romance and drama, used again recently by Bernard Shaw in his play, comes from Apion's writings.

APULEIUS (*ăp'ū-lee'yŭs*), **LUCIUS** (fl. 160 A. D.). Philosopher and moralist; wrote the *Metamorphoses*, now called the *Golden Ass*, the story of the adventures of a young man turned into an ass and restored later to human form by aid of Isis. Contains an original allegory, fragments of old literature, rapid narrative of all sorts of transformations and changes of fortune. The beautiful story of Cupid and Psyche comes from Apuleius; so do some of the episodes used by Cervantes, by the author of *Gil Blas*, Boccaccio, and more modern story tellers. Great favorite in the Middle Ages and since.

ARANY (*o'ro-ny*), **JANOS** (1817–1882). Great Hungarian epic poet who made literature popular but dignified and artistic. Won several prizes. His *Lost Constitution* is a satirical poem treating of contemporary politics, but his great trilogy, *Toldi*, *The Love of Toldi*, and *Toldi's Evening* gave him lasting fame and international appreciation. Translated Aristophanes and edited some plays of Shakespeare.

ARATUS (*ă-rē'tus*), **OF SOLI** (b. c. 315 B. C.). Known now only in a few fragments, was a Greek poet quoted by St. Paul in *Acts* 17.28. Influenced both Cicero and Virgil.

ARBUTHNOT, JOHN (1667–1735). Fashionable Scotch doctor, friend of Pope and his circle. Popularized the idea of John Bull in his *Miscellanies*, a series of prose essays and sketches, including five papers devoted to *History of John Bull*. Pope's *Epistle to Dr. Arbuthnot* forms the prolog to his own satires.

ARGENSOLA, LUPERCIO LEONARDO DE (1559–1613). Spanish official historian of Aragon, translator of Latin poets, with some original satires, and three tragedies imitated from Seneca, which Cervantes said delighted all who heard them.

ARIOSTO (*ă'rē-ōs'tō*), **LUDOVICO** (1474–1533). Forced to study law against his will and for much of his life to follow a courtly patron to get a living, Ariosto found time to compose his noble epic *Orlando Furioso*, or the *Mad Orlando*. In 46 cantos, revised again and again, Ariosto traced through many adventures the love of Ruggero and Bradamante, together with the events leading to the madness of Orlando. Noted for its vividness, pathos, and artistic charm. See ITALIAN LITERATURE.

ARISTOPHANES (*ăr'ĭs-tŏf'ă-nēs*) (c. 450–c. 380 B. C.). Greek earlier poetic author of more than 40 comedies. Among the best known are *The Wasps*, a satire on the love of litigation among the Greeks; *The Birds*, variously interpreted as allegory or satire on caprice as to laws or a protest against religious cults; *The Frogs*, an attempt to calm the minds of men during troublous times; *The Babylonians*, an attack on the system of choosing officials by lot in Athens. Though he scorned innovations and intellectual attainments, as a poet and artist he is almost beyond reproach for his combination of subtle and broad comedy. See GREEK LITERATURE.

ARNDT, ERNST MORITZ (1769–1860). German patriotic poet, called often "the most German of all Germans." Did much to arouse the people against Napoleon. Songs like *Was ist das deutsche Vaterland?* and *Was blasen die Trompeten?* were known in every home. Wrote some beautiful religious poems and many scholarly works.

ARNOLD, SIR EDWIN (1832–1904). Though Arnold spent 40 years as a journalist, he is now known only for his translations of Sanskrit works; *The Light of Asia*, a poem in which the spirit and teachings of Buddha were glorified; and *The Light of the World*. The last was written to meet the criticism that Arnold exalted a non-christian religion too highly, and so Christ is the center of this great epic poem. Yet the other work contains his best descriptions and most delicate touches of color and imagination. Arnold also wrote two works on Japan, where he lived several years late in life.

ARNOLD, MATTHEW (1822–1888). English inspector of schools, poet, critic, and essayist, Arnold represents the highly intellectual man of culture. *Dover Beach* and other poems have a haunting melancholy; his *Essays*, a classical and highly polished manner; and his tempered controversial writings in *Culture and Anarchy*, *Literature and Dogma*, and *Discourses in America* brought forth wide interest and no little dissent. Narrative poems like *Balder Dead* and *Sohrab and Rustum* have long been favorites in the schools because of their finish, reserve of feeling, and beauty that reminds one of a Greek statue.

ATHENAEUS (c. 160–c. 210). Now known for his account of learning, banqueting, etiquette, and various subjects discussed in 15 books, not all of which have survived. By quoting from 800 authors, most of whom perished, he shows the extent of ancient literature.

ATHERTON, GERTRUDE FRANKLIN (1857–). Lived much of her life in California and abroad. Wrote novels of social life, including *The Californians*, *Senator North*, *The Conqueror*, and *The Living Present*.

ATTERBOM, PER DANIEL AMADEUS (1790–1855). Swedish romantic poet, whose studies of authors, and attempts to found a literary journal, had a profound influence on his age. Of his own works, *The Fortunate Island*, a drama, *The Flowers*, a cycle of lyrics, and a dramatized fairy tale, *The Blue Bird*, extant now only in a beautiful fragment, were his noblest, most delicate, and popular.

AUERBACH (*ou'ĕr-bäk*), **BERTHOLD** (1812–1882). Through his study of Spinoza he was turned away from his intention to become a rabbi, and then devoted his life to writing stories and novels of life in the Black Forest, which he depicted with charm and vividness. Because of his attractive view of the philosophy of life, he had an immense vogue and numerous imitators.

AUGIER (*ō'zhē-ā'*), **GUILLAUME VICTOR EMILE** (1820–1889). Opponent of the sentimental and melancholy romanticism of his day, he wrote nine successful lyric dramas of great moral earnestness depicting bourgeois society at its best.

AUSTEN, JANE (1775–1817). Basing her novels on an acute and exact observation of English life of her period, Miss Austen came to be regarded as the leader of a new realistic school. Humor, refined sentiment, and good common sense characterize her writings. She opposed sham, conventions, and the foolish romanticism found in most of the novels of the time.

Pride and Prejudice and *Sense and Sensibility* still charm us in home and school. Her *Northanger Abbey* ridicules the bugaboo and maudlin sentiment of the novels now called Gothic romances. Walter Scott said that Miss Austen could do simple life to perfection, while all he could attain was the "big bowwow."

AUSTIN, ALFRED (1835–1913). After the death of Tennyson in 1892, no poet laureate was appointed in England for four years. Then Alfred Austin was chosen instead of several better known authors. His early satire, *The Seasons*, has knowledge of life and humor, and most of his volumes, like *Prince Lucifer* and *England's Garden* have delicate and sincere love of nature and some imagination.

AYTOUN, WILLIAM EDMONSTOUNE (1813–1865). In his own words he "followed the law but could not overtake it," and then turned to journalism. Professor at Edinburgh for a time. Great parodist, imitating Tennyson, Tom Moore, Dobell, Alexander Smith, and others. *Montgomery, a Poem* and *The Massacre of Macpherson* are his best-known travesties. In serious works like *Bothwell* and his redactions of the ballads of Scotland he resembles Scott.

BACCHYLIDES (*bă-kĭl'ĭ-dēz*), (fl. 467 B. C.). Recognized by Alexandrian scholars among their favorite nine Greek lyric poets. Pindar considered him a rival. Only fragments of about 100 lines remained till in 1897 a mutilated papyrus of his works was acquired in Egypt and restored by the British Museum. Much given to picturesque touches and use of epithets. In an ode celebrating a horse race, Pindar gives two lines and Bacchylides ten to the details themselves.

BACHELLER, IRVING (1859–). An American author of novels of local color and vivid characterization as in *Eben Holden* and *Dri and I*, stories of northern New York.

BACON, FRANCIS. See INDEX.

BACSANYI (*bō'chàn-yē*), **JANOS** (1763–1845). Influential patriotic Hungarian poet, whose *Valor of the Magyars* (1785) was followed by many other lyrics. He founded the *Magyar Museum*, suppressed in 1792, and he was imprisoned two years later on a charge of conspiracy against the government. After translating the manifesto of Napoleon in 1809, he fled to Paris, but in 1814 was seized and allowed to live in Linz. Collected poems published at Budapest in 1827.

BAGEHOT (*bāj-ŏt*), **WALTER** (1826–1877). British economist whose papers and essays as editor of *The Economist* and in his books like *The English Constitution* and *Lombard Street* have remarkable freshness and likewise scientific accuracy. These and *Physics* and *Politics* had profound influence on statecraft of the age, the latter notably on the continent.

BAGGESEN, JENS (1764–1826). Danish author of *Comical Tales*, which at 21 made him the talk of Copenhagen. Though he had a profound influence in fixing and polishing Danish style in literature, he quarreled with his contemporaries and lived many years abroad, especially in Paris. His simple little poem, "There was a time when I was very young," translated into English by Longfellow, is known in every Danish household today. *Labyrinth*, a fine descriptive lyric and *Perthenais*, an epic in hexameters, are best known of his poems.

BAIF, JEAN ANTOINE DE (1532–1589). French translator of Greek and Latin poets, especially elegies; author of numerous amatory and occasional poems; tried to fix relation between music and verse.

BAILLIE (*bā'lĭ*), **JOHANNA** (1762–1851). Now best known as author of poems, but she aspired to be a playwright, and had the assistance of Walter Scott in arranging her *Family Legend* for the stage of Edinburgh. Her tragedy, *De Montford* attained ephemeral fame, largely through the acting of John Kemble and Mrs. Siddons in London. Miss Baillie sought to "delineate the strange passions of the mind," making both a comedy and tragedy for each chief emotion. Lack of real theatrical technique prevented any large success.

BAIRD, HENRY MARTYN (1832–1906). An American historian; published a three-volume account of the Huguenots, now a model of thoroughness and impartiality. His brother Charles Washington (1828–1887) left an unfinished work dealing with the Huguenot emigration to America, 2 volumes.

BAKER, ERNEST A. (1869–). English librarian and editor. Best works are *Guide to the Best Fiction*, revised 1913, *History in Fiction*, *The Public Library*, all useful to students; edited Cassell's English and French dictionaries.

BAKER, RAY STANNARD (1870–). American journalist and author of many books, including *What Wilson Did at Paris*, *Woodrow Wilson and World Settlement;* edited with Prof. W. E. Dodd, *The Public Papers of President Wilson.* Under pseudonym of David Grayson wrote *Adventures in Friendship*, *Great Possessions*, and other optimistic essays.

BALLANTINE, WILLIAM (1825–1894). Scotch writer of stories who spent six years with the Hudson Bay Company in Canada. Wrote *Hudson Bay, or, Life in the Wilds of America*, and a series of fine adventure books for boys, including *The Young Fur-Traders*, *The World of Ice*, *The Dog Canoe*, in all about 100 books.

BALMONT, CONSTANTIN (1867–). Russian poet. Among his works are a translation of Shelley, *Under Northern Sky*, *In Boundless Space, Only Love*, *The Liturgy of Beauty*, and *The Bird of Flame.*

BALZAC (*bāl'zăk'*), **HONORE DE** (1799–1850). French novelist of tremendous output, 85 titles, and a dozen other prose works. Intended for the law, he acted for a time as clerk to a notary, and there learned much of the tricks which he exposed in his works. He planned a great Comedy of Humanity (*La Comédié Humaine*), but no man, even as accurate and indefatigable as Balzac with twice the length of life, could have completed this on the original scale. His knowledge is prodigious and fairly accurate, but his books are cluttered with too many details. For many of them he visited scenes of battles and other points for local color. Credited with a profound knowledge of the hearts and ways of women. He courted at intervals Mme. Hanska for 15 years, and their marriage three months before his death freed him from the load of debt which had always oppressed him. *Father Goriot*, *Eugene Grandet*, *Lost Illusions*, *Séraphita*, the last an attempt at poetic prose and rhapsody, *Le Médicin de Campagne*, and the very droll *L'Illustre Gaudissart* are among his best-known fictions.

BANCROFT, GEORGE. See under EDUCATORS.

BANGS, JOHN KENDRICK (1862–1922). American humorist, editor, and lecturer. Now known chiefly for his clever and funny *House Boat on the Styx*, *Ghosts I have Met*, *Hours with the Idiot.*

BANIM, JOHN (1798–1842). Called the Scott of Ireland. With his brother Michael (1796–1874), he wrote of the Irish peasants in a series called *Tales of the O'Hara Family.* Other novels are *The Nowlans*, *The Croppy*, *The Denounced*, *The Ghost Murder.* Michael Banim wrote *Father Connell*, *Clough Fionn*, and *The Town of the Cascades.*

BARBAULD, ANNA LETITIA (1743–1825). For a school kept by herself and husband, she wrote *Hymns in Prose*, a beautiful collection of simple studies. She collected in 50 volumes and edited *The British Novelists;* also wrote many popular verses.

BARBOUR, JOHN (c. 1316–1395). Scots poet, known for his *Brus* or *Bruce*, a narrative, historical poem in 13,500 rimed lines of four stresses each. Other works attributed to him are *Legends of the Saints*, and, more doubtfully still, the *Buik of Alexander*, containing old fragments. Barbour has been called the "father of Scotch poetry."

BARCLAY, ALEXANDER (c. 1476–1552). Scotch or English poet and satirist, whose *Ship of Fools* set a new vogue; written in stanzas like Chaucer's poems, but in more modern language. His *Eclogs* describe the rustic sports like football in the village, the struggle of the poor, and some abuses of the time.

BARHAM, RICHARD HARRIS (1788–1845). Under the name of Thomas Ingoldsby he compiled a series of metrical tales or *Legends*, which are rich in accurate and curious lore of past ages.

BARING-GOULD, SABINE (1834–1924). English clergyman and author of books on various subjects. Notable for books on folklore such as *Book of Werewolves*, *Curious Myths of the Middle Ages*, and stories of the west country of England. Wrote the hymn, *Onward, Christian Soldiers.*

BARLOW, JOEL (1754–1812). Known as one of the Hartford Wits, wrote an elaborate poem called *The Vision of Columbus*, a satire in mock-heroic form known as *Hasty Pudding*, and certain liberal republican treatises while living in France. Died in Poland while acting as minister to France, and trying to negotiate with Napoleon to conserve American rights.

BARRIE, JAMES MATTHEW (1860–1937). Scotch story writer and dramatist. Intensely popular in native land and England. His *Auld Licht Idylls*, a volume of sketches, *A Widow in Thrums*, stories of a poor Scots milling town with its humor and pathos, *The Little Minister*, a story of the parson's romance, *Peter Pan*, a poetic dramatic sketch dear to the heart of children as played by Maude Adams and others, *What Every Woman Knows*, replete with humor and satire on the "intuition" of the sex, *The Twelve Pound Look*, and several others. In his later works for a nice balance of the droll and the pathetic, Barrie has no superior in recent English.

BARTLETT, JOHN (1820–1905). American publisher and bibliographer whose *Familiar Quotations* and *Shakespeare Concordance*, on which he lavished years of labor, have long been standard works.

BARTON, WILLIAM E. (1861–1930). American clergyman and author of numerous books on religious topics, stories, and accounts of Lincoln. Some of them are *The Psalms and their Story, Faith as Related to Health, The Fine Art of Forgetting, Wit and Wisdom of Safed the Sage, Life of Clara Barton, Influence of Chicago on Abraham Lincoln.*

BATES, KATHARINE LEE (1859–1929). Long a professor of literature at Wellesley College; author of numerous books, some of which are *The Story of Chaucer's Canterbury Pilgrims Retold for Children, College Beautiful*, a book of poems, *English History Told by English Poets*. Best known for her inspiring national hymn, *America the Beautiful*, long a chief favorite in our schools.

BAZIN, RENE (1853–1932). French novelist, known best for his *Une Tache d'encre, Autumn Glory, By Faith Alone*, and a volume of short stories.

BEATTIE, JAMES (1735–1803). Scotch poet and professor of moral philosophy at Marischal College, Aberdeen. Besides his great essay on the *Nature and Immutability of Truth*, his works include *Original Poems and Translations, Judgment of Paris*, and *Verses on the Death of Churchill*, a violent attack afterward recalled by Beattie.

BEAUMONT (*bō'mōnt*), **FRANCIS** (1584–1616). With John Fletcher (1579–1626) wrote over fifty romantic plays; was intensely popular in the Shakespeare age. They specialized in serious plays, turning from tragedy to comedy toward the close, or as sometimes called, tragi-comedies. *Philaster, The Maid's Tragedy, The Faithful Shepherdess* are typical examples of their work.

BECKFORD, WILLIAM (1760–1844). Lived for a time abroad, built a magnificent house in Wiltshire, England, at tremendous cost, and famed for its peculiar architecture. Best known for *Vathek*, a picturesque and horrible tale of an Arabian who gave himself to the cruel and bloody rites of the religion of Eblis, and, after a life of crime, found himself in the hall of inner mysteries, only to be tormented with a burning heart. For oriental splendor and its grim and awful close, this "Gothic" romance had no equal, but many imitators in the next generation. It was written in French, but the English translation by Rev. Samuel Henly appeared before the original edition.

BEDDOES, THOMAS LOVELL (1803–1849). English dramatist and poet. Early recognized genius of poet Shelley. Tried to revive the manner of later Elizabethans. His *Death's Jest Book*, first issued in 1825, was often revised and finally published after his death.

BEDE (*bēd*) (672 or 673–735). Called Venerable Bede, but little is known of him outside what he says in his *Ecclesiastical History of the English Nation* in Latin, our chief source for early events to 731. Other works are *History of the Abbots*, a life of St. Cuthbert, and perhaps a lost vernacular translation of the *Gospel of John*. King Alfred apparently had the *History* translated into Old English. Most distinguished scholar of his age. See ENGLISH LITERATURE.

BELLMAN, KARL MIKAEL (1740–1795). Swedish patriotic poet known at every hearth for his *Fredmans Epistlar*, and *Fredmans Sanger*. Used old ballad music for his odes, many of which have a delicate and entrancing pathos. Often improvised music and words for his friends when he was "inspired by God."

BELLO, ANDRES (1781–1865). Born in Venezuela, he spent 19 years as a diplomatist in London, later settling in Chili, where he helped found the national university, of which he was rector. Wrote on law, philosophy, criticism, and philology. His best scholarly work is *Gramatica castellana* (1857); his most picturesque and artistic, the *Silvas Americanas*, a fine account of landscape of his native country, written while he was abroad.

BELLOC, HILAIRE (1870–). Born in France, naturalized English subject, 1902. Author of books on varied subjects,—poetry, French history, politics. *Verses and Sonnets, Bad Child's Book of Beasts, Path to Rome, Party System, Europe and the Faith, How the Reformation Happened* are some of his chief writings. Known for independence, clear style, and versatility.

BEMBO, PIETRO (1470–1547). Italian scholar, bishop, and restorer of classic Latin style of writing. Edited Petrarch's poems, wrote a treatise on Italian prose, a discussion of platonic affection, and a *History of Venice.*

BENET (*ben-ā'*), **STEPHEN VINCENT** (1898–). American poet, educated at Yale. Author of *John Brown's Body*, an attempt at American epic treatment, 1928, *Young Adventure, Heavens and Earth, Beginning of Wisdom.*

BENNETT, ENOCH ARNOLD (1867–1931). English novelist and dramatist. Editor 1893–1900. Makes everyday life seem romantic and very unusual. *Old Wives' Tale, Clayhanger, The Matador of Five Towns, The Card*, are among his best novels and stories. *The Great Adventure*, founded on his novel, *Buried Alive*, is a notable drama.

BENNETT, JAMES GORDON (1795–1872). Founder and long editor of the New York *Herald*. Introduced more effective methods of international news gathering, was independent of politics, and popularized illustrations. His son, J. G. Bennett, Jr., carried on the paper till his own death in 1918. Established the *Telegram* and London and Paris editions of the *Herald*. Sent Henry M. Stanley to central Africa to find Dr. Livingstone.

BERANGER (*bāy-rōn-zāh'*), **PIERRE JEAN DE** (1780–1857). Patriotic writer of French songs. *Les Gueux, Le Senateur*, and *Le Roi d'Yvetot* ran like wildfire from one end of France to the other. Imprisoned twice for his revolutionary doctrines. Championed the common sorrows of mankind, having no respect for those poets who "forget beside their mistress those who labor before the Lord."

BERNARD OF CLAIRVAUX (1091–1153). Did much to humanize theology; canonized by the church, 1174. His arguments and eloquence promoted the Second Crusade. Fervid piety characterized all his works, which were varied and extensive, mainly 350 sermons, 400 letters, 12 theological treatises, and many hymns. Helped unite the divided church, his pupil becoming pope, and he next in influence. Several of his hymns now used in Protestant churches.

BERNARD OF CLUNY (1622–c. 1655). Benedictine monk of Brittany, but of English parentage. Known for his descriptions of paradise, and for several hymns, such as *Jerusalem the Golden, The World Is Very Evil*, and *For Thee, O, Dear, Dear Country.*

BERNI, FRANCESCO (c. 1497–1536). Italian poet of sparkling verses and wit. Best known for his revamping of Boiardo's celebrated *Orlando Innamorato*, which his contemporaries pronounced greatly superior to the original.

BESANT (*bē-sānt'*), **WALTER** (1836–1901). Instrumental in founding the Society of Authors, which has done much to protect the rights of writers inexperienced in business. His *All Sorts and Conditions of Men* turned sympathy toward the poor of the east end of London. His story, *The Children of Gibeon*, revealed some of the evils of the sweating system in industry. He also wrote on French literature, and proposed a work, partly executed, which was to describe and improve various sections of London.

BEYLE, HENRI MARIE. See STENDHAL.

BIERCE, AMBROSE (1842–1914†). American satirist and short story writer, known often as "Bitter Bierce," and yet he was a thinker of originality and power. Lived 25 years in San Francisco and afterward mainly in Washington, D. C. In 1891 he published his *Tales of Soldiers and Civilians*, for which his experience in the Civil War gave him material, and later *Can Such Things Be?* a series of tales of strange and unnatural happenings. His *Cynic's Word Book*

(later called *The Devil's Dictionary*), *Write it Right*, a book of literary directions, and *Black Beetles and Amber*, are his chief works, the last being poems. In 1913 he set out for Mexico, "with a pretty definite purpose, which, however, is not at present disclosable," and was never heard of later. Rumored killed in the revolution there.

BIGELOW, JOHN (1817–1911). American diplomatist, who helped to maintain neutrality of France during Civil War. Of his literary and historical works, he is now remembered chiefly for his edition of the works of Franklin, his biography of S. J. Tilden, and for his *Retrospections of an Active Life*.

BIGELOW, POULTNEY (1855–). American traveler, journalist, and historical writer of works on Germany, Africa, and Japan, including *History of the German Struggle for Liberty*, *White Man's Africa*, *Japan and her Colonies*, *Memoirs*.

BINYON, LAURENCE (1869–). Poet, scholar, and orientalist in British Museum. *England and other Poems*, *The Flight of the Dragon*, *Japanese Colour Prints*, *Oriental Art in the British Museum*, and *The Golden Treasury of Modern Lyrics* are some of his numerous books.

BION (fl. 100 B.C.). Greek lyric and pastoral poet; probably lived in Sicily. His work is less simple and sincere than that of Theocritus, father of the Greek pastoral, being also sentimental and too artistic for true poetry of the type. His *Lament for Adonis* is the best, a model for many modern elegiac poems like Shelley's *Adonais*, inspired by the death of John Keats.

BIRMINGHAM, GEORGE A. (1865–). Pen-name for Rev. James Owen Hannay, Irish clergyman and novelist. He was educated at Trinity College, Dublin, and wrote several novels of contemporary life and people. Notable stories are *The Seething Pot*, *The Lost Tribes*, *From Connaught to Chicago*, *Minnie's Bishop and other Stories*.

BJORNSON (*bē-yērn'sun*), **BJORNSTJERNE** (1832–1910). A Norwegian novelist and dramatist; tried to establish a new saga type in play form. *Sigurd the Bastard* (1862), and *Sigurd the Crusader* illustrate. *Mary Stuart of Scotland* is a romantic tragedy, *Bankruptcy*, *The Editor*, and *The Gauntlet* are social dramas; *Dust*, *Mother's Hands* and *Absalom's Hair* are short narratives. His amusing piece, *Geography and Love*, continues to be produced.

BLACK, WILLIAM (1841–1898). British author of 34 novels, the best of which have to do with the mountains of his native Scotland or the waters off the shore. *A Daughter of Heth*, *The Princess of Thule*, *Judith Shakespeare*, and *White Heather* are among his best.

BLACKMORE, RICHARD DODDRIDGE (1825–1900). Tried writing poetry at first. His first successful novel *Clara Vaughn* led him to make a series, the culmination of which was *Lorna Doone* (1869). This was immediately hailed as a welcome turn from the dull realistic works then in vogue. The vigor, charm of background, and simple but heroic and stirring love of John Ridd and the adopted daughter of the wild Doone tribe is a perennial favorite with young and old alike.

BLAKE, WILLIAM (1757–1827). English poet and artist of mystic and eccentric genius. His *Songs of Innocence* appeared in 1789 and *Songs of Experience* in 1794. Symbolism and obscurity mark many of his best lyrics, which are imbued with feeling and genuine inspiration. Blake illustrated these poems with about 60 original drawings. About 1795 he completed a magnificent series of highly colored prints of originality and beauty. These include *Nebuchadnezzar*, *The Elohim Creating Adam*, and *Newton*. Among much other artistic work he made 537 watercolors for Young's poem, *Night Thoughts*.

BLOOMFIELD, ROBERT (1766–1823). English poet who fled to London and while working for a shoemaker wrote in a garret his *Farmer's Boy*, of which 25,000 copies were sold in two years, and it was translated into continental languages. *Rural Tales*, *The Banks of the Wye*, and *Wild Flowers* also attained considerable repute.

BOCCACCIO (*bôk-kâ'chō*), **GIOVANNI** (1313–1375). Italian author of Naples and Florence whose stories in his *Decameron* are among immortal world literature. In earlier works, *Filocolo and Fiammetta*, he revived the charm of Naples, but all through his life he suffered from an unhappy affection for the married woman he named Fiammetta. His *Filostrato*, in the ottava rima verse form, gave Chaucer much of his *Troilus and Criseyde*, which eventually came to Shakespeare for his drama. The *Teseide* also served Chaucer for the tale of *Palamon and Arcite*. *The Decameron*, one of the type of "frame" stories, is a collection of many narratives supposedly told by some lords and ladies driven to the country from Florence during the Black Death. Each of the ten persons tells a number of tales, but we are not interested in the frame work. Here we have the realism of Florentine life and a gallery of many living persons of all classes.

BOETHIUS (*bō-ē'thi-us*), **ANICIUS MANLIUS SEVERINUS** (c. 480–524). Unjustly imprisoned, he spent his time writing the *Consolations of Philosophy* in Latin, a work which had profound influence on the Middle Ages. The object is to show that all fortune is really good. Alfred translated it into Old English and Chaucer into Middle English. This and some other translations and commentaries of Boethius remained as guides to thought till Aristotle became popular again in the thirteenth and fourteenth centuries. Boethius was finally executed.

MRS. BOGAN OF BOGAN. See NAIRNE, CAROLINA.

BOIARDO, MATTEO MARIA, COUNT (1434–1494). Italian poet and governor of Reggio; known mainly for his *Orlando Innamorato*, model for Ariosto's great epic of *Orlando Furioso* (The Mad Orlando). Though the characters are realistic and the story interesting, the style is too involved, and the work not fully completed. Revised and finished by Berni (q. v.).

BOILEAU (*bwä-lō'*), **DESPREAUX NICOLAS** (1636–1711). French satirist and literary critic In 1764 he issued his masterpieces, *L'Art Poetique* and *Le Lutrin*. In the first he discussed the methods and types of poetry; the latter is a mock heroic, in six cantos, which gave Pope his form for the *Rape of the Lock*. Boileau, called the "legislator of Parnassus," has profoundly influenced many English authors.

BOK, EDWARD WILLIAM (1863–1929). American editor and author born in Holland. Edited *Ladies' Home Journal* for 30 years, retiring in 1919. The account of himself in *The Americanization of Edward Bok* won the Pulitzer prize for the best biography of 1920, and also the gold medal of the Academy of Political and Social Science. Offered $100,000 for most practical plan for international coöperation in peace. The one-half share for the author of the plan went to the late Dr. C. H. Livermore of the New York Peace Society. Erected a great carillon, bird tower, and sanctuary in Florida, which was dedicated by President Coolidge, and which is the burial place of Bok.

BOND, CARRIE JACOBS. See under FINE ARTS.

BORROW, GEORGE (1803–1881). English linguist, traveler, and novelist. Best remembered for his *Lavengro* and *Romany Rye*, romantic account of his travels and of gypsy life. His *Bible in Spain* (1843) gave him an immense fame, but 8 years before he completed his *Metrical Translations from Thirty Languages*. *Zincali* describes the gypsies of Spain, whom he knew rather well.

BOSWELL, JAMES (1740–1795). Author of the *Life of Johnson* (1791), long recognized our finest biography in English. Unfortunate because of his own temperament and foibles, Boswell suffered eclipse by the ursa major he described so faithfully and vividly. Two other works, *A Tour of the Hebrides*, and the *Account of Corsica*, received some notice. With the discovery of new evidence regarding Boswell in recent years, he now stands more favorably than once when the world accepted Macaulay's dictum: "Servile and impertinent, shallow and pedantic, a bigot and a sot." He was a Scotsman who tried to practice law in England with only indifferent success.

BOTHA, COLIN GRAHAM (1883–). Born in Cape Colony; archivist of Union of South Africa. Numerous publications include *Guide to the Documents in the Cape Archives*, *French Refugees at the Cape*, *Social Life in the Cape Colony in the 18th Century*.

BOURGET (*bōōr'zhā'*). **PAUL CHARLES JOSEPH** (1852–1935). French author of romantic novels of both exact description of life and great literary charm. Some of his popular titles are, *Le Disciple*, *Coeur de femme*, *Cosmopolis*, *Un Divorce*, which last he dramatized,

BOURINOT (*bōō-rĭ-nō'*), **JOHN GEORGE** (1837–1902). Born in Nova Scotia, he covered the entire field of Canada in various histories. Clerk of the Canadian House of Commons. His *Parliamentary Practice and Procedure* (1884) long a standard work; *Canada* in the Story of the Nations Series; *Builders of Nova Scotia;* and *Constitutional History* and other popular works.

BOWLES, SAMUEL (1826–1878). Editor for more than 30 years of the *Springfield Republican,* founded as a weekly by his father in 1824. After 1844 it became a daily. Nationally known for incisive and independent style and effective typographical arrangement; long a model and training school for young journalists, along with the *Sun, Tribune,* and *Herald* in New York. Bowles always advised them to "put it in the first paragraph."

BOWLES, WILLIAM LISLE (1762–1850). Revived the older manner of simplicity in sonnet form; his nature poetry highly praised by Coleridge. He said that images drawn from nature are preferable to those drawn from thought or art, and the permanent and elemental emotions to those of transient or even of personal sort. Byron, Campbell, and others differed with him in the ensuing controversy. Among his longer poems *The Spirit of Discovery* was ridiculed by Byron.

BOYENSEN (*boi'ĕ-sĕn*), **HJALMAR HJORTH** (1848–1895). Popular novelist born in Norway. After 1869 lived in America, where he was professor at Illinois, Cornell, and Columbia universities. His works in English include *Gunnar, Boyhood in Norway,* and *Idylls of Norway,* poems.

BRADDON, MARY ELIZABETH (1837–1915). Immensely popular English novelist. Her *Lady Audley's Secret* (1862) was translated several times, staged, and filmed, and passed through countless editions. All her 50 novels were highly melodramatic, sensational, and full of spirited descriptions. Others are *Dead Men's Shoes, London Pride, Eleanor's Victory,* and *Beyond these Voices* (1910).

BRADY, CYRUS TOWNSEND (1861–1920). Born in Pennsylvania; graduate U. S. Naval Academy, but became a clergyman and author of numerous books, chiefly stories of sea adventure for boys. For several years in railroad service. Some of his books are *For Love of Country, Stephen Decatur, Recollections of a Missionary in the Great West, Woven with the Ship, Border Fights and Fighters, A Midshipman in the Pacific.*

BRANDES, GEORG MORRIS COHEN (1842–1927). Danish critic of Jewish birth, known for independence and acuteness of thought. His *Main Currents in Nineteenth Century Thought* ably traces the tendencies of literature in Europe. The *Shakespeare,* which aroused much controversy, now highly regarded. Professor of aesthetics at Copenhagen from 1902. Wrote lives of Goethe, Nietzsche, Voltaire, Heine, and *Creative Spirits of the Nineteenth Century.* The *Jesus Myth* (1925) stirred up a great discussion.

BREMER, FREDRIKA (1801–1865). Swedish novelist, later interested in the emancipation of women and various reforms. Traveled widely. Some of her greatest works are *The H. Family, Homes in the New World,* and the social novels *Hertha,* and *Father and Daughter.*

BRIDGES, ROBERT (1844–1930). Appointed English poet laureate by Premier Asquith in 1913. Was greatly interested in various experiments in meters and in poetic dramas. The *Shorter Poems* (1890) show that he had restrained but deep and beautiful feeling. His anthology *The Spirit of Man* (1916) gained great fame, and *The Testament of Beauty* is growing in favor. Wrote prose criticisms in *Milton's Prosody, John Keats,* and *The Necessity of Poetry.*

BRIEUX (*brē'ĕ'*), **EUGENE** (1858–1932). French dramatist of social evils and customs. *Blanchette,* attacking faults in education of girls of the poorer classes, *The Three Daughters of M. Dupont,* the miseries of the dowry system in the middle class, *The Result of the Race,* the evils of betting among workmen, are illustrations of his didactic and problem plays.

BRONTE (*brŭn-ta'*) **SISTERS. CHARLOTTE** (1816–1855), **EMILY** (1818–1848), and **ANNE** (1820–1849). English novelists of Irish parentage, the name being modified from Brunty. Left somewhat to themselves by the death of their mother and the studious habits of their father, a country rector, the sisters early turned to reading and writing for amusement. All sent to school for one year to finish their education. There Charlotte got many impressions which appear in her masterpiece, *Jane Eyre,* a wonderfully fine study of the development of the soul and emotions of a young lady. In 1846 the sisters published poems jointly under the names of Currer, Ellis, and Acton Bell. Emily's great work is *Wuthering Heights,* which though a sombre and morbid novel, is one of haunting genius and tremendous power of character study. Anne Brontë is best remembered by her *Agnes Grey.* Charlotte wrote two other great novels, *Shirley,* a tale of a factory town, and *Villette.* Charlotte, after two similar proposals, married her father's curate, Mr. Nicholls, in 1854, but died about a year later after the birth of a child. Mrs. Gaskell's tragic account of the Brontë family reads like her own history of Cranford town.

BROOKE, RUPERT (1887–1915). Young English poet of great promise who died of disease in the Dardanelles expedition. Educated at Cambridge. *Poems* (1911), his *Letters* after a visit to America, his beautiful poem *Grantchester* (1912), and his sonnets entitled *1914,* his best work probably, promise to be long remembered.

BROOKE, STOPFORD AUGUSTUS (1832–1916). English minister and literary essayist, first in Church of England and later as a nonconformist, but always a powerful religious thinker. His best criticisms are his very readable books on early English Literature, Tennyson, Browning, and Shakespeare.

BROUGHTON, RHODA (1840–1920). English novelist of distinction. *Cometh up as a Flower, Not Wisely but too Well, Red as a Rose is She* stand high among her writings.

BROWN, ALICE (1857–). Born in New Hampshire; lived in Boston. Best known for novels and stories of New England life. Drama *Children of the Earth* received the Ames prize of $10,000 for most distinctive American play.

BROWN, CHARLES BROCKDEN (1771–1810). First American novelist of note. Influenced by English Gothic romance, transferred in America from old castles to caves and grottos, and made more rational. The mystery of his *Wieland* (1798) is finally explained as a case of biloqual ventriloquism, but not before the deluded hero has slain two of his family under a misapprehension; *Arthur Mervyn* vividly describes the yellow fever epidemic in Philadelphia (Brown was a physician); and *Edgar Huntley* introduces a somnambulist. Thus Brown tried to make reasonable endings to a type of novel left unsolved in many English tales.

BROWNE, CHARLES FARRAR (1834–1867). American humorist and lecturer known as Artemus Ward. Imitated the methods of the traveling showmen, and often had real or imaginary exhibits to illustrate his lectures, full of puns and satirical byplay. For instance, after visiting Utah, he said in a lecture that he found the Mormon religion singular, but the wives plural.

BROWNE, SIR THOMAS (1605–1682). English physician and author of curious learning, wide breadth of view usually free from bias, and delightful spirit of mind. He aims to be reasonable, not superstitious, and orthodox but, failure in some respects is probably due to the influence of the age in which he lived. His evidence, in a witch trial, for example, helped convict two poor women at Norfolk, his home city, in 1664. His *Religio Medici,* published without his consent, was a year later issued by him in correct form (1642). The *Pseudoxi Epidemica* is a wonderful storehouse of curious popular superstitions with attempts to explain or refute them. His *Urne-Burial* (*Hydrotaphia*) aims to explain certain remains dug up in Norfolk and to justify cremation and burial in urns. It contains, especially toward the close, some of his most imaginative musical prose. Browne has deeply influenced liberal thought.

BROWNING, ELIZABETH BARRETT (1806–1861). Though married secretly to the poet Browning in 1846, and never forgiven by her father. Mr. Barrett, a wealthy English merchant, Mrs. Browning was supremely happy till her death in Florence. They had corresponded some time before, having admired each other's works, though very different in temperament and scope. Mrs. Browning constantly complained of the stupid lack of appreciation of Browning by the average Englishman. Her chief works are *Sonnets from the Portuguese,* not a translation at all, but a very fervid and deep commemoration of her love for her husband. She never designed them for the

world, but Browning thought them so good he had them printed in 1847. Her other great work, *Aurora Leigh*, a long fiction in verse, attained an immediate vogue for its descriptive and imaginative power. The married life of the Brownings was spent mainly in Italy. Their one son, Robert W. Barrett Browning, became a notable artist.

BROWNING, ROBERT (1812–1889). Supreme author of the dramatic lyrics and character studies in poetry in the nineteenth century. Young students should begin to read the short poems like *Soliloquy in a Spanish Cloister, How they Brought the Good News, Fra Lippo Lippi* and the other art poems, *Hervé Riel, Evelyn Hope, Cristina, My Last Duchess*, to get the point of view of Browning. One must always ask several questions: Who is speaking? To whom? Under what circumstances or conditions? These questions answered, a careful reading will usually lead to real appreciation, for the obscurity and "high-brow" character of his poems have been exaggerated. *Paracelsus, Pauline*, and *Sordello* are among the most difficult of his earlier works. *The Return of the Druses* is a drama that reveals considerable power of analysis and characterization. *Rabbi ben Ezra, Saul, Pippa Passes*, a beautiful lyric drama, and many poems in the volume entitled *Men and Women* are now favorites among lovers of Browning. His masterpiece, *The Ring and the Book*, built out of conflicting and sordid testimony of a Roman murder trial, shows his superb genius, knowledge of life and character, and skill in handling many points of view. Though it may be rather too long, most is not difficult reading. An optimist, genial gentleman, and student of human nature, Browning is well known as a man. Died in Italy; buried in Westminster Abbey. See ENGLISH LITERATURE.

BRUCE, H. ADDINGTON (1874–). A Canadian now living in the United States. Journalist and author of works on social subjects. Among his books are *The Riddle of Personality, Scientific Mental Healing, Psychology and Parenthood, Nerve Control and How to Gain It, Your Growing Child.*

BRUNETIERE (*brün'tyâr*), **FERDINAND** (1849–1906). French critic of great learning, penetration, and courage. Wrote much on evolution of various types of literature in France, on Balzac, and various questions in controversy. Conservative in politics, but original and independent in literary appreciation.

BRYANT, WILLIAM CULLEN (1794–1878). American journalist, chief editor of New York *Evening Post*, 1830 to his death. Did much to create and foster an original American literature and honest criticism. Some assert that real American poetry begins with Bryant's *Thanatopsis* in 1817, written when he was 17. In moral earnestness it sets a high tone. More artistic possibly are his *To a Water-fowl* and *Robert of Lincoln*. His emotions were restrained, orderly, and cultured.

BUCHANAN, ROBERT WILLIAM (1841–1901). As a novelist he is best known for the *Wandering Jew;* as a poet for *Undertones;* and as a critic for his article *The Fleshly School of Poetry*, an attack on certain amorous poetry of the day. Both Rossetti and Swinburne replied. Afterward Buchanan tempered his views so far as to dedicate his own *God and the Man* to Rossetti.

BULFINCH, THOMAS (1796–1867). American author, born in Boston, who wrote the *Age of Chivalry* and the *Age of Fable*, the latter of which was revised in 1881 by Edward Everett Hale.

BULWER-LYTTON, EDWARD GEORGE EARLE LYTTON, BARON BULWER-LYTTON (1803–1873). Wrote over 60 different novels and plays. Member of Parliament. His first novel, *Pelham*, set forth a dandy such as one could see in Paris or London. *Paul Clifford* and *Eugene Aram* show how criminals may regenerate themselves through development of the best in their own characters. *The Last Days of Pompeii, The Last of the Barons*, and *Harold* sought to revive the historical novel and became as popular as Scott's fictions. His plays, *The Lady of Lyons* and *Money* long held the stage as studies of society. All his work is vivid, energetic, and serious.

BUNIN, IVAN ALEXEYEVICH (1870–). Russian translator, poet, and novelist. Both his own poems and his translation of Longfellow's *Hiawatha* were awarded the Pushkin prize, highest literary award in Russia. Translated also Byron's *Manfred*, Tennyson's *Lady Godiva*, and other poems from the English. His own poetry is descriptive, vivid in color, and correct in form. Best known of his prose are *The Village, A Gentleman from San Francisco, Suchodol, An Evening in Spring, Dreams of Chang and other Stories*, the last in English translation being best known.

BUNNER, HENRY CUYLER (1855–1896). American author of short stories and graceful poems. *Short Sixes* and *More Short Sixes* contain clever, witty, and captivating tales, many of them of the surprise variety.

BUNYAN, JOHN (1628–1688). English reformer, preacher, and allegorist. His *Grace Abounding*, an autobiography, contains realistic writing worthy of a Defoe, with intense religious and moral convictions as well. His *Holy War* has been called the most perfect or most elaborate allegory in our English prose; his *Pilgrim's Progress*, a great work of English puritanism, appeals to all for its vivid conception of types of persons, its vivid allegory, and moral earnestness. For refusing to stop preaching contrary to law, he was imprisoned for twelve years, and wrote much of his work while in jail at Bedford, England.

BURGER, GOTTFRIED AUGUST (1747–1794). German poet whose *Lenore* (1773) revived interest in the ballad and set a new vogue, widely imitated in England and elsewhere. Translated by Walter Scott.

BURKE, EDMUND (1729–1797). Irish orator, philosopher, and patriot. His analysis of political conditions was fair and keen. Sympathized for a time with the Revolution in France, and with the American colonists as Englishmen endowed with love of freedom. His *Essay on the Sublime and Beautiful*, long a model for such works, especially in Germany, is now considered of little real value. His *Conciliation with the American Colonies* is still regarded as a type of argument at its best. Being a Whig in politics, and a member of the minority, Burke never attained to an office commensurate with his great talents; and yet his influence was profound, especially that of his printed essays, speeches, and treatises.

BURNETT, FRANCES HODGSON (1849–1924). Though once a prolific and famous author of books for children, Mrs. Burnett is now remembered regretfully by some victims for having set the style of good manners for children in the drawing room in her model character, *Little Lord Fauntleroy*. Born in England, lived in Tennessee for a time, and married an English surgeon, Stephen Townsend, for her second husband.

BURNS, ROBERT (1759–1796). National poet and idol of the Scots, in spite of his faults of training and life. Born near Ayr, Scotland; died at Dumfries. Worn down in youth by hard toil on the farm, disheartened because of his failure to wrest a living from the soil, erratic but fervent, honest, and independent in genius, Burns has been rather pitied than censured. His songs and poems breathe the air of his native land. *The Cotter's Saturday Night* represents the home life at his best; *Scots wha Hae*, stirring national ideals; *Highland Mary* and *To Mary in Heaven*, Burns himself as a true lover; *Auld Lang Syne, My Heart's in the Highlands, Sweet Afton, Highland Laddie* show him as a song writer; *To a Mouse* and *The Wounded Hare* show him as kind to animals; the *Address to the Unco Guid*, and *Holy Fair* show him as a foe to false religion; and at last his *A Man's a Man for a' That*, the disheartened poet as honest, independent, and trying hard not to envy the rich. Of his genius, genuine poetic inspiration, and natural kindness no doubt remains; the only puzzle is how to explain the man, torn by so many conflicting emotions and experiences,—his own worst foe. See ENGLISH LITERATURE.

BURROUGHS, JOHN (1837–1921). American naturalist and essayist of great originality and penetration. *Birds and Poets, Indoor Studies, Bird and Bough* are among his best volumes. Always a champion of sincere and honest observation of animals, he precipitated a controversy in 1904 by an attack on certain "nature fakers."

BURTON, ROBERT (1577–1640). English author of *The Anatomy of Melancholy*, a voluminous work peppered with hundreds of quotations from foreign authors, mainly the classics. Style has been called "literary smallpox." Discussed the sources, causes, and remedies for all types of melancholy; remarks on "Love Melancholy" curious and intriguing.

BUTLER, SAMUEL (1612–1680). Author of *Hudibras*, a satirical poem in loose rimed verses, 20,000 lines in length, ridiculing the Puritans, full of

ridiculous situations, curious allusions, bad rimes, and a thread of story which is the least merit of the whole. Butler excels in making characters render themselves grotesque, ridiculous, and despicable. Scores of familiar quotations come from this poem.

BYRON, GEORGE GORDON BYRON, 6th BARON (1788–1824). Long regarded as a foremost poet for the resolute and independent character of his own heroes, most of whom were reflections of himself. Posed as the man mistaken and baited by a cruel and bigoted public; in reality he was selfish and ungrateful, treating even his best friends at times with shameful thoughtlessness. *The Prisoner of Chillon* charmed by its picture of the despair of a condemned man for years held prisoner in a dungeon having but one single ray of light. *Childe Harold*, a rambling account of a tour in Europe, contains many noble descriptive passages. His dramas show a titan struggling always against the gods of custom and restraint. Goethe said, "When Byron reasons he is a child," and this is probably true; and yet he was for years the idol of the literary world. See ENGLISH LITERATURE.

CABELL, JAMES BRANCH (1879–). Author of a series of biographical novels showing generations of characters with irony, beautiful description and sentiment, and literary charm. Part of the series are *Beyond Life, Chivalry, The Line of Love, The Cream of the Jest.*

CABLE, GEORGE WASHINGTON (1844–1925). American author of stories of creole life in old New Orleans. Lived for many years there and after 1886 at Northhampton, Mass. *Old Creole Days* (1879) was his first and some think his best collection of tales. Local color, romance, the older régime are rendered most alluring. *Strange True Stories of Louisiana* have also great vividness and charm. His novel *The Grandissimes* (1880) is darkened by the memory of customs and prejudices incident to the struggle against slavery. Pathos and heroism of simple folks are rendered fascinatingly.

CADMON (*kăd'mŏn*) (fl. 670). Mentioned by Bede in his *History* as author of a hymn, fragments of which are extant. *Genesis, Exodus, Daniel*, and other Old English poems are attributed to him, but scholars are still debating whether they are his or works by his pupils and successors. Called "father of English song." Bede's legend states that Cadmon, an unlettered cowherd, at Whitby who left the feast because he lacked skill in improvising according to custom, was visited by an angel in the stable who commanded him to sing and inspired him. Afterward he became a learned monk.

CAINE, THOMAS HENRY HALL (1853–1931). Went from Cheshire to London to live with the poet Rossetti, and his first work in 1882 was *Recollections of Rossetti*. Three years later began a series of stirring tales, some dealing with the Isle of Man. *The Deemster, The Manxman, The Christian, The Eternal City* are important. All these were dramatized, the last of them with considerable success in 1902 by Beerbohm Tree.

CALDERON DE LA BARCA, PEDRO (1600–1681). Eminent Spanish dramatist of 120 regular plays and 60 religious sketches. Served in the army, and became a churchman, canon of Toledo. Master of stagecraft, but philosophy blurs some of his art. *El mayor monstroso los celos* (No Monster Like Jealousy), *La dame duende* (The Fairy Lady), *El Alcalde de Zalamea* (The Mayor of Zalamea) have received great praise.

CAMDEN, WILLIAM (1551–1623). English historian, whose two Latin works *Britannia* and *Annals of the Reign of Elizabeth* are valuable sources of our knowledge of the past.

CAMOENS (*kăm'ô-ĕns*), **LUIS DE** (1524–1580). Great epic poet of Portugal, author of the *Lusiad*. His love sonnets, some perhaps autobiographical, are noble and delightful. After service in the army, including a turn in India, and some years at Macao, was shipwrecked on his return, saving his epic as he swam to shore at Cambodia, and finally died of the plague at Lisbon. His *Lusiad* (narrative of the Portuguese people) is original, details contemporary rather than past events, is shorter than most epics and more perfect in structure than modern ones, unless it be Milton's, and majestic and fluent in style and diction.

CAMPBELL, THOMAS (1777–1844). Scotch poet whose *Pleasures of Hope* (1799) pleased because devoted to common affairs of men of the day. Spent years collecting his *Specimens of English Poets*, finally issued in 1819, with biographical and critical notes, an admirable undertaking. His *Gertrude of Wyoming*, a narrative in Spenserian stanzas, celebrated emigration and events of settlers in the Wyoming Valley, Pennsylvania. Some of the most stirring patriotic songs in English are his *Battle of the Baltic, Hohenlinden, Ye Mariners of England*, and *The Soldier's Dream.*

CAMPBELL, WILLIAM WILFRID (1861–1919). Canadian poet of nature and patriotic lyrics. Was successively a minister and civil employee. Wrote *Beyond the Hills of Dream* and *Collected Poems* (1905) and *Poetic Tragedies* (1908). Compiled *Oxford Book of Canadian Poetry.*

CAMPOAMOR Y CAMPOOSORIO, RAMON DE (1819–1901). Spanish artistic and philosophical poet known for creating a species called *doloras* from the title of a collection in 1846. Wrote some dramas without special merit, some exquisite early lyrics, and several books of philosophy. See SPANISH LITERATURE.

CANFIELD, DOROTHY. See FISHER, DOROTHY CANFIELD.

CANTU, CESARE (1804–1895). Italian prose author, whose novel, *Margherita Pusterla* was written in an Austrian prison by using a toothpick for pen and candle smoke for ink. His *Storia Universale* (1838–1846) in 35 volumes attempts world history with some success.

CARDUCCI (*kär-dōōt'chē*), **GIOSUE** (1836–1907). Italian poet who imitated old Roman forms, but dealt with modern Italian subjects. His best are *Decennali, Nuove Poesie*, and *Odi barbare.*

CARLYLE, THOMAS (1795–1881). Scotch philosophic prose author and historian; original in style and thought, but often biased and capricious. *Life of Cromwell, The French Revolution*, lively and picturesque, and *Frederick the Great*, his most laborious series of volumes, are his chief historical works. *Sartor Resartus* shows his interest in German philosophy; it contains many notable passages of argument, keen thinking, and comment on life as a struggle. *Past and Present* and *Work* illustrate his doctrine of labor as an everyday gospel. His married life with Jane Welch, as to whether it was really happy or not, has aroused much comment. After her death he felt deeply grieved, lonely, and some claim remorseful because he had not been more sympathetic. See ENGLISH LITERATURE.

CARMAN, BLISS (1861–1929). Canadian poet; lived in United States after 1892. Influenced by Browning and Matthew Arnold, he wrote many beautiful nature lyrics, some of which are *Low Tide at Grand Pré, Pipes of Pan, Daughters of Dawn, April Airs, Later Poems.*

CARROLL, LEWIS (1832–1898). Pen name of Prof. Charles Lutwidge Dodgson, lecturer in mathematics at Oxford. Under his own name he published works in geometry, calculus, and other higher mathematics. As Lewis Carroll he wrote *Alice in Wonderland* (1861), an English masterpiece of peculiar humor which has pleased three generations of children, followed by *Through the Looking-Glass* (taken literally), *The Hunting of the Snark*, and *A Tangled Tale.*

CARY, ALICE (1820–1871), and **PHOEBE** (1824–1871). Wrote jointly a volume of *Poems*, long popular in America. Alice wrote many prose works also. Poe praised her poem, *Pictures of Memory.* Phoebe wrote the hymn beginning, "One sweetly solemn thought," and also two volumes in 1854 and 1868.

CASTIGLIONE (*kās'tē-lyō'nē*), **BALDASSARE** (1478–1529). Italian gentleman and bishop. *Il Cortegiano* (translated as *The Courtier*) was written in 1514, but not published till 1528; rendered into English about 1561. This work in form of a discussion in the drawing room of a duchess explains the views of various speakers as to the qualities and education of a perfect courtier. It throws much light on the customs and ideals of the Renaissance, but in some respects seems remarkably modern. Samuel Johnson pronounced it "the best book that was ever written upon good breeding."

CATHER, WILLA SIBERT (1876–). American novelist of pioneer life. Style beautiful, somewhat restrained, but her inspiration is even and effective. *One of Ours* (1922) tells the story of a Western boy in the World War. *A Lost Lady* (1923) penetrates

into the secret of a woman's charm and tragedy. *Death Comes to the Archbishop* (1927) is a vivid story of the arid Southwest. *Youth and the Bright Medusa* (1920), a collection of short stories, has no little originality and force.

CATLIN, GEORGE (1796–1872). Artist and author of books on Indian and pioneer subjects in America. Spent several years learning Indian languages in North and South America. His *Manners of the North American Indians* contains 300 engravings to illustrate the text. *The North American Portfolio* has 25 plates of hunting and other scenes of the West.

CATO, DIONYSIUS (3rd or 4th century). *Disticha*, a small collection of moral sayings, attributed now to him, was extremely popular in the Middle Ages. Translated into many languages; often mentioned by Chaucer; printed by Caxton in 1483 in translation.

CATS, JAKOB (1577–1660). Immensely popular Dutch poet and humorist. His *Emblems* set a new style of writing. Other works are *Maiden Duty, Marriage, Fidelity, Age and Country Life*. Twice visited England, once to seek medical advice regarding a fever, which was finally cured in Holland by a wandering quack, and once on a diplomatic mission.

CATULLUS (*kă-tŭl'ŭs*), **GAIUS VALERIUS** (84?–54 B. C.). Great Roman lyric poet whose numerous tributes to his beloved Lesbia attain a high rank for sincerity and depth of emotion. His disillusionment, on finding her unworthy of his affection, is touching even to a modern. Also translated or adapted several older authors in parts.

CAVALCANTI, GUIDO (c. 1250–1300). Florentine author of love sonnets in honor of a French lady, Mandetta. Friend of Dante, and by marriage became head of Ghibellines. Best poems translated by Rossetti in his *Dante and His Circle*.

CAVENDISH, GEORGE (1500–1562?). Confidant and biographer of Cardinal Wolsey. His work was written finally about 1557, but was not published in its authentic form till 1810, though a garbled version appeared in 1641. One of our first and best biographies, the source of much information about the period, not otherwise obtainable.

CAXTON, WILLIAM (c. 1422–1491). First English printer, edited and translated several works; wrote a few original ones. Translation of the French version of the *Recuyell of the Historyes of Troye* printed at Bruges in 1474 or 1475. The second printed book in English was *The Game and Playe of Chesse*, 1476. Established his press at Westminster (London) in same year. Printed Chaucer's *Canterbury Tales, Troïlus and Creseide, House of Fame*, and the translation of Boethius, Gower's *Confessio Amatis*, and several poems by Lydgate, as well as Malory's *Morte d'Arthur*. Printed 18,000 pages, much of which was his own translation, 96 separate works, with little skilled help. See ENGLISH LITERATURE.

CAZAMIAN, LOUIS (1877–). French critic and professor of English at the Sorbonne, Paris. His works include *A History of Civilization in England, Modern England, Carlyle*, and (with M. Emile Legouis), *History of English Literature*.

CERVANTES (*sĕr-văn'tēz*) **SAAVEDRA, MIGUEL DE** (1547–1616). Spanish author educated at Salamanca and Madrid. Lost use of left hand in military service for Romans. On return to Spain in 1575, captured by Moors and held captive at Algiers for five years, until ransomed by payment of 500 gold ducats. After this gave himself to literature. *Galatea* (1585) is a pastoral novel in the older manner of Sannazaro. Several plays were coldly received. His immortal work, *Don Quixote*, long in process of writing, in part was issued in 1605 and ran through four editions the first year. No book of his time save Aleman's *Guzman de Alfarache* was more celebrated and imitated. Translated into English in 1612, into French 1614. The second part was issued in 1615. Several spurious imitations appeared at different times. His *Moral Tales* (1613) are artistic and truthful to life and character of his day. These 12 stories alone would have made his name immortal. Cervantes in *Don Quixote* ridiculed by burlesque example the fanciful and exaggerated romances of chivalry. As a travesty its success was total, for works he found unreal beyond all semblance to actual life or character were laughed off the stage by his realistic treatment of old romance. The crack-brained knight and his simple squire have taken highest rank among the world's literary entertainers. Cervantes set a new style in both fiction and drama.

CHAMBERS, ROBERT (1802–1871). Scotch antiquarian, publisher, and author. Journals, cyclopedias, and biographical dictionaries bearing his name were long standard works. *Domestic Annals, Book of Days*, and *Vestiges of the Natural History of Creation*, which some claim antedated a few of Darwin's theories, are his chief original contributions. Assisted by his brother William (1814–1883).

CHAMBERS, ROBERT WILLIAM (1865–1933). American author and artist. Gave up illustrating for humorous journals to write novels, some of which are *Ashes of Empire, The Firing Line, The Tree of Heaven*, and *Slayer of Souls*, and also two dramas, one based on Scott's *Guy Mannering*.

CHAMISSO (*shä-mĭ'sō*), **ADELBERT VON** (1781–1838). German author and botanist. Besides interesting scientific works, his narrative of *Peter Schlemihl*, the story of the man who lost his shadow, found its way into most European languages. His lyric poems have great felicity of expression and deep feeling.

CHAPMAN, GEORGE (c. 1559–1634). English translator and dramatist. His rendering of Homer, though in some points too ornate and romantic, still remains a noble monument to the revival of interest in the classics in the age of Elizabeth. It inspired one of John Keats's best sonnets. *Eastwarde Hoe* (1605), to which Jonson and Marston contributed, is a fine play of London life. Chapman's best single work is the tragedy of *Bussy D'Amboïs*.

CHAPMAN, JOHN JAY (1862–1933). American essayist and critic of great originality and independence. Known for *Emerson and other Essays, William Lloyd Garrison, Greek Genius, A Glance Toward Shakespeare, Letters and Religion*.

CHATEAUBRIAND (*shă-tō-brē-ōn*), **FRANCOIS RENE** (1768–1848). French romantic author in transition from old to new type of writing. His works are all picturesque, sometimes poetic, and usually incisive. *Natchez* describes the American Indians after he lived in America for 7 months in 1791. *Paul and Virginia* has been much read in the schools for its style and coloring. *Atala* and *René* set the fashion in description form. He translated *Paradise Lost*, and wrote at last his *Memoires*, now his most read work.

CHATFIELD-TAYLOR, HOBART C. (1865–). American man of letters, educated in France. Decorated by various countries. Wrote *The Land of the Castanet, The Idle Born, Molière, Chicago, Cities of Many Men*.

CHATTERTON, THOMAS (1752–1770). Eccentric lad of Bristol, England, who forged a series of manuscripts, went to London to make his way in literature, and, after living in a garret for about two months, took his life by poison. His forgeries he attributed to a wholly imaginary monk called Rowley. Certain poems by Chatterton show that he was a powerful genius and might have become a great name in our literature. Long a puzzle to critics, he perhaps should be judged in the light of his own dictum on the monument erected later in Bristol—"To the Memory of Thomas Chatterton. Reader! Judge not. If thou art a Christian, believe that he shall be judged by a Superior Power. To that Power only is he now answerable."

CHATRIAN, ALEXANDRE. See ERCKMANN-CHATRIAN.

CHAUCER (*chô'sĕr*), **GEOFFREY** (c. 1340–1400). English poet. Acted as agent of the crown on various occasions and received several pensions. His works divide into three periods. First, is a translation of the *Romance of the Rose* from the French, and the *Book of the Duchess*, one of his best poems. Second, *Troïlus and Criseyde, Palamon and Arcite*, both taken from Boccaccio and embellished as only Chaucer could. Third, *Canterbury Tales*, his masterpiece. These are only a few of his compositions. The *Tales* give us the living persons, color of the time, humor and gentle satire, together with some homely philosophy of the author himself. The stories of the so-called "frame" type were told by a group of about 30 pilgrims from London to the shrine of St. Thomas at Canterbury. Each traveler was to tell two stories going and two on the return journey, but only 20 and 4 fragments were composed. Chaucer improved the language, established a native style of writing, popularized much of the best of other literatures, drew characters true in every detail, and looked at life so shrewdly but without cynicism that he is one of the great story tellers of all time.

CHEKHOV (*chĕ'kôf*), **ANTON PAVLOVICH** (1860–1904). Russian dramatist and writer of short

narratives. Plays like *Uncle Vanya, The Three Sisters,* and *The Cherry Orchard* are well known, but he is better remembered by his psychological stories *The Chorus Girl,* a fine masterpiece, *A Dreary Story, The Teacher of Literature, Peasants, The Lady with the Dog,* and *The Bishop.*

CHENIER, ANDRE DE (1762–1794). Adapted French poems to the classic manner; wrote some political pieces; died by the guillotine during the Revolution. *La jeune Tarentine* is a charming poem; so is the *Jeu de Paume,* a moral ode addressed to the painter David; but his best, *Jeune Captive* and the *Iambes,* belong to the 141 days of his imprisonment before execution. His brother, Marie-Joseph (1764–1811), is an inferior genius, though rather prolific. His *Henry VIII,* a drama, a history of French literature, some hymns and songs are still recalled.

CHESTERFIELD, PHILIP DORMER STANHOPE, EARL OF (1694–1773). His *Letters to his Son,* established a vogue for politeness and the art of getting on, for two generations. They are of the worldly-wise type, with sturdy conventional advice on morals and etiquette.

CHESTERTON, GILBERT KEITH (1874–1936). English author, keen in penetration and clever in criticism; called a "master of paradox." Wrote on many subjects. Some of his best works: *Charles Dickens, Hereticks, What's Wrong with the World; The Man Who Was Thursday, The Man Who Knew Too Much, Victorian Age in Literature.*

CHURCHILL, WINSTON (1871–). American author, born in St. Louis; lived later in New Hampshire. His novel, *Richard Carvel* (1899), a story of Maryland in the Revolution, sold nearly a million copies altogether. Other successes were *The Crisis, A Modern Chronicle, The Inside of the Cup,* the last two novels of problems in American life.

CIBBER, COLLEY (1671–1757). English actor and dramatist; engaged in numerous controversies in literature. Attacked by Pope in the *Dunciad* as the prince of dunces, but he was everything but that. Poet laureate. His *Apology* tells of his own life and defends the stage against Collier's charge of immorality.

CICERO, MARCUS TULLIUS (106–43 B. C.) Roman orator and statesman. Put to death by the Triumvirate—Octavius, Antony, and Lepidus. For putting down the conspiracy of Cataline, he was called "father of the country." Best known for his Philippics against Antony, Cataline, and others. As orator was given to puns, pathos in excess ("tear-drops" they said of him), sharp invective, and great polish of style. In his work on oratory he favored rhythm and musical effects. Late in life, after holding several military and civic offices, he tried to retire to his studies. He wrote essays on the gods, the supreme good, and notably on old age (*De Senectute*).

CLARK, CHARLES COWDEN (1787–1877). Editor and lecturer; friend of literary men like Shelley, Hunt, the Lambs. Married Mary Victoria Novello, sister of his partner. His lectures on Shakespeare made him celebrated. She is best known for the *Concordance to Shakespeare,* a valuable work still. Together they compiled several books, such as *Shakespeare's Characters, Molière's Characters, The Shakespeare Key.*

CLEMENS, SAMUEL LANGHORNE. See TWAIN, MARK.

CLOUGH (*kluf*), **ARTHUR HUGH** (1819–1891). Scholarly and reflective English poet. Experimented with hexameters or six-stress lines in *Toberna-Vuolich* (1848); wrote *Ambervalia* (with Thomas Burbidge), short lyrics, one novel, and a satire. *Thyrsis* was written by Matthew Arnold to commemorate Clough.

COBBETT, WILLIAM (1763–1835). Radical and English author. Wrote many controversial pamphlets, *Life of Peter Porcupine,* his own defense against those who made light of his early environment, *Grammar of the English Language,* for young uneducated workmen, *Rural Rides,* observations on the country and life there, *Advice to Young Men,* and many others. Carlyle called Cobbett "the pattern John Bull of his century." Did some practical gardening and farming.

COLERIDGE, SAMUEL TAYLOR (1772-1834). English philosopher and poet. With Wordsworth, Shelley, and Keats, leader of the Romantic Revival. Classical scholar at Cambridge, but did not graduate; enlisted under assumed name, but his brother got his honorable discharge after four months. He and poet Southey married sisters named Fricker. Coleridge settled near Wordsworth, and in 1798 they issued the *Lyrical Ballads,* at Bristol, England. His *Ancient Mariner,* best known poem of the volume, is one of the great works in our language for vividness of imagination, beauty and music of diction, power of concrete details, and romantic mystery, with moral sentiment. His *Kubla Khan* is pure music, a glorious fragment, mystical and vigorous. As a conversationalist Coleridge was well-nigh marvelous. Coleridge's last years were spent in the home of Dr. Gillman at Highgate, who treated him successfully for the opium habit.

Of three surviving children of Coleridge, Sara (1802–1852) became an author of note, known principally as a translator; Hartley (1796–1849) wrote many fine sonnets and edited the plays of Massinger and Ford; and Derwent (1800–1883) became a noted educator, leaving two children who in turn entered literature.

COLLIER, JEREMY (1650–1726). Clergyman whose *Short View of the Immorality and Profaneness of the English Stage* drew replies from several dramatists, but Dryden admitted that he was partly justified, though he greatly exaggerated.

COLLINS, WILLIAM (1721–1759). English poet known for his odes on *Popular Superstitions of the Highlands, The Passions, Music,* and *Simplicity.* His poem *To Evening* is a noble instance of unrimed verse made musical by delicate arrangements of words. Helped introduce the new romantic poetry.

COLLINS, WILLIAM WILKIE (1824–1889). Once very popular English novelist, now somewhat superseded, except possibly for his *Woman in White* and *The Moonstone,* which rank among the great mystery stories. Count Fosco, his detective character, is interesting, human, and more attractive than many such today in detective literature.

COLONNA, VITTORIA (1490–1547). Italian marchioness; wrote many *Rime spirituali* and several elegies. Friend of Tasso, Michelangelo, who addressed her in sonnets, Castiglioni, Cardinal Pole, and other churchmen.

CONGREVE, WILLIAM (1670–1729). Called by many the greatest English comic dramatist. His *Way of the World,* though not appreciated for its true worth at first, still retains its vogue as a clever, true, and facile picture of the age (1700). Two years earlier he tried rather lamely to reply to Jeremy Collier (q. v.), who charged the English stage with gross immorality. Yet his own play refutes the charge. Other works are *The Old Bachelor* and *Mourning Bride.*

CONNOLLY, JAMES BRENDAN (1868–). American author of sea tales; lived in Boston. Won first Olympic championship in modern times at Athens. Followed the sea. Among his books are *Out of Gloucester, Crested Seas, Sonny Boy's People, Book of Gloucester Fishermen.*

CONNOR, RALPH; pseudonym for Rev. Charles W. Gordon (1860–1937). Clergyman in Canada; has served on several imperial commissions. Author of interesting religious books, such as *Black Rock, Sky Pilot, The Major, The Sky Pilot in No Man's Land.* Chaplain in World War.

CONRAD, JOSEPH (1857–1924). Born in Poland, became a master in English merchant marine; learned the language by himself through his love for Shakespeare, Dickens, Cooper, and Marryat first read in Polish. Finally became a British subject. *Almayer's Folly* was written between 1889 and 1894. Then followed a remarkable series of tales of the sea, grim, terrible, the foe of man—25 stories in all. His *Youth* (1902) contains three short narratives of compelling genius and perfect technique. *Typhoon* describes the fury of the storm at sea. *Lord Jim* is the story of a man who heroically saved his soul but lost his own life. *Chance* (1914) brought him great fame. It answers those who say his work is too fatalistic. Others are *Victory, The Arrow of Gold, The Rescue,* and *The Rover,* all more like other novels in style and form, and yet still distinctively Conradian. His English is faultless almost, his manner reserved and dignified, his power to picture, and to arouse emotions is of high order.

COOKE, ROSE TERRY (1827–1892). New England author of realistic and droll stories and descriptions of village life. *Root-bound, Somebody's Neighbors, Huckleberries Gathered from New England Hills* are among her best volumes.

COOPER, JAMES FENIMORE (1789–1851). American novelist, born in New Jersey, died at Cooperstown,

N. Y. Served six years at sea. *The Pilot* is a romanticised account of some adventures of John Paul Jones; it is true to sea-life, character, and events in the main—a new type in America. The legend is that Cooper was displeased with Scott's knowledge of seacraft as shown in his *Pirate*, and sought to better his methods. His *Leatherstocking Tales* include such works as *The Pioneers, Last of the Mohicans*—his most popular book now—*The Pathfinder, Prairie* and *Deerslayer*. Critics assert that his Indians are either too good or too bad, that he has wax dolls instead of women in his books, and that his knowledge of lore of the forest even might be questioned. Yet his stories stir the young and probably give as interesting a picture as we have of the pioneer life in New York and adjacent territory. His *History of the Navy* brought him fame and criticism both, but it is still a standard work.

COPPEE, FRANCOIS (1842–1908). French poet of the peasant life and type. Wrote many volumes, including *Le Reliquaire, Les Intimités, Les Humbles, Olivier*. His dramas *Severo Torelli* and *Pour la couronne*, the latter produced in English in 1896 by John Davidson, were once very famous. Took prominent part against Dreyfus.

CORELLI, MARIE (1864–1924). Adopted daughter of Charles Mackay, English song-writer and dramatist. *Romance of Two Worlds*, a fantastic descriptive story, which with other novels gave her tremendous vogue for many years. Many of her writings were controversial, and some were in bad taste and grotesquely melodramatic. Yet she was sincere and capable. *The Sorrows of Satan, The Master Christian*, and *Barabbas* are some of her stirring romances. Interested in music.

CORNEILLE (*kŏr-nāy'*), **PIERRE** (1606–1684). Greatest of French dramatic poets, educated at Rouen, practiced law for a brief time, and entered literature by dramatising an incident of his own life. His *Cid*, another play, acted with tremendous success in 1636, aroused a storm of jealousy and protest. Finally, in his *Discours* and *Examens* Corneille explained his principles of composition and tried to defend himself. These are able works of criticism. *Oedipe, Horace, Pompée, Andromède* are some of his dramas.

COUPERUS, LOUIS (1863–1923). Dutch novelist; lived in East Indies as a boy, where his father was an official. At first influenced by Tolstoy. Wrote many prose poems, and the "Books of the Small Souls" or, in English, *The Small Souls, The Later Life, The Twilight of the Soul. Old People and the Things that Pass, Dionyzos, Herakles*, the last two based on classical researches, placed him among the great novelists of the century.

COWLEY, ABRAHAM (1618–1667). Regarded once as greatest English poet of his age; now hardly read. His essays contain some noble passages; but his verse now seems artificial and insipid. Wrote a form he called *Pindarique Odes*, but they are not like those of Pindar. Among his love verses, *The Mistress* gained high fame, as an amorous poem of the customary type. A royalist, he spent about fifteen years of exile in France.

COWPER, WILLIAM. English didactic poet; wrote several hymns still sung; also great letter writer; and made a noble translation of Homer. His *John Gilpin* is one of our great humorous pieces. *The Task* introduces us to humble life of the age, with a fine philosophy and great powers of concrete and interesting description. His ballad *The Loss of the Royal George* is known to every Englishman as a sincere and pathetic lyric. See ENGLISH LITERATURE.

CRABBE, GEORGE (1754–1832). First tried surgery and at last became a clergyman. Knew the conditions of the daily laborer. His poem *The Village* shows the hard life of real toil without any romantic flourishes such as we read in Goldsmith's *Deserted Village*. He was an unflinching realist, and as such gives us much insight into common life of the period.

CRADDOCK, CHARLES EGBERT (1850–1922). Pen name of Miss Mary N. Murfree of Tennessee. In her stories we have the romance, superstition, independence, and sturdy honor of the mountaineers. A master of dialect; knew her people thoroughly. Best works are *In the Tennessee Mountains, The Prophet of the Great Smoky Mountains, Phantoms of the Footridge, Mystery of White Face Mountain*.

CRAIK, DINAH MULOCK (1826–1887). Besides her delightful poems for children, Mrs. Craik wrote one novel, *John Halifax, Gentleman*, a tale of sturdy honesty which still places her in the front rank of women authors. Her husband was G. L. Craik of the Macmillan Company.

CRANE, STEPHEN (1870–1900). American journalist and writer. His *Red Badge of Courage* is a fine picture of heroism during the Civil War. *The Open Boat*, a vivid account of his own shipwreck and perils at sea, has been called by H. G. Wells "the finest short story in the English language." Wrote some free verse. War correspondent and adventurer; died early as result of privations and shipwreck.

CRASHAW, RICHARD (1613?–1649). English religious poet and mystic. Admired by Milton. *Steps to the Temple* is his greatest effort.

CRAWFORD, FRANCIS MARION (1854–1909). American author; son of Thomas Crawford the sculptor; nephew of Julia Ward Howe. Educated at Cambridge, Heidelberg, and Rome; lived in Rome after 1883. Treated Italian life and scenery romantically. Among his picturesque and vivid stories touched with some mysticism are *Mr. Isaacs*, the story of an oriental who loved an English lady, *Saracinesca, Via Crucis, In the Palace of the King*.

CREASY, EDWARD SHEPHERD (1812–1878). Historian and judge; born in Kent, England; chief justice of Ceylon. His best known work today is the *Fifteen Decisive Battles of the World*.

CREVECOEUR (*krēv"kūr'*), **MICHEL-GUILLAUME JEAN DE** (commonly called Hector St. John) (1735–1813). Born in France; became American citizen and wrote a rosy picture of life and opportunities in the new world, *Letters of an American Farmer*. Lived in New York; later consul. Assisted in Revolution, and in securing French immigration.

CROCKETT, SAMUEL RUTHERFORD (1860–1914). Scotch story writer, known for his humor, pathos, and good descriptions of young life. *The Sticket Minister* (1893) is one of his best; and his accounts of Gibby the Eel, as his classmates called an interesting student and minister, are very droll.

CROSBY, FANNY J. (1820–1915). Born in Putnam County, N. Y., lived in New York City, and Bridgeport, Conn. Wrote eight thousand hymns. Blind from six weeks of age; had most remarkable memory for names and events. Educated at New York Institution for the Blind, where she also taught for 11 years, till her marriage to Alexander Van Alstyne in 1868 (d. 1902). After publishing three books of verses, she turned to hymn writing in 1864, and continued to be associated with men like William B. Bradbury, W. H. Doane, Ira D. Sankey, H. P. Main, George C. Stebbins, and William J. Kirkpatrick all her life. Used more than 100 pseudonyms. For years addressed religious audiences in eastern states. *Memories of Eighty Years* published in 1907. Some hymns are *Rescue the Perishing, Safe in the Arms of Jesus, Blessed Assurance, Saved by Grace*.

CROTHERS, SAMUEL McCHORD (1857–1927). Unitarian clergyman and author of Cambridge, Mass. Author of many genial essays published in books entitled, *The Gentle Reader, The Pardoner's Wallet*, and *The Endless Life*.

CURTIS, GEORGE WILLIAM (1824–1892). American editor, essayist, and reformer. Wrote for various magazines, including the "Easy Chair" department of *Harper's Monthly*, and as political editor of *Harper's Weekly*. Offered many political appointments, but declined all. Leader in civil service reform movement. *Potiphar Papers* are humorous satires on fashions; *Prue and I*, a tender, humorous, and delightful collection of essays.

CYNEWULF (*kin'i-wulf*), **CYNWULF** (fl. 9th cent.). Only Old English vernacular poet known surely by name. Four poems are found in the *Exeter Book* and *Vercelli Book*, written in 11th century. They are signed by the runes or letters which make up his name. His undoubted works include *Juliana*, on the martyrdom of an early saint; *Elene*, on the discovery of the true cross by Empress Helena—based in part on a Latin original—*Fates of the Apostles*, and the *Ascension*. Several others assigned to him, but belong to pupils or imitators.

DA COSTA, ISAAK (1798–1860). Dutch poet and writer on theology. Earliest leader of romanticism among poets of his time. His chief works are *Poezy, Alphonsus I*, a tragedy, *Hagar*. He translated *The*

Persians and *Prometheus* of Aeschylus; edited works of Bilderdijk, greatest contemporary poet of Holland.

DALIN, OLOF VON (1708–1763). Greatest Swedish poet of his period. Born in Holland; acted as tutor to crown prince, afterwards Gustavus III. His satiric allegory, *Story of a Horse*, inspired many imitations. Wrote six volumes of criticisms and comments on literature, a didactic poem called *Swedish Liberty*, and his great work, *History of the Swedish Kingdom*.

DANA, CHARLES ANDERSON (1819–1897). Managing editor of the New York *Tribune*, served in War Department during Civil War, and moulded the policy and style of the *Sun* from 1868 to his death. His paper came to be known as the "Newspaper-man's paper," because of its journalistic terseness and sense of news values. Dana also wrote *The Art of Newspaper Making*, with George Ripley made *The American Cyclopedia*, and edited *Household Book of Poetry*.

DANA, RICHARD HENRY (1815–1888). His father was Richard Henry Dana (1787–1879), one of the editors of the *North American Review* and author of volumes of poems. His grandfather was an American statesman. R. H. Dana, Jr., to repair his health, shipped before the mast to California around Cape Horn, 1834–1836. Growing out of his experiences, his *Two Years Before the Mast*, became a classic of its type, still widely read in America and Europe. It led to some reforms in the Navy. He prepared a valuable edition of Wheaton's *International Law*, but became involved in lawsuits over this for 13 years. Other activities mainly political.

D'ANNUNZIO, GABRIELE. Listed under ANNUNZIO.

DANTE (*dăn'tē*) (or **DURANTE), ALIGHIERI** (1265–1321). Among the half-dozen supreme poets of all the ages. Born and lived in Florence till driven in 1302 to Siena. Took part in political and military affairs of the war between Guelphs and Ghibellines; expelled finally for resisting outside influences in Florence. Dante's *Vita Nuova* or *New Life* contains poetry with prose interpretations and comments; celebrates his love for one Beatrice, now supposed to be of the Portinari family. Though conventional in form, the situation and emotion may be real and sincere in the main. Later married one of the famous Donati family, which at last joined the opposing party in Florence. Left two sons and one daughter. Visited various places, possibly France, and lived last years in Ravenna. His *Divine Comedy*, as it came to be called, is epic in form, but lyric in many respects—a unique work of superb genius, imagination, and moral power. It details a vision of Dante's visit to Hell, where in different stages or circles he beholds some great men of the past, and punishment for all according to their deserts. Popes, warriors, politicians, rivals, emperors all appear in vivid and terrible pictures. He reserved honor for a few and mild punishment for the nobles and poets who lived before the Christian era. Virgil acts as his guide and instructor. Finally, Beatrice herself leads him to the supreme Heaven and God Himself. *Paradiso* is a concluding or sequel portion. The *Convivio* or *Banquet* and the Latin treatise *Monarchia* expound Dante's political ideas and glorify Rome as center of the world. Pope and emperor are supreme, but must obey the laws of God. In his love poetry he was influenced by Petrarch (q. v.). See also ITALIAN LITERATURE.

D'ARBLAY, FRANCES BURNEY (1752–1840). Wrote *Evelina*, the story of a young English girl's introduction to society; a fruitful source of knowledge of etiquette and customs of the period (1778). Miss Burney moved in the Johnson circle; married Alexandre D'Arblay, a French military exile. Her *Diaries* and *Letters*, next to Boswell's Johnson, throw much light on literary persons and some others.

DAUDET (*dō-dāy'*), **ALPHONSE** (1840–1897). Called by some the Dickens of modern French literature. *Le petit chose* tells with pathos and delicacy of his early struggles. His series of stories of *Tartarin de Tarascon*, showing his hero in the mountains, as a hunter, and as a colonist, take highest rank. Like Dickens a master of both joy and tears, but also urged by a sense of moral values. Some of his stories for children—notably *La Belle Nivernaise*, the tale of an old boat—are charming and still very much read. His wife, Julia Allard (with whom he was singularly happy) also wrote *Impressions of Nature and Art* and *Youth of a Girl of Paris*. Their son Leon (1867–) was known as a royalist and novelist, author of *The Voyage of Shakespeare* and *The Stupid Nineteenth Century*.

DAVENANT, WILLIAM (1606–1668). Succeeded Ben Jonson as poet laureate; wrote plays; managed Drury Lane theatre. His *Siege of Rhodes* is an early form of operatic drama, which he fostered and developed. His epic *Gondibert* was once widely admired.

DAVIS, RICHARD HARDING (1864–1916). Son of Rebecca Harding Davis (1831–1910) who wrote various stories, including *Life in the Iron Mills*, a realistic description, which Pattee calls "a glimpse into the hell of the Pittsburgh roller mills in the unrecorded days." Richard was correspondent in every major conflict from the Greco-Turkish (1897) to the World War. *Gallegher*, a local color newspaper story, *Van Bibber and Others*, accounts of a New York clubman who finds diversion in learning "how the other half lives," are among his best tales. *Notes of a War Correspondent* (1910), and *Somewhere in France* (1915) show the results of his many hazardous exploits in gathering news.

DAY, THOMAS (1748–1780). English leader of the "back to nature" movement in the period just before the Romantic Age of Burns, Coleridge, and Byron. *Sanford and Merlin* gave directions and examples for education of the young. His poem, *The Dying Negro* (1773) was an early outcry against slavery. Sympathized with America in the Revolution.

DEFOE, DANIEL (1661–1731). English pamphleteer and novelist. Engaged in several controversies, writing anonymously. His *True-Born Englishman* vindicated William III. against the prejudice that he was a foreigner; *Essay on Projects* contains many modern suggestions for civic improvements; *Shortest Way with Dissenters* is a satirical work which many took seriously, and he was pilloried in punishment, but his friends made his detention a holiday, and he afterward wrote his *Hymn to the Pillory*, to recall the occasion. Defoe wrote three books on phases of magic, and his wonderful *Apparition of one Mrs. Veal*, a realistic and "veracious" account of a ghost, is good reading today. The masterpiece *Robinson Crusoe* seems so probable and true that even adults find it easier to believe than many contemporary events. This reveals in greatest detail what Defoe called his facility of forging a tale and making it seem real,—his greatest quality, which had a profound and far-reaching influence on modern fiction. His *Journal of the Plague Year*, though largely fictitious, is still taken by many as a true account, and some libraries erroneously classify it as history.

DEKKER, THOMAS (c. 1572–c. 1632). Called by Ben Jonson a "dresser of plays"; compiled many dramas, including his most popular *The Shoemaker's Holiday*, based on Deloney's *Gentle Craft*, a series of sketches in honor of shoemaking. His *Gull's Hornbook* (primer) shows the life of a man of fashion in London day by day. *The Wonderful Year* describes the city during a plague.

DELAND, MARGARET WADE (1857–). Born Margaret Wade Campbell at Allegheny, Pa.; married L. F. Deland of Boston. Specialized in lively and delightful stories of village characters in *Old Chester Tales*, *Dr. Lavendar's People*, *New Friends in Old Chester*, and also her novels, *The Awakening of Helena Ritchie*, and *John Ward, Preacher*, tracing the soul struggles of young persons, all of which have been greatly appreciated.

DELAVIGNE (*dā-lā"vĭn'yā*), **JEAN FRANCOIS CASIMIR** (1793–1843). French patriotic poet and dramatist. *Messeniennes*, a collection of lyrics, and his song *La Parisienne*, with music by Auber, rivaled the *Marseillaise* in celebrity. *Louis XI.* and *Charles VI.* are his celebrated dramatic compositions.

DE MORGAN, WILLIAM FREND (1839–1917). Retired from the tile business at 65, and before his death at 78 wrote six novels, noted for simplicity, accurate observation, and character analysis. *Joseph Vance*, party autobiographical, *Alice-for-Short*, and *It Never can Happen Again* are highly praised by lovers of Dickens and the discursive novel of manners.

DEMOSTHENES (*dē-mŏs'thē-nēz*), (348 ?–322 B. C.). Greatest orator of ancient times. Ridiculed at first in public, he shut himself away from men and went through an elaborate discipline, during which he spoke with pebbles in his mouth (possibly to overcome an impediment in speech), against the sound of the waves of the sea, in an enclosed space, and under other adverse conditions. Then became known as greatest of his day in Athens. Prepared speeches and briefs in many law cases. Spent much

of his life vainly trying to rouse his countrymen against Philip of Macedon; hence his speeches are called *Philippics*, a name now applied generally to similar efforts. Banished for a time. For genuine patriotic fervor, unselfishness, love of Athens and of freedom, he has been cited through the ages as a world example. Of 60 orations, those of greatest influence were speeches *On the Peace, On Affairs in the Chersonese, On the Embassy*, and *On the Crown*, the last a noble and faultless defense of his own conduct, called by many critics the world's greatest oration.

DENHAM, JOHN (1615–1669). English royalist and poet. His paraphrase of part of the *Aeneid*, a tragedy called *Sophy*, and his *Cooper's Hill* are his chief works. Dryden called the last of these "the exact standard of good writing," and Pope imitated its descriptions in his *Windsor Forest*.

DE QUINCEY, THOMAS (1785–1859). Born in Manchester; educated at Oxford, tried law, and finally settled in the Lake District near Wordsworth. Wrote three types of works: first, like *Narratives* and sketches, designed to amuse; second, various scholarly and literary essays for magazines, to which he became a large contributor; third, his *Confessions* and *Suspira de Profundis*. He fought against the opium habit for many years, at times with success. The *Confessions* give an imaginative account of his struggles against the drug. This pathetic outpouring shows but one side of De Quincey. He could be satirical as in his *Murder Considered as one of the Fine Arts*, which might have been written in one of our own modern cities, he could be intensely imaginative as in *The English Mail Coach*, or dramatic and intense as in the *Joan of Arc*.

DESCHAMPS, EUSTACHE (1346?–1406?). Noted for historical and patriotic poems, his implacable hatred of England, and his *Miroir de mariage*, a satire in 13,000 lines of railing against women. He did much to give form to French poetry after the age of the troubadours.

DEUS, JOAO DE (1830–1896). Stands next to Camoens and Garrett in the esteem of the people of Portugal. Indifferent to fame and to politics, he wrote some satirical verses of great power, but his *Flores de campo, Ramo de flores*, and *Folhas soltas* are supremely artistic, beautiful, and refined. He also wrote much on education.

DIBDIN, CHARLES (1745–1814). British dramatic and lyric author, known best now for many popular songs, such as *Tom Bowling, Jock Ratlin, The Bells of Aberdovey, Saturday Night at Sea*, found in his musical plays *Liberty Hall* and *The Oddities*. His son, Thomas John (1771–1841) attained fame and fortune by his dramatic adaptations, pantomimes, and stage versions of the novels of Walter Scott. Of his 70 productions, not more than a half dozen were flat failures, and many were inordinate successes.

DICKENS, CHARLES (1812–1870). Eminent novelist, born at Portsmouth, England, son of a poor naval clerk. When hardly more than 11, while his father went to prison for debt, and the mother to try to earn a little by teaching (there were 8 children), Charles became apprenticed to a firm that made blacking. These years are brought into some prominence in his autobiographic *David Copperfield*, but even in adult life he recalled them with tears. From them arose his zeal to defend the young, the unfortunate, and the outcast. Early he learned to observe minutely, to see everything, and to remember scenes, faces, and unusual events. Learned much also as shorthand reporter and journalist. No modern author has a greater command of the grave and the gay alike. Though Dickens is accused of distorting out of all semblance, one at least recalls something like life and people in his books. The *Pickwick Papers*, finished in 1837, established him solidly in public regard. What child does not know Little Nell of the *Old Curiosity Shop*, the corner of London where she lived, and the fields where she went forth to wander and die! What red-blooded youth does not know about the historical romance of the *Tale of Two Cities*, and the horrors of the French Revolution! Or the boy and man Oliver Twist? Or that terrible house of shortcomings pictured in *Nicholas Nickleby*, the school of Squiers and his gang! Or Tiny Tim of the *Christmas Carol!* Though through these and many others, Dickens is known well as a novelist, he is not so well known as he should be for his short stories.

DICKINSON, EMILY (1830–1886). American poet; lived most of her life in Amherst, Mass. Became somewhat of a recluse possibly because of an unhappy love affair. Only after her death were the poems published through T. W. Higginson. In 1924 both poems and her letters were again issued. They show her a mystical, inspired, and sweet-tempered genius, with profound knowledge of nature and life.

DIDEROT (*dēd'rō*), **DENIS** (1713–1784). After making some translations, he was engaged to turn into French Chambers' *Cyclopedia*, but the work was much enlarged and grew into an immense storehouse of all knowledge in 36 volumes. Thus France profited by his incessant toil for ten years, which brought him little money and much danger and ostracism. Catherine of Russia finally acted as a patron.

DIODORUS (*dai"o-dō'rus*), **SICULUS** (fl. 60–20 B. C.). Wrote a *Library of History* in 40 volumes; material gathered from various sources. Only 5 books are now extant, but they are valuable.

DISRAELI (*diz-rā'li*), **BENJAMIN** (1804–1881), Earl of Beaconsfield (see RULERS AND STATESMEN under Beaconsfield. English statesman of great influence in the nineteenth century, but equally well known as an author of novels and some plays. *Vivian Grey* (1826) began a career that ended with *Endymion* (1880). *Venetia, Henrietta Temple, Coningsby* were widely admired. His father, Isaac (1766–1848), wrote several fine books, including *Curiosities of Literature* and *Amenities of Literature*.

DIXON, THOMAS (1864–). Novelist and playwright. Stories of the South aroused considerable interest and controversy, such as *Leopard's Spots, The Clansman, The Sins of the Fathers*. His photoplay, *Birth of a Nation*, very elaborately set, attained a tremendous vogue.

DIXON, WILLIAM HEPWORTH (1821–1901). English traveler and historian. Of his numerous volumes, notable ones are *John Howard and the Prison World of Europe, Life of William Penn*, in answer to Macaulay's attack; *Personal History of Lord Bacon, New America, Free Russia*.

DOBSON, HENRY AUSTIN (1840–1921). Introduced French verse forms into English poetry in his volume, *Proverbs in Porcelain*. An early collection of poems is *Vignettes in Rhyme* (1873). His best prose consists of *At the Sign of the Lyre, Eighteenth-Century Vignettes*, and biographies of Fielding, Steele, Goldsmith, Walpole, Richardson, and Fanny Burney

DODGSON, REV. C. L. See CARROLL, LEWIS.

DOLE, NATHAN HASKELL (1852–1935). American critic, poet, and translator. *Famous Composers, Joseph Jefferson, Omar, the Tent-Maker, Six Italian Essays, Life of Tolstoi, The Hawthorn Tree and other Poems, Building of the Organ;* translations of Tolstoi, Daudet, Verga, are some of his works. Also edited numerous volumes. Lived in New York and near Boston.

DONNE, JOHN (1573–1631). Leader of English metaphysical or fantastic poets. Intensely popular preacher as dean of St. Paul's. Six collections of his poems published between 1633 and 1669. Given to conceits, elaborate figures, analogies, and other turns of style. Had a great but not always salutary influence on later poets. Many sermons and essays of his are also extant.

DONNELLY, IGNATIUS (1831–1901). Known mainly as an American who wrote *The Great Cryptogram*, an elaborate and ingenious effort to prove by mathematical and other methods that Bacon wrote the Shakespeare dramas. His *Lost Atlantis* is a romance based on the legend of a lost continent in the Atlantic. Donnelly has had several followers.

DORAN, JOHN (1807–1878). English author of Irish descent, whose *Their Majesties' Servants* still remains an authoritative work on the stage from Betterton to Kean, supplemented by *In and Out of Drury Lane*.

DOSTOIEVSKI (*dŏs'tō-yĕv'skĭ*), **THEODORE M.** (1821–1881). A Russian novelist at first influenced by Gogol and Balzac, and later by Dickens. An exile in Siberia for seven years. Last novels are his best, for they incarnate in his characters his profound sympathy for the oppressed, an outgrowth of his own hard life and lack of self-control. *The House of Death, Crime and Punishment, The Gambler* (he was one at times), and the *Brothers Karamazov* are outstanding realistic pictures. For imaginative analysis, power to construct and handle his own ideas, and sheer lifelikeness of his people he has seldom been excelled in fiction.

Both his method and his ideas have intensely influenced several writers since 1895 in France, Germany, and England.

DOUGALL, LILY (1858–1923). A Canadian author. Her successful novels are *Beggars All, What Necessity Knows, The Mormon Prophet.*

DOUGLAS, GAVIN (1474?–1522). Scottish poet, bishop of Dunkeld. Died in London. His four chief works are: *Palice of Honour*, in 2,000 lines in type of dream-allegory, like *The Romance of the Rose; King Hart*, of King Heart in his castle served by courtiers (the five senses), an elaborate allegory, in 900 lines; *Conscience;* and his translation of Virgil's *Aeneid*, the first rendering of any important Latin poem in any English dialect.

DOWDEN, EDWARD (1843–1913). Irish critic and poet, best known by admirable studies in *Shakespeare, his Mind and Art, Shakespeare Primer, Studies in Literature, Life of Shelley.* His books are readable and authoritative.

DOYLE, ARTHUR CONAN (1859–1930). Creator of the famous detective Sherlock Holmes. Practiced several years as a physician; in late years interested in spiritualism. His tales were so popular that he had to bring Holmes back from the dead to satisfy the public demand for more. The series includes *A Study in Scarlet* (1887), *Adventures of Sherlock Holmes, The Memoirs of Sherlock Holmes, The Return of Sherlock Holmes.* His *Cause and Conduct of the World War* appeared in various languages besides English. Wrote *History of Spiritualism* (1926).

DOZY, REINHART PIETER ANNE (1820–1883). Dutch Arabic scholar of Huguenot parentage. The *History of the Mussulmans in Spain* (Eng. trans. 1913), *Supplement to the Dictionary of the Arabs* are two of a number of learned and standard works. Professor of history at Leyden for 30 years.

DRAKE, JOSEPH RODMAN (1795–1820). American poet; lived in New York. His greatest lyrics are *The American Flag, The Culprit Fay*, and an elegy remembering Fitz-Greene Halleck, with whom he wrote *The Croakers.*

DRAYTON, MICHAEL (1563–1631). Voluminous English poet, now remembered only by his sonnets, *Heroical Epistles*, the noble *Battle of Agincourt*, and *Polyolbion*, a "Herculean toil" not completed, but containing some 30,000 lines descriptive of the waters and natural divisions of England.

DRUMMOND, WILLIAM (of Hawthornden) (1585–1649). Scotch poet who lived near Edinburgh. Known for his sonnets, religious, and nature poems; friend of Jonson and Drayton. *Forth Feasting*, his earlier *Poems, Flowers of Sion*, and a beautiful prose discussion of the foolishness of the fear of death, adjoined to the *Flowers*, are his chief works. Wrote some political essays.

DRUMMOND, WILLIAM HENRY (1854–1907). Canadian "habitant" or dialect poet of French-Canadian humble life. Besides *The Habitant, Johnny Courtneau* is highly praised. Drummond practiced medicine in Montreal. See CANADIAN LITERATURE.

DRYDEN, JOHN (1631–1700). English dramatist, poet, critic, born at Aldwinkle, Northamptonshire. Graduated at Cambridge and entered upon a literary career succeeding Sir William Davenant as poet laureate in 1670. He became the foremost writer of the Restoration, exercising a great influence upon English literature in the eighteenth century. For complete review of works, see ENGLISH LITERATURE page 800.

Du BELLAY, JOACHIM (c. 1522–1560). French poet and critic. *Regrets*, 191 sonnets, is his chief work; an earlier group of 47 was translated by Edmund Spenser as *The Ruins of Rome.*

DUDEVANT, MADAME A. L. D. See SAND, GEORGE.

DUMAS (*dū-mäh'*), **ALEXANDRE** (1802–1870). Romantic French novelist and playwright. *His Henry III, Antony*, somewhat autobiographical, and *Richard Darlington*, related to Scott's *Chronicles of the Canongate*, are among his very successful plays. Collaborated in many of his works, having some connection with about 300 books. His great novels are *The Three Musketeers, The Count of Monte Cristo, Joseph Balsamo*, and *The Viscount of Bragelonne.* The first of these is probably the world's most read novel. For conception on an epic scale, swiftness and vividness of narrative, and genuine dramatic interest, his stories are equal to any. Some of his characters like D'Artagnan, the three musketeers—Athos, Porthos, and Aramis—Milady, Chicot, for dash, bravery and human interest are never forgotten.

DUMAS, ALEXANDRE (1824–1895). Natural son of the preceding and a French dressmaker; recognized by his father and now generally known as "Dumas Fils" or the Younger Dumas. Celebrated dramatist and moralist. The facts of his ancestry made a deep impression on many of his works, many of them concerned with the "eternal feminine." His *La Dame aux camélias*, as both novel and play, has remained a favorite; it is a picture of his early associations. Others are *Le Demi-Monde, La Femme de Claude, L'Etrangère.* His great industry and good management paid off the family debts, made him happy, and gave him a place his father never could attain, including election to the French Academy. For humor, serious purpose, and delightful facility in both novel and drama, the younger Dumas has few peers.

DU MAURIER (*dū mō'rē-āy*), **GEORGE** (1834–1896). Known as celebrated artist of *Punch*, humorous journal of London, and for his *Trilby*, a magnificent success as illustrated story and drama.

DUNBAR, PAUL LAURENCE (1872–1906). Celebrated American negro poet; lived in Dayton, Ohio; introduced to public by W. D. Howells. His *Lyrics of Lowly Life* and the collected *Poems*, the best of which are in negro dialect, have been greatly appreciated. Some of his short stories rival his verses.

DUNBAR, WILLIAM (c. 1460–c. 1520). Laureate of the Scotch court. Two allegorical poems, *The Goldyn Targe* and *The Thissil and the Rois, The Ballad of Kynd Kittok*, humorous and formless, the vision of the *Dance of the Sevin Deidlie Synnis* are his best known compositions. His satire is biting, his contentious work, notably scurrilous, especially for a priest as he was, his humor of a type better known in later authors like Burns.

DUNNE, FINLEY PETER, or "MR. DOOLEY" (1867–1936). For droll and caustic comment on things and men, Mr. Dooley became a national figure, in the various books printed with his name in the title, such as *Mr. Dooley in Peace and War, Mr. Dooley's Philosophy.*

EARLE, ALICE MORSE (1853–1911). Like Samuel A. Drake and more recently Wallace Nutting, did much to preserve interest in old New England, its history, and customs. Some well-known books are *The Sabbath in Puritan New England, Customs and Fashions in Old New England, Stage Coach and Tavern Days, Two Centuries of Costume in America.* Most of these books are illustrated with pictures.

EATON, WALTER PRICHARD (1878–). Dramatic critic and novelist. Lived in New York and Massachusetts. *Plays and Players*, various books in a Boy Scout series, including *Boy Scouts of Berkshire, Boy Scouts at Glacier Park, Boy Scouts on Katahdin*, are some of his volumes.

EBERS (*ā'y'bērs*), **GEORG MORITZ** (1837–1898). A German scholar who popularized ancient Egyptian lore in novel form, including *Uarda, Homo Sum, Kleopatra.*

ECHEGARAY (*ā'chā-gā-rī'*), **JOSE** (1832–1916). Spanish mathematician, dramatist, and poet, once very popular. *El gran Galeoto* (1881), often produced in other countries, *El Hijo de Don Juan, El Loco Dois*, resembling Ibsen somewhat, are among his works.

EDGEWORTH, MARIA (1767–1849). Novelist of Irish life and manners. With her father, Richard, she wrote some early critical works, including the celebrated *Essay on Irish Bulls.* Her fame was firmly established by *Castle Rackrent*, the history of an Irish estate and its owners as told by the old steward of the family. Her *Absentee* shows other evils of the landlord system. *Belinda* is a novel of society. Her various series of *Moral, Popular* and *Fashionable Tales* are characterized by insight, lightness of touch, and reflection of the age to a remarkable degree. She was among the first to declare that Scott was the author of the Waverley Novels.

EDGREN-LEFFLER, ANNE CHARLOTTE (1849–1892). Swedish story writer and dramatist. Her short narratives, *From Life* (1882 and 1889) describe actual life with great power; her plays, *True Women, How Men Do Good, The Struggle for Happiness* (assisted by Sophie Kovalevsky, whose biography she wrote), were greatly in favor.

EGGLESTON, EDWARD (1837–1902). American realistic novelist, born in Indiana, died in New York. Sought to give a veracious account of early pioneer life. He succeeded, with some pardonable exaggeration, in his *Hoosier Schoolmaster, The Mystery of Metropolisville, The Circuit Rider, The Graysons*, the last of which shows Abraham Lincoln as a lawyer in Illinois. His histories of social customs and his juveniles are also valuable records, especially of primitive and Indian life.

EGILL SKALLAGRIMSSON (c. 900–983). An early Icelandic skald or bard; served under the English king Athelstan for a time while in exile, but later was in favor in Iceland. Best known for *Sonatorrek*, composed after the death of a favorite son, and a poem in honor of his friend Arinbjörn, and the *Egill's Saga*, part or all of which some attribute to Snorri Sturluson (q. v.).

ELIOT, GEORGE (1819–1880). Literary name of Mary Ann (Marian) Evans, later the wife of G. H. Lewes, and after his death, of J. W. Cross, who wrote a biography of her. Mainly self-educated, she became a great scholar, philosopher, and critic. Her first notable work was a translation from the German of Strauss's *Leben Jesu* or *Life of Jesus*. Became sub-editor of the *Westminster Review* and wrote for it many notable papers and essays. Encouraged by Mr. Lewes, she turned to fiction. Her *Scenes of Clerical Life*, three short tales, contains some of her best work. *Adam Bede*, the story of two young people and their environment, *The Mill on the Floss*, a powerful study of the romantic but erratic Maggie Tulliver and her stolid and commonplace brother, suffused with tragic atmosphere from beginning to end, *Silas Marner*, the convincing account of how a miser regains his soul and a new interest in life through the coming to his hearth of a little waif, who became the stay of his old age, *Middlemarch*, an unerring analysis of middle class life, *Romola*, a story of the past in Florence, *Felix Holt*, a study of radicalism, and several others,—all show her varied talents, her philosophic mind, her gift of reality and fact, and in the background the tragic undertow of her own soul. She wrote mainly for an educated and adult reading public, though *Silas Marner* has been found a spiritual tonic by countless young men and maidens in our schools.

ELIOT, JOHN (1604–1690). Called Apostle to the Indians, among whom in New England he established several missions. His work in every way was far-sighted and did much to maintain peace. The *Catechism, Indian Grammar, Dialogs*, and *Logic Primer* are some of his translations, the first being the earliest book turned from English into an American Indian tongue.

ELIZABETH, QUEEN OF ROUMANIA (1843–1916). Under name of Carmen Sylva wrote many folk tales which were translated into several languages. Knew English, French, German, and Roumanian well. Born in Germany, married Prince Charles in 1869, who became Carol I in 1881. Her *Thoughts of a Queen* also popular.

EMERSON, RALPH WALDO (1803–1882). New England transcendental philosopher, essayist, and poet. Was Unitarian pastor for several years, then retired to Concord, where he lived quietly, going on lecture tours now and then. His printed *Essays*, for the most part, grew out of the lectures. Oliver Wendell Holmes called Emerson's address *The American Scholar* "our literary Declaration of Independence." Originality and freedom from slavish imitation of English letters were the slogans of the address. Yet the poet himself was influenced by Wordsworth, Carlyle, Swedenborg, and by all the German mystic philosophers. Some of his essays like *Friendship, Compensation, The Over-Soul, Manners, Genius*, and *Truth* are illuminating and authoritative. The *Representative Men* discusses famous leaders in all walks of human endeavor. Some now believe that Emerson's poems may outlive his prose, notably those like *Rhodora, Terminus, Days*, and the *Concord Ode*. No American has had a more pervasive and more profound influence on independent thinkers than Emerson has had.

ENGLISH, THOMAS DUNN (1819–1902). Philadelphia physician who wrote many poems. Best known for his *American Ballads, Boy's Book of Battle Lyrics*, and his sentimental song, *Ben Bolt*.

ENNIUS, QUINTUS (239–170 B. C.). Born in Calabria, served as a soldier, and became a Roman citizen. Titles of 25 of his tragedies are extant, his *Annales* of which 600 lines remain, and some other fragments. Imitated by Virgil, Ennius began Roman satire and attempted for the first time a kind of shorthand in Latin.

EPINAY (*āy-pĕ-nāy*), **LOUISE** (1726–1783). French lady friend of Rousseau and other literary figures. In an autobiographical romance called *Mémoires*, events connected with herself and friends were described. Her *Conversations*, written for the schooling of her granddaughter, received the crown of the French Academy in 1783.

ERCILLA Y ZUNIGA (*er-thī'lya ĭ thū-nyi-ga*), **ALONSO DE** (1533–1594). After a number of years as a soldier, published *La Araucana*, an epic poem, completed in 1590. In spite of digressions, and too much mythology, this remains about the best of its type in Spain.

ERCKMANN-CHATRIAN. Composite literary name of Émile Erckmann (1822–1899) and Alexandre Chatrian (1826–1890), novelists of Lorraine, France. Noted for clear descriptions of rustic scenes, peasant life, and the futility of war. *Madame Thérèse, History of a Conscript, Waterloo*, are some of their best works.

ERSKINE, JOHN (1879–). University professor, critic, and author. Graduate and professor at Columbia. Author: *The Elizabethan Lyric, Leading American Novelists, Democracy and Ideals, The Literary Discipline, Collected Poems, Sonata and other Poems*.

ERVINE, ST. JOHN (1883–). Playwright and novelist. *John Ferguson, Mary, Mary, Quite Contrary, The Wonderful Visit*, plays, *Alice and a Family, The Foolish Lovers, The Wayward Man*, novels, constitute his chief writings.

ESPRONCEDA (*es"pron-thē'da*), **JOSE DE** (1810–1842). Spanish soldier, adventurer, and lyric poet, greatest of his age. Influenced deeply by Byron. *El Estudiante de Salamanca, El Diablo Mundo, El Mendigo, El Verdugo* are among his famous poems.

EURIPIDES (*ū-rĭp'ĭ-dēz*) (c. 484–407 B. C.). Last of three great tragic poets of Greece; also athlete and painter. Won the tragic prize 5 out of 22 possible times. Ridiculed by some contemporary comedians, but his active vogue lasted for 600 years. Gave the chorus greater significance as interpreter of the action. Many of his plays are lost. Of the 18 now extant, the noted tragedies are: *Alcestis*, freely translated by Browning in *Balaustion, Medea, Ion, Electra, Hecuba*, and the *Suppliants*. See GREEK LITERATURE.

EUSTATHIUS (c. 1125–c. 1193). Byzantine scholar, bishop of Thessalonica, who wrote an elaborate commentary on Homer, which gives much information from authors otherwise lost. Part of his commentary on Pindar is also preserved. Original works include a history of the Norman conquests of Thessalonica and *The Reform of Monastic Life*.

EVANS, AUGUSTA. See WILSON, AUGUSTA E.

EVELYN, JOHN (1620–1706). English author of various works. Only his *Sylva* and the *Diary* are read today. The former is an early work on reforestation, long standard; the latter, one of the most celebrated intimate accounts that we possess. It covers (in great detail, at times) the years from 1641 to within three weeks of Evelyn's death.

EWALD, JOHANNES (1743–1781). In spite of neglect by his family and friends late in life, while Ewald was an invalid, he was recognized soon after his death as a Danish lyric poet without a peer. An elegy on the death of Frederick V. is a work of art. His *Adam and Eve*, a dramatic poem, was coldly received, but is now regarded as the highwater mark of the age. The *Brutal Clappers* satirizes a theatre dispute; *Harlequin Patriot* satirizes political scribblers; *Balder Dead* is a heroic opera; and his *Fishers* contains the Danish National Song, "King Christian stood by the High Mast."

EWING, JULIANA HORATIA ORR (1841–1885). Celebrated English author of children's books, daughter of Rev. Alfred Gatty; married Maj. Alexander Ewing, composer of the hymn, *Jerusalem the Golden*. For simplicity, earnestness, truth to nature, and good descriptions, Mrs. Ewing's stories take very high rank. Some of them are *The Brownies, Lob-lie-by the Fire, The Story of a Short Life*, and *Jackanapes*.

FABYAN, ROBERT (d. 1513). London tradesman who compiled a chronicle of England from early times to 1509; later extended by unknown persons to 1559. Gives information used later by Hall and Holinshed, not then accessible in other forms.

FAGUET (*fă-gā'*), **EMILE** (1847–1916). French professor of poetry and critic. Valuable monographs on *Flaubert, Zola, Balzac,* a fine *History of French Literature* from the seventeenth century, and other critical and political essays.

FARINA, SALVATORE (1846–1918). Born in Sardinia, settled in Milan. His sentimental stories gave him the name of the Italian Dickens. *Il Signor Io* (1880), his best known tale, was followed by several others, among them being *Il Tesoro di Donnina, Della spuma del mare,* and *Il Numero 13.*

FAWCETT, EDGAR (1847–1904). American novelist, who wrote of social life, including *A Romance of Old New York, An Heir to Millions, Purple and Fine Linen.* He also wrote poems, such as *Short Poems for Short People* and *Songs of Doubt and Dream.*

FAY (*fi*), **ANDRAS** (1786–1864). His *Fables* gave him the name of the Hungarian Aesop. Fay also composed plays, romances, and tales, and for a time led the opposition in the Hungarian diet. He called two collections of poems *Nosegays.*

FENELON (*fayn'lon*), **FRANCOIS DE SALIGNAC DE LA MOTHE** (1651–1715). French archbishop, theorist, and author. *Fables, Dialogues of the Dead, Télémaque,* a political novel of utopian nature, *Maxims of the Saints,* condemned by the Pope—and so Fénelon was virtually exiled to the archbishopric of Cambrai, —and the celebrated *Letter to the French Academy* (1714) make up his chief writings. His *Letter* describes the literary movements of the age.

FERBER, EDNA (1887–). From journalism in Wisconsin, she went to New York, and became a writer of stories. *Dawn O'Hara, Butter Side Down, Personality Plus, Show Boat, Mother Knows Best* and *So-Big* are among her narratives.

FERGUSON, SAMUEL (1810–1886). Irish antiquary and poet, whose two great poems, *The Forging of the Anchor* and *Father Tom and the Pope* appeared in *Blackwood's Magazine.* His *Lays of Western Gael* and other stories attempted to interest the modern readers in an Irish epic of past ages.

FERREIRA (*fĕr-rĕ'ê-rā*), **ANTONIO** (1528–1569). A Portuguese poet; lived in Lisbon. Wrote some delicate and artistic sonnets. Horace was greatly admired by him, and his *Poemas Lusitanos* shows the influence of his classical studies. *Bristo,* a comedy similar to those of the Latin of Terence, and *Cioso,* one of character, are well known; but his greatest work in the *Castro,* earliest tragedy in Portuguese, and apparently second oldest in Europe of modern times.

FEUILLET (*feh-yay'*), **OCTAVE** (1821–1890). Lived at Saint-Lo, France. *Dalilah, The Romance of a Poor Young Man,* both dramatised, and *The Little Countess,* are his best novels; *La Crise* and *The Portraits of the Marquis* are good dramas. Empress Eugenie herself acted in the latter play.

FIELD, EUGENE (1850–1895). American journalist, columnist, and poet. For 12 years wrote or collected paragraphs and bits for his column in the Chicago *Daily News.* His best poem is *Little Boy Blue,* but many of his poems for children still retain their vogue. His other works are *Little Book of Western Verse, Little Book of Profitable Tales, Love Songs of Childhood.*

FIELDING, HENRY (1707–1754). English playwright, judge, and novelist. Father of English realistic novel, as Richardson is of romantic novel. After several comedies and farces, he thought it best to counteract the influence of Richardson. His three long fictions, *Tom Jones, Joseph Andrews,* and *Amelia,* are all works of art in their own way. *Tom Jones* probably has been read by more persons than any other story of the period. It has had numerous imitators. *Joseph Andrews,* at first designed to ridicule Richardson's *Pamela*—the heroine was Pamela Andrews—turned into a genuine story of its own, full of incident and humors. *Amelia* is a realistic account of the heroism of a young wife of a spendthrift and dissolute retired army officer. It is one of our first great pictures of the unwholesome side of life.

FIELDS, JAMES THOMAS (1817–1881). American publisher who encouraged the most talented authors of his day. He also wrote several volumes and edited the *Atlantic Monthly* from 1862 to 1870. *Yesterdays with Authors* is now read for its information of the great writers of the day. His wife, Annie Adams Fields, also wrote several books of delightful reminiscences.

FIRDOUSI (*fĕr-dōō'sē*) (c. 941–1020). Name adopted by Abu Mansur, great epic poet of Persia, whose *Shanama* or *Book of Kings,* in 60,000 lines, was completed in 1001, after 35 years of labor. The reward of one silver piece for each line, which the sultan sent by a favorite, was distributed in three parts at once by Firdousi, who returned word that it was not for money he wrote. Though greatly in favor with both monarch and subjects, he was allowed to live in privation, and in his last year went forth to wander, having sent the sultan one of the bitterest satires ever written on ingratitude. The poem existed in manuscript up to 1831, when the French government began to pay for a translation, completed in 1868. This Persian bard is mentioned more than once by Emerson.

FISCHART, JOHANN (c. 1545–1591). German satirist, reformer, and scholar. In a violent but sincere manner he aimed his satire against common abuses of the time—pride of birth, astrology, undue love of learning, haughtiness of monarchs. His best-known work is a satire in imitation of Rabelais. Some poems are picturesque, full of symbolism, and intensely vigorous.

FISHER, DOROTHY CANFIELD (1879–). American author, born in Kansas, educated at Ohio State and Columbia Universities; married John Redwood Fisher, and lived in Vermont. Translated Papini's *Life of Christ.* Author of numerous stories and novels, including *The Squirrel Cage, The Bent Twig, Understood Betsy, Home-Fires in France, Made-to-Order Stories, Why Stop Learning?*

FISKE, JOHN (1842–1901). Born in Connecticut; educated at Harvard; lived most of life in Cambridge, Mass. Philosophical historian and scientist. Read widely and wrote with great care and precision. Though his scientific books like *Darwinism, Outlines of Cosmic Philosophy,* and *The Idea of God* were widely read, he is known now mainly for his histories of various periods in America, including *The Discovery of America, Old Virginia and her Neighbors, The Critical Period in American History* (1783–1789).

FITCH, CLYDE (1865–1909). American author of 36 plays and 24 adaptations. His work all shows cleverness, knowledge of stage business, and lightness of dialog. *Beau Brummel,* produced by Mansfield in 1890, is one of his best; but now *The Girl with the Green Eyes,* an admirable study of jealousy, is better known. *Captain Jinks of the Horse Marines,* made famous by Ethel Barrymore, is a fine light comedy.

FITZGERALD, EDWARD (1809–1883). Mother's name adopted by father, Edward Purcell. Knew the literary men of his day. Translated freely *Six Dramas of Calderon,* the great Spanish author, but his own best work is the translation of *The Rubaiyat of Omar Khayyam,* which made both the poem and FitzGerald famous among English-speaking peoples.

FLAUBERT (*flō-bâyr'*), **GUSTAVE** (1821–1880). French novelist and stylist; lived at Rouen. He polished to the last item, sometimes spending a whole week on a page, and nothing escaped his penetrating analysis. *Madame Bovary* (1857) began a new type of fiction, the intimate recital of concrete and truthful details, a real picturing of people and life. Yet he was also a man of vision and heart, so that some of his work is remarkable for its clever joining of fact and fancy. Influenced later men like Daudet, E. de Goncourt, and Zola. Faithfully studied *Don Quixote.*

FLERS, ROBERT DE LA MOTTE-ANGO, MARQUIS DE (1872–1927). French dramatist of lively fancy, but somewhat lacking in acute observation. His best of several seem to be *Le Roi, L'Habit Vert,* satires of contemporary life and letters. Elected to the Academy, and was president of the Society of Dramatic Authors.

FLETCHER, GILES (c. 1584–1623), and **PHINEAS** (c. 1582–1650). Sons of Giles Fletcher, who wrote an interesting account of Russia. Giles is best known for *Christ's Victorie,* a deeply religious poem, which influenced Milton's *Paradise Regained;* and Phineas for *The Purple Island,* a curious and laborded, but interesting allegory of the human body and mind. Both brothers were disciples of Spenser. *Piscatory Eclogs* by Phineas Fletcher are interesting pastorals, but marred by conceits.

FLETCHER, JOHN (1579–1625). Wrote with Beaumont (q. v.) some 50 or more dramas. *The Two Noble Kinsmen* by some is identified as partly Shake-

speare's, and *Henry VIII.*, partly Fletcher's. See ENGLISH LITERATURE.

FOGAZZARO, ANTONIO (1842–1911). Thoughtful and spiritual poet and novelist of Italy. *Valsolda* is his best-known poem at present. Malombra (1882), somewhat connected with the life of its author, and *Daniele Cortis*, became intensely popular after being admired by French critics. *Piccolo Mondo antico* has been hailed as the greatest novel of Italy since Manzoni's *I Promessi Sposi* (*The Betrothed*). The *Piccolo* (trans. as *The Sinner*) was nearly matched by his *Il Santo* (*The Saint*) though many condemned the latter as being unorthodox.

FONTANE, THEODOR (1819–1898). He ranks as a great writer of ballads, for which he gained material from foreign as well as native sources. He followed an historical romance, *Vor dem Sturm*, with various accounts of real life of his age. Influenced somewhat by French realists.

FONTENELLE (*fônt'nĕl'*), **BERNARD LE BOVIER DE** (1657–1757). *Conversations on the Plurality of Worlds* sought to make known the work of Descartes to Frenchmen. In the *History of Oracles* he sought to show that ancient revelations did not necessarily come from demons and that they did not cease in former times. Secretary Academy of Sciences for more than forty years.

FORSTER, JOHN (1812–1896). Voluminous English author, whose *Life of Dickens* is one of our classic biographies. He also wrote lives of Goldsmith, Sir John Eliot, Landor, and Swift.

FOSCOLO, UGO (1778–1827). Italian, who lived many years and died in England. Fought in French army, hoping Napoleon would free his beloved Italy. His *Carme sui sepolcri* (1807) summons the learned and patriotic dead from their tombs to fight the battles of their native land, especially of Florence which Foscolo dearly loved. He also made a great tragedy and in England composed many essays for the magazines.

FOSS, SAM WALTER (1858–1911). American editor, librarian from 1898 to 1911 at Somerville, Mass., wrote on homely topics, in volumes like *Dreams in Homespun* and *Songs of the Average Man*. His poem, *The House by the Side of the Road*, has become a classic of sentiment.

FOUQUE (*fōō-kā'*), **FRIEDRICH HEINRICH KARL DE LA MOTTE, BARON** (1777–1843). Though this German author wrote fiction, plays, and epics, he is now known only by a few works, such as his *Sigurd*, a dramatization of the Nibelungen stories, and a mystery, *Undine* (1811), which inspired many similar works in various languages.

FOX, JOHN (1863–1919). Kentucky novelist and short story writer. His *Little Shepherd of Kingdom Come*, a vivid picture of mountaineer life, and his *The Purple Rhododendron*, the latter a tragic story of love and heroism, are best known.

FOXE, JOHN (1516–1587). English clergyman, who lived abroad during much of the reign of Mary, and later wrote the long *History of the Acts and Monuments of the Church*, better known as *Foxe's Book of Martyrs*, a most vivid account of the times in England, which has had a profound influence on puritan life and thought.

FRANCE, ANATOLE (1844–1924). Adopted name of Jacques Anatole Thibault. French author and philosopher, largely influenced by Voltaire; above all a consummate prose artist. His work varies from the lightest to the most profound—a thorough student of mankind. *La vie litteraire*, *Thaïs*, a novel of Alexandria, *Le Lys rouge*, a study of Florence and of jealousy, a biography of Joan of Arc, and two books of reminiscences make up his chief works, but at present opinion is divided as to which are most significant.

FRANCIS, PHILLIP (1740–1818). Born in Dublin; English government official; opponent of policy of Warren Hastings, who wounded him in a duel. Best known now as the reputed author of a series of 69 violent and at times brutal attacks on the ministry of Lord Grafton. Under the name of Junius, they were sent to the printer of the *Public Advertiser*, and to various individuals. They are shameless almost in invective, bold in argument, and virulent in condemnation of many, including George III. himself. Though Junius admitted that he was beaten even when the ministry of Grafton gave way to the long one of Lord North, the *Letters of Junius* were the sensation of the years between January, 1769, and January, 1772. Of various persons suspected of the authorship, including Burke and Johnson, it is almost agreed now to assign them to Francis. He wrote some pamphlets and other prose works.

FRECHETTE, LOUIS HONORE (1839–1908). Poet of Quebec; for some years warm advocate of union of Canada and the United States. Translated the *Chance Acquaintance* of W. D. Howells and *Creole Days* of Cable into the dialect of French-Canadians. His own *Christmas in Canada*, *Voice of an Exile* (while he lived several years in Chicago), and *The Legend of a People* have long been popular in Canada.

FREEMAN, EDWARD AUGUSTUS (1832–1892). Professor of history at Oxford. Insisted on the continuity of history and always on the use of original sources. The *History of the Norman Conquest*, a masterpiece of narrative, is also singularly accurate and complete.

FREEMAN, MARY WILKINS (1862–1930). Born at Randolph, Mass., was secretary to Dr. Oliver Wendell Holmes; married Dr. Charles M. Freeman of Metuchen, N. J., in 1902. Regarded by some as best author of local color short stories America has produced. Celebrated volumes are *A New England Nun*, *The Wind in the Rose Bush*—mystery and ghost stories—*Humble Romance*. Besides the title stories mentioned, some notable single stories are *On the Walpole Road*, *Evelina's Garden*, *Shadows on the Wall*, and *The Revolt of Mother*. All these are true to life and spirit of New England.

FRENCH, ALICE (1850–1934). Born in New England, she has lived for many years in Arkansas and Iowa. Local story writer of the settlement of the middle states. *Knitters in the Sun*, *Stories of a Western Town*, *A Slave to Duty* and *Other Women* are among her collections; some individual stories are *Otto the Knight*, *Half a Curse*, *The Loaf of Peace*, *The Day of the Cyclone*, *The Besetment of Kurt Lieders*.

FRENEAU (*frē-nō'*), **PHILIP** (1752–1832). American poet and sea-captain; described the *Beauties of Santa Cruz*, *The House of Night* (an early romantic poem before Poe), and *The Wild Honeysuckle*. *The Indian Burying Ground* and *Eutaw Springs* have also been highly praised.

FREY, ADOLF (1855–1920). Swiss poet, critic, and novelist. Professor of German at Zurich. *Poems* collected in 1922 from earlier works, monographs of Haller, Keller, Meyer, Koller, Hodler, and other authors, and two historical novels make up his popular works.

FREYTAG (*frī'tähg*), **GUSTAV** (1816–1895). German author known widely for his *Soll und Haben*, a novel of the counting house, which is a prime favorite in Europe, a popular history of Germany, and his autobiography. His *Die Journalisten*, from material drawn out of his own life, is one of the best German comedies of the century. For a long time his *Technique of the Drama* was highly regarded, but now many critics assert its rules and descriptions are too rigid.

FROISSART (*frwä-sär'*), **JEAN** (1338–1410?). French chronicler of his own times. Visited England, Holland, and Italy, taking notes and shrewdly observing. His work is vivid, accurate, full of details, but some have said insensitive and lacking in vision. It throws a flood of light on men and manners of the fourteenth century.

FROST, ROBERT (1875–). American poet; professor of English at Amherst. "Poet in residence," University of Michigan, 1921–1923; Pulitzer prize for poetry, 1924. Author of *A Boy's Will*, *North of Boston*, *Mountain Interval*, *New Hampshire*.

FROUDE (*frood*), **JAMES ANTHONY** (1818–1894). Belonged to High Church part in England for several years till influenced by Carlyle. His *Nemesis of Faith* in 1848, reveals the break with his past. From 1856 to 1870, he worked on his *History of England from the Fall of Wolsey to the Defeat of the Spanish Armada*, and this work, though at times biased and inaccurate, remains a power of dramatic narrative, full of concrete and decisive incidents.

FULLER, THOMAS (1608–1661). English divine, royalist, and author. Of his various works, those of importance are *History of the Holy War*.

Good Thoughts in Bad Times (to cheer up the royalist soldiers), *Church History*, and *Worthies of England*.

FUNK, ISAAC KAUFMAN (1839–1912). Lutheran clergyman, who founded a publishing house, edited the *Standard Dictionary*, *Homiletic Review*, and wrote, among other works, *The Psychic Riddle*.

FURNESS, HORACE HOWARD (1833–1912). Shakespearean scholar, educated at Harvard, who edited 15 plays in the Variorum edition, which contains important collations, notes, and criticism from all previous authors. Standard in this subject of criticism. Editions were continued by H. H. Furness, Jr. (d. 1930).

FURNIVAL, FREDERICK JAMES (1825–1910). English scholar, one of the founders of the Workingmen's College, in which he taught several years, founder of the Early English Text Society, and for a time chief editor of the *New English* or *Oxford Dictionary*. Wrote on Shakespeare and brought out a "six-text" edition of Chaucer's *Canterbury Tales*.

FUST or **FAUST** (*foust*), **JOHANN** (c. 1400–1466). Lent money to Gutenberg to establish printing. He and his son-in-law printed first book to be completely dated in modern times. Psalter (1457), a very beautiful first Latin work (Cicero's *De Officiis*), together with Greek characters and many others.

GABORIAU (*ga"bō"ri-ō'*), **EMILE** (1833–1873). Classic author of detective novels and stories. His Monsieur Lecoq is the Sherlock Holmes of earlier days. *The Lerouge Affair* (1866), *La Vie Infernale*, *File Number 113* are his chief works, in addition to *Monsieur Lecoq*, which introduced the detective in 1869.

GALDOS, BENITO PEREZ. See PÉREZ GALDÓS, BENITO.

GALE, ZONA (1874–1938). American short story writer and dramatist; journalist for 14 years. Her volumes of delightful realistic stories of humble life include *Friendship Village*, *Friendship Village Love Stories*, *Heart's Kindred*, and *Neighborhood Stories*; her own dramatization of her novel *Miss Lulu Bett* won the Pulitzer prize, 1920.

GALSWORTHY, JOHN (1867–1933). English playwright and novelist; educated at Oxford. Between 1906 and 1921 wrote five novels in a series called the Forsyte Saga. These novels picture sympathetically middle-class life in the Victorian age and later. *Fraternity*, *The Patrician*, and others continued the same vein, while in 1924 he began with *The White Monkey* a set of three designed to do for London after the War what he did so well for the previous periods. His plays are good in stage-craft, dialog, and fine style. Some of them have to do with problems, such as *Joy*, *Strife*, *Justice*, and *The Skin Game*.

GALT, JOHN (1779–1839). Scotch novelist, whose *Annals of the Parish* are droll and picturesque stories of country life. Unpublished they antedate Scott's first novel, *Waverley*. As head of a land company he laid out a road between Lake Erie and Huron in Canada; founded Guelph, Canada.

GARDINER, SAMUEL RAWSON (1829–1902). Unbiased, thorough, and prolific historian. Educated at Oxford, professor at London. His work covers in three volumes events from 1603 to 1660. The *Students' History of England*, *What Gunpowder Plot Was*, *Cromwell* are separate books of great insight. Gardiner covered social as well as political events and ideas, including religious toleration.

GARLAND, HAMLIN (1860–1940). Notable interpreter of life in the American middle states. Born in Wisconsin. Among his books of short narratives are *Main Travelled Roads* (2 vols.), *Prairie Folks*; his biographical studies include *A Son of the Middle Border*, embodying much of his boyhood experience, and *Trail-Makers*, both fine accounts of pioneer life and struggles.

GARNETT, RICHARD (1835–1906). Librarian, critic, and author. Besides works on the Near East, he wrote biographies of Carlyle, Emerson, Milton, and others; some highly interesting tales, *Twilight of the Gods*, *A Short History of Italian Literature*, and other miscellaneous works of distinction.

GARRETT, JOAO, VISCOUNT (1799–1854). Great Portuguese poet, born in Oporto, but lived for some years in the Azores. An early tragedy *Lucrecia* (1819) is in the classic manner, but his poem *Camoens* turned to the new romanticism and set the vogue among his countrymen. Twice driven into exile, he spent much time in England and France, became a great liberal leader, and in his own country did much for reform, holding some minor political offices. His influence helped establish a national theatre, a school for dramatists and actors, and a new form of copyright law. Among his other works are volumes of poetry, some tragedies, and historical dramas, and an historical fiction influenced by Scott.

GASKELL, ELIZABETH CLEGHORN (1810–1865). Known in many lands for her simple, pathetic, and veracious *Cranford*, the biography of a small English town like Knutsford where Mrs. Gaskell lived as a child. Her other realistic stories are *Ruth*, also a study of early environment, *North and South*, with its background of the industrial revolution, and the earlier *Mary Barton*, which gained her the friendship of Dickens, Landor, and Carlyle. Her *Life of Charlotte Brontë* takes rank among the great English biographies.

GAUTIER (*go-te-ay'*), **THEOPHILE** (1811–1872). French poet, novelist, and critic of romantic school. His poems *Albertus*, *Comédie de la Mort*, *Amaux et camées*, all works of superior merit; his short narratives like the mystery story *La Morte amoureuse* rival those of the great Mérimée; and many general works, make up his chief claims to be remembered.

GAY, JOHN (1685–1732). An English poet known for his *Fables*, the ballad, *Black-ey'd Susan*, and *The Beggar's Opera*, often called the forerunner of the modern comic opera, or ballad opera, as it was once named.

GAYLEY, CHARLES MILLS (1858–1932). Professor of English, University of California, critic. Author of *Classic Myths*, *Plays of Our Forefathers*, *Shakespeare and the Founders of Liberty in America*, *Poetry of the People*, and others.

GELLERT, CHRISTIAN FURCHTEGOTT (1715–1760). Beloved German poet of *Fables and Tales* and many beautiful hymns.

GEOFFREY OF MONMOUTH (c. 1100–c. 1154). Welsh bishop and historical romancer. The *Historia Britonum*, claimed to be from old records, may be almost wholly fictional; but many chroniclers, such as Hardyng, Fabyan, Holinshed, took it for fact, and so did authors like Warner for his *Albion's England*, Drayton for his *Polyolbion*, and even Milton. Three of his 12 books deal with King Arthur.

GERHARDT, PAUL (1607–1676). German hymn author, whose *O Sacred Head Once Wounded*, *Commit Thou All Thy Griefs*, and *Jesus, Thy Boundless Love*, appear in most modern hymnals. He was a sturdy Lutheran.

GERVINUS (*gĕr-vē'nōōs*), **GEORG GOTTFRIED** (1805–1871). Of several histories, political and literary, his best known is that of German poetry and that of the nineteenth century. As a critic his *Shakespeare* is preëminent.

GESTA ROMANORUM (c. 1300) is a collection of stories, anonymous, which furnished Chaucer, Gower, Shakespeare, and many other English writers with plots and material. This *Deeds of the Romans* is loose and admirably adapted to revision, and to addition of new material, by any author.

GIBBON, EDWARD (1737–1794). English historian; his *Decline and Fall of the Roman Empire* (1776–1788) is picturesque and detailed, but accurate, one of the most gorgeous panoramas of peoples and civilization yet written. See ENGLISH LITERATURE.

GILBERT, WILLIAM SCHWENK (1836–1911). *Bab Ballads* are replete with fun; the *Palace of Truth*, good fairy drama; *Engaged* and *Sweethearts*, interesting social dramas, and above all his *H. M. S. Pinafore*, *The Mikado*, and *The Pirates of Penzance*, extremely vivid and clever light operas, are among his works that retain their vogue.

GILDER, RICHARD WATSON (1844–1909). American poet and editor of the *Century Magazine*. Wrote *Lyrics* and *Five Books of Song*, and the complete poems appeared in 1908.

GISSING, GEORGE (1857–1903). Realistic novelist of London streets. His chief works like *A Life's Morning*, *New Grub Street*, and *The Whirlpool* attract more and more readers.

GLASGOW, ELLEN (1874–). Novelist, born and lived in Virginia. Author of *The Freeman and*

Other Poems, The Battleground, The Romance of a Plain Man, The Miller of Old Church, Life and Gabriella, and *One Man in His Time.*

GODWIN, MARY WOLLSTONECRAFT (1759–1797). English novelist and reformer, now known solely by her *Vindication of the Rights of Women.* Married William Godwin, the socialist, and mother of Mary Godwin, wife of the poet Shelley.

GOETHE (*gû'tĕ*), **JOHANN WOLFGANG VON** (1749–1832). Greatest German poet and author of world note; leader of *Sturm und Drang* (Storm and Stress) as the reaction toward Romanticism was called. Studied at Leipzig for the law, but favored literature and read English and French zealously. Life at Wetzlar gave rise to his *Sorrows of Werther,* a study of a young man adrift in the world; this greatly influenced the sentimental novels of later days. Later Goethe lived at Court of Weimar with other great intellectuals. His visit to Italy (1786) gave suggestions for the *Iphigenia at Taurus,* his tribute to the ancient Greek philosophy and life. Including two other novels concerning Wilhelm Meister, the delightful idyllic *Hermann and Dorothea;* the superb but puzzling *Faust,* a great philosophic, scientific, and artistic creation of genius, and his *Metamorphosis of Plants,* a forerunner of Darwinism, all show the depth, considerable range and fertility of his mind and soul. See GERMAN LITERATURE.

GOGOL (*gō'gôl*), **NIKOLAI VASILIEVITCH** (1809–1852). Russian social novelist and dramatist. *Evenings on a Farm* and *Cossack Tales,* his short narratives; *The Cloak,* the pathetic story of a poorly-paid government clerk; the *Revizor,* greatest Russian comedy; and the epic *Dead Souls,* are the chief claims to the distinction now his. Gogol is the Russian Dickens; his last years were saddened by attempts to find emotional and spiritual peace.

GOLDONI, CARLO (1707–1793). Italian writer of 150 comedies, still greatly admired. Tried law and finally enjoyed royal favor in France. He once wrote 16 good plays in a single year, among them being *La Pamela,* one of his best. *One of the Last Nights of the Carnival,* played as his farewell to Italy, was so well received that Goldoni wept like a child. Died broken-hearted in France during the Revolution. *La Donna di Garbo, I Rusteghi, La Casa nova,* and *La Locandiera* are only a few of his great successes.

GOLDSMITH, OLIVER (1728–1774). English man of letters, born in Ireland, either at Pallas or at Roscommon. *The Deserted Village,* his pathetic and reminiscent poem, probably has many touches of his old home in it, as does the prose sentimental romance, *The Vicar of Wakefield.* Both are full of fine descriptions, homely philosophy, and good nature. Some see in the vicar the improvident Goldsmith himself, who never could keep anything when somebody near him was in need. His two comedies, *The Good-Natured Man,* and *She Stoops to Conquer,* are replete with sentiment, clever situation, and knowledge of human nature, even though somewhat improbable in plot.

GOLLANCZ, ISRAEL. See under EDUCATORS.

GORDON, CHARLES WILLIAM. See under his pseudonym CONNOR, RALPH.

GORKI, MAXIM (1868–1936). Real name is Alexy Maximovich Peshkov. Russian author. *Chelkash,* his first story, placed him beside Tolstoi in public favor, while his play *The Lower Depths* ran two years in Berlin. Persecuted because of strong democratic sympathies. *My Fellow-Traveller* and *Twenty-six Men and a Girl,* though not now so highly regarded, are real masterpieces. Yet his best work perhaps falls in his latest period, including the *Recollections of Tolstoi,* a very unusual record, and *Fragments from My Diary.* Since 1922 lived mainly abroad.

GOSSE, EDMUND (1849–1928). English author of many books of poetry, criticism, and biography; assistant in British Museum, 1867–1875; translator for Board of Trade, 1875 on; librarian House of Lords, 1904–1914. Translated or criticised works of Holland and Scandinavia; wrote several books of verse; lives of Congreve, Donne, Jeremy Taylor, Thomas Browne, Gray, and others. His *Histories of Eighteenth Century* and *Modern English Literature,* together with a highly-illustrated *Record of English Literature,* are his chief productions.

GOWER, JOHN (c. 1330–1408). That he wrote in French, Latin, and English shows that authors had some doubts whether the vernacular tongue would become an established literary medium; it shows also three different publics—the French of courts, the Latin of the Church, and the English of common folks. The *Speculum Meditantis* is the French work, long supposed lost, till discovered in 1895 under the title *Mirour de l'omme,* describing the seven deadly sins and opposite virtues. *Vox Clamantis* is a Latin poem treating of the faults of mankind, and vividly describing the peasants' revolt of 1381. The *Confessio amantis,* his English poem, again treats of the seven deadly sins, in divisions illustrated by narratives, and in the whole the story of a lover making confession to Genius, priest of Venus.

GRAND, SARAH (1862–). English novelist; four times mayoress of Bath. Widow of Lieut. Col. McFall. After 5 years in Orient wrote *Ideals;* interested in suffrage. Some other works are *The Heavenly Twins, The Beth Book, Babs the Impossible, The Winged Victory.*

GRANT, GEORGE MONRO (1835–1902). Born in Nova Scotia, his speeches turned Nova Scotia in favor of entering the Dominion of Canada. Later principal of Queen's University, Kingston. His best known works are *Ocean to Ocean,* an account of the value of Canada, and *Advantages of Imperial Federation.*

GRANT, ROBERT (1852–1940). American judge and author; lived in Boston. *Unleavened Bread, The Art of Living, Law and the Family, The Convictions of a Grandfather,* and *Their Spirit* are some of his notable stories.

GRAY, THOMAS (1716–1771). English poet and scholar. His *Ode on a Distant Prospect of Eton College* is a fine account of English scholastic life and sports. His *Elegy in a Country Church-yard,* the pre-eminent example of elegiac or "graveyard" poetry in modern English, is a noble specimen of classic influence, graceful imagery, pathetic sentiment, and chaste diction. Late in life Gray turned to romantic modes in *The Bard* and *Superstitions of the Scotch Highlands,* which in theme and form are freer and anticipate the new age in English poetry, of which Coleridge and Wordsworth are leaders.

GREEN, JOHN RICHARD (1837–1883). English historian; educated at Oxford. The *Short History of the English People,* a picturesque and colorful narrative of the progress of the people, was tremendously popular; and later it was expanded into four volumes. Afterward two volumes, *The Making of England* and *The Conquest of England* contributed much to solid making of history. Mrs. Humphrey Ward, according to some, had Green in mind in her novel *Robert Elsmere.* Green married (1877) Miss Alice Stopford, herself a notable historian, chiefly of Ireland. She became a member of the Irish Senate in 1922, and in 1927 completed her third book on Ireland, *Studies in Irish History.*

GREENE, ROBERT (1558–1592). London writer of stories and plays. Of his 35 prose tracts, some possibly spurious, the *Groatsworth of Wit,* and *Never Too Late,* realistic tales, show much of the seamy side of London. Of his prose romantic stories, *Pandosto* gave Shakespeare most of the plot for his *A Winter's Tale.* His *Friar Bacon and Friar Bungay* is a curious and lively picture of contemporary life.

GREGORY, ISABELLA AUGUSTA, LADY (1852–1932). Leader in the Irish revival; dramatist and translator. *Seven Short Plays, Irish Folk History Plays, The Kiltartan Molière,* translations, *The Kiltartan History Book* and *Poetry Book,* and a history of the theatre of Synge and the rest, entitled *Our Irish Theatre* (1914) are her chief writings. Her comedies are humorous and true to life; her other work full of romance and wonder.

GREY, ZANE (1875–1939). Born at Zanesville, Ohio. Prolific author of tales of western United States. *The Last of the Plainsmen, Riders of the Purple Sage, The Light of Western Stars, Tales of Lonely Trails, Tales of Swordfish and Tuna* are only a few of his popular hits.

GRIFFIS, WILLIAM ELLIOT (1843–1928). Educated in Japan, pastor in America, 1877–1903; author of many books, mostly of Japan, Holland, and the United States. *The Mikado's Empire, Sir William*

Johnson and the Six Nations, Influence of the Netherlands, The Pilgrims in Their Three Homes, The Religion of Japan, The Unmannerly Tiger and Other Korean Tales, fairy tales of several nations, and *Bonnie Scotland* are some interesting books by Dr. Griffis.

GRILLPARZER, FRANZ (1791–1872). Great Austrian dramatist and lyric poet. Temperamental, brooding and fatalistic. Some of his early political tragedies were notably successful, but later dramas like *Des Meeres und der Liebe Wellen,* in which he used the romantic story of Hero and Leander, his *Sappho,* a masterpiece of romantic love-tragedy of prime technical excellence, and a single great short story, *Der arme Spielmann,* are some of his best. He refused to marry the girl he loved, lived a life of uncertainty of will-power, often came in contact with the censor, but in time proved a national hero.

GRIMM, JAKOB LUDWIG KARL (1785–1863) and **WILHELM KARL** (1786–1859). Their *Dictionary* is a vast collection of philological and other learning, but they are popularly known for the *Fairy Tales.* Jakob also made a *Grammar,* expressed certain findings as to transfer of forms in words which is now known as Grimm's Law, and a work on *German Mythology,* complete and scholarly like the rest.

GROTE (*grōt*), **GEORGE** (1794–1871). An English historian whose *History of Greece* appeared at intervals in 12 volumes between 1846 and 1856. This contains a tremendous mass of facts told in simple but very interesting form. Among other works his studies of Plato and an incomplete work on Aristotle are famous.

GRUNDTVIG, NIKOLAI FREDERIK SEVERIN (1783–1872). Danish theologian, scholar, and poet. *Rhyme of Roskilde, Decline of the Heroic Life in the North,* an elaborate epic, *Songs for the Danish Church,* a fine collection of hymns, are his chief poems. Engaging in a theological controversy, he issued a pamphlet, *The Church's Reply,* and in consequence he was forbidden to preach for seven years. During this interval he studied Old English, and in 1840 edited the *Phoenix,* with Danish translation of this poem.

GUEST, EDGAR A. (1881–), Conductor of column in *Detroit Free Press.* Author of sentimental and humorous poems, including the volumes: *A Heap o' Livin', Just Folks, The Passing Throng, The Light of Faith.*

GUICCIARDINI (*gwī-char-dī'nī*), **FRANCESCO** (1483–1540). The famous works of this Italian politician are *Storia d'Italia, Ricordi politici,* the latter containing about 400 political maxims, brilliant but lacking idealism. See ITALIAN LITERATURE.

GUINEY, LOUISE IMOGEN (1861–1920). American poet and critic of penetrating and gracious idealism. *Songs at the Start, The Martyr's Idyl, Goose-Quill Papers, A Little English Gallery* are some of her chief compositions.

GUIZOT (*gee-zo'*), **FRANCOIS PIERRE GUILLAUME** (1787–1874). French statesman and historian. After an early work (1809) on French synonyms, he held various offices until 1851. Among many admirable volumes may be named *History of Civilization in France, History of the Origin of Representative Government,* and *Life, Correspondence, and Writings of Washington.*

GUTHRIE, THOMAS ANSTEY (1856–). See ANSTEY, F.

GUTSKOW, KARL FERDINAND (1811–1878). His novels and dramas mark the swing of the pendulum in Germany from romanticism back toward realism. *Richard Savage,* his well-known drama, and several stories like *Blazedow and his Son,* a satire on education of the period, *Die Ritter vom Geist,* are some that have survived their day.

HAFIZ (*hä'fiz*) (c. 1300–1388). Real name was Sham-ud-din Mohammed. Great Persian poet and philosopher. His lyrics are full of life, color, and noble idealism. *Diwan,* a collection of brief odes, and a large number of sonnets, make up his principal writings.

HAGGARD, HENRY RIDER (1856–1925). Having spent some time in Africa, he produced a number of novels with picturesque scenery of that continent as a background. Some of them are *The Witch's Head, King Solomon's Mines,* and *She.* Later became a practical farmer in Norfolk, England, and wrote *The Poor and the Land* and other works suggesting methods of solving the land question at home and abroad.

HAKLUYT (*hāk'lōot*), **RICHARD** (c. 1553–1616). British geographer, whose *Principal Navigations, Voyages, and Discoveries of the English Nation* was issued finally in 1600 in three volumes. It is a glorious account of the attempts of England to settle various corners of the world, or to gather treasure from the wilds of unexplored lands. Some one called it the "prose epic of the modern English nation."

HALE, EDWARD EVERETT (1822–1909). American clergyman, author, and historian. Graduated at Harvard; pastor Worcester and Boston, 1846 to 1902. Chaplain, U. S. Senate, 1903. His humorous story *My Double and How He Undid Me* is now well known, and his *Man Without a Country* stands high in our literature of partriotism. *If, Yes, and Perhaps, Philip Nolan's Friends, Ralph Waldo Emerson* and *A New England Boyhood* have been widely admired.

HALEVY, LUDOVIC (1834–1908). With Henri Meilhac (1831–1897) he produced many dramatic successes, including *La Belle Hélène, Barbe Bleue, La Grande Duchesse,* and various pieces for the music of Offenbach. They excelled in light comedy of Parisian types. Two novels by Halévy, *Monsieur et Madame Cardinal* and *Les Petites Cardinal,* take high place among faithful but not offensive pictures of the lower classes. His *L'Abbé Constantin* was immensely celebrated at a time when taste turned from the ultra-realism of Zola to something more humane and kindly.

HALIBURTON, THOMAS CHANDLER (1796–1865). Canadian judge and writer of sketches under name of Sam Slick. Lived in Nova Scotia, became judge of supreme court in 1842, but after 1856 he lived in England till his death. *The Clockmaker, or Sayings and Doings of Sam Slick of Slickville* (1837) was followed by two similar books.

HALL, JOSEPH (1574–1676). English clergyman and satirist, whose collections of "Toothless" and "Biting" poems are among our first of the kind. Professed to be first English satirist, but John Marston and John Donne both have some claims to this distinction.

HALLAM, HENRY (1777–1859). English philosophical historian known chiefly for three great works: *The View of the State of Europe in the Middle Ages: Constitutional History of England,* and *Introduction to the Literature of Europe in the 15th, 16th, and 17th Centuries.* His son Arthur Henry Hallam inspired Tennyson's *In Memoriam,* one of our noblest tributes to friendship.

HALLECK, FITZ-GREENE (1790–1867). Lived at Guilford, Conn. Known for his elegy on the death of Drake, and for *Marco Bozzaris,* declaimed by thousands of school boys.

HANNAY, JAMES OWEN (1865–). See BIRMINGHAM, GEORGE A.

HAPGOOD, NORMAN (1868–1937). American editor and biographer; at various times connected with *Bookman, Collier's Weekly,* and *Harper's Weekly.* Minister to Denmark, 1919. Wrote *Literary Statesmen,* biographies of Webster, Lincoln, and Washington, *The Stage in America.*

HARDY, ARTHUR SHERBURNE (1847–1930). Diplomatist and author. Represented the United States in Persia, Greece, Switzerland, and Spain. Professor of engineering and mathematics, Dartmouth, 1874–1893. Besides several mathematical books, his novels include *But yet a Woman, Wind of Destiny, His Daughter First, No. 13, Rue du Bon Diable.*

HARDY, THOMAS (1840–1928). English novelist, critic, and poet. Last of great Victorian prose writers, who strove to interpret the life of man in accordance with the ruling principles of the world. Fate is strong in his writings. Of his early novels, *The Return of the Native* and *Tess of the D'Urbervilles* are perhaps best known. *Jude the Obscure* has been called too philosophical. In his middle life *The Dynasts* is the chief work, taking the form of a great epic in prose of the age of Napoleon. In later life he specialized in poetry, with volumes like *Wessex Poems, Late Lyrics,* and *Winter Words* being among the more penetrating as time went on. To the end almost he retained his keen vision and sincere views of life and man.

HARNACK, ADOLPH VON (1851–1930). Church historian born in Esthonia; professor at German uni-

versities from 1876 to 1924. He took the views that much of Greek thought got into early Christianity, and so the individual is somewhat free to think for himself in matters of dogma. His chief works, rather numerous, are *History of Dogma* and *What Is Christianity?* and other books on early church doctrine and progress.

HARRIS, JOEL CHANDLER (1848–1908). Creator of the kindly and shrewd old negro story-teller, Uncle Remus, lived most of his life in Georgia, becoming eventually editor of the Atlanta *Constitution*. Between *Uncle Remus; His Songs and Sayings* (1880) and 1900 he issued several similar volumes to satisfy the demand of readers. Some are *Nights with Uncle Remus, Uncle Remus and His Friends, Short Stories Told after Dark. Mingo, Free Joe, Little Mr. Thimblefinger* are some of his children's books of stories. Harris laid no claims to literary distinction, always insisting that he was merely a reporter of "cornfield" sketches and stories of negro life and its humors. Yet he has thrown much light upon the superstitions, rude philosophy, and shrewd common sense of Uncle Remus.

HARRISON, CONSTANCE CARY (1846–1920). Married Burton Harrison, once secretary to Jefferson Davis; lived in New York and abroad. A writer of many novels, those now recalled being *A Daughter of the Old Dominion, Good Americans, The Anglomaniacs.*

HARRISON, MARY ST. LEGER. See MALET, LUCAS.

HARRY THE MINSTREL or **BLIND HARRY** (fl. 1475–1500). Author of poem on William Wallace in Scots dialect; said to have been a wandering minstrel. The unique manuscript, of nearly 12,000 lines of heroic couplets, dated 1588, may be a more literary version edited by a scholar.

HART, ALBERT BUSHNELL (1854–). American historian, born in New Jersey; professor at Harvard. *Practical Essays on American Government, Foundations of American Foreign Policy, Monroe Doctrine, Source Readers in American History* are among his critical works. Edited the American Nation series.

HARTE, FRANCIS BRET (1839–1902). American writer, born in Albany, N. Y., and lived for some years in far West. His *Condensed Novels* parody well known authors of the age. Became editor of *Overland Monthly* in 1868. From 1885 till his death lived in England. *Luck of Roaring Camp, Outcasts of Poker Flat, Two Saints of the Foothills, Tennessee's Partner, M'liss, Baby Sylvester* are but a few of his many titles. *The Heathen Chinee*, his poem, was widely admired and copied.

HAUPTMANN (*houpt'män*), **GERHART** (1862–). Eminent German author of the "naturalistic" school. He specialized in plays of the working people and their ideals, such as *Einsame Menschen, Gabriel Schillings Flucht, Die Weber*, the last a plot of a small revolution. Some fairy pieces, two or three good stories, and *Atlantis*, a rather famous German novel make up the rest of his work.

HAVERGAL, FRANCES RIDLEY (1836–1879). English author of many hymns, *Take my life and let it be* being perhaps most well known. *The Ministry of Song, Loyal Responses*, and *Red Letter Days* are other works.

HAWEIS (*haws*), **HUGH REGINALD** (1838–1901). Popular English preacher. Now recalled chiefly for his *Music and Morals, Old Violins*, and a book on church bells.

HAWKINS, ANTHONY HOPE (1863–). See HOPE, ANTHONY.

HAWTHORNE, NATHANIEL (1804–1864). American romancer and leader in the short story. Born in Salem, Mass., and lived many years at Concord, and from 1853 to 1860 abroad, first five years as American consul at Liverpool. *Twice Told Tales*, 18 stories and sketches, resulted after several years of seclusion and meditation at Salem. They still remain among the great short stories for which America is famous. Hawthorne shares with Poe the honor of making a new type of literature on this side of the Atlantic. Longer in form, *The Scarlet Letter* remains to this day the most typical and most inspired of stories of Puritan New England, with its gloom, its devotion to single ideals, and its submerged human nature. Though the theme is repellent, Hawthorne handles the story with great sincerity, dignity, and power to portray human emotions and conflicting personages. *The Blithedale Romance* recalls in some details the Brook Farm experiment near Boston, where Hawthorne visited for a few months; and *The House of the Seven Gables*, the name taken from a curious old house still at Salem near Hawthorne's own birthplace, is another story of old New England and its curious people, together with a wholesome romance contrasted with a sombre background. *The Marble Faun*, written after a visit to Italy, gives us much of the atmosphere of artistic Rome, with the study of a mysterious and romantic heroine. Some of the short stories which every person should know are: *The Gray Champion, Wakefield, The Ambitious Guest, The Minister's Black Veil, The Artist of the Beautiful, The Great Stone Face, The Birthmark*, and *Rappaccini's Daughter*. In these as in the novels, Hawthorne brings out often the inherent contradictions in human personality. *Nathaniel Hawthorne and his Wife*, by their son Julian, also a romancer of some note, is an admirable biography.

HAY, JOHN (1838–1905). Statesman and author; served United States as ambassador and as secretary of state from 1898 to 1905. Fostered idea of open door in China. Best known in literature for his *Pike County Ballads* (1871), with John G. Nicolay the valuable and elaborate *Life of Abraham Lincoln*, admirable letters and speeches, and *Complete Poetical Works* (1916).

HAYNE, PAUL HAMILTON (1831–1886). American attorney and later a journalist; lived in Charleston, S. C. *Complete Poetical Works* published in 1882. His verse is graceful and loyal.

HAZLITT, WILLIAM (1778–1830). British essayist and critic; for a time early in life a painter. His fame now rests on his appreciations of Shakespeare as an artist, on his *View of the English Stage, Lectures on the English Poets*, and *Table Talk*. Personally erratic, unhappy in his domestic relations, and often estranged from Hunt, Lamb, and other friends. His grandson William Carew Hazlitt (1834–1913) wrote a valuable *Handbook of English Literature* and many excellent bibliographical notices.

HEARN, LAFCADIO (1850–1904). Born in Ionian Isles of Irish-Greek parentage, was a journalist in New Orleans, and in 1891 settled in Japan, married a native wife, and became a naturalized subject, also a Buddhist. Wrote many charming books on Japan, some of which are *In Ghostly Japan, Japanese Fairy Tales, Japan*, and *Attempt at Interpretation*.

HEINE (*hī'nĕ*), **HEINRICH** (1797–1856). Great lyric poet, born in Germany of Jewish descent; after 1831 lived in France. Of a very romantic temperament, though he refused to ally himself with the Romantic movement, so called, his poems struck a new note in Europe, with their bold nature symbolism, sad but still hopeful note with the zeal also of a lover of man, and a true reformer. His best poems are contained in volumes at different times called *Reisebüder* and *Buch der Lieder*. As a prose writer he is only a little less distinguished, for his *The Romantic School* and *Der Salon*, collections of prose essays and papers of great penetration and clarity of style. Heine married an uneducated Paris shop-girl, but they were uncommonly happy. The last few years, because of a spinal disease, were of great suffering, but he bore it with resolution. The collected works fill 21 volumes.

HELPS, ARTHUR (1813–1875). Edited for Queen Victoria the speeches of Prince Albert and her own *Highland Journals*. His other works include *Friends in Council, The Conquerors of the New World*, and other less important papers.

HEMANS (*hem'anz*), **FELICIA DOROTHEA** (1793–1835). Born as Felicia D. Browne at Liverpool; married Capt. Alfred Hemans; in childhood lived in Wales, and later in Liverpool. Wrote many volumes of sentimental but serious poetry. Capt. Hemans went to Italy in 1818 and never returned. She knew Scott and Wordsworth. Single poems still remembered are *The Treasures of the Deep, The Better Land, The Palm Tree, The Wreck, The Lost Pleiad, Casabianca* (The boy stood on the burning deck) and *The Landing of the Pilgrims* (The breaking waves dashed high).

HENLEY, WILLIAM ERNEST (1849–1903). British critic and poet. Collaborated with R. L. Stevenson. Collected *Poems* in 1898 and *Hawthorn and Lavender* in 1901 make up his best poems. He edited several journals, lastly the *National Observer*,

in which Kipling's *Barrack Room Ballads* were published.

HENRYSON, ROBERT (fl. 1470–1500). Scotch poet. Best known for his poems founded on older works, such as *Morall Fabillis of Esope*, the *Testament of Cressid*, which takes up the story of Troilus and Cressida where other poets stop, and *Orpheus and Eurydice*, drawn from Boethius. Though he used much old material, he adds life, color, the Scotch point of view and many delightful single touches. Henryson had a profound influence on later poets.

HENTY, GEORGE ALFRED (1832–1902). English journalist and author of books for boys. Acted as correspondent in many campaigns, and in middle life commenced his series of adventure stories, which finally grew to 80 different titles. *Out on the Pampas* (1868) was his first and *With the Allies to Pekin* (1904) his last story, issued after his death. Others are *With Roberts at Pretoria*, *With Clive in India*, and *The Treasure of the Incas*.

HERBERT, GEORGE (1593–1633). English religious poet of deep inspiration, though at some times fantastic. All the common incidents of life, the parts of the church, even the stones and mortar, are given significance. His collection, entitled *The Temple*, was published after his death. Isaac Walton wrote a fine life of Herbert, and George Herbert Palmer, professor of philosophy at Harvard, edited the poems (1905).

HERDER, JOHANN GOTTFRIED VON (1744–1803). German poet and philosopher. Turned to romantic themes after reading Percy's *Reliques*, and became one of the leaders in the new movement in Germany.

HEREDIA Y CAMPUZANO, JOSE MARIA DE (1803–1839). Cuban poet and translator. His *Epistle to Emilia*, and *Ode to Niagara* abound in imagination and noble sentiment. Being banished in 1823, he spent the rest of his life in the United States and Mexico.

HERFORD, CHARLES HAROLD (1853–1931). English scholar and writer. *The Age of Wordsworth*, *Spenser's Shepherd's Calendar*, *Goethe*, *Shakespeare, Treatment of Love and Marriage*, *Is There a Poetic View of the World? The Mind of Post-War Germany*, *The Romantic and the Classic Styles* are some of his critical or descriptive works.

HERGESHEIMER, JOSEPH (1880–). American novelist, author of *Java Head*, *The Bright Shawl*, *The Presbyterian Child*, and *Tampico*.

HERODOTUS (c. 484–425 B. C.). Often called the father of history. His work concerns mainly the Persian invasion of Greece, written in an expansive and imaginative manner, without slavish attention to fact or event. Close knowledge of the classics of Greece and several years of travel prepared him for his great work.

HERRERA, FERNANDO DE (c. 1534–1597). Spanish lyric poet; lived in Seville. Noted for his sonnets, his ode on the battle of Lepanto, on Don John of Austria, and the elegy on King Sebastian of Portugal.

HERRICK, ROBERT (1591–1674). Greatest pastoral lyric poet of the English people. He left 1,300 short poems, most of them small diamonds, clear in thought or sentiment, celebrating the simple joys of country life. Rector at Dean Prior, Devon, 1629–1648. In the latter year he published his *Hesperides*, and his religious poems *Noble Numbers* already in 1647. In 1662 he became rector again at Dean Prior, where he is buried.

HERRICK, ROBERT (1868–1938). Professor of English, University of Chicago, 1905–1923. Some of his novels are *The Common Lot*, *The Memoirs of an American Citizen*, *The Healer*, *The Conscript Mother*, and *Chimes*.

HERTZ, HENRIK (1797?–1870). Danish poet and dramatist. *King René's Daughter*, a lyrical drama translated into most languages of Europe, *Svend Dyring's House*, a national drama, and several volumes of lyrics constitute his claim to be remembered.

HERVIEU (*ĕr-vyû'*), **PAUL** (1857–1915). French dramatist. Now remembered largely for his *Nippers*, *The Passing of the Torch*, *The Law of Man*, and *The Enigma*. His plays are carefully built up.

HEWLETT, MAURICE HENRY (1861–1923). English novelist; spent much time in Italy. His *Forest Lovers*, *Richard Yea-and-Nay*, a story of Richard the Lion-Hearted, *The Queen's Quair*, a story of Mary of Scotland, and *New Canterbury Tales*, show his profound knowledge of medieval life in England; *Little Novels of Italy*, short narratives, show the middle age also, together with several others.

HEYSE (*hī'zĕ*), **PAUL JOHANN** (1830–1914). Wrote over 150 short stories and about 60 dramas. Of the former *L'Arrabbiata* (The Cross-Patch) has been read often in the schools. Novels called *Children of the World*, *In Paradise*, and *Merlin* counteract the realistic tendencies of the age, notably the last. Successful plays are *Hans Lange Kolberg*, and *Mary of Magdala*.

HICHENS (*hĭch'ĕnz*), **ROBERT SMYTHE** (1864–). English novelist, whose *The Green Carnation* (1894) raised a great stir; yet his later works, with rich oriental setting, excel in real merit. Some are *The Garden of Allah*, *The Call of the Blood*, and *Bella Donna*. The first and last were dramatized most successfully.

HIGGINSON, THOMAS WENTWORTH (1823–1911). American soldier and author. Fought in Civil War, his *Army Life in a Black Regiment* being the result of his experience as colonel of a regiment of colored troops. Wrote many books of charm and insight, such as *Outdoor Papers*, *The Afternoon Landscape*, *Cheerful Yesterdays*, *Old Cambridge*, and lives of both Longfellow and Whittier.

HILL, DAVID JAYNE (1850–1932). American college president, ambassador to Holland and Germany, and author. His best books are *History of Diplomacy*, *The Struggle for Universal Empire*, *World Organization*, and *The Problem of a World Court* (1927). His adaptation of Jevons' *Logic* for Americans was long a standard college text. See DICTIONARY OF STATESMEN.

HOGG, JAMES (1770–1835). Known as the Ettrick shepherd. While engaged as a shepherd came under notice of Walter Scott, whose publisher issued *The Mountain Bard* (1807). Also wrote several other volumes of verses, including *The Queen's Wake*, with its fine ballad of Kilmeny. *When the Kye Come Hame* and *Flora Macdonald's Farewell* are familiar pieces by Hogg.

HOLBERG, LUDWIG (1684–1754). Danish author; professor at Copenhagen. His main works are *Introduction to Natural and Popular Law*, *Peder Paars*, a mock-heroic epic, which was a wonderful success, *The Pewterer Turned Politician* and *The Weaver* and two of several great comedies, *Henrik and Pernille*, probably his best. Later he wrote some histories, satires, and other works. Altogether he deserves much credit for making the Danish language respected.

HOLLAND, JOSIAH GILBERT (1819–1881). Editor and novelist; for many years connected with *Springfield Republican*. Best known for his graceful poems as *Bitter Sweet*, *Katrina*, and *Garnered Sheaves*, and for a few good histories.

HOLMES, OLIVER WENDELL (1809–1894). Celebrated American surgeon and author; professor of anatomy at Harvard, 1847–1882. Combined pathos, sentiment, and humor admirably in his *Autocrat of the Breakfast Table*, followed later by books in which a professor and a poet take the place of the autocrat. These show Holmes at his best as a genial, brilliant, and witty talker. *Elsie Venner* was his best known novel, and memoirs of Motley and Emerson are now his best known essays.

HOMER (fl. about 1100 B. C.). Name of the author assumed for the *Iliad* and *Odyssey*, the greatest epic poems of Greece and of the world. These works certainly record the traditions of an early mythology and literature, whether collected by Homer or others remains unproved. See GREEK LITERATURE for description of the poems.

HOOD, THOMAS (1799–1845). For a time Hood helped edit *The London Magazine* and came to know the literary men of the period. He became famous through his *Comic Annual*, in which for years he commented in a witty and clever way on contemporary events. Late in life his best works were produced,—*Song of the Shirt*, *Bridge of Sighs*, and *Song of a Labourer*, all of which show his sympathy for those who live a life of toil.

HOPE, ANTHONY (1863–1933). Literary name of Anthony Hope Hawkins. Won great fame in 1894 by his *Prisoner of Zenda*, now a classic adventure novel, followed by *Rupert of Hentzau* the sequel.

Tristram of Blent, Double Harness, and *Second String* are other novels. His *Dolly Dialogue* also set a fashion for clever, witty talk of the drawing-room.

HORACE (65–8 B. C.). Latin name is Quintus Horatius Flaccus. He wrote *Carmina* (odes in four books), *Sermones* (two books of satires), two of epistles, one of epodes, and some letters. Most polished author of antiquity. Visited Athens, and fought with Roman legions in Asia. Knew Virgil and was befriended by Augustus and Maecenas, patron of letters, who gave him the Sabine farm mentioned frequently in his poems. He is master of poetic form, good diction, and genial manners.

HORNUNG, ERNEST WILLIAM (1866–1921). An English writer of adventure stories, such as *Dead Men Tell No Tales, Mr. Justice Raffles, Witching Hill,* and *The Crime Doctor.*

HOUGH, EMERSON (1857–1923). Naturalist and novelist, born in Iowa. Some of his works are *The Singing Mouse Stories, The Mississippi Bubble, Young Alaskans on the Trail,* and *The Sagebrusher.*

HOUSEMAN, ALFRED EDWARD (1859–1936). Professor of Latin at London and Cambridge Universities. Besides scholarly works, his lyrics entitled *A Shropshire Lad* and *Last Poems* (1922) have been widely appreciated.

HOWARD, BRONSON (1842–1895). American dramatist, clever in stage effect and artistic composition of plays. *Aristocracy,* a satire on running after titles, *Old Love Letters,* sentimental comedy, and *The Henrietta.*

HOWARD, HENRY, EARL OF SURREY (1518?–1547). After a visit to Italy, introduced some new forms into England, including some short poems and the form of the sonnet, but in rugged and halting style, not true to the strict Italian. His rendering of the second and fourth books of Virgil is the first attempt at blank verse in our language.

HOWE, JULIA WARD (1819–1910). American humanitarian and reformer, who wrote voluminously. *Poems Old and New* (1908) preserve some of her best work, but her fame now rests almost wholly on the *Battle Hymn of the Republic* (1862).

HOWE, MARK ANTHONY DEWOLF (1864–). Editor and author; lived in Boston. Wrote many biographies, some of which are those of George Bancroft, Bishop Hare, Bishop Brooks, Charles Eliot Norton, Barret Wendell (received Pulitzer prize), *Memoirs of the Harvard Dead in World War,* and *The Atlantic Monthly and Its Makers, Boston Common,* and *The Boston Symphony Orchestra.*

HOWELLS, WILLIAM DEAN (1837–1920). Prince of American realistic authors. Consul at Venice, 1861–1865; editor *Atlantic Monthly,* 1871–1881; afterward lived in New York. Best known for his *Rise of Silas Lapham,* a great—some say greatest—New England novel of its type, *A Modern Instance, Poems, Literature and Life,* and some clever short dramatic skits.

HUBBARD, FRANK McKINNEY (KIM HUBBARD) (1868–1930). Journalist on *Indianapolis News* since 1891. Author of *Abe Martin's Sayings,* in syndicate form weekly, and in volumes annually.

HUBBARD, ELBERT (1859–1915). Born in Indiana; established the Roycroft shops at East Aurora, N. Y., where fine printing, illuminating, and other arts flourished. Influenced by William Morris (q. v.). Went down on the *Lusitania,* May 9, 1915. Wrote *Little Journeys* and several books; but is probably now best remembered for his *Message to Garcia,* a classic call to efficiency in life, of which millions of copies were distributed.

HUDSON, WILLIAM HENRY (1841–1922). British naturalist and writer of nature books, full of human interest and literary charm. Born near Buenos Aires; lived many years in London, known only to a few till his great work became known. Author of *Green Mansions, Far Away and Long Ago* (accounts of life in Argentine), *Afoot in England,* and scientific works like *British Birds* and *Birds of the La Plata.*

HUGHES, THOMAS (1823–1896). Sociologist, lawyer, and author. *Tom Brown's School Days* (1857) widely affected English schools, and *Tom Brown at Oxford* was nearly as famous.

HUGHES, RUPERT (1872–). Among his works are *American Composers, Love Affairs of Great Musicians, Long Ever Ago* (Irish stories), and numerous plays and motion pictures, including *Tess of the Storm Country, Dangerous Curve Ahead, The Old Home Town,* and *The Lovely Ducklings.*

HUGO, VICTOR MARIE (1802–1885). Eminent French author, son of a general in army of Napoleon. His *Odes* (1822) attracted even the notice of the king, and a liberal pension followed. Later some *Ballades* were added, and then the *Cromwell,* which in a preface declared that "The object of modern art is not beauty but life." *Hernani,* a great melodrama, brought him fortune as well as fame (1830). *Notre Dame de Paris,* his first grand novel, gained a wider hearing, where his poems and first play had not been known. In exile in Jersey and Guernsey from 1851 to 1870, when the republic again became a reality. His biting satire, *Napoleon the Little,* printed at Brussels in 1852, was vigorously suppressed in France. It has little real merit. His prose masterpiece, *Les Misérables,* appeared in 1862. In its sympathies it favors the French common man in the Revolution, and it is a gorgeous series of pictures, people, and actions. His best poetry is found in *The Terrible Year,* that of the Franco-Prussian War (1870–1871). Though his work was somewhat overrated at first, Hugo influenced profoundly all movements and thought of his generation. See FRENCH LITERATURE.

HUME, DAVID (1711–1776). Scotch historian. Chief works are *Essays on Human Understanding, Enquiry Concerning the Principles of Morals,* and *History of England,* 5 volumes (1754–1762). Hume was a philosopher, but biased, and the last volumes of his great *History* are distorted by prejudice and hatred of the English and everything south of the Tweed, though his work netted him a comfortable fortune.

HUNT, HELEN. See JACKSON, HELEN HUNT.

HUNT, LEIGH (1784–1859). Essayist and poet; friend of Keats, Shelley, Byron, Lamb, and Coleridge. The *Story of Rimini* is possibly the best of his poems; *Table Talk,* some of his essays in the *Examiner,* which he and Hazlitt edited, and his *Lord Byron* are his chief literary remains. Hunt was an able and generous critic, a man of sympathy, and of democratic or Whig principles; so the Tory reviewers had little praise for him and sometimes wrote terrible diatribes against all connected with him in any way.

HURST, FANNY (1889–). Married Jacques S. Danielson. Made many concrete studies of shop girls, waitresses, and working people generally. Her chief stories are *Every Soul Hath its Song, Gaslight Sonatas, Humoresque, Lummox, Mannequin* ($50,000 prize given by Famous Players-Lasky Corporation) and *Song of Life.*

IBANEZ (*ē-bän'nyäth*), **VINCENT BLASCO** (1867–1928). Spanish novelist, journalist, and politician. He is best known in America for his *Four Horsemen of the Apocalypse.* Early abandoning the law for writing, he took up republican principles, for which he suffered imprisonment. He was opposed to suffrage of women. Not enjoying a large popularity in Spain, he at last settled in France and died there. Other works are *The Shadow of the Cathedral, Blood and Sand,* and *Our Sea.*

IBSEN (*ĭb'sĕn*), **HENRIK** (1828–1906). Born at Skien, Norway, he spent some time at medicine and as a druggist's assistant, and then directed the Ole Bull theatre at Bergen. At Christiania he produced *The Warriors of Helgeland, The Pretenders,* and *Love's Comedy,* which gave him a reputation. Became leader of the social drama of modern times. From 1864 to 1891 lived abroad. His plays that have been popular in English-speaking countries are *The Pillars of Society, A Doll's House, Ghosts, Hedda Gabler,* and *When We Dead Awaken.* His intensely real works usually show the conflict between man and society.

IK MARVEL. See MITCHELL, D. G.

INGELOW (*ĭn'jĕ-lō*), **JEAN** (1820–1897). Lived at Boston, Lincolnshire, England. Known widely for her poem *High Tide on the Coast of Lincolnshire, The Story of Doom, Mopsa,* a fairy story, and some fine children's books.

IRELAND, WILLIAM HENRY (1777–1835). Forged many documents purporting to be connected with Shakespeare, first to deceive his own father, a London engraver and author, and finally to fool the public. Among other documents was *Vortigern,* a Shakespeare play, which Sheridan attempted to have

produced at Drury Lane Theatre on April 2, 1796, but the audience laughed it off the stage. During the year Ireland admitted some frauds, and in 1805 his fuller confession freed his father from blame, but some assert the disgrace had hastened the elder Ireland's death in 1800.

IRVING, WASHINGTON (1783–1859). American man of letters, of British ancestry. After a visit to Europe, he wrote with his brother and J. K. Paulding a series of *Salmagundi Papers*, full of quaint drollery and humor. His *Knickerbocker History of New York* is in his best vein, though not as finished as the later *Sketch Book*, on which Irving's fame mainly rests now. Irving has been rightly called the American Addison, for his geniality, love of life and the people about him, and his ability to make interest out of commonplace is surely Addisonian. After an absence of 17 years abroad, he returned to New York and published *The Alhambra* in 1832, a series of delightful tales and sketches of the Moors in Spain. Biographies of Mahomet, Goldsmith, and Washington take high rank in our language. Though many of his short narratives lack a certain form, his *Legend of Sleepy Hollow* and *Rip Van Winkle* led the newer type of writing in America.

IRWIN, WALLACE (1876–). Born at Oneida, N. Y., brother of Will Irwin. Humorist and character author. Best known for his *Mr. Togo, Maid of All Work*, and *Letters of a Japanese Schoolboy*, which created a new vogue, though they may lack verisimilitude to a real Japanese servant in this country. Other works are *Love Sonnets of a Hoodlum, Fairy Tales Up to Now, The Blooming Angel.*

IRWIN, WILLIAM HENRY (WILL IRWIN) (1874–). Brother of preceding. Journalist in San Francisco and New York; war correspondent. Wrote *Stanford Stories* (with J. K. Field), *The Confessions of a Con Man, The House of Mystery, A Reporter in Armageddon, Christ or Mars, Youth Rides West.*

ISOCRATES (*ī-sŏk'rȧ-tēz*) (436–338 B. C.). Attic orator and statesman. His extant works consist of letters, several works like the *Encomium on Helen*, which has a famous description of beauty, two essays on education, and the *Areopagiticus*, a treatise on political affairs.

JACKS, LAWRENCE PEARSALL (1860–): British preacher and author, editor of the *Hibbert Journal;* principal of Manchester College. Chief works are *Life of Stopford Brooke, All Men Are Ghosts, Legends of Smokeover, The Faith of a Worker.*

JACKSON, HELEN HUNT (1831–1885). American poet and novelist. Daughter of Prof. N. W. Fiske, Amherst, Mass., commenced to write after death of her first husband, Capt. E. B. Hunt, and two sons. In 1875 married W. S. Jackson, a banker, of Colorado Springs, Colo., and is buried on a neighboring mountain at her request. Noted as champion of kinder treatment for the Indians, as in *A Century of Dishonor* (1881), and three years later *Ramona*, the romance of old days in California.

JAMES, GEORGE PAYNE RAINSFORD (1799–1860). Prolific novelist whose *Richelieu* was admired by Scott. *Henry Masterton, Mary of Burgundy, Darnley*, and *The Smuggler* are among his best.

JAMES, HENRY (1843–1916). Born in New York, lived in Boston and after 1868 mainly in England. Son of Henry James, the author; brother of William James, the philosopher; father of Henry James III. Perfected the international novel, showing, for example, the life of an American in Europe in *The American* and of others in New England, *The Europeans.* Applied principles of psychology to novels, writing from the point of view of the characters, not that of the author or the reader. *Daisy Miller* and *The Portrait of a Lady* are fine character studies. James wrote many good short stories, like *The Liar, Passionate Pilgrim, Madonna of the Future*, and *The Real Thing.* Called the Browning of prose.

JAMI (1414–1492). Name adopted by Nur-Ed-Din Abdur Rahman, last great classic Persian poet. Wrote lyrics and odes, a prose *Spring Garden*, and a collection of romantic pieces called *Seven Thrones.*

JEBB, RICHARD CLAVERHOUSE (1841–1905). Professor of Greek at Cambridge University, England. Edited or translated many classic works,—Attic orators, Theophrastus, Homer, and Sophocles.

JEFFREY, FRANCIS (1773–1850). Scottish judge and editor of *Edinburgh Review* for about 26 years, during which he wrote 200 critical articles. His criticisms were able, fearless, but often biased, especially in case of younger poets or those who developed new types of writing. Tom Moore, the poet, challenged him to a duel, which the police stopped, and a warm friendship started between them.

JEROME, JEROME KLAPKA (1859–1927). English humorist, whose *Idle Thoughts of an Idle Fellow* and *Three Men in a Boat* established him in public favor. *The Passing of the Third Floor Back*, a short narrative, is among his best works.

JERROLD, DOUGLAS WILLIAM (1803–1857). After following the sea, he moved to London from Kent, and became popular as a playwright. *Black-Eyed Susan*, of his 40 plays, was the greatest hit. Later he wrote much for *Punch.*

JEVONS, WILLIAM STANLEY (1835–1882). Professor at Owens College and London University; wrote economic and scientific articles and books. His best are *The Principles of Science, The Gold Question, Primer of Political Economy*, and *Pure Logic.*

JEWETT, SARAH ORNE (1849–1909). Author of short stories of New England life; lived at South Berwick, Me., and Boston. Some very interesting stories are found in *Deephaven*, the biography of an old seaport, *The Country of the Pointed Firs*, and *Old Friends and New. A Country Doctor* largely describes the life of her father in Maine.

JOHNSON, OWEN (1878–). Son of R. U. Johnson (q. v.). Graduate of Yale. Wrote *Arrows of the Almighty, The Varmint, Stover of Yale*, the latter two fine school stories, *Murder in any Degree, Children of Divorce*, and other books.

JOHNSON, ROBERT UNDERWOOD (1853–1937). American editor, poet, and publicist. Has fostered many movements in reform and civic progress. Ambassador to Italy, 1920–1921; received decorations from several countries. Chief books are *Songs of Liberty, Saint Gaudens*, an ode, *Poems of War and Peace, Collected Poems*, and *Remembered Yesterdays*, a volume of reminiscences.

JOHNSON, SAMUEL (1709–1784). Dictator of English literary taste. *Rasselas* is an attempt to propose a stoic philosophy as the true source of happiness; it is the story of an African prince who went abroad in search of happiness, but found it at last in his home land. The poem, *Vanity of Human Wishes*, has a similar theme. His monumental *Dictionary* (1755) sought to fix the language and establish correct forms once for all. Edited the *Rambler*, a periodical similar to the *Spectator*, and wrote *Lives of the English Poets*, a fine series of biography and criticism.

JOHNSTON, MARY (1870–1936). Virginia novelist. *To Have and To Hold, Audrey, The Goddess of Reason, Pioneers of the Old South, Michael Forth, The Slave Ship* and *The Great Valley* are stories known for the romance and chivalry of the older régime.

JOKAI (*yō'kō-ē*), **MAURUS** (1825–1904). Hungarian romantic author and patriot. His best romances are *Working Days, A Hungarian Nabob, The Golden Age of Transylvania, Sad Days;* his best dramas are *The Jew Boy* and *Milton;* his best stories, *Tales of Jokai.*

JONES, HENRY ARTHUR (1851–1929). Great English social dramatist, noted for fine technique and close study of human nature. *Saints and Sinners* (1884), tale of life and faith in a small town, ran for 200 nights, followed at intervals by many dramas. His characteristic plays are *The Case of Rebellious Susan, The Liars, Mrs. Dane's Defense, Whitewashing Julia*, and *Mary Goes First.*

JONSON, BEN (1573–1637). Helped his stepfather lay bricks in London, became a soldier in the Netherlands, and finally a great classic dramatist, though his education probably had been limited. Tried to revive manner and material of Latin plays. *Every Man in his Humour* accentuated the peculiarities of type characters and founded the so-called "humour drama." His *Alchemist*, which follows the unities of time, place, and character, shows the clever schemes of a gang of sharpers in a gentleman's house in London while he is absent, the plan being frustrated by a sudden return. *Sejanus*, a tragedy, gives much

attention to Roman life. *The Sad Shepherd* is a pastoral drama. Besides other works, Jonson made many masks for noble persons and court occasions. His poem *Drink to me only with thine eyes* is still sung.

JOSEPHUS (*jō-sē'fus*), **FLAVIUS** (37–c.95). Jewish soldier and historian; active in great rebellion in 66 A. D. against Rome. Imprisoned but freed by Vespasian and became a Roman citizen. Chief works are *Jewish War, Jewish Antiquities*, his own *Life*. Knowledge of the times of Christ is found in his histories.

J. S. OF DALE. See STIMSON, F. J.

JUSSERAND (*zhüs-răn'*), **JEAN A. A. JULES** (1855–1932). French author and minister from France at Washington from 1902 to 1925. Of many distinguished works, the best known in English perhaps are *English Wayfaring Life in the Middle Ages, Literary History of the English People, The Theater from the Beginnings to the Time of Shakespeare, The School for Ambassadors.*

JUVENAL (c. 60–128). Roman lawyer whose satires, 16 in all, flay his countrymen for their loose manners and vices, giving us of today much insight into social and political conditions of the first century.

KAHN, GUSTAVE (1859–1936). French journalist and poet who claimed to be the first user of *vers libre* or free verse. He refused to use the conventional six-stress line or Alexandrine, and sought effects from the thought, and not from the rhythm, which is irregular in his poems. In the preface to *Premiers poèmes* (1897) he explains his artistic methods.

KEATS, JOHN (1795–1821). Born and lived in London; died of consumption in Rome. Trained as a surgeon, but gave up practice for literature at once. Died before his powers fully developed, but left poems of great beauty, musical effect, and romantic atmosphere. Some of his chief works are *Endymion, Eve of St. Agnes, Ode on a Grecian Urn, To a Nightingale*, and many fine sonnets, such as the one on Chapman's *Homer* and *When I have fears that I may cease to be*, a pathetic expression of his idea that he might die early, as it proved. Keats had the soul of a Greek and the temperament of an Elizabethan. He gained much from Spenser, and succeeding poets drew upon his own inspiration in many ways. Shelley's *Adonais* is a noble tribute to Keats, with indignant words for the reviewers, whose harsh criticisms may have hastened the poet's decline.

KELLER, HELEN ADAMS (1880–). Born in Alabama; through illness, deaf and blind at 19 months; educated by Miss Anne Sullivan (now Mrs. John A. Macy). Graduated at Radcliffe College. Wrote *The Story of My Life*, an essay on *Optimism, Out of the Dark, My Religion.*

KEMPIS, THOMAS A. (1380–1471). Ascetic of the Augustinian convent near Utrecht; a German by birth, born at Kempen,—hence his name Thomas of Kempen, his real one being Hemerken. His *Imitation of Christ* furnish spiritual food for thousands of people.

KENNAN, GEORGE (1845–1923). American author, correspondent, and authority on Russia, particularly Siberia. Studied Russian exile system, eruption of Mt. Pelee, the war in Cuba, the Russo-Japanese war at first hand. Lectured and wrote, among other works, *Tent Life in Siberia, Folk Tales of Napoleon, A Russian Comedy of Errors, The Salton Sea.*

KENNEDY, CHARLES RANN (1871–). Born in England, married Edith Wynne Matthison, eminent actress, lived in New York. Among his best works are his plays, some being *The Servant in the House, The Winterfest, The Terrible Meek, The Necessary Evil, The Army with Banners, The Chastening*, and *The Admiral.*

KEY (*kā*), **ELLEN** (1849–1926). Swedish teacher and author; wrote on rights of women and children. The *Century of the Child, Ideas, Lines of Life*, and two biographies are her principal writings.

KEY, FRANCIS SCOTT (1779–1843). American lawyer and author of *The Star-Spangled Banner.* Educated at St. John's College, Annapolis, lived at Frederick, Md., and Washington D. C. While trying to secure the release of a friend held captive on the British fleet in 1814 in the Chesapeake, he watched the shelling of Fort McHenry, defending Baltimore, and was inspired to write his lyric, which the Army and Navy later adopted as an official anthem.

KILMER, JOYCE (1886–1918). Young American poet killed in U. S. army at the Ourc in France; journalist and miscellaneous author. Known best, however, for his beautiful and mature lyrics, in volumes entitled *Summer Love* and *Main Street.*

KING, CHARLES (1844–1933). Graduate of West Point, and in army, 1866–1879, when retired because of wounds; returned to service as general of volunteers for the Philippine campaign in 1898. Lived afterward in Wisconsin. Of his many books, *The Colonel's Daughter, Captain Blake, Medal of Honor*, and *Famous and Decisive Battles* are representative.

KINGLAKE, ALEXANDER WILLIAM. See under EDUCATORS.

KINGSFORD, WILLIAM (1819–1898). English engineer who settled in Canada, and wrote *History of Canada, Canadian Archaeology*, and *Early Bibliography of Ontario.*

KINGSLEY, CHARLES (1819–1875). English minister and author, born in Devon. Became a Christian socialist, and as such wrote *Yeast* and *Alton Locke*, which show wretched conditions of workers. His great powers lay in description and eloquence, as shown in his *Westward Ho*, a very stirring tale of voyages to the Spanish Main, in *Hypatia*, a novel of Egypt, and in descriptions of his own beloved Devonshire. *Water Babies* is an interesting book for young folks.

KIPLING, (JOSEPH) RUDYARD (1865–1936). Born in India and became a journalist at Lahore, after being educated in Devon, England. *Departmental Ditties, Barrack Room Ballads, The Seven Seas*, are among his best volumes of poems, which have an easy grace and much characterization. *Kim* and *The Light that Failed* are his longer stories of note, full of subtle description and interpretation of life. Of his numerous volumes of short stories, we may mention *Plain Tales from the Hills, Soldiers Three, In Black and White, The Phantom 'Rickshaw* (ghost stories), *Wee Willie Winkie*, and *The Day's Work* (collection). Single stories one should read are *The Man Who Was, The Man Who would be King, The Brushwood Boy, The Drums of the Fore and Aft, They.*

KLEIST (*klīst*), **HEINRICH WILHELM VON** (1777–1811). Many consider *Der Zerbrochene Krug* (The Broken Pitcher) the best short comedy in Germany. His life and death were tragic.

KLOPSTOCK, GOTTLIEB FRIEDRICH (1724–1803). Inspired by Virgil and Milton, attempted a great religious epic called *Messias* (The Messiah), translated into 17 languages. Some other sacred poems have been admired.

KOKOSCHKA, OSKAR (1886–). German poet and painter combining in his dramas a beautiful scenery, the best of which are *The Burning Thornbush, Orpheus and Eurydice*, and the *Hiob.*

KOROLENKO (*kŏ-rŏ-lĕng'kō*), **VLADIMIR GALAKTINOVICH** (1853–1921). Russian journalist and socialist; spent six years in exile in Siberia (1879–1885). Among his works are *Siberian Tales, The Murmuring Forest, The Blind Musician*, and an interesting autobiography.

KOTZEBUE (*kōt'sĕ-bō*), **AUGUST FRIEDRICH FERDINAND VON** (1761–1819). German novelist and dramatist; lived for years in Russia. Many of his 200 odd plays were translated into other languages and often imitated or adapted. *The Stranger* and *The Spaniards in Peru*, adapted as *Pizarro* by Sheridan, melodramatic tragedies, are not now as famous as some of his comedies.

KRASZEWSKI (*kra-shev'skī*), **JOSEPH IGNATIUS** (1812–1887). Polish author of several political romances like *Countess Cosel*, other stories like *Morituri* and *Resurrecturi*, and an epic *Anafielas* on the history of Lithuania.

KUPRIN (*kŏ-prēn'*), **ALEXANDER IVANOVICH** (1870–). Novelist and short story author, served in Russian army, lived afterward in France. His novel, *The Duel*, is a realistic picture of garrison life, and several others have been translated into English.

KYD, THOMAS (1558–1594). Elizabethan dramatist, whose *Spanish Tragedy* set the fashion for the

plays of blood for a generation. They left no device and no cruelty unemployed.

LA FONTAINE, JEAN DE (1621–1695). French author who lived at Château Thierry and Paris. Though his stories are well known only in France, his *Fables* are read throughout the world. They are fresh, vivid, and artistic, pleasing young and old alike to a remarkable degree.

LAGERLOF (*lä'gĕr-lûf*), **SELMA** (1858–1940). Swedish teacher, who devoted herself to writing after 1895. As early as 1890 her *Gosta Berling Saga* won a prize, and in 1909 she was granted the Nobel prize for literature. She excels in simple, home-like tales, and psychological novels; some of her best work being *From a Swedish Homestead, Legends of Christ, The Adventure of Nils*, the last being written for the schools.

LAMARTINE, ALPHONSE DE (1790–1869). Voluminous French author of early romantic school. His *Meditations, Harmonies*, and *Jocelyn* are facile and original poems; *The Stone Mason* is a masterly short narrative; and *La Presse*, his reminiscent accounts of his experiences, are now thought the best of his 41 volumes.

LAMB, CHARLES (1775–1834). Delightful English essayist and romanticist; employed in the accountant's office of the East India House for 33 years. Wrote out of hours. Tried and failed at drama but in 1807 the *Tales from Shakespeare* by Charles and Mary Lamb attracted immediate attention. *Poetry for Children* and some stories followed, then some journalistic work and essays, till in 1823 the first of his volumes of *Essays of Elia* appeared. These and his remaining works take high rank for quaintness, good humor, delicate pathos as in his *Dream Children*, and as mirrors of the best in literature of a bygone day.

LANDON, LETITIA ELIZABETH (1802–1838). Under initials "L. E. L." wrote many sentimental and melancholy verses, which suited the taste of the age. Married George Maclean, but survived only a few months. Born at Chelsea, English; died at Cape Coast, Africa, where her husband was governor. *The Fate of Adelaïde* and *Poetical Works* are still remembered.

LANDOR, WALTER SAVAGE (1775–1864). English poet, educated at Oxford, and lived in Italy for several years. Besides some poems that are noble in diction, fertile in imagination, and sensitive in metrical effects, he wrote *Imaginary Conversations, Citation and Examination of William Shakespeare, Hellenics*, poems in Latin model, *Antony and Octavius*, twelve poetic dialogs, and other prose works.

LANG, ANDREW (1844–1912). Scotch scholar and man of letters. In Scotch history he wrote two books about Mary Stuart, one about John Knox, an elaborate *History of Scotland;* in narrative, the *Blue Fairy Tale Book*, followed by a *Red*, a *Green*, and a *Yellow;* several volumes of poems; translations from the Greek, and a fine account of *The World of Homer;* and in folklore, *Custom and Myth, Myth, Literature, and Religion*, and *The Making of Religion*. These are but a few of his valuable works.

LANGLAND, WILLIAM (c. 1332–c. 1400). Reputed English poet, author of *Piers Plowman*, a satire on the abuses of nobles and the helpless state of the people. Has been called the Divine Comedy of the poor. It belongs to vision literature, advancing the claims of a true reformer who is to save the people. Professor J. M. Manly and others believe this work a collection of older poems, or else Langland is merely a name, and not the single author.

LANIER, SIDNEY (1842–1881). Born in Macon, Ga., lived in the South and in Baltimore, where he lectured at Johns Hopkins. His *Science of English Verse* traces the relations between poetry and music. Lanier played the flute professionally. Another prose work highly appreciated is the *English Novel*. He is now best known, however, as author of delightful lyrics like *Corn, The Song of the Chattahoochie*, and *The Marshes of Glynn*.

LARDNER, RING W. (1885–1933). American writer on sports and of humorous sketches; born in Michigan, lives near New York City. His best known works are *You Know Me, Al, Gullible's Travels, Symptoms of Being 35*, and *What of It?*

LAVEDAN, HENRI LEON EMILE (1859–1940). French witty author, playwright, and journalist. He has described life in Paris with cleverness, insight, and kindliness, but looks on the human stage as a moralist. *The Descendants* is a satire on the nobility. His short stories and sketches *Catherine, The New Spirit*, and *The Marquis of Priola* are well known.

LAWRENCE, DAVID HERBERT (1885–1930). British novelist of originality and insight of social conditions. Influenced by travels in many lands. Later novels, especially those with scenes laid in Mexico, treat problems of sex. *Women in Love, Kangaroo, Ladybird, The Plumed Serpent* are among his fictions; *Sea and Sardinia, Psychoanalysis and the Unconscious, Studies in Classic American Literature*, are among his other prose; *Mornings in Mexico*, a volume of essays; and *Movements in European History*, a study of great trends.

LAYAMON (*lä'yä-mŏn*) (11 cent.). English author of an elaborate chronicle called *The Brut*, of which two manuscripts exist, but they seem to be copies of the original, or at least not the first copy. There are more than 32,000 lines. Probably a paraphrase of an older poem by Robert Wace, a little over half its length. Source of later chronicles.

LEACOCK, STEPHEN BUTLER (1869–). Canadian novelist and economist; professor at McGill University, Montreal. Besides *The Unsolved Riddle of Social Justice*, his writings consist mainly of stories and novels like *Nonsense Novels, Arcadian Adventures with the Idle Rich, Moonbeams from the Larger Lunacy, My Discovery of England*, and *The Garden of Folly*. He writes with a pleasant witty touch and kindly view of life.

LECKY, WILLIAM EDWARD HARTPOLE (1838–1903). Irish historian who tried to study the relations between morals, religion, and history. His chief works are *History of Rationalism*, incorporating his earlier *Declining Sense of the Miraculous, Leaders of Public Opinion, History of European Morals*, and *History of England*. Though his work lacks system and compression, Lecky had a fine sense of fact and relationship.

LECONTE DE LISLE, CHARLES MARIE (1818–1894). Leader of the Parnassian movement in French poetry. His verse is cold, clear, rhythmical, correct, and realistic, with some color and romance. Translations of the Greek poets and of Horace are among his best. His own *Poèmes antiques, Poèmes barbares* and *Poèmes tragiques* are still renowned.

LEE, SIR SIDNEY (1859–1926). English author of Jewish parentage. Shortly after graduation from Oxford, became connected with *The Dictionary of National Biography*, but he is best known now as author of the definitive *Life of Shakespeare*, which has passed through several editions. Also edited Shakespeare, wrote biographies of Queen Victoria and King Edward (unfinished), and other works, chief of which are *Shakespeare and the Modern Stage, Principles of Biography, The French Renaissance in England*.

LEE, VERNON (Pen-name for Violet Paget) (1856–1935). Of English birth and training, long a resident and interpreter of Italy. Some notable works by her are *Studies of the Eighteenth Century in Italy, Euphorion, Essays on the Renaissance, Gospels of Anarchy*, and *Satan the Waster*, a war tragedy and indictment of all international and civil strife. Her stories and novels also created no little comment.

LE GALLIENNE (*lē-gāl'ĭ-ĕn'*), **RICHARD** (1866–). English critic and poet; lived in United States after 1898. Wrote, among many other works, *George Meredith, The Religion of a Literary Man, The Life Romantic, Omar Repentant, Painted Shadows*, and *The Junk Man and Other Poems*.

LEGOUIS, EMILE (1861–1937). French scholar, lecturer at Sorbonne, Paris. With L. Cazamian (q. v.) wrote the *History of English Literature*, and alone *The Youth of Wordsworth, Shakespeare, Chaucer*, and *Spenser*, collaborating also on a translation of the *Canterbury Tales*, which was crowned by the French Academy. Lectured in the United States.

LELAND, CHARLES GODFREY (1824–1903). American poet of humorous verses included in the *Hans Breitmann's Ballads* (1871), and several critical works, *The English Gypsies, Gypsy Sorcery and Fortune-Telling, Poetry of Mystery and Dream, Algonquin Legends* being among his best.

LEMAITRE (*lĕ-mā'tr*), **JULES** (1858–1914). French dramatist, critic, and author of short narratives. *Myrrha*, stories, *The Kings, The Pardon*, and *The Difficult Age*, and *Bertrade*, plays, are still high

praised. Two of his plays were produced in New York, *The Pardon* and *The Studio Assistant.*

LEMOINE, JAMES MacPHERSON (1825–1911). Canadian scientist and author. *Birds of Quebec, Lore of the Lower St. Lawrence, The Scot in New France, Maple Leaves,* and *The Tourist's Note Book* represent his range and interests.

LEMON, MARK (1809–1870). More than 60 of his dramatic pieces were produced in London. He founded and edited *Field,* and, with Henry Mayhew, the humorous weekly *Punch* (1841), which still remains a national asset, besides many lyrics, a hundred songs, and some fairy tales.

LERMONTOV, MIKHAIL YUREVICH (1814–1841). Russian poet of Scotch ancestry. For writing *On the Death of the Poet* (1837) after the death of Pushkin, he was exiled for a year to the Caucasus to a line regiment. In 1841 he was killed in a duel with an old schoolmate for the affections of a lady. *A Hero of our Times,* and some posthumous poems make up his work, some of which C. T. Wilson translated in 1887 into English.

LE SAGE, ALAIN RENE (1668–1747). French novelist and playwright. Two plays of considerable merit are *Crispin* and *Turcaret,* quite in the manner of the time; but his prose *Gil Blas* set a new vogue in France, the successor of the Spanish picaresque novel.

LESSING, GOTTHOLD EPHRAIM (1729–1781). German author who did much to establish the literary language and style of modern times. Son of the chief pastor at Kamenz, who sent him to Leipzig to study theology, but he became interested in literature instead. Translated from the English and French, and his first great play *Miss Sarah Sampson* was founded on French models. Finally he sought to establish a real German style and manner of writing plays. *Minna von Barnhelm,* his greatest comedy, gives us a German soldier who is a man of honor, but the heroine is one of the greatest figures in European drama. *Emilia Galotti* (1772), a great tragedy, embodies the foundation of the story of the Roman Virginia, but really is a play of the common lot of man. Lessing's *Laokoon* is a classic study, showing the relation of poetry to the plastic arts. His *Hamburgische Dramaturgie* is a valuable work on play construction and staging. Lessing's last years were involved in theological controversy, which his drama *Nathan der Weise* did not diminish.

LEVER, CHARLES JAMES (1806–1872). Irish physician and novelist; author of many droll and picturesque stories, such as *Charles O'Malley,* somewhat shadowing forth his experiences at Trinity College, Dublin, *Harry Lorrequer, Jack Hinton,* and *The Dodd Family Abroad.*

LEWES, GEORGE HENRY (1817–1878). English philosopher and literary critic; husband of George Eliot (q. v.). His *Life of Goethe* is a standard work. Other criticism is *The Spanish Drama, Actors and Acting,* and *Biographical History of Philosophy;* scientific books, *Studies in Animal Life, Seaside Studies, Problems of Life,* the last being perhaps his supreme accomplishment.

LEWIS, MATTHEW GREGORY (1775–1818). One of the leaders of the Gothic Romance, or the novel of horror in England, wrote *Ambrosio, the Monk,* earned the nickname "Monk" Lewis, and set the literary fashion for a time.

LEWIS, SINCLAIR (1885–). Born in Minnesota; journalist and author. Of his works, those portraying the common lot of man excel, such as *Main Street, Babbitt, Elmer Gantry,* each one also attacking some contemporary abuse.

LIE, JONAS LAURITZ EDEMIL (1833–1908). Norwegian novelist, failing at journalism, produced *The Visionary* (1894) which won him a reputation. Other well-known stories are *The Pilot and His Wife, The Commodore's Daughters, Niobe,* and *Trold* (Weird Tales), a collection of short stories.

LILIENCRON (*lĭl'i-en-krōn*), **DETLEV VON** (1844–1909). German author, best known for his lyric poems, as in his *New Songs,* for his powerful short stories in *Der Mäcen, Krieg und Frieden,* and his humorous poem, *Poggfred.*

LINDSAY, NICHOLAS VACHEL (1879–1931). American poet known for richly colored and musical verses. *General William Booth Enters into Heaven, The Chinese Nightingale,* a delightful fantasy, *The Golden Whales of California* are among his noted lyrics.

LIPPMANN, WALTER (1889–). Journalist and author of *A Preface to Politics, Liberty and the News, Public Opinion, The Phantom Public,* and *Men of Destiny.* Lives in New York City.

LIVY (59 B. C.–A. D. 17). In Latin Titus Livius wrote his history in 142 books, 35 being now preserved. This work gives in fine language much information of early ages, ending in 9 B. C.

LOCKE, WILLIAM JOHN (1863–1930). Novelist and playwright, born in Barbados; lived in England. Some of his fictions are *The Beloved Vagabond, Simon the Jester, The Fortunate Youth, The Wonderful Year, Stories Near and Far;* several of his dramas are based on his own novels.

LOCKHART, JOHN GIBSON (1794–1854). Scotch editor and author; son-in-law of Walter Scott, whose *Life* he wrote as a *magnum opus.* Other works are papers in *Blackwood's Magazine,* four novels, and some translations. Next to Boswell's *Johnson,* the *Life of Scott* takes highest rank as an English biography. Lockhart gave up the profits to help pay obligations voluntarily assumed by Scott after his publishing firm failed.

LONGFELLOW, HENRY WADSWORTH (1807–1882). American poet of graceful, melodious verses, loved by the young especially. Was a graduate of Bowdoin in the famous class of 1825, taught languages at Bowdoin, and after 1836 at Harvard. Some of his favorite poems are *Evangeline, The Courtship of Miles Standish,* stories in verse of old colonial life, *Hiawatha,* a beautiful Indian legend, *Tales of a Wayside Inn,* a collection of delightful stories, *The Psalm of Life*—about as well known as any modern English poem, sonnets, and translations. Though not a great thinker, Longfellow is a true and inspiring poet.

LONGINUS, DIONYSIUS CASSIUS (c. 213–273). Athenian philosopher whose works on rhetoric were greatly admired in ancient times and whose *On the Sublime* is standard even now.

LOTHROP, HARRIETT MULFORD (STONE) (1844–1924). Born in New Haven, Conn., married Daniel Lothrop of Boston, a publisher. Under name of Margaret Sidney, wrote the Little Pepper series of delightful children's stories, including *Five Little Peppers and How They Grew, What the Seven Did,* and *Dilley and the Captain.*

LOTI, PIERRE (1850–1923). Pen name for Louis Marie Julien Viaud. French intimate writer of vivid and intriguing stories such as *Pecheur d'Islande, Le Mariage de Loti, Madame Chrysanthème, Ramuntcho, Le Livre de la pitié et de la Mort.*

LOUNSBURY, THOMAS RAYNESFORD (1838–1915). American professor and critic of English; taught at Yale. His *Life of Fenimore Cooper,* one of our fine biographies, *Studies in Chaucer,* his master work, and various works on Shakespeare, *English Spelling and Spelling Reform,* and *The Standard of Usage in English* are his chief works.

LOVELACE, RICHARD (1618–1658). Royalist and poet in Jacobean age. While in prison he wrote *To Althea from Prison,* which with his *Going to the Wars,* and *The Scrutiny* make up his best lyrics, full of dash and vividness. "Strong walls do not a prison make nor iron bars a cage," a familiar quotation, comes from Lovelace.

LOVER, SAMUEL (1797–1868). Irish man of letters and musician. Known first by his songs, he became popular at London, and later published his *Songs and Ballads,* and *Rory O'More* and *Handy Andy,* two inordinately popular fictions.

LOWELL, AMY (1874–1925). American poet, known for freedom and independence in writing. Championed modern free verse. Besides several volumes of poetry, some of which are *Sword Blades and Poppy Seeds, Pictures of the Floating World, Fir-Flower Tablets* (from the Chinese), and *A Critical Fable,* her *John Keats* and *Six French Poets* were highly praised.

LOWELL, JAMES RUSSELL (1819–1891). Professor at Harvard, ambassador to Spain and England, essayist, and poet, Lowell was a busy man. *Among My Books* and *My Study Windows* give us the best of his literary criticism, which was penetrating, generous, and admirable in literary style. *My Garden Acquaintance, On a Certain Condescension in Foreigners, A Good Word for Winter* are well-known papers.

As first editor of the *Atlantic Monthly* (1857–1861), Lowell did no little to establish and fix high literary standards in America. Among his poems, the *Harvard Commemoration Ode*, *The Biglow Papers*, delightful dialect poems of quaint Yankee humor and philosophy, *A Fable for Critics*, *The Vision of Sir Launfal*, and many short lyrics are familiar friends.

LUDWIG, EMIL (1881–). German playwright, novelist, and biographer. Some of his plays are *Ein Untergang*, *Napoleon*, *Die Borgia*, *Tristan and Isolde*, *Atalanta*, and *Ariadne*; novels *Manfred und Helena*, *Diana*; biographies in a florid style of Goethe, Wagner, Bismarck, Napoleon, and Christ.

LUND, TROELS FREDERICK (1840–1921) Danish historian of social, personal, and family life, for which he read numerous documents. Besides his history of Denmark, he wrote a volume of gifted historical tales.

LYLY, JOHN (1553?–1606). English author, known for his *Latin Grammar* which was used for several generations, his *Euphues*, which set the vogue for both literary style and politeness in the Elizabethan age, and for *Endymion* and other imaginative and literary dramas. Euphuism, named for the chief prose work of Lyly, is a style of antithetical sentences, with puns, allusions especially to nature, and other artificial elements. Shakespeare, who may have been a pupil or at least a friend of Lyly, shows this style in *Much Ado* and other dramas.

LYTTON, EDWARD ROBERT. See MEREDITH, OWEN.

McCARTHY, JUSTIN (1830–1912). English politician and author, born in Ireland, and lived in United States from 1868 to 1871. Member of the House of Commons and vice-president of the Irish National League (1886); leader of Home-Rule Party after Parnell. Of his numerous writings, *History of the Four Georges and William IV*, *Epoch of Reform*, *A History of Our Own Times*, *The Story of Gladstone's Life*, and *The Story of an Irishman* are well known.

MACAULAY (*mă-kô'lĭ*), **THOMAS BABINGTON** (1824–1905). English essayist and politician. Noted for his wonderful memory, his precocity, and command of great masses of historical details, though he was often biased and lacked a broad philosophical view. Graduated at Cambridge, and practiced law for a time. When he was 25, his *Essay on Milton* established his fame, and is still one of our best critical biographies. While one of the Supreme Council for India, he drafted a bill which became the criminal code for that country. After 1847 he gave himself wholly to writing, and the following year two volumes of the *History of England* appeared. Late in 1855 two more volumes were ready. In England alone within about 30 years, 140,000 copies were sold, and the *History* was translated into nine European languages. Besides several volumes of later essays, he wrote the *Lays of Ancient Rome*, energetic and picturesque, if not great poetry. No modern author had a better command of material, a stronger way of emphasizing, or more confidence in the truth of his narrative, but he often runs to excess, overstatement, and too great detail.

MacDONALD, GEORGE (1824–1905). Scotch novelist and poet. Graduate of Aberdeen University and preached for several years. Besides stories for the young, some sermons, his chief works are *Within and Without*, a dramatic lyric, and his imaginative romance, *Phantastes*, and several novels, *Annals of a Quiet Neighborhood*, *Robert Falconer*, *Malcolm*, *The Marquis of Lossie*, and *Donald Grant*.

MACHAR, JAN SVATOPLUK (1864–). Czech poet, from early verses of sentiment, finally turned to satire, in which he used many of the persons known in history. *Magdalene*, *Warriors of God*, *In the Glow of the Hellenic Sun*, and *The Jail* are his chief writings, the last being a vivid account of his own imprisonment during the World War in Austria.

MACKAY, CHARLES (1814–1889). Scotch writer of songs like *Cheer, Boys, Cheer*, for which Henry Russell and Sir Henry Bishop made the music, a prose *Voices of the Crowd* (1846), which has some extraordinary descriptions of people, and critical works like *Memoirs of Public Delusions*, and he edited a collection of English poetry that long held the public interest. His son, Eric Mackay (1851–1899) wrote the interesting *Love Letters of a Musician*. Miss Marie Corelli (q. v.) was an adopted daughter.

MACKAYE (*mă-kī'*), **PERCY** (1875–). American poet and dramatic author, son of Steele Mackaye, noted just below. Graduate of Harvard. Imagination, dignity, wealth of diction, and clever technique characterize all his compositions. *Dogtown Common* and *Poems* are lyrics, *The Canterbury Pilgrims*, a fine modern rendering of Chaucer's immortal *Prolog*, *Sappho and Phaon* and *The Scarecrow* are dramatic poems, *Saint Louis* and *Caliban* are masks, and *Kentucky Mountain Fantasies* are short narratives of folklore.

MACKAYE, STEELE (1842–1894). American author of 30 plays, *Hazel Kirke* being performed countless times; acted in 17 different characters himself; and did much to raise the standards of acting and speaking by his lectures on dramatic art and elocution.

MACLAREN, IAN (1850–1907). Better known pseudonym of Dr. John Watson, a Scotch clergyman and author. He was born in Essex, educated at Edinburgh and Tübingen, became a minister of the Free Church and held pastorates in Glasgow and Liverpool. From 1894 he was known as the author of sketches and sentimental stories of Scotch life and manners, as in *Beside the Bonnie Brier Bush*, *The Days of Auld Lang Syne*, and *A Doctor of the Old School*. Some of his religious books are *The Mind of the Master*, *The Potter's Wheel*, and *The Cure of Souls*.

MACLEOD, NORMAN (1812–1872). Scotch clergyman, editor, and voluminous writer. One of the founders of the Evangelical Alliance, edited the *Christian Instructor*, and helped the poor in many ways. He is recalled now mainly through his fascinating *Reminiscences of a Highland Parish* and *Peeps at the Far East*.

McMASTER, JOHN BACH (1852–1932). Educated in New York City, became an instructor in civil engineering at Princeton, and professor of history at the University of Pennsylvania. Known for his scholarly and readable *History of the People of the United States from the Revolution to the Civil War*, *History of the People of the United States During Lincoln's Administration*, and *With the Fathers*.

MACPHERSON, JAMES (1736–1796). Scotch poet and schoolmaster, who for several years made a study of Gaelic, after which in 1760 he issued *Fragments of Ancient Poetry Collected in the Highlands of Scotland*. One year later, after further travel, he produced a poem claimed as a modern equivalent of some fragments written by Ossian or Oisin, a bard of the very early days. He followed this with *Temora*, and in 1765 with *The Collected Works of Ossian*. At once a debate arose. Dr. Johnson said they were spurious, but Macpherson claimed that he had some originals, but neither he nor his literary executor produced enough to convince the skeptics. The modern view favors the theory that Macpherson may have had a basis for his work, but it was rather slight, the most being his own rhythmic prose and odd diction.

MAETERLINCK (*mā'tĕr-lĭnk*), **MAURICE** (1862–). Belgian dramatist and poet, known for his study, defense, and use of mysticism in his works, especially in the earlier ones. *The Seven Princesses*, *Pelléas and Mélisande*, several delightful pieces for the marionettes, *La Mort de Tintagiles*, a translation or two, a study of Novalis, a book on the ethics of mysticism are among his first successes. Since the World War he has written four volumes of essays, *The Buried Temple*, *The Double Garden*, *Life and Flowers*, and *Death*. These turn away somewhat from his earlier mysticism. Probably Maeterlinck is best known in English countries by his fascinating *Blue Bird*, a play of fantasy and great charm of technique. Received the Nobel Prize for literature in 1911.

MAISTRE (*mĕs'tr*), **XAVIER DE** (1763–1852). French author, who saw military service in Russia, and lived there as a painter for a time before gaining the rank of major general in the Caucasus campaign. His delightful *Journey Round My Chamber* was written while he was temporarily in prison. Other works are *The Prisoners of the Caucasus*, *The Young Siberian Girl*, and *Nocturnal Expedition*.

MAJOR, CHARLES (1856–1913). Novelist who lived in Indiana and wrote popular works, of which the most noted are *When Knighthood Was in Flower*, *The Bears of Blue River*, and *Dorothy Vernon of Haddon Hall*.

MALET, LUCAS (1852–). Pen name of Mary St. Leger Harrison. She was the daughter of Charles Kingsley; married William Harrison, rector at Clovelly, Devon. After her husband's death in 1897 lived in London. *The Wages of Sin* and *History of Sir Richard Calmady* are her earliest great successes, followed

by *A Counsel of Perfection, On the Far Horizon, The Tall Villa,* and *The Days of Want.*

MALLOCK, WILLIAM HURRELL (1849–1923). English author of stories having controversial and sociological basis, including *The New Republic* in which he introduced several famous contemporaries, *The New Paul and Virginia, The Reconstruction of Belief,* a study of dogma and *The Old Order Changes,* an anti-socialist story.

MALORY, THOMAS (d. 1471). English knight and member of Parliament, who compiled or copied a version of several romantic stories in his *Morte d' Arthur.* Caxton printed this in 1485. It contains parts of five different cycles or legends, including the *Merlin, Tristan, Lancelot, Queste,* and *Morte Artus;* parts omitted were the *Joseph of Arimathea,* the *Grand S. Graal,* and a portion of an early *Graal.* Though some of the joints show and many things need to be explained, Malory made a fairly unified and entertaining series of rapid narratives of the early days of chivalry. Arthur in his hands becomes a reality, and no longer a mere ideal or an historical myth.

MANZONI, ALESSANDRO (1785–1873). Italian poet, patriot, and novelist. His *Il Conte di Carmagnola* broke from all classical traditions of drama. This was followed by some poems not immediately published and finally (1825–1827) by his great romantic masterpiece *I Promessi sposi* (The Betrothal), an historical picture of the seventeenth century, ranked by some the greatest European novel. The *Il Cinque Maggio* is an ode written on the death of Napoleon.

MARDEN, ORISON SWEET (1850–1924). American editor and exponent of success in life. Founded the *Success Magazine,* which he edited from 1897 to 1912, and wrote *Pushing to the Front, The Secret of Achievement, Training for Efficiency,* and *Masterful Personality.*

MARKHAM, EDWIN (1852–1940). Born in Oregon, lived for some years as a teacher in California, and then settled in New York. His *Man with a Hoe,* showing the downtrodden nature of some workers, was more widely copied, discussed, and combated than almost any other poem of the generation. It was inspired by seeing the picture by Millet. *Lincoln* was almost as famous. Later books, *Shoes of Happiness* and *Gates of Paradise,* contained no great works, but many poems high above the average.

MARLOWE, CHRISTOPHER (1564–1594). Father of English single-hero drama and perfector of blank verse for tragedy. Graduate of Cambridge. The *Hero and Leander,* a colorful and romantic poem, belongs to the love poetry of the age. Between 1587 and 1593 he produced five great tragedies in wonderful lines of firmness and artistic finish. *Tamburlaine the Great,* a heroic drama in two parts, is founded on legends of the mighty monarch of the east; it contains many noble passages; *Dr. Faustus,* a philosophic, romantic tragedy, is founded on the legend of a man who sold himself to the devil in return for 24 years of pleasure and success; and *The Jew of Malta* is a cruel and vindictive tragedy of blood, of the type then current, but written in a way to command some respect for the *Jew* himself. Other plays are noble in parts, but probably suffer from corruption of the texts that have come down to us. On the whole, Marlowe is the greatest dramatist in the Elizabethan age next to Shakespeare himself.

MARRYAT (*măr'ĭ-ăt*), **FREDERICK** (1792–1848). Served for 25 years in the English navy with great distinction. After 1829 gave himself to writing tales of heroism at sea. He stands between Smollett and Fenimore Cooper as the greatest novelist in English of his type. Marryat created many vivid and droll pictures in *Mr. Midshipman Easy, Peter Simple,* and *Snarley-yow, or the Dog Fiend.* Later he wrote many books for boys, including *Masterman Ready, Percival Keene, Children of the New Forest.* Visited Canada and the United States. His daughter, Florence Marryat (1837–1899), wrote his *Life* and many stories of her own.

MARTIAL (MARCUS VALERIUS MARTIALIS) (c. 39–104). Roman writer of epigrams; born in Spain. Gave the form point and dash, with everything that interests man as subjects of his jests.

MARTINEAU (*mär'tĭ-nō*), **HARRIET** (1802–1876). English author of various types of works; traveled much, including a visit to the United States, when she took the part of the abolitionists (1834). Lived after 1845 at Ambleside, England. *Society in America, The Hour and the Man* (a novel), some tales for children, including *Settlers at Home, Feasts on the Fiord,* and *The Peasant and the Prince,* and *Eastern Life, Past and Present,* tracing the religions of mankind. Her brother, James Martineau, wrote various theological works, the best known of which, *Endeavours after the Christian Life,* is a collection of sermons.

MASEFIELD, JOHN (1875–). English poet and novelist, traveled much, lived in America for time, followed the sea. *Salt-Water Ballads, The Everlasting Mercy,* and *The Daffodil Fields,* are some of his best poetry, noted for action and fine description; *Jim Davis* and *Multitude and Solitude* are novels; *The Tragedy of Nan, Pompey the Great* are some of his dramas; and *Gallipoli* contains sketches of the World War in Turkey.

MASTERS, EDGAR LEE (1869–). Born in Kansas, educated at Knox College, and practiced law in Chicago. Became famous through his *Spoon River Anthology,* an attempt to represent rustic characters in their own language and environment in a free verse style of poetry. *Starved Rock, Mitch Miller, Doomsday Book, The New Spoon River Anthology, Selected Poems* (1925) are some of his other volumes.

MATTHEWS, BRANDER (1852–1929). Graduate of Columbia and professor of English there from 1892 to 1924. His *Vignettes of Manhattan* contain some fine stories of city life; his *Molière, French Dramatists of the 19th Century, Aspects of Fiction,* and *Development of the Drama,* show his keen critical faculties.

MATURIN, CHARLES ROBERT (1782–1824). English author, whose tragedy of *Bertram* was recommended to Drury Lane Theatre by Scott and Byron and made some stir, and whose story *Melmoth,* giving the account of a kind of "Wandering Jew," was long a favorite.

MAUPASSANT (*mō-pà-sän'*), **GUY DE** (1850–1893). One of the greatest French authors of short stories, numbering about 200, some of which like *The Necklace, The Coward,* and *The Piece of String* being known in many lands. Though now not so well known as a novelist, some famous longer stories like *A Life,* with its exact, truthful, and brutal realism, *Pierre and Jean, Bel-Ami,* the story of a scoundrel, and *The Little Rogue,* are characteristic of his great but very erratic mind. *Le Horla,* a series of tales of a distorted imagination, predict the derangement which deepened in his last four or five years till total eclipse came toward the end.

MAUROIS, ANDRE (1885–). French author of several delightful and idyllic biographies of Englishmen, among which are his *Ariel, or the Life of Shelley* (1923), and similar treatments of Disraeli and Byron.

MAURRAS, CHARLES (1868–). French writer and politician, known for his royalist sentiments. Wrote many articles during the World War. His *L'Action Française,* not so highly regarded at home, took deep root in some foreign lands.

MEDINA, JOSE TORIBO (1852–1930). Chilean bibliographer, legation secretary, and author. Visited the United States and Europe to study documents bearing on Chili; set up his own printing press in 1886. Issued many volumes, including the masterpiece, *The Aborigines of Chili, History of Colonial Literature in Chili,* 30 volumes of historical documents, and *Hispano-American Library.*

MELVILLE, HERMAN (1819–1891). American author, born in New York City, sailed on a whaling ship at 18, but left the boat because of the cruelty of the captain, was captured by cannibals and lived among them unharmed for four months, until finally rescued. From 1866 to 1885 he held a post in the New York Custom House. Melville was a close friend of Nathaniel Hawthorne. Of various works, the greatest are those that deal with adventures on sea and land, growing out of his own experiences, such as *Typee,* the account of his experiences among the cannibals of the Marquesas; *Omoo,* other adventures in the South Seas, and *Moby Dick, or The Whale.* For a time the works of Melville were almost forgotten, but after 1910 there was a great revival of interest in his stirring tales.

MENANDER (c. 342–291 B. C.). One of the leaders in the new comedy, so called, of Greece. Though he wrote many plays, only certain fragments remain, about 850 single lines of his works. The Roman authors of comedy, Plautus and Terence, drew on Menander for some of their plays.

MENDES, CATULLE (1841–1909). French poet of great metrical grace; of Jewish ancestry; born in Bordeaux, died in Paris. Wrote *Philomela*, various editions of his *Poems*, and novels, *Le Roi Vierge*, *La Maison de Vieille*, and *Gog*.

MEREDITH, GEORGE (1828–1909). Novelist and poet; born in Hants and died in Surrey, England. *Shaving of Shagpat*, his first novel, catches the atmosphere of the *Arabian Nights*, with their vividness and magic. *The Ordeal of Richard Feverel*, considered a masterpiece of analysis and characterization, tells how a father attempts to bring up his son according to a fixed "system" which does not always work. *The Egoist* traces the character of a self-centered man, until he loses friends and sweetheart, but *Diana of the Crossways* was more popular with the general readers. Of his several volumes of poems, the best single pieces perhaps are those like *The Woods of Westermain*, *Love in a Valley*, *Seed-time*, *Hard Weather*, and *The South-Wester*. The reality and sacredness of nature greatly impress Meredith.

MEREDITH, OWEN (1831–1891). Pen-name for Edward Robert Bulwer-Lytton, first Earl of Lytton. He was a son of E. G. E. L. Bulwer-Lytton (q. v.), author of *The Last Days of Pompeii* and many other novels. Owen Meredith became a diplomatist, holding various posts, and a poet of unusual grace and descriptive power. Some of his chief works are *Lucile*, *National Songs of Servia*, *Fables in Song*, and *Legends of Exile*.

MEREZHKOVSKY, DMITRI SERGEIEVICH (1865–). Russian man of letters, noted for novels and poems. *Christ and Antichrist* is a trilogy of historical significance and likewise the novels *Alexander I*, *December 14*, and *The Birth of the Gods*, based in part on the discovery of the tomb of King Tutankhamen. He also published studies of Tolstoy and Dostoievsky. After the Russian revolution he lived in Paris.

MERIMEE, PROSPER (1803–1870). French romantic author, noted principally for his colorful novels. *Colomba*, a picturesque and masterly story of Corsica; followed by *Mateo Falcone*, in which the Southern precision as to honor is brought forth; *Arsène Guillot*, satirizing false morality and faith; and *The Capture of the Redoubt*, a clever and detailed piece of description, are some of his celebrated works.

MEYNELL, ALICE (1849–1922). Gifted English poet; born as Alice Thompson, married Wilfred Meynell in 1877, to whom she had been introduced after he had read her sonnet *My Heart shall be thy Garden*. Much interested in journalism and relief of the poor. Of her various volumes of poetry, most was collected for the *Poems* (1923). Some of her books appeared in volumes like *The Rhythms of Life*, *The Second Person Singular*, followed at last by collected *Essays* (1914).

MICHELET (*mĭch-lē*), **JULES** (1798–1874). French historian and professor. Through opposition to the restoration of the empire, he lost a place held in the Record Office and finally his professorship at the Collège de France. From his *Introduction to Universal History* to his last volume of the incomplete *History of France*, his works are varied and numerous. As a romantic and picturesque historian he is at times less reliable than the plodding, scientific writers. *History of the French Revolution*, *Women of the Revolution*, *Woman*, *The Bible of Humanity*, and *Montagne*, are his chief volumes. The *History of France*, now published in about 20 volumes, takes the story to the French Revolution.

MICKIEWICZ (*mik-ē'ā-vits*), **ADAM** (1798–1855). Great Polish poet, born in Russian territory; spent many years in wandering after 1830. *Konrad Wallenrod* is a veiled account of the wars between Poland and Russia; *Dziady* (Forefathers' Eve) is a fantastic piece describing ancient national religious rites, including an account of his own unhappy love-affair; and the epic *Pan Tadeusz*, describes home life in his country of Lithuania. Because of the vivid reminiscences, touched with the sadness known to an exile from his native land, the poetry of Mickiewicz has been inordinately popular among Polish folk. For a time he was a professor in France.

MILLAY, EDNA ST. VINCENT (1892–). Born in Rockland, Maine; graduate of Vassar College. Married in 1923 Eugen Jan Boissevain. She won the Pulitzer prize in 1923 with her *Harp-Weaver*. Some of her other volumes are *Renascence and Other Poems*, *A Few Figs from Thistles*, *The Lamp and the Bell*, and *The Buck in the Snow*. With Deems Taylor as composer of the music in 1925 she collaborated in *The King's Henchman*, an American opera enthusiastically received at the Metropolitan Opera House in New York.

MILLER, JOAQUIN (1841–1913). Adopted name of Cincinnatus Heine Miller. Called the Poet of the Sierras. Born in Indiana; was a judge in Oregon; lived in Washington as a journalist and later settled in California. *Songs of the Sierras*, *Songs of the Sunlands*, and *Collected Poems* are his main volumes, noted for love of nature, for freedom from restraints of conventional society, and for lyric sincerity. For a time he mined gold in California.

MILTON, JOHN (1608–1674). Born in London. His father, a notary, gave him all advantages of the time, including a course at Cambridge, where he became an M. A. in 1631. During this period and shortly afterward he wrote several poems, the best being the *Hymn on the Morning of Christ's Nativity*, one of our great lyric poems. During a retirement at his father's country estate, he composed several of the shorter poems, such a *L'Allegro*, *Il Penseroso*, and the *Masque of Comus*, produced at Ludlow Castle in 1634. After a trip to the continent, he engaged in public affairs and remained in close touch with the Puritan Commonwealth for almost twenty years. Meanwhile, he wrote many prose tracts and essays, chief of which are *Of Education*, a rather modern plan for a school, and *Areopagitica*, which he called a "Speech for the Liberty of Unlicensed Printing." During the time of Cromwell and his son, Milton held the office of Latin Secretary, an important government post. In 1652 he became blind from his many labors in the cause of liberty as he himself believed, but he never complained. After 1660 he retired to a quiet spot in London, to finish his masterpiece, completed about 1665, and one of our immortal epics,—*Paradise Lost*. For sublimity, sheer intellectual power, wonderfully sustained description, and moral earnestness Milton takes rank among world master artists. Later he wrote *Paradise Regained*, founded on the life of Christ, as a companion to his great epic, but this fell short in conception and execution. *Samson Agonistes*, a dramatic account of the life and death of the blind Samson, and *Lycidas*, in memory of his friend Edward King, one of our great elegies, complete the list of Milton's major works. Even though powerful for the time and trenchant in argument and real wisdom, most of his prose works are now seldom read.

MISTRAL, FREDERIC (1830–1914). Provençal poet. His great poem, *Mireio*, founded on the conventional situation of lover, lady, and forbidding parents, is a masterpiece of description and life of the poet's early home near the River Rhone. Again, in his *Lis Isclo d'Or*, he gives beautiful pictures of humble life, with much of legend and homely philosophy. In another great epic of the Rhone he narrates the legends of the country along the banks and weaves in a romantic story. Mistral raised his native Provençal to the level almost of a distinct language. In 1904 he was awarded the Nobel prize for literature.

MITCHELL, DONALD GRANT (1822–1908). Used pen name Ik Marvel. Born at Norwich, Conn., educated at Yale, lived many years at New Haven. *Reveries of a Bachelor* (1850), *Dream Life*, *My Farm at Edgewood*, *English Lands*, *Letters*, *and Kings*, *Seven Stories with Attic and Basement* are his principal prose compositions.

MITCHELL, SILAS WEIR (1829–1914). Celebrated nerve specialist of Philadelphia, Pa. *The Case of George Dedlow*, a medical story (1863), began his literary career. Besides over 100 articles and monographs on professional subjects, he is best known for his *Hugh Wynne*, *Free Quaker*, a realistic and vivid account of early colonial life, and for *The Red City*. His *Wear and Tear*, *or Hints for the Overworked*, was a best seller, and *Fat and Blood* was translated into a number of languages.

MITFORD, MARY RUSSELL (1787–1855). An English lady who spent her time for many years trying to care for an eccentric father and writing to keep the family out of debt. *Our Village* (1824–1832) is a wonderfully fresh, interesting, and simple account of life in a small town. A close friend of Mrs. Browning. Her poems are in the manner of Coleridge, and some plays had a temporary vogue. Her *Recollections of a Literary Life* is still much read. Miss Mitford was a witty, entertaining, and brilliant talker.

MOLIERE, JEAN BAPTISTE POQUELIN (1622–1673). Prëminent comedy dramatist of France. Carefully educated for the law, but gave this up for the playhouse. Organized a small troupe, which failed in Paris, but succeeded in the provinces for 13 years. Began to write with farces, some of which later were expanded into real comedies. With the favor of the king's brother and Louis XIV himself at times, Molière gained an everlasting reputation at Paris in 1659, with his *Les Précieuses Ridicules*, a satire on fictitious gentility. Some of his other admired productions are: *Tartufe*, a satire on false religion closely akin to hypocrisy; *Don Juan*, a similar attempt; *Le Malade Imaginaire*, a drive against quackery in medicine; *Bourgeois Gentilhomme*, a picture of a man of the middle class who finds himself out of place among gentlemen; *Georges Dandin*, the sad state of a man who marries into a class above him; *L'Avare*, the idea that a miser is a man of distrust. Molière was kind, gentle, companionable, and sympathetic. He established the real man in drama, replacing the ideal or conventional model of the past; and his influence on drama since his time has been beyond estimate.

MOMMSEN, THEODOR (1817–1903). Eminent German historian, whose best works are *History of Rome, History of Roman Coinage, Chronology down to Cæsar*. Immense learning characterizes all his books.

MONTAGU (*mŏn'tà-gū*), **MARY WORTLEY** (1689–1762). While her husband was ambassador at Constantinople, she wrote *Letters* to Pope and other literary men of the age. These rank her first among English letter writers, according to some, or certainly first among lady writers of letters. She brought back from Turkey the custom of inoculation for smallpox. Later a coldness sprang up between her and Pope, and he mentioned her very bitterly in several passages of his satires. The reason of his venom is not surely known. From 1739 to 1762 she lived abroad, mainly in southern France and Italy, dying in England not many months after her return.

MONTAIGNE (*mŏn-tān'*), **MICHEL DE** (1533–1592). Father of the modern essay; family name was Eyquem. Magistrate and member of parliament of Bordeaux. Retired in 1571 to Montaigne, became known as the Lord of Montaigne, and gave his life to writing and thinking.

MONTESQUIEU (*mŏn-tĕs-kū'*), **CHARLES LOUIS DE SECONDAT** (1689–1755). French baron, essayist, and satirist. President of the parliament of Bordeaux for 12 years. His *Lettres Persanes* (1721) satirized life, society, and manners of the age. Though the elders were scandalized, the younger generation was amused and friendly. His two other works, *Considerations of the Causes of the Grandeur and the Decadence of the Romans*, and *Spirit of Laws*, on which he worked almost 20 years, gave him a substantial reputation for serious writing, though it took some time to counteract the impressions of his early book.

MOORE, THOMAS (1779–1852). Irish poet, satirist, and biographer. Known now chiefly for his *Lalla Rookh*—an oriental poem for which Moore read very carefully—intensely popular, as was likewise his *Loves of the Angels*. His *National Airs*, containing favorite melodies of many nations, and his own songs long held the public interest. He wrote also biographies of Sheridan, Lord Edward Fitzgerald, and Lord Byron, the latter of which replaced Byron's own *Memoirs*, entrusted to Moore, and burned at the insistence of Byron's relatives.

MORE, HANNAH (1745–1833). English writer of religious stories and tracts. In early life some of her simple and pastoral dramas held the stage for a time. *Coelebs in Search of a Wife* enjoyed a tremendous vogue and an enormous circulation. Her *Village Politics* sought to counteract the teachings of Tom Paine. Then followed her series of "Cheap Repository Tracts," of which *The Shepherd of Salisbury Plain* sold several hundred thousand copies, her series altogether running into more than two millions. For simplicity, knowledge of life, and lessons of contentment in humble circumstances, her works were admired in many lands.

MORE, PAUL ELMER (1864–1937). American critic, who did much to raise and maintain classical standards of writing. Born in St. Louis, educated at Harvard, and taught classics for a few years. His *Shelburne Essays*, 11 volumes. *Life of Benjamin Franklin, Religion of Plato*, and *Hellenistic Philosophies* are well known.

MORE, THOMAS (1478–1535). Author of *Utopia*, the account of a model political community, lived in London, and was lord chancellor. His great work, one of many books, is an account of an island where goods are held in common, education is national, everybody is obliged to work, and the common good is above that of the single person. More got his idea from Plato's *Republic*, and his work in turn has been often imitated in many lands. Published in Latin, 1516, it was rendered into English in 1551.

MORLEY, JOHN (1838–1923). English statesman, editor of the Men of Letters series of biographies, wrote an admirable *Life of Edmund Burke*, a masterly *Life of Gladstone*, a defense of Cobden in the *Life* of that statesman, and a careful, critical *Life of Cromwell*. During much of his life he engaged in politics as a Liberal, holding several offices of trust, such as secretary of state for India and secretary in the cabinet for Ireland, and as Lord President of the council. His career terminated at the start of the World War.

MORRIS, WILLIAM (1834–1896). Artist and poet, lived in and near London. His *Defense of Guinevere* (1858) is a fine poem, different from Tennyson's account of the wife of King Arthur, in that she defends her own conduct. *Life and Death of Jason* and *The Earthly Paradise*, his best work, translations from Virgil and from the Norse, make up his important literary ventures. He worked many years in designing wall paper, furniture—from which morris chair takes its name—and stained glass windows. He set up the Kelmscott press, from which many fine books were issued, including a costly edition of Chaucer.

MORRISON, ARTHUR (1863–). Author who gives us the realism, meanness, and lack of idealism of people in certain parts of London. *Tales of Mean Streets, A Child of the Jago, Martin Hewitt*, and *The Hole in the Wall* are his chief volumes.

MOTLEY, JOHN LOTHROP (1814–1877). Historian, also served as U. S. minister to Austria and to Great Britain. After years of careful research in America and Europe, he published his *Rise of the Dutch Republic*, to which he added later the *History of the United Netherlands*.

MOULTON, LOUISE CHANDLER (1835–1908). Born in Connecticut, educated in Troy, N. Y., lived in Boston and London; wife of W. U. Moulton, publisher. Her *Bed-time Stories* have been very popular with children. Published also several volumes of poems, fiction, and travel.

MOULTON, RICHARD GREEN (1849–1924). Professor at University of Chicago; educated in London. He did much to develop appreciation of literature among those both in and without our colleges, especially in the study of the *Bible* as literature. Some of his works are *The Ancient Classic Drama, The Modern Study of Literature*, and *The Modern Reader's Bible*, in 21 volumes. Died in England.

MUKERJI, DHAN GOPAL (1890–1936). Born near Calcutta, India, of the priest or Brahmin class. Life near the jungle greatly impressed him, as did what he saw in the temple, where he began to minister at eleven years of age, becoming a priest at 14. Then he set out on three years of travel. Eventually, he came to America, was graduated from Stanford in 1914, lived in New York for a time, and returned to India in 1921, after being here for 12 years. His books have made a profound impression in the world, —*Kari, the Elephant, Hari, the Jungle Lad*, and *Jungle Beasts and Men, Gay-Neck*, which won the Newbery medal for 1927, *A Son of Mother India Answers*, and *My Brother's Face*.

MULLER, MAX (1823–1900). Of German birth, he lived many years in England, and tried to popularize the study of language. Some of his scholarly books are *History of Ancient Sanskrit Literature, The Sacred Books of the East, Introduction to the Study of Religion, Chips from a German Workshop*.

MUNCHAUSEN (*mŭn-chō'zĕn*), **BARON VON** (1720–1797). Stories told by this retired German officer who had served in Russia became proverbial for exaggeration. Greatly enlarged and magnified, they were collected by Rudolph Eric Raspe and published in 1785, and many times afterward in extended forms. At the end they were hardly more than a mass of fabulous tales collected from all possible sources, ancient and modern, and palmed off on a credulous

public. Raspe himself had nothing to do with many of them in later editions.

MURFREE, MARY NOAILLES. See CRADDOCK, CHARLES EGBERT.

MURRAY, LINDLEY (1745–1826). Born in Pennsylvania, lived and made a fortune in New York during the Revolution, and afterward in England. His *Grammar of the English Language*, with other texts, was inordinately famous for many years, passing through edition after edition.

MURRAY, WILLIAM HENRY HARRISON (1840–1904). Often called Adirondack Murray. Born in Connecticut, preached in Boston, and lived for a time in the northern part of New York. Many of his stories became well known, including *Adirondack Tales*, 6 volumes, *Daylight Land*, *How John Norton Kept His Christmas*, and *The Story of Mamelons*.

MUSSET (*moo-sáy*), **ALFRED DE** (1810–1857). French poet of great originality, power, and imagination. Two of his plays, *André del Sarto* and *Les Caprices de Marianna* held the stage for a time. *October Night*, *December Night*, *Rolla*, and his *Confessions* made a deep impression on the France of his generation. Musset was a romantic and lovable man; but his intimacy with George Sand and the termination of it left him greatly disturbed.

NAIRNE, CAROLINA OLIPHANT (1766–1845). Scotch baroness and song writer. Stands only second to Burns in the affections of most Scotchmen as a song writer. Her *Scottish Minstrel* contains a collection of familiar airs set to her own words. She signed the initials "B. B." (representing "Mrs. Bogan of Bogan") to her work, and the real authorship was not known till near her death. R. A. Smith revised the music for her songs, among which are *The Laird o' Cockpen*, *John Tod*, *Charlie is my darling*, *Caller Herring*, *Land of the Leal*, and the *Auld Hoose*— where she was born.

NAPIER, WILLIAM FRANCIS PATRICK (1785–1860). Great English military historian and soldier. His *History of the Peninsular War*, for vividness and sheer descriptive power, perhaps has not been equaled in a similar work in English. Acted as governor of Guernsey for five years, and finally became a general.

NEIHARDT, JOHN GNEISENAU (1881–). Born in Illinois; lived in Nebraska and St. Louis, Mo. Literary editor of the *St. Louis Post-Dispatch*. Some of his best poems are *Song of Hugh Glass*, *The Song of the Three Friends*, *The Song of the Indian Wars*, *The River and I*, and *The Quest*. He attempted to reproduce in epic form some of the fading traditions of the old West.

NEWBOLD, HENRY JOHN (1862–1938). English poet, educated at Oxford, and acted as barrister for 12 years. *Admirals All*, a book of ballads, was followed by many volumes of energetic lyrics, such as *Songs of the Sea*, *The Island Race*, *Drake's Drum*, *St. George's Day*. He also wrote *Naval History of the Great War*, *Tales of the Great War*, and, besides other prose works, *New Paths to Helicon*.

NICHOLSON, MEREDITH (1866–1929). Lived in Indiana and wrote several novels and some poems. Stories like *The House of a Thousand Candles*, *The Port of Missing Men*, *The Lords of High Decision*, and *A Hoosier Chronicle* attracted wide attention.

NICOLAY, JOHN GEORGE (1832–1901). Author with John Hay of the monumental *Abraham Lincoln; A History* which throws much illumination on the period of the Civil War in the United States. Lived in Bavaria till he was six years old.

NIETZSCHE (*nē'chĕ*), **FRIEDRICH WILHELM** (1844–1900). German philosopher and iconoclast; rebelled against the orthodox of almost every type. Glorified power as really back of all motives of the good, the true, and the beautiful. His main works are the *Poems* and *Also Spoke Zarathustra*. He looked for a new race of supermen to arise and rule the world.

NORDAU (*nôr'dou*), **MAX** (1849–1923). Real name was Südfeld. Born in Budapest of Jewish parentage; was a physician for a time. Best known for *Degeneration*, *The Conventional Lies of Society*, *Biology of Ethics*, and some dramas. An ardent Zionist, he advocated with Herzl acceptance of the British offer of land for a Jewish colony in East Africa.

NORRIS, FRANK (1870–1902). Lived for years in Chicago, but studied at Stanford, Harvard, and Paris. Became interested in the story of wheat and completed two volumes of a trilogy on the influence of that grain. *The Octopus* shows the raising of wheat and the hold of the railways on the ranchmen, and *The Pit* shows the conditions of board of trade speculation in wheat. Shorter stories are *A Deal in Wheat*, *McTeague*, a tale of the San Francisco slums, *The Third Circle*, and some critical works.

NORTH, CHRISTOPHER. See WILSON, JOHN.

NORTON, CHARLES ELIOT (1827–1908). American author and art critic; lived in Cambridge, Mass., except for 10 years residence abroad. Translated the works of Dante, still a standard rendering; and wrote noble biographies of the great literary men who had been his intimate friends, including Carlyle, Emerson, John Ruskin, George William Curtis, Longfellow, and Lowell. Did much to improve taste for art and poetry in America. Professor of the history of art at Harvard, 1874–1898.

NOYES, ALFRED (1880–). English poet, educated at Oxford, and acted as professor at Princeton University from 1914 to 1923. *The Loom of Years* in 1902 was his first poem, followed by numerous others, of which famous examples are *Forty Singing Seamen*, *Drake*, *A Salute to the Fleet*, *Robin Hood*, a poetic drama. Noted for fine sentiment and delicate technique.

NYE, EDGAR WILSON (1850–1896). Called himself Bill Nye. For years a famous American humorist and lecturer to immense crowds. His writings were noted for bad spelling, puns, and homely philosophy, among them being *Bill Nye and the Boomerang*, *The Forty Liars*, *Baled Hay*, and *Bill Nye's History of the United States*. He toured for a time with James Whitcomb Riley. Born in Maine, lived in Wisconsin, Wyoming, and New York.

O'BRIEN, FITZJAMES (c. 1828–1862). Irish-American author, educated at Dublin University; came to New York in 1852, and became a leader in the brilliant set of young authors, including Bayard Taylor, Aldrich, Stedman, Winter, and Stoddard. Killed in Union army in Civil War. His best-known short stories are *What Was It*, a mystery, which set the fashion for tales of this sort, *The Wondersmith*, the story of some vindictive manikins, *The Diamond Lens*, the story of a man who fell in love with a beautiful animalcule discovered under a powerful lens in a drop of water, and other fanciful but clever and fascinating stories.

OEHLENSCHLAGER (*ûʻlĕn-shlâ-gĕr*), **ADAM GOTTLOB** (1779–1850). Leading poet of Denmark. His early tragedies are *Haakon Jarl*, *Correggio*, and *Digte*, which began a new age in Danish letters; while *Dina* is the most popular of his later poetic tragedies. Professor of aesthetics at Copenhagen University.

O. HENRY, pen-name for **WILLIAM SIDNEY PORTER** (1867–1910). Born in North Carolina, sent to Texas and then to Central America, where he got much local color for his first stories. After some experiences in journalism in New Orleans and elsewhere, he settled in New York and wrote 12 volumes of short stories, which are models of clever technique of plot construction, humor, surprise endings, and interesting philosophy. Some of the best volumes are *Cabbages and Kings*, *The Gentle Grafter*, *The Trimmed Lamp*, and *Whirligigs*.

OLIPHANT (*ŏlʻi-fănt*), **LAURENCE** (1829–1888). Born in Cape Town, lived for a time in Ceylon, England, Russia, United States, and elsewhere, finally settling in Palestine. Wrote notable books of travel and a very entertaining novel called *Piccadilly*, after he lived in England long enough to serve in Parliament. For years followed Thomas Harris, an American religious leader. His *Scientific Religion*, written after the death of his wife, Alice La Strange, expresses the idea that he was nearer to her after her death than before.

OLIPHANT, MARGARET WILSON (1828–1897). Married her cousin, Frank Wilson Oliphant. Life saddened by loss of husband and three children, but she wrote more than a hundred books. Her novels, *Adam Graeme*, *Miss Marjoribanks*, her stories, *Chronicles of England*, and her *Autobiography* won a notable reputation, second only to her fame after writing accounts of the *Makers of Florence*, *Venice*, *Modern Rome*, and her lives of Dante and Cervantes.

OLIVER OPTIC, pen-name of **WILLIAM TAYLOR ADAMS** (1822–1897). Known to three generations for more than 100 boys' books. Many were republished from his magazine, such as *The Boat Club Woodville Stories, Army and Navy, Starry Flag,* and *Young America Abroad.*

OLMEDO, JOSE JOAQUIN DE (1780–1847). Celebrated Spanish-American poet, born in Ecuador. Served in diplomatic service and was a candidate for presidency. His ode to General Bolivar, the liberator of Peru, and his ode to General Flores made him popular.

OMAR KHAYYAM (*o'mar khi-yahm'*) (d. 1123). Omar the Tent-maker. Wrote a great work on algebra, reformed the Persian calendar, and achieved great fame as a scientist. In modern times he is known for his *Rubaiyat,* or quatrains, about 500 in number, in praise of liberality of thought and the joys of life. Edward FitzGerald (q. v.) made the definite English translation.

O'NEILL, EUGENE GLADSTONE (1888–). American dramatist; educated at Princeton and Harvard. Came in contact with Provincetown, Mass. players, who produced many of his dramas. Three times won the Pulitzer prize for drama: In 1920, for *Beyond the Horizon;* in 1922 for *Anna Christie;* and in 1928 for the *Strange Interlude.* Other successes are *Emperor Jones,* and *The Great God Brown.*

O'SHAUGHNESSY, ARTHUR WILLIAM EDGAR (1844–1880). English scientist and poet; noted for fine sense of rhythm. Some of his works are *Epic of Women, Lays of France* (a free translation of the *Lais* of Marie de France), and *Music and Moonlight.*

OSSIAN. See MACPHERSON, JAMES.

OUIDA (*wē'dȧ*), or **LOUISE DE LA RAMEE** (1840–1908). Born in England of English-French parentage. Her pen name Ouida represents her own early attempt to say "Louise." Died in Italy. Wrote many novels and some admirable short stories. Of the first *Under Two Flags, Held in Bondage,* and *Strathmore* are her best; of the latter, *Bimbi: Stories for Children, A Leaf in the Storm,* a terrible indictment of war, and *A Dog of Flanders,* a charming story of a dog, and *Two Wooden Shoes* are well known. Though much of her work is melodramatic and hysterical, she was an author of no little genius.

OVERBURY, THOMAS (1581–1613). English author, known now almost entirely for his poem, *The Wife,* and for his *Characters,* witty paragraphs describing the disposition and actions of various persons and types. These and similar works by John Earle set the fashion for several years. Died in prison by poison.

OVID (*ŏv'ĭd*) **(PUBLIUS OVIDIUS NASO)** (43 B. C.–A. D. 17). Roman poet of the golden or Augustan period; known now mainly for his *Metamorphoses,* in 15 books, giving stories of changes or transformations of all sorts, and this has been a mine for dramatists and story tellers of a later day.

PAGE, THOMAS NELSON (1853–1923). Born in Virginia, he won a great reputation for short stories with his *In Old Virginia* in 1887. *Marse Chan'* in this is a typical and as fine a story of the days before the Civil War as we have yet produced. Other volumes of good stories are *Elsket* and *Pastime Stories.* His great novel is *Red Rock.* From 1913 to 1919 Page represented the United States as ambassador to Italy.

PAGET, VIOLET (1856–1935). See LEE, VERNON.

PAINE, THOMAS (1737–1809). Born in England, served for a number of years in the excise, but being financially embarrassed he gave up position, country, and wife, and settled in America, where his *Common Sense* (1776), aided tremendously the cause of the Colonists in their struggle for freedom. Later he returned to England, attacked Burke's ideas of the French Revolution with his *Rights of Man,* served in the French Convention, narrowly escaped the guillotine, and finally returned to America, having published his *Age of Reason.* This was coldly received, and Paine never came again into public favor. His work attacks revealed religion, but defends natural religion of mankind; at times he is eloquent in defense of real morality. Died somewhat neglected in New York in 1809; buried now in England.

PALACIO VALDES, ARMANDO (1853–1938). Spanish novelist and critic. After some clever essays, he wrote his first great novel, *The Senorita Octavio,* followed by *Martha and Mary,* showing the struggles between two types of persons, and later by *Riverita* and many others. He is powerful in description and a keen observer of life and character.

PALAMAS, KOSTES (1859–). Greek poet of the popular school as opposed to the classical or purist. *The Songs of My Country, Hymn to Athena,* and *The Twelve Lays of a Gipsy* are among his famous lyrics.

PALFREY, JOHN GORHAM (1796–1881). American historian and politician; professor at Harvard, 1830–1839; political offices 1844–1849, 1861–1867. Editor of *North American Review,* 1835–1843. *Evidences of Christianity* and *History of New England to 1775* are his chief works.

PALGRAVE, FRANCIS TURNER (1824–1897). English anthologist and poet. Son of Sir Francis Palgrave (original name Cohen), who wrote *History of Normandy, Rise and Progress of the English Commonwealth,* and other works. F. T. Palgrave was a graduate and professor of poetry at Oxford. Known now for his own *Idylls and Songs,* including some hymns; but more especially for his *Golden Treasury of English Songs and Lyrics* (1861), which for delicacy of taste and genuine critical judgment have never been excelled by similar works. He made another collection of *Sacred Song* and a second *Golden Treasury,* and wrote a discriminating essay on *Landscape in Poetry.*

PANSY. See ALDEN, ISABELLA M.

PAPINI, GIOVANNI (1881–). Italian critic and author of essays, novels, and poems. *Stroncature* is an original and telling criticism of famous characters, but he is known best for his *Storia di Cristo* (1921), which in English as Papini's *Life of Christ* gained immense fame.

PARDO BAZAN, EMILIA (1851–1921). Celebrated Spanish author, who introduced the French realism of Zola and others into the novel of her country. *La Tribuna, Los Pazos de Ulloa,* the story of a decadent family, but also well known for its fine pictures of country life, and *La Madre naturaleza* gained her a permanent reputation.

PARINI, GIUSEPPE (1729–1799). Poet and official of Italy, known for his scorn of the aristocracy. *Il Giorno* gives ironical advice to a young nobleman as to how to spend his morning, and the poem includes three earlier ones descriptive of various parts of the day.

PARKER, (HORATIO) GILBERT (1862–1932). Novelist born in Canada; educated at Trinity College, Toronto; from 1886 to about 1890 traveled and wrote in Australia and Canada, and then settled in England. M. P. 1900–1918. His knowledge of French Canadian life is accurate, romantic, and intensely sympathetic as shown in *Pierre and his People,* a fine volume of short stories, followed by others, and by several great novels, best known of which in America are *Seats of the Mighty,* a vivid account of the battles between the French and English in Quebec, and his romance, *The Right of Way,* the life of a fine fellow who went to the bad through dissipation.

PARKER, LOUIS NAPOLEON (1852–). Born in France of English parents; educated in music. Known for many cantatas, pageants, and dramas. *The Twenty-third Psalm* and *Belle Margaret* are cantatas; *Cyrano de Bergerac, The Cardinal, The Monkey's Paw,* pageants for Dover, Colchester, and York, *The Mask of War and Peace, Joseph and his Brethren,* a biblical spectacle, and *David Copperfield,* are some of his pageants and dramas.

PARKMAN, FRANCIS (1823–1893). American historian; lived in Boston; worked many years under great handicap of virtual blindness. Concentrated on the history of America and Canada during the French régime; noted for his knowledge of Indian life and character, and for his keen literary sense. His histories, though learned and accurate, read almost like fiction—*The Conspiracy of Pontiac, Pioneers of France in the New World, The Jesuits in North America, La Salle and the Discovery of the Great West, The Old Régime in Canada, Montcalm and Wolfe,* and *A Half-Century of Conflict.* Improved his health by gardening and originated several varieties of plants.

PARTON, JAMES (1822–1891). American author born in England; after his fifth year lived in New

York and after 1875 in Newburyport, Mass. Wrote notable lives of Horace Greeley, Aaron Burr, Andrew Jackson, Benjamin Franklin, and *Captains of Industry*.

PATER, WALTER HORATIO (1839–1894). English critic and essayist; educated at Cambridge and Oxford, taught at Oxford. Acted as an interpreter of the Renaissance in art and literature, notably in *Studies in the History of the Renaissance* and in his narrative of *Marius the Epicurean*, an exposition of the devotion of Pater to the beautiful.

PATMORE, COVENTRY KERSEY DIGHTON (1823–1896). English poet and critic; from 1846 to 1868 acted as assistant in the British Museum. His first book of *Poems* (1844) was harshly reviewed by the critics, and Patmore destroyed all of the edition he could obtain. He is best known for his *The Angel in the House*, divided into four parts: *The Betrothal, The Espousal, Faithful Forever*, and *The Victories of Love*.

PAULDING, JAMES KIRKE (1778–1860). American author and politician, secretary of the navy from 1838 to 1841. Wrote some satirical poems with Irving, including *Salmagundi; The Lay of the Scotch Fiddle*, a parody on Scott; *Westward Ho*, a tale of migration westward, and *The Life of Washington*.

PAYN, JAMES (1830–1898). English editor and author of 100 novels. Edited very successfully *Chambers' Magazine*, and the *Cornhill* after Leslie Stephen. *Carlyon's Year, Glowworm Tales, Literary Recollections*, and *Not Wooed but Won* are some of his works.

PAYNE, JOHN HOWARD (1791–1852). American playwright; lived among the Cherokee Indians for a time and collected their myths; was consul at Tunis, Africa, 1842–1845, 1851–1852, when he died there. His successful plays made him the first American dramatist to be well known in England, where his *Brutus* ran for fifty nights in 1818, with the great Edmund Kean as hero. His opera, *Clari, Maid of Milan*, produced at Covent Garden, London, in May 1823 contains the celebrated *Home, Sweet Home*. For 40 years of his life Payne had no real home he could call his.

PEABODY, JOSEPHINE PRESTON (1874–1922). Born in Brooklyn, N. Y., educated at Radcliffe, and married Prof. L. S. Marks of Harvard. Some of her volumes of poems are *The Singing Man, Harvest Moon*, and *The Chameleon;* her poetic plays are *Marlowe, The Wolf of Gubbio*, and *The Piper*, which won the prize and was produced (1910) at Stratford-on-Avon, Shakespeare's birthplace, England.

PEELE, GEORGE (1558?–1597?). British dramatist; educated at Oxford; led a precarious life in London. Wrote several plays, best known now for *Arraignment of Paris*, a pastoral comedy, *The Old Wives' Tale*, containing within it another drama and much rustic lore, and *Chronicle of King Edward the First*.

PEMBERTON, MAX (1863–). Born in Birmingham, England; author of mystery stories mainly, some of which are *The Iron Pirate, Jewel Mysteries I Have Known, The House under the Sea, The Diamond Ship*, and *The White Walls*.

PEPYS (*pēps*), **SAMUEL** (1633–1703). English public official and diarist. His *Diary* runs from Jan. 1, 1660, to May 31, 1669, and it records all the thoughts, acts, and feelings of the author, evidently for his own eye alone, in a modified form of shorthand complicated by shrewd original devices. His work is a living human document, hardly like anything else we have.

PEREDA, JOSE MARIA DE (1833–1906). Spanish novelist, best in describing provincial life and the toilers of the sea. His *Don Gonzala Gonzalez de la Gonzalera* ridicules the persons of fortune who claim to be liberal in politics, *Pedro Sanchez* shows the disillusionment of a person who has become a politician in the capital, *Sotileza* shows the heroism of fishermen.

PEREZ GALDOS (*pā'rāth gäl-dōs'*), (1845–1920). Gifted Spanish novelist and dramatist. Under the title *Episodios nacionales* (National Episodes) he wrote 46 volumes of historical fiction. In addition he described the life of his own day, its religious and social problem, in romances like *Doña Perfecta, Gloria, Angel Guerra*.

PERRY, BLISS (1860–). Professor and critic, born at Williamstown, Mass., and educated at Williams and abroad. Edited the *Atlantic Monthly* and taught at Williams, Princeton, and Harvard. His books include *A Study of Prose Fiction, The Powers at Play, The Amateur Spirit, Walt Whitman, Whittier, Carlyle, The American Mind*, and *A Study of Poetry*.

PERSIUS (AULUS PERSIUS FLACCUS) (34–62). Roman satirist and poet. His brief work condemns many common practices of the day. During the middle ages he was rather popular.

PETRARCH (*pē'trärk*), **FRANCESCO** (1304–1374). Celebrated Italian poet, born at Arezzo, lived at Avignon and Vaucluse. At Avignon he became interested in Laura, a lady of golden hair and great beauty, and he wrote sonnets expressing his affection. Scholars have been divided as to whether the sonnets are entirely autobiographical or only so to some degree. Petrarch prided himself on his Latin, yet this is not true ciceronian, but influenced by the forms of the late Latin ages. He is considered the father of the modern sonnet and of humanism.

PHAEDRUS (*fē'drus*), Latin author of fables, in time of Augustus; born in Macedonia, but lived mainly at Rome. His 100 fables, according to one modern version, were drawn mainly from Aesop, without great originality; influenced medieval fable writers, "Romulus" being a version of his work.

PHELPS, ELIZABETH STUART (1844–1911). Married Rev. H. D. Ward in 1888. Prominent in suffrage and other movements. Some of her many books are *Gates Ajar*, an attempt to imagine the life beyond this world, *An Old Maid's Paradise*, and *Men, Women, and Ghosts*, the last a collection of remarkable short stories.

PHELPS, WILLIAM LYON (1865–). Writer on literature; professor at Yale; educated at Yale and Harvard. Besides editing many books and the complete novels of Jane Austen and Richardson, he has written many critical estimates, such as *Beginnings of the English Romantic Movement, Teaching in School and College, How to Know Browning, Reading the Bible*, and *Human Nature in the Bible*.

PHILLIPS, STEPHEN (1868–1915). British poet and dramatist; born near Oxford, and studied at Cambridge till he joined a troupe of traveling actors. Introduced to the public by his *Poems* (1897), he turned to dramas, mostly in blank verse, including *Paolo and Francesca, Herod, Ulysses, The Sin of David*, and *Nero*. All his works are beautiful in thought and style.

PHILLPOTTS, EDEN (1862–). Born in India, lived for some years at Plymouth, Devonshire, and wrote novels of that region similar to those of Blackmore, with a touch of Hardy. *Lying Prophets* and *Children of the Mist, Sons of the Morning, Tales of the Tenements, The Joy of Youth*, and *Brunel's Tower*, are some well-known stories.

PINDAR (c. 522–443 B. C.). Greek lyric poet of great piety, dignity, and charm of manner. His odes are full of original imaginative touches, delicate music, and kindly feeling. Tradition says he was a practiced player of the flute. *Odes of Victory*, 44 in all, celebrate the contests of the Olympic games every four years; besides we have fragments of songs, dirges, dance pieces, and hymns to the gods attributed to Pindar.

PINERO, ARTHUR WING (1855–1934). Dramatist born in London; played at Edinburgh and London for about six years. Some of his typical plays, distinguished by clear technique, earnestness, and fine characterization, are *Sweet Lavender*, which has been often revived, *The Second Mrs. Tanqueray, The Notorious Mrs. Ebbsmith, Trelawney of the Wells, His House in Order*, and *The Big Drum*.

PLATO. See under PHILOSOPHERS.

PLAUTUS, TITUS MACCIUS (c. 252–184 B. C.). Roman comic dramatist who borrowed much from earlier Greek models. Of his many compositions, but 20 now survive intact. Many type characters exist in his remaining plays, among which the *Captivi* is an account of self-sacrifice of a slave, the *Amphitruo* is a travesty, the *Menaechmi* is a farce of mistaken identity, of which Shakespeare's *Comedy of Errors* is

an adaptation, and the *Pseudolus*, *Bacchides*, and *Mostellaria* are all comedies of society or manners.

PLIEKSANS, JAN (1865–). Poet and dramatist of Latvia. Edited a paper for a time, but was exiled for several years, after which he turned to writing democratic plays. He translated Shakespeare, Schiller, and Goethe, and wrote several historical tragedies, of which the best remembered are *Fire and Night*, *Blow Breeze*, and *The Dvina*.

PLINY THE ELDER (c. 23–79). He is known best now for his *Natural History* in 37 books, in which he quotes 147 Latin and 327 foreign authors. Though entirely fabulous in certain details, this work until modern times was taken as a veracious scientific authority. Even in the drama of Shakespeare and his contemporaries are many echoes from Pliny and his successors,—like the allusions to "crocodile tears," mermaids, unicorns, gryfons, and many others.

PLUTARCH (c. 46–120). Now known in modern times as a Greek who wrote the 46 *Parallel Lives* of Greeks and Romans, one from each people in a set of two. He also wrote 60 moral essays, some subjects being *On Having Many Friends*, *How a Flatterer may be Distinguished from a Friend*, *On Superstition*, and *On Exile*. Shakespeare used parts of Sir Thomas North's translation of the French version of the *Lives* in his Roman history plays.

POE, EDGAR ALLAN (1809–1849). American poet, leader in the short story, and eminent critic; with Hawthorne he shares the honor of establishing short narrative on an artistic and scientific basis. Born of actor parents in Boston, he was left an orphan, and adopted early by John Allan of Richmond, Va., and sent to the University of Virginia in 1826, but had to leave after a term. He then joined the regular army for a time, published *Al Araaf and Tamerlane* in 1827, and in 1831 was courtmartialed from West Point. In 1833 he won a prize for *The Manuscript Found in a Bottle*, after which his output of short narratives was fairly consistent, though at times intermittent. After 1834, when Mr. Allan died, Poe was largely on his own resources. In 1839 he became editor of the *Gentleman's Magazine*, in which his *Tales of the Grotesque and Arabesque* appeared. In these stories he attempts to unite the strange and horrible with the artistic and the adorned. Poe was influenced by the German and by the Gothic romance, or the tale of horror. His object was to revive interest in tales for men, as a counterpart to the sentimental fictions of the day. At different times he was also connected with the *Southern Literary Messenger*, which he made a real literary force, and with the *Quarterly Review* in New York. Though he was conscientious and able, his temperament was erratic, restless, and melancholy, and his habits were uncertain, though he was not the drunkard that some have imagined. Drink at times, especially late in life, however, got the best of him. After the death of his child-wife, Virginia Clemm, his first cousin, in 1847, he became more and more irrational and unreliable. Poe, in fact, was always haunted by the specter of himself, against which his great pride, genius, and literary fame contended in vain. At times he and Mrs. Clemm, who did the best she could to keep the family intact, lived in abject poverty, if not in actual need, during the fatal illness of consumption of Virginia Poe. His death in Baltimore in 1849 has never been quite explained. Poe found the short story formless, rambling, and sentimental, and he left it unified, certain in technique, and free of undue subjective influence. Much of his scientific temperament, in stories like *The Descent into the Maelstrom* and *The Gold Bug*, made him peculiarly fitted to write this type. His romantic and brilliant, though morbid, imagination is shown best in *The Fall of the House of Usher*, *The Pit and the Pendulum*, and *The Cask of Amontillado*. The haunting inspiration of a mysterious beautiful lady is shown in *Ligeia*, *Morella*, and in the horrible *Berenice*, and the sense of loss in *Annabel Lee* and *Ulalume*, two of his best poems. For music, powers of concrete description, and genuine inspiration, his *Raven* and *The Bells* are poems of great charm and dignity. Poe as a critic in three or four papers showed he had very definite ideals and literary methods in both prose and verse. His short narratives, *The Gold Bug*, *The Purloined Letter*, and *The Murders in the Rue Morgue*, are the prototypes of many of our modern detective stories and tales. Poe the artistic author is explainable, and in some measure Poe the scientist, but his personal character is a jumble and enigma.

PONTOPPIDAN (*pĕn-tôp'ĕ-thăn*), **HENDRIK** (1857–). Danish novelist of peasant life and character. Some of his stories are the trilogy, *Soil*, *The Promised Land*, and *Dooms Day*, an account of a minister who marries a peasant lady, *Skyer*, and *Lykke Per*, all noted for fine descriptive and analytical powers.

POOLE, WILLIAM FREDERICK (1821-1894). American librarian who started the *Index to Periodical Literature* while a student at Yale. Afterward as librarian at Amherst College he issued new revisions. He was the author of several books on literary or scholastic subjects.

POPE, ALEXANDER (1688–1744). English author and critic, born in London, and educated there and by his own efforts. His delicate constitution made him somewhat morbid and querulous. Beginning with his *Essay on Criticism*, he composed several great works in heroic couplets of polished elegance. This first poem gives the ideas of writing which characterized Pope. His *Rape of the Lock* is a mock-heroic poem, written to patch up a quarrel that resulted when a gallant clipped a lock of hair from a lady's coiffure without getting her permission. It has many fine imaginative passages. From his translations, the *Iliad* and *Odyssey*, the latter his only in part, he made a handsome sum. In satire his best work is the merciless *Dunciad*, which excoriated petty authors and all who aspired to rival the great genius. Pope quarreled with most of his friends at one time or another, especially any who might rival or dispute his claim as literary dictator of the age. The *Essay on Man* and *Moral Essays* sought to interpret man according to the philosophy of Bolingbroke and others of Pope's coterie. Though he was a clever meterist and a dangerous antagonist, he was not a philosopher and not even a deep thinker.

PORTER, GENE STRATTON (1868–1924). Born in northern Indiana; married Charles D. Porter. Greatly interested in nature, especially in birds, plants, and forests. Wrote her novels largely to create a love for nature, alternating them with her scientific works, like *Birds of the Bible*, *Moths of the Limberlost*, *Music of the Wild*, and *Friends in Feathers*. Her novels include *Freckles*, *A Girl of the Limberlost*, and *Michael O'Halloran*. For several years earlier she was in the camera department of *Recreation* and on the staff of *Outing*, and she illustrated her own nature books.

PORTER, JANE (1776–1850). Born in Durham, England, she commenced to write stories early in life, profiting by her friendship with Sir Walter Scott. *Thaddeus of Warsaw* (1803), giving the story of some dramatic episodes in the history of Poland, gained her tremendous fame in all Europe. *Scottish Chiefs*, issued in 1810 four years before Scott's first novel, is a picturesque account of the heroes of the Scots clans—one of the few early historical novels still read with interest. Her sister, Anna Maria Porter (1780–1832) wrote some works of merit, including *The Lakes of Killarney* and *The Hungarian Brothers*.

PORTER, NOAH (1811–1892). Known best for his edition of *Webster's Dictionary*. Graduate, professor, and president (1871–1886) of Yale University. Some of his other works are *The Human Intellect*, *American Colleges and the American Public*, and *Science and Sentiment*.

PORTER, WILLIAM SIDNEY. See O. HENRY.

POST, MELVILLE DAVISSON (1871–1930). Lived in West Virginia. Wrote many mystery and detective stories, some of which attained great currency. *The Strange Schemes of Randolph Mason*, *The Corrector of Destinies*, *The Nameless Thing*, *The Mystery of the Blue Villa*, and *Walker of the Secret Service* are among his best tales.

PRESCOTT, WILLIAM HICKLING (1796–1859). Born at Boston, graduate of Harvard. Because of the loss of an eye by an accident in college, he had to employ readers for his researches in Spanish history. His great works are *Conquest of Peru* and *Conquest of Mexico*.

PREVOST, EUGENE MARCEL (1862–). French author of novels relating to the education of women. His *Lettres des femmes*, *Les Demivierges*, *Lea*, *Les Vierges fortes*, created no little interest, and the

second of them a real sensation because of its implied criticisms of the French manner of educating young girls. Later novels treat also of other subjects.

PRIBRAM, ALFRED FRANCIS (1859–). Historian of Austria, best known for his *Secret Treaties of Austria-Hungary* 1879–1914, *Austria-Hungary's Foreign Policy*, 1908–1918, and *Secret Treaties* (1929). Most of his work is founded on careful examination of numerous documents.

PRIOR, MATTHEW (1664–1721). English satirical and humorous poet. With Charles Montagu, later earl of Halifax, he wrote *City Mouse and Country Mouse*, a parody on Dryden's *Hind and Panther*. Employed by the Tory government, but later imprisoned (1715–17) by the Whigs. During these two years he composed an elaborate humorous poem *Alma; or, the Progress of the Mind*, followed by his greatest, *Solomon*, and *Poems on Several Occasions*.

PROCTER, ADELAIDE ANNE (1825–1864). Daughter of Bryan W. Procter, noted just below. Contributed many poems, at first under name of "Mary Berwick," to *Household Words* edited by Dickens. *Legends and Lyrics* (1858) for seven years averaged over an edition a year.

PROCTER, BRYAN WALLER (1787–1874). English public official and poet; knew all the literary men of note from Wordsworth to Tennyson. His chief claim to remembrance are his songs, 300 in number, including *The Sea, Life, Song to My Wife*, but his dramatic *Mirandola* was produced at Covent Garden with Macready, Charles Kemble, and Miss Foote as principals in the cast.

PULCI, LUIGI (1432–1484). Italian poet patronized by the Medicis. He delighted in travesties of the long poetic romances of chivalry as then current. His best semi-serious poem is *Morgante* (1482), which is largely a burlesque of an epic of Charlemagne.

PUSHKIN, ALEXANDER (1799–1837). Russian poet influenced largely by the lyrics of Lord Byron. For speaking too freely in his *Ode to Liberty*, circulated in Moscow, his birthplace, in manuscript form, he was banished to some minor office in Southern Russia. Having visited the Caucasus for his health, he gained experiences which he used in several poems, notably in *A Captive in the Caucasus*, the story of the love of a native girl for a Russian, *Fountain of Bakhchisarai*, an account of the experience of a Polish youth in the Crimea, and in the *Gipsies*. In 1825 he was recalled to Moscow, where the emperor is said to have pronounced him "the most intelligent man in Russia." *Poltava*, a lively poem on an historical subject, *A Voyage to Arzrum*, after another visit to the Caucasus, which is very fine in every respect, and some prose make up his later works. He was killed in a duel with the husband of his wife's sister, Baron D'Anthes, who was in consequence expelled from Russia. Pushkin is the greatest poet of Russia.

QUARLES, FRANCIS (1592–1644). English symbolist poet, whose *Emblems* is a curious mingling of Scripture passages, quotations from fathers of the church, and an epigram at the end. They once immensely appealed to many persons.

QUENTAL, ANTHERO DE (1842–1891). Portuguese author of numerous fine sonnets, some of which are among the best of modern times, though a lack of faith and a prevailing melancholy chill much of his better work.

QUEVEDO Y VILLEGAS (*kē-vē'do*), **FRANCISCO DE** (1580–1645). Spanish poet and satirist; lived for some years at court. Gifted in style, knowledge of human frailty, and biting sarcasm and wit. He wrote a picaresque romance, a noted work on politics at the worst, and a dissertation on *The Patience of Job*, besides thousands of verses, letters, and scholarly treatises.

QUILLER-COUCH (*kōōch*), **ARTHUR THOMAS** (1863–). Educated at Oxford, was a journalist in London, lived for years in Cornwall, and in 1912 became professor of English literature at Cambridge. Some of his Cornish tales are *The Blue Pavilions*, *The Ship of Stars*, and *The Shining Ferry;* some volumes of criticism are *On the Art of Writing*, *Studies in Literature*, *Shakespeare's Workmanship;* he completed R. L. Stevenson's unfinished *St. Ives*, and compiled several noble anthologies of English prose and verse notably *The Golden Pomp* and *The Oxford Book of English Verse*.

RABELAIS (*rȧb'lē*), **FRANCOIS** (1495–1553). French humorist and satirist, who acted as physician for a time at Lyons. *Gargantua* and *Pantagruel* are puzzling combinations of farce, wit, slashing satire, much license of language, and some believe a modified moral zeal. They satirize the customs of education, war, nobility, and daily life of the age.

RACINE (*rȧ-sēn'*), **JEAN** (1639–1699). French dramatist noted for the beauty, sentiment, and high literary art of all his works. With Boileau, La Fontaine, and Molière, he formed what was called "the society of four." From his first great success *Alexander the Great*, through *Mithridate*, *Britannicus*, *Bajazet*, *Andromaque*, *Iphigénie*, to *Phèdre* and *Athalie* his work increased in popularity and power. Against the *Phèdre* a cabal was formed, and a rival play was produced a week afterward. For almost 20 years Racine wrote no plays, returning at last with *Esther* for the girls of St. Cyr to act, followed by *Athalie*. *Les Plaideurs*, his one comedy, at first a failure, became popular after the king approved it.

RADCLIFFE, MRS. ANN (1764–1823). Chief exponent of the Gothic romance in England. Her tales are full of mysterious happenings, with heroes deprived of their rights and often imprisoned in some part of the castle, from which they are rescued, to the general accompaniment of clanking chains in cellars, mysterious music, strange voices, and other unexplained events. The vogue became great, but later novelists tried to explain away all the mysteries. Mrs. Radcliffe wrote four successful works, chief of which is *The Mysteries of Udolpho*. In prose the Gothic novel corresponded to the poems of Byron. C. B. Brown (q.v.) modified the type to suit conditions here in America.

RAMEE, LOUISE DE LA. Noted under her pseudonym, OUIDA.

RAMSAY, ALLAN (1686–1758). Scotch poet, first a wig-maker, and later established first circulating library in Scotland. From collecting old poems and ballads, he began to write songs of his own, included finally in *Scots Songs* (1719). *The Gentle Shepherd*, a drama pastoral, for many years was known at every fireside, and still in parts is read through Scotland. He sought to revive interest in older literature by collecting poems written before 1600, and also in contemporary literature by publishing his *Tea Table Miscellany*, composed of poems by himself, his friends and others.

RANDALL, JAMES RYDER (1839–1908). Journalist and song writer, born at Baltimore. While teaching in a college in Louisiana, he heard of disturbances in his native town at the outbreak of the Civil War, the result of which was the celebrated song *Maryland, My Maryland*, which with *Dixie* became the favorite of the South. Other songs are, *There's Life in the Old Land Yet*, *The Battle Cry of the South*. Later edited the Georgia *Constitutionalist* and then acted as Washington correspondent for several Southern journals.

RANKE, LEOPOLD VON (1795–1886). German scientific historian, born in Thuringia; professor for 5 years at Berlin. Granted a fund by the government to study archives abroad, after his *History of the Roman and Teutonic Peoples, 1494–1535*, appeared. His other great works are *History of Southern Europe in the 16 and 17 Centuries*, *History of the Popes*, very valuable work, and *German History in the Time of the Reformation*. In his seminar at Berlin he trained many modern historians.

RASK, RASMUS CHRISTIAN (1787–1832). Danish scholar and professor at the University of Copenhagen. His great services to the history of northern languages is found in his *Introduction to the Grammar of the Icelandic and other Ancient Northern Languages*, *Anglo-Saxon Grammar*, *Essay on the Origin of the Ancient Scandinavian or Icelandic Tongue*, tracing the connection with the Latin and Greek, and his translations of two ancient *Eddas*.

RASPE, RUDOLPH ERICH (1737–1794). See MUNCHAUSEN.

RAYMOND, HENRY JARVIS (1820–1869). Born at Lima, N. Y., served on the N. Y. *Tribune* with Greeley, and established the *Times* on Sept. 18, 1851. Helped form the Republican Party, and the famous *Address to the People*, written by him, was adopted

by the Convention at Pittsburgh in 1856. Member House of Representatives, 1865–67. Of his books, biographies of Webster and Lincoln are standard works.

READ, OPIE (1852–1939). Journalist and author, born in Tennessee. Edited *Arkansas Traveler*, humorous paper, for 8 years, and then (1891) engaged in literature in Chicago. Lectured extensively. Some of his works are *A Kentucky Colonel, An Arkansas Planter, A Tennessee Judge, On the Suwanee River, A Yankee from the West*, and *In the Alamo*.

READ, THOMAS BUCHANAN (1822–1872). Born in Pennsylvania. He devoted his time mainly to painting, but wrote several volumes of poems, of which his best-known single piece is *Sheridan's Ride*. Painted portraits of Mrs. Browning, Longfellow, and others.

READE, CHARLES (1814–1884). English dramatist and novelist; educated at Oxford; lived in London. His first great success was *Masks and Faces* (written with Tom Taylor), a comedy, which he later made into the story of *Peg Woffington*. He produced many purpose novels, including *It's Never Too Late to Mend*, aimed to reform discipline in jails; the noble historical fiction, *The Cloister and the Hearth*, of which the hero is the father of Erasmus, *Hard Cash*, having to do with treatment of the insane, and *Put Yourself in His Place*, having to do with trades-unionism.

REDLICH, JOSEPH (1869–1936). Austrian historian and professor at Vienna University. His works deal largely with English peoples, such as *Local Government in England, The Procedure of the House of Commons, The Common Law and the Case Method in American University Law Schools*.

REGNIER (*rā-nyē'*), **HENRI FRANCOIS JOSEPH DE** (1864–1936). French poet and novelist. *Les Medailles d'argile, La Cité des eaux* are two of his best volumes of verse, *La Canne de jaspe* and *Les Amants singuliers*, two of his realistic novels.

RENAN, ERNEST (1823–1892). French biblical scholar and translator whose *Life of Jesus* raised a storm because of its skepticism. His translations of *The Book of Job, Song of Songs*, and *Ecclesiastes* contain some of his best scholarship. *The Future of Science* is a voluminous work, *Origins of Christianity*, though at times showing a disillusioned man, and the *History of Israel* were works of great learning and painstaking.

REPPLIER (*rĕp'lēr*), **AGNES** (1858–). Born in Philadelphia of French ancestry; lived largely in Paris in later life. Her stimulating essays were popular and authoritative. *Essays in Idleness, Compromises, In Our Convent Days, Americans and Others, A Happy Half Century*, and *Points of Friction* are some of her volumes.

REUTER, FRITZ (1810–1874). Lived in Mecklenburg and Neubrandenburg; made the Plattdeutsch a literary language in his poems and stories. *Anecdotes and Rhymes, Kein Hüsung*, a fine epic, *Old Stories of Bygone Days*, are three of his best works.

REYMONT, LADISLAS STANISLAS (1867–1925). Polish novelist whose studies of the life of peasants gave him world-wide fame. Three early novels described the life of strolling players; *The Promised Land* depicted certain forms of industrialism; *The Peasants*, in four volumes, pi ture the seasonal occupations of the people and gained for him the Nobel prize for literature in 1924. He also wrote some historical fictions.

RHODES, JAMES FORD (1848–1927). Celebrated American author of the *History of the United States from 1850 to 1877*, seven volumes, and *History of the Civil War, History of the United States from Hayes to McKinley*, eight volumes. For these and other works he was awarded many honors, including the Loubat prize, Berlin Academy of Science, a gold medal of the National Institute of Arts and Letters, and the Pulitzer prize at Columbia for literary work in history. *The McKinley and Roosevelt Administrations*, 1922, brings his work down to recent days.

RICE, ALICE CALDWELL HEGAN (1870–). Born in Kentucky; married Cale Young Rice, noted below. Wrote several popular realistic stories like *Mrs. Wiggs of the Cabbage Patch, Lovey Mary, Sandy, Miss Mink's Soldier and other Stories*, and *Turn About Tales* (with Mr. Rice). Helped found Cabbage Patch Settlement House in Louisville, Ky.

RICE, CALE YOUNG (1872–). Poet, born and lived in Kentucky. A few of his volumes are *From Dusk to Dusk, Many Gods, Far Quests, Wraiths and Realities*, and several poetic dramas, including *David, Yolanda of Cyprus, The Immortal Lure*, and *Porzia*.

RICE, JAMES (1843–1882). English novelist and literary partner of Walter Besant, with whom he wrote *Readymoney Mortiboy*, later dramatized by them, *My Little Girl, This Son of Vulcan, The Golden Butterfly, The Monks of Thelema*, and others.

RICHARDSON, SAMUEL (1689–1761). Father of the modern English novel. Born in Derbyshire and was a printer till 1739. At the suggestions of two publishers, he wove a series of letters into a fiction called *Pamela* (1740), the story of a servant girl who gained the respect of her employer and finally married him, after many vicissitudes. This was instantly received as a great document of humanity. It was parodied, imitated, ridiculed, but still remained a noble instance of the purity and cleverness of a girl in the modest class of society. *Clarissa Harlowe* (1748), his masterpiece, and one of the world's best studies of human motive, conduct, and intimate analysis, tells the tragedy of a girl of the middle class, born for better things, who rejected her country suitors, all of whom were much below her in attainments, but fell into the hands of a scheming man of fashion named Lovelace, and finally died in a respectable lodging house, forsaken by her lover and rejected by her own people. Her nobility, purity of heart, and steadfastness of purpose have charmed countless thousands of readers. No novel is more intense, more heart-searching, and more dramatic, but the story winds back and forth ceaselessly through a mass of letters in three large volumes. *Sir Charles Grandison* is the author's attempt to show society in the highest class, completing his trilogy of the three social strata. The hero is too faultless to be real, and the story too improbable to be regarded as anything equal to the other two novels. Richardson moved in the best society, surrounded by many ladies who called themselves his literary daughters, some of whom turned to writing fiction, notably Sara Fielding, sister of Henry Fielding, Richardson's opponent in novel writing.

RICHEPIN, JEAN (1849–1926). French author of many volumes. His *Chanson des gueux* (1876) won him fame and a term in prison because of their revolutionary tendencies; his novels were morbid and realistic; but his dramas gave him greatest fame, especially *Nana Sahib*, in which he played with Bernhardt, as well as two or three musical pieces.

RICHTER (*rich'tar*), **JOHANN PAUL FRIEDRICH** (1763–1825). Better known as Jean Paul Richter. Born in Bavaria, educated at the gymnasium, and for a time at the University of Leipzig, but left because of lack of money. *Hesperus, Quintus Fixlein, Titan* and *Flegel*—which he regarded as his best—are some of his fictions. He also wrote works on art criticism, education, politics, and his own biography. Though his works are formless and very digressive at times, he has a wealth of ideas and fertility of imagination which made him immensely famous in his time.

RIDPATH, JOHN CLARK (1840–1900). American historian, born in Indiana. Besides a very popular school history, he wrote a *History of the United States* in 8 volumes, and *The Great Races of Mankind*, a work of considerable merit. He was professor at DePauw University for a time.

RIGGS, MRS. GEORGE C. See WIGGIN, KATE DOUGLAS.

RILEY, JAMES WHITCOMB (1853–1916). Born and lived most of his life in Indiana, except for a number of years spent as a wandering sign-painter and assistant to strolling entertainers. Became known as the "poet of the common people" and "Indiana's most distinguished citizen." His poems are full of humor, sentiment, quaint philosophy, and all the plain ideas that appeal to the masses. His early dialect poems were issued under the pen-name of Benjamin F. Johnson of Boone. Beginning with 1883 and *The Old Swimmin' Hole and 'Leven More Poems*, he issued many volumes, collected finally in the Holmstead edition of 16 volumes. *Out to Old Aunt Mary's, The Raggedy Man, Knee Deep in June, An Old Sweetheart of Mine* are single poems known far and wide.

RINEHART, MARY ROBERTS (1876–). Born at Pittsburgh, Pa., author of *The Circular Staircase, The Man in Lower Ten, The Amazing Interlude, Love Stories*, and many others, besides *The Bat, The Breaking Point*, and other dramas.

RIPLEY, GEORGE (1802–1880). Best known as an American scholar and social reformer, one of the founders of Brook Farm, a community where artists proposed to combine writing, painting, and so on with working on the soil. The *Discourses on Philosophy and Religion* and *Letters on the Latest Forms of Infidelity* attracted wide comment. He edited with others *Appleton's Cyclopedia* and introduced many European authors to an American public.

RIVES (*rēvz*), **AMELIE** (1863–1917). Born in Virginia; in 1896 married Prince Pierre Troubetzkoy, a Russian nobleman. Among her successes are *A Brother to Dragons*, short stories, *The Quick or the Dead*, which raised a considerable stir, *Virginia of Virginia*, *World's End*, *Shadows of Flames*, and a play version of Mark Twain's *The Prince and the Pauper*.

ROBERTS, CHARLES GEORGE DOUGLAS (1860–). Born in New Brunswick, Canada; professor in King's College, Nova Scotia; lived in New York for a time. Some of his many books are, in verse, *In Divers Tones*, *Songs of the Common Day*, *Collected Poems* (1900), *New Poems* (1919); in prose, *Around the Camp Fire*, *A History of Canada*, *The Heart of the Ancient Wood*, *Haunters of the Silences*, and *The Secret Trail*.

ROBINSON, EDWIN ARLINGTON (1869–1935). American poet, born in Maine; educated at Harvard; lived mainly in New York. Won Pulitzer prize for poetry in 1921 and 1925. Some of his books of poems are *The Man Against the Sky*, *The Three Taverns*, *Collected Poems* (1921), *The Man Who Died Twice* (1925), and *Tristram*.

ROBINSON, HENRY CRABBE (1775–1867). British lawyer and literary man; knew all the great authors of the day. Left many volumes of *Diaries*, *Journals*, and *Letters*, part of which were printed in 1869, and the *Correspondence with Wordsworth* in 1927.

ROBINSON, JAMES HARVEY (1863–1936). Born in Illinois; educated at Harvard; professor of history, Columbia, (1895–1919). An advocate of the newer way of writing history, with less attention to kings and politics and much more to the progress of arts, science, and thought. His chief histories are *Introduction to the History of Western Europe*, *Readings in European History*, *The New History*, *Medieval and Modern Times*, *The Mind in the Making*, *The Ordeal of Civilization*.

ROD, EDOUARD (1857–1910). Born in Switzerland; lived many years in Paris, and adopted realistic manner of his friend Zola, being particularly good in character analysis. *La Course à la mort*, *Le sens de la vie*, and *The Private Life of an Eminent Politician* (*La Vie privée de Michel Tessier*, translated in 1893), are his great novels.

ROE, EDWARD PAYSON (1838–1888). Famous American novelist; lived in New York. Of his numerous works, the best recalled are *Barriers Burned Away*, *From Jest to Earnest*, *Driven Back to Eden*, and *The Earth Trembled*.

ROGERS, SAMUEL (1763–1855). English banker, poet, literary dictator, and friend of authors. An invitation to his breakfasts in London assured one's fame as a literary person. He befriended Tom Moore, Cary, the translator of Dante, Wordsworth, and other authors. His own *Pleasures of Memory*, written in the style of the age of Gray, and *Italy* are notable poems. Rogers was a prince of conversationalists, and Alexander Dyce published from notes *Recollections of the Table Talk of Samuel Rogers*.

ROLLAND, ROMAINE (1866–). French man of letters; winner of the Nobel prize for literature in 1915. Known for his works on the history of the arts and for his political essays and plays. *History of the Opera*, *Causes of the Decadence of Italian Painting*, *The Theatre of the People*, *Millet*, *Beethoven*, *Michelangelo*, *Jean-Christophe*—an elaborate biography of a musician—and an eloquent defense of the Indian leader in *Mahatma Gandhi* are his chief writings.

ROMAINS, JULES (1885–). French author, known for his lively style and knowledge of humanity. His *La Vie Unanime* is a study of the life of the spirit in various social groups, *Mort de Quelqu'un* shows how a dead man gradually fades from memory; *Knock*, a farce, some prose poems, and tragedies make up his principal books.

ROOSEVELT, THEODORE (1858–1919). Besides his many public services, Mr. Roosevelt found time to write a large number of books, some of which are *Naval War of 1812*, *Ranch Life and the Hunting Trail*, *American Ideals*, *History as Literature*, *African Game Trails*, *Fear God and Take Your Own Part*, *Theodore Roosevelt's Letters to his Children*. (For his administration as President, see page 360.)

ROSSETTI (*rō-sĕt'ē*), **CHRISTINA GEORGINA** (1830–1894). Daughter of an Italian refugee, Gabriele Rossetti, professor of Italian literature at King's College, London, 1831, till he became blind in 1845; sister of Dante Gabriel (q. v.) and of William M. (q. v.). She twice refused suitors because of difference in religious views, Miss Rossetti being a high-church Anglican. Her life and poetry are colored and saddened by her experience and by illness. *Goblin Market*, *Sing-Song*, a collection of poems for children, *The Face of the Deep*, an attempt to interpret *Revelations*, *Seek and Find*, and many theological tracts make up her output of literature. Her poem *When I am dead, my dearest* takes rank among our best.

ROSSETTI, DANTE GABRIEL (1828–1882). English painter and poet, who sought, so far as possible, to fuse the two arts. Contributed to *The Germ*, a magazine founded by his brother, *The Blessed Damozel* and some sonnets in 1850. This poem is preëminent in its coloring, pictures, and musical interpretation of the longing of a girl in heaven for her lover still on the earth. Rossetti wrote many poems, including a noble series of sonnets, *The House of Life*; he also translated the Italian poets. When Robert Buchanan (q. v.) published his attack, entitled *The Fleshly School of Poets*, Rossetti replied in his *The Stealthy School of Criticism*. His last years were saddened by the death of his beautiful wife and by his own failure to control his use of drugs. (For Rossetti as a painter, see the Dictionary of the Fine Arts in this volume.)

ROSSETTI, WILLIAM MICHAEL (1829–1919). English author and critic; brother of Christina and Dante Gabriel, noted above. He founded the Pre-Raphaelite Brotherhood, a group of artists including his brother, Burne-Jones, Holman Hunt and several others, and edited their official magazine *The Germ*. Besides fine biographies of his father and his brother, he is noted for his editions of Shelley, Blake, and Walt Whitman, a blank verse translation of Dante's *Inferno*, *Democratic Sonnets*, and many papers on art.

ROSTAND, EDMOND (1868–1920). Dramatist born at Marseilles, France. *Les Romanesques*, a travesty, *La Princesse Lointaine*, *La Samaritaine*, *Cyrano de Bergerac*, his great heroic comedy, which was acclaimed more loudly than any drama since Victor Hugo's time, *L'Aiglon*, in which Sarah Bernhardt played at her own theater, and *Chantecler* are his chief productions. His late work consisted mainly of patriotic poems. Great artistic finish and beauty characterize nearly all his plays, especially the *L'Aiglon*, which was in verse.

RUNEBERG, JOHAN LUDVIG (1804–1877). Though he lived all his life in Finland, Runeberg is, with an exception or two, the most popular poet who wrote in Swedish. He was a professor of Latin at Borga College for many years. *The Grave in Perrho*, for which the Academy gave him a gold medal, *Hanna*, *The Elk-Hunters*, and *King Fjalar*—a group of romances in blank verse—are his chief poetic compositions. In spite of Greek influence, he remains a great patriotic and most original poet.

RUSKIN, JOHN (1819–1900). English author of notable books on art and on labor and workingmen. Born in London, he had the advantage of a pious mother, who taught him the Bible and thus formed his simple and beautiful style of writing. Graduate of King's College, London, and Christ Church College, Oxford. His first great work, *Modern Painters*, (1843–1860), in five volumes sought to defend the artists like J. M. W. Turner who lived in modern times. Though many artists disagree with Ruskin, his defense is an eloquent and sincere one. *Modern Painters* did much to encourage English art. In the *Seven Lamps of Architecture*, perhaps somewhat fancifully, he sought to show that all good building has seven great principles or "lamps,"—sacrifice, truth, power, beauty, life, memory, and obedience. After 1860 he wrote mainly on work. *Sesame and Lilies*, some addresses for the young, have had countless admirers of their homely sense and dignified beauty. *The Crown of Wild Olive* is a plea for beauty in every-day life. *Three Lectures on Work*, *Fors Clavigera* (letters to workingmen), *Traffic and War* are some notable writings after 1860. Several earlier books deal with the

technique of art. Though Ruskin often exaggerated, and sometimes outran himself in zeal, his purpose was noble and the results of his work tremendous for a generation or more. He spent much of his private fortune building modest but artistic homes for workmen. In his later life he lived at Coniston in the Lake District. At two different times, 15 years in all, he was Slade professor of art at Oxford. Vigorously defended the Pre-Raphaelite artists.

RUSSELL, GEORGE WILLIAM (1867–1935). Familiarly known by his pseudonym "AE". Irish author and painter. Edited, 1904 to 1923, *The Irish Homestead*, an organ of coöperative farming, and then took charge of *The Irish Statesman*. Some of his best-known work are in *Collected Poems* (1913). *Gods of War*, *The Hero in Man*, and *Voices of the Stones*. He also wrote essays, a drama or two, *The Interpreters*, an interesting Platonic dialog, and *The Candle of Vision*, in the last of which he sought to discover some elements of mysticism.

RUSSELL, WILLIAM CLARK (1844–1911). Son of Henry Russell, writer of songs, noted in Dictionary of Fine Arts in this volume. After eight years in the merchant service on the seas, he wrote biographies of Collingwood and Nelson, but Russell is best recalled through his interesting novels of the sea, such as *John Holdsworth, Chief Mate*, *The Wreck of the Grosvenor*, *A Sailor's Sweetheart*, *Marooned*, and *The Good Ship Mohock*.

RYAN, ABRAM JOSEPH (1839–1886). Affectionately known as Father Ryan, a Roman Catholic priest and poet, who once enjoyed great popularity. Lived in Alabama and Virginia, where he was born. Of his numerous poems, the tenderest is *Their Story Runneth Thus*, supposed to be largely autobiographical.

RYDBERG, ABRAHAM VIKTOR (1828–1895). Swedish journalist and romantic novelist, greatest of his age. *The Freebooter of the Baltic*, *The Last of the Athenians*, are his leading imaginative works; he also wrote *The Bible's Teachings about Christ*, an immensely popular study, and *Roman Days*, a series of papers on conditions of old Rome.

SACHS (*zäks*), **HANS** (1494–1576). German meistersinger of Nuremberg, except for 5 years spent in travel. Worked as a shoemaker and composed over 6,000 pieces out of hours. These consist mainly of brief songs, short fables—at which he was best—and 200 dramatic pieces on Biblical and secular subjects. An edition of his works in 23 volumes was completed at Stuttgart in 1896.

SA DE MIRANDA, FRANCISCO DE (1485?–1558). Portuguese poet who introduced the Renaissance into his country. He produced both the first classic comedy and the first great tragedy in Portugal. A visit to Italy and studies in Greek, Latin, and Italian aided him materially. Dialogs, eclogs, letters, and shorter poems form the bulk of his other compositions. He wrote also in Castilian.

SADI (c. 1184–1291). Greatest philosophical poet of Persia, born in Shiraz. Spent thirty years of his life in travel and wandering, but achieved fame in Delhi, Damascus, and endured countless hardships as a slave in Tripoli, till rescued and ransomed by an old friend. At 70 he settled at Shiraz under a favorable monarch and gave to the world, in many types of verse, a large number of beautiful, dignified, and polished lyrics. *Fruit Garden* (*Bustan*), *Rose Garden* (*Gulistan*), lyrics, elegies, odes, and epigrams make up his large output, most of which are deep in thought and clever in expression.

SAINTE-BEUVE (*sänt'bûv'*), **CHARLES AUGUSTIN** (1804–1869). Distinguished French critic. Except for three volumes of poems, one drama, and a work on Port-Royal, his writings were composed of a Monday article in different Paris dailies. His comments are always sensible, restrained, precise, and expressed in delicate and tactful language. These criticisms now fill 28 volumes.

SAINTSBURY, GEORGE EDWARD BATEMAN (1845–1933). English critic; professor of rhetoric and English literature at Edinburgh University, (1895–1915). Of his voluminous and learned works, the most useful to students are *Short History of French Literature*, *A Short History of English Literature*, *History of English Prosody*, *History of English Criticism*, and a *History of the French Novel*.

SAND, GEORGE (1804–1876). Pen-name of Madame Armandine Lucile Aurore Dupin, wife of Casimir Dudevant. She wrote a great number of romantic and pastoral novels—her collected works totaling 109 volumes. *Spiridon*, *Les Sept cordes de la lyre*, *Le Péché de M. Antoine*, *La Comtesse de Rudolstadt*, and *Lucrezia Floriani* are well known. As an intense human document her *Story of My Life*, amazing in its self-revelation of various love affairs, has attracted wide attention.

SANDBURG, CARL (1878–). Born in Galesburg, Illinois; studied at Lombard College. Gained great experience as a newspaper man, as a soldier in the War with Spain in Porto Rico, and as a student of mankind. Sandburg is a master of words, contrasted effects, keen insight into both prairie and city where he lived. *Chicago Poems*, *Corn Huskers*, *Smoke and Steel*, and *Slabs of the Sunburnt West*, are his chief volumes of verse. *Rootabaga Stories*, much liked by young folks, two discriminating books about Lincoln, and *Good Morning, America*, show Sandburg as a trenchant prose writer.

SARDOU (*sär'dōō'*), **VICTORIEN** (1831–1908). Great French playwright, who, after initial failure and a narrow escape from death, gained a tremendous success in Paris by his *Monsieur Garat*, *A Scrap of Paper* (written for Sarah Bernhardt), and a series of satirical dramas ridiculing various classes of society, succeeded by many great romantic plays, in which Sardou turned to account the history of various countries. From Italy he took *La Haine* and *Dante*, from Greece *La Duchesse d'Athènes*, *Patrie* from Holland, *Robespierre* from the French Revolution, and *La Sorcière* from Spain.

SAROLEA, CHARLES (1870–). Born in Belgium, educated at Liége University; professor of French literature in University of Edinburgh. He has written numerous monographs and essays, including *H. Ibsen*, *Cardinal Newman and his Influence on Religious Thought*, *How Belgium Saved Europe*, *Europe and the League of Nations*, *President Masaryk and Abraham Lincoln*, *R. L. Stevenson and France*, and *Impressions of Soviet Russia*, which was translated into nine languages.

SAXE, JOHN GODFREY (1816–1887). American editor and humorous poet. Edited Burlington, Vt., *Sentinel* from 1850 to 1856, and the Albany, N. Y., *Evening Journal* after 1872. Of his three volumes of poems, single pieces still recalled are *The Proud Miss McBride*, *Rhyme of the Rail*, *Progress*, and *The Money King*.

SCHAFF, PHILIP (1819–1893). Born in Switzerland, educated in German universities, he was called to the Reformed Theological Seminary of Bethlehem, Pa., and in 1870 became a professor at Union Seminary, New York City. Besides editing many learned works, such as the Schaff-Herzog *Encyclopedia of Religious Knowledge* and *The Creeds of Christendom*, he wrote *History of the Apostolic Church* and *History of the Christian Church*, two valuable works still standard.

SCHEFFEL, JOSEPH VIKTOR VON (1826–1886). German poet and novelist of extraordinary fame. His romantic and humorous poem, *The Trumpeter of Säckingen* went through 250 editions, and his historical romance *Ekkehard* was almost as popular.

SCHILLER, JOHANN CHRISTOPH FRIEDRICH (1759–1805). German poet, born at Marbach, Wurtemberg; studied to be a lawyer and then became a surgeon in a regiment under appointment of the Duke. In 1781 his tragedy *The Robbers* turned him definitely toward literature, and he expressed in poems the unrest of the age. Absent without leave twice to see his dramas produced, he was commanded by the Duke to communicate with nobody outside his province. Schiller escaped, wandered for several years, became interested in history, and then in philosophy through friends. After two unimportant dramas, his *Don Carlos* appeared in 1787, and two years later he became professor of history at Jena. *Revolt of the Netherlands* and *History of the Thirty Years' War* followed, two picturesque but accurate works. Ill-health followed, but he continued to labor on his dramas, while he was forced to give up his teaching. From 1799 to his death he lived at Weimar, in the society of Goethe and other great authors. The trilogy of *Wallenstein*, in which he gave a picture of the Thirty Years' War, in 1799 placed him at the head of European dramatists. Then followed his *Maria Stuart*, a great tragedy, *The Maid of Orleans*, a beautiful story of Joan of Arc, *The Bride of Messina*, a tragedy similar to the ancient Greek model, and at last *Wilhelm Tell*, the national story of Switzerland. For singleness of purpose, devotion to ideals, and optimism, Schiller

stands among the world's great, the leader of German tragedy, and next to Goethe the favorite author of the German people.

SCHNITZLER, ARTHUR (1862–1931). Austrian novelist and playwright; practiced at first as a physician. His chief dramas are *Anatol*, the love story of a Viennese, *Liebelei* and *Reigen*, in all of which he shows the careless, happy, romantic life of the Austrian capital. Schnitzler is a master of characterization and of the management of realistic details. Some of his stories are *Sterben*, *Lieutenant Gustl*, *Casanovas Heimfahrt*, and *Fräulein Else*.

SCHOOLCRAFT, HENRY ROWE (1793–1864). Born in Albany County, N. Y., became a geologist, explorer, member of the legislature of Michigan, and authority on Indians. Of his numerous works, the *Information respecting the Indian Tribes of the United States*, in six volumes, *Algic Researches*, and *The Legend of Hiawatha* are standard sources of our information. Longfellow used the last of these for certain information for his own *Hiawatha*. He married a cultured Indian girl, granddaughter of a chief, and she aided him greatly in his studies.

SCHREINER, OLIVE (1862–1920). After some years of residence in South Africa, where her father was a German missionary, she published in England *The Story of an African Farm*, *Trooper Peter Halkett*, and *An English South African's View of the Situation* (1899). These give intimate pictures of life in South Africa.

SCOLLARD, CLINTON (1860–1932). American poet; professor of English literature at Hamilton College for some years. Some of his volumes are *Songs of Sunrise Lands*, *A Boy's Book of Rhyme*, *Lyrics of Dawn*, *Odes and Elegies*, *The Vale of Shadows*, and *Songs of Summer*, all of which are characterized by lyric and metrical grace.

SCOTT, DUNCAN CAMPBELL (1862–). Canadian author; official of Civil Service. Some of his publications are *The Magic House*, *Labor and the Angel*, *New World Lyrics*, and *Lundy's Lane and other Poems*, all volumes of poetry; *In the Village of Viger*, and *The Witching of Elspie*, short stories.

SCOTT, WALTER (1771–1832). British poet, novelist, and historian. Born in Edinburgh, became a lawyer, but later decreased his practice in part to give his time to literature. For 25 years he acted as clerk of the session in Edinburgh, devoting several hours a day to this for at least six months every year, while court was in session. His remarkable memory, interest in the past, and romantic imagination gave us his great poems and novels. Beginning with *Minstrelsy of the Scottish Border*, an edition of old songs and ballads collected by him, he worked incessantly at his writing. In succession the metrical ballads appeared,—*Lay of the Last Minstrel*, a wonderful success, *Marmion*, a revival of the old atmosphere of chivalry, and *The Lady of the Lake*, an idyllic account of the northern clans and their chiefs, with a delightful romance as additional interest, and at least two other poems now disregarded. Feeling that fiction was to be more popular, and knowing that Byron was the great idol then, and also to provide money to help a publishing firm in which he had become a silent partner, Scott turned to novels. In the meantime he had edited Dryden, Swift, and other works. *Waverley*, 1814, instantly caught the fancy of thousands, who called for more from the Great Unknown, as Scott was called by those who suspected his authorship. He aimed eventually to cover most of the periods of history in his fictions, without being scrupulously accurate in all details. To read Scott's novels is to obtain vivid and usually accurate pictures of life and people in past centuries. *Rob Roy* gives much insight into highland life and customs; *The Heart of Midlothian* reveals the tragedy and heroism of a simple Scotch family in Midlothian; *The Abbott* introduces Mary Queen of Scots; *Kenilworth* brings upon a magnificent stage Queen Elizabeth, Raleigh, the Earl of Leicester, and some unhistorical characters, with the tragedy of Amy Robsart; *The Bride of Lammermoor*, one of the great tragedies of family pride and thwarted lovers; and *Ivanhoe* takes us back to the days of Richard the Lion Heart. These are only typical of Scott's many romantic fictions, with their color, interest in all classes of persons in all ages, and dramatic characterizations. Through the failure of the publishing firm in 1826, Scott became involved in tremendous debt, all of which he assumed that he might "owe no man a penny." His chagrin, superhuman labors to write enough to gain the needed money, and other events hastened his end by several years. By 1847, fifteen years after his death, all debts had been paid by his estate, in all nearly $600,000.

SERAO, MATILDE (1856–1927). Italian journalist and novelist; born in Greece of Italian-Greek parentage. With her husband, Eduardo Scarfoglio, she established a paper in Rome, and finally at Naples, *Il Mattino*, which became a great favorite in south Italy. All her stories show an intimate knowledge of common life. *Cuore Infermo*, *Fior di Passione*, *La Conquista di Roma*, and *Ventre di Napoli* are some of her fictions.

SERVICE, ROBERT W. (1875–). Born in England, went to the Canadian northwest and the Klondike, and finally settled in Paris. Wrote several volumes of poems known for dash, independence, and picturesque descriptions of life in the wilds. Experiences in the gold rush are recorded in *Ballads of a Sourdough*, *Rhymes of a Cheechako*, and *Rhymes of the Trail*, and as an ambulance driver in the World War in *Rhymes of a Red Cross Man*.

SHAKESPEARE, WILLIAM (1564–1616). English player, poet, and dramatist; acknowledged by most critics as the greatest dramatist of all time. Tradition has it that Shakespeare died on his birthday, for we know three things: That he died on April 23, 1616; that he was baptized on April 26, 1564; and that at his death he had entered upon his 53rd year. So his birthday could hardly have been earlier than April 23. Though we should like to know much more of his life, we have much information in fact, and no few reasonable conjectures. The poet's father was a burgess of Stratford-on-Avon, Warwickshire, a glover probably by occupation, and perhaps also a contractor in produce. Of his several children, all died except William by 1613. One son Richard was also an actor. John Shakespeare, after holding several village offices, fell into monetary difficulties by 1577, and by 1586 he was dropped as alderman of Stratford. Ben Jonson, himself a great classical scholar, asserted that William Shakespeare had "small Latin and less Greek." Yet he may have had all the town school afforded,—a considerable amount measured by modern high school standards. According to evidence not wholly conclusive, he married at 18 Ann Hathaway of a neighboring town of Shottery, and she evidently was 8 years his senior. Of their three children—Susanna and twins, Hamnet and Judith, the boy died early, and the line through the daughters became extinct in 1670, though his sister Joan's descendants could be traced as late as 1865.

Shakespeare may have left Stratford for London as early as 1584, but until about 1591 or 1592, nothing very positive is known of his occupations. Some think he left Stratford with the players of the Earl of Leicester about 1586–87, and after Leicester's death in 1588 passed with the company under the patronage in turn of Lord Strange, the Earl of Derby, and at last Lord Hunsdon, or that he was allied with the men of Pembroke or Sussex. Strong tradition indicates he acted as a man of all work about the playhouse, then became a regular actor, and finally the chief dramatist of the age of great dramas. His non-dramatic poems, *Venus and Adonis*, his own contribution to the erotic verse of the time, *Lucrece*, and possibly the *Sonnets* were written by 1593. Yet the last of these was not published in full till 1609. These were dedicated to the Earl of Southampton, a young man then not of age, and in connection with this possible alliance with a nobleman, some of the baffling problems of the story of the *Sonnets* have arisen.

When the theaters were opened in 1594 after an interval or two of plague in London, Shakespeare was with the Lord Chamberlain's men, later the King's men, when James I became their patron, and this company appeared at court more often than others. Shakespeare is said to have played old Adam in *As You Like It* and the Ghost in *Hamlet*, neither a chief part. Yet as a playwright he must have contributed to the company not less than two plays in the average year. By 1596 Shakespeare began a series of transactions which eventually restored his father to peace till his death in 1601, and which finally left him a prosperous landowner and money-lender of his native town. From the interest he owned in the Globe Theatre in London, amounting to an income of perhaps 200 or 300 pounds a year, he purchased a home in Stratford, to which he came in 1610 as a more or less settled tenant. Whether his health was poor during the last years is not established, but his will was made hastily on March

25, 1616, a month before his death. Much has been made of the fact that Shakespeare left his wife only the "second best bed with the furniture," but it must be recalled that the widow would have her dower interest in the property, not mentioned in the will.

Some of Shakespeare's plays were published in quartos or editions of single plays during his lifetime, and some variant versions give rise to many problems for the scholars. In 1623 two old friends—Heminge and Condell—issued the first *Folio*, reprinted in 1632 and twice later. Of 37 plays 18 appeared in the *Folio* for the first time, and several in a form somewhat differing from other texts.

For a description of Shakespeare dramas, see page 875, and for a synopsis of individual plays, see at intervals pages 858 to 878.

SHAW, ALBERT (1857–). Economist and editor. Educated at Grinnell College; editor of *Minneapolis Tribune*, 6 years, and of the *American Review of Reviews* after 1891. Awarded the John Marshall prize by Johns Hopkins for books on municipal government, such as *Municipal Government in Great Britain, Municipal Government in Continental Europe.* Among his other books are *The Business Career* and *The Outlook for the Average Man.*

SHAW, GEORGE BERNARD (1856–). British dramatist and socialist. Born in Dublin. After attempting five novels, he turned to single tax theories of Henry George, but stopped only when he had become a Fabian socialist. The novels at last were printed in propaganda magazines. Finally he wrote many plays, most of which had some idea he desired to promote. In 1898 he published *Plays Pleasant and Unpleasant* in two volumes. Later successes were *Candida, Man and Superman, John Bull's Other Island, Androcles and the Lion,* and others, besides some essays on art, Ibsen, Wagner, and other topics.

SHELLEY, PERCY BYSSHE (1792–1822). Acknowledged by most critics the greatest lyric poet of the English race. Son of Sir Timothy Shelley, and born near Horsham, England. Educated at Eton College and Oxford, from which latter he was dismissed for issuing a pamphlet, *The Necessity of Atheism.* Following differences with his father, he married Harriet Westbrook, daughter of an inn-keeper, who drowned herself five years later in 1816. Having become interested in Mary, daughter of William Godwin, a socialist and free-thinker, Shelley legally married her after the death of his first wife. This marriage was a happy one. In 1816 he was with Byron in Switzerland, afterward spending some time near him in Italy. He also became intimate with Leigh Hunt, the poet and critic. From 1818 till the summer of 1822, the Shelleys lived in various places in Italy, at last on the Gulf of Spezia. He and a friend named Williams were drowned on July 8 by the overturning of their sailboat in the Gulf. The bodies were burned, but Shelley's ashes were interred in the Protestant Cemetery at Rome, not far from the grave of his old friend, John Keats, whom he had commemorated in *Adonais.* Of Shelley's numerous lyrics, some of the greatest are *The Ode to the West Wind, To a Skylark, Hymn to Intellectual Beauty, Monte Blanc, Arethusa, Alastor, Epipsychidion,* the dramatic poems, *Prometheus Unbound,* which shows his revolt against conventional restraints, *The Witch of Atlas;* and the tragedies, *The Cenci* and *Oedipus Tyrannus.* His sonnet *Ozymandias* is one of our best.

SHENSTONE, WILLIAM (1714–1763). Born in Shropshire, England; later made his estate a showplace of England. His long poem in Spenserian stanzas is *The Schoolmistress,* which is notable for its humor and fine realistic descriptions. The *Pastoral Ballads* take high rank in their class.

SHERIDAN, RICHARD BRINSLEY (1751–1816). British dramatist and parliamentary orator, born in Dublin and educated at Harrow school. Three fine comedies established his fame,—*The Rivals, The School for Scandal,* and *The Critic,* all of them clever revelations of the manners of the age. Sheridan is noted for his ingenious handling of plot, his tense situations, vivid characterizations, and humor. In Parliament he was a chief spokesman for the Whig party, best recalled today for his telling speech against Warren Hastings in the trial for impeachment. He held several minor offices in the government. *Pizarro,* his last play, is a fine melodrama with patriotic motive.

SHERMAN, FRANK DEMPSTER (1860–1916). American poet and journalist, born in New York. Some of his graceful and musical verses are found in *Madrigals and Catches, Lyrics for the Lute, Little-Folk Lyrics,* and, in collaboration with J. K. Bangs, *New Waggings of Old Tales.*

SHILLABER, BENJAMIN PENHALLOW (1814–1890). Under the name of "Mrs. Partington," he wrote several humorous sketches and collections of sayings, among which are *Life and Sayings of Mrs. Partington,* which gave him fame, *Knitting Work, Mrs. Partington's New Gripsack Filled with Fresh Things, Rhymes with Reason and Without.*

SHORTHOUSE, JOSEPH HENRY (1834–1903). British novelist, who, at 50, wrote *John Inglesant,* laid it aside, published 100 copies three years later, and rose suddenly to great fame when it was praised by Gladstone. His later works were not up to his original standards.

SIDNEY, MARGARET. See LOTHROP, HARRIET M.

SIDNEY, PHILIP (1554–1586). English courtier, poet, romancer, and soldier. His father was deputy in Ireland, where Sidney visited him in 1576, and later wrote a defense of the elder Sidney's administration; next went on a mission to the continent. While engaged in the wars in the Low Countries in 1586 he died of a wound in the thigh. *Astrophel and Stella,* his sonnet series, contains many fine poems, most of which are thought to be autobiographical; and his *Defense of Poesy* refuted the charges of Gosson and others that English was not a fit language for poetry and modern poetry was inferior to the ancient. While rusticated from court by the Queen for advising her too freely as to her plans for marriage, he wrote at the country place of his sister, Penshurst, a beautiful prose romance, *Arcadia,* though it is rather formless and wandering. This also contains poems interspersed at intervals. Tradition represents Sidney as the ideal courtier and gentleman of a glorious age.

SIENKIEWICZ (*syen-kyā'vich*), **HENRYK** (1846–1916). Born in Russian Poland, educated at Warsaw, traveled much in various countries, including the United States in 1876, and received the Nobel prize for literature in 1905. Died in Switzerland while engaged in organized relief for Polish refugees; buried in Cracow, Poland, 1924. His novel of the times of the Roman emperor Nero, entitled *Quo Vadis,* was translated into 30 languages, dramatized, and filmed many times. *With Fire and Sword, The Deluge,* and *Pan Michael,* in technique, are better works, though not so famous. *Yanko the Musician and other Stories* also have been translated into English.

SIGOURNEY (*sĭg'ür-nē*), **LYDIA HUNTLEY** (1791–1865). Lived in Connecticut; married in 1819, Charles Sigourney, a Hartford merchant. Like the English poet, Mrs. Hemans, with whom she has been compared, she wrote numerous books of verse and prose, besides hundreds of articles to many journals and papers. *Traits of the Aborigines of America* (1822) is an elaborate poem in blank verse.

SILL, EDWARD ROWLAND (1841–1887). Born in Connecticut, educated at Yale, studied theology at Harvard, but could not conform to doctrines, acted briefly as a journalist, taught school, and was professor of English, University of California, from 1874 to 1882. Of a retiring disposition, Sill did not seek fame as an author, but his volumes *Hermitage and other Poems, The Venus of Milo and other Poems* have many fine pieces, among which *The Fool's Prayer* and *Venus of Milo* are still recalled.

SIMMS, WILLIAM GILMORE (1806–1870). Lived in South Carolina and became best known author of the South, excepting Poe. His verse is not notable, but his short stories, *The Wigwam and the Cabin,* afford a fine series of pictures of pioneer life. Simms wrote several novels, somewhat resembling Cooper's, including *The Yemassee,* his best, *The Partisan, The Forayers, Border Beagles,* and *Beauchampe* have been favorites. His *History of South Carolina* is still an accepted text, and his *Life of Francis Marion* has been often reprinted.

SIMONDS, FRANK HERBERT (1878–1936). Journalist in Albany and New York City. His stories in the *Review of Reviews* during the World War gave him an enviable reputation for keen analysis and accuracy in reporting. His books include the story of Verdun in *They Shall Not Pass, History of the World War,* and *How Europe Made Peace without America.*

SINCLAIR, UPTON (1878–). Born in Baltimore, studied in New York, and later lived in California. Founded several societies and experiments.

Sinclair gained a wide reputation in 1906 with his *Jungle*, a study of the stock yards region in Chicago. *Oil*, *King Coal*, *The Brass Check*, *The Goose Step*, and *The Goslings* continue his attacks, the first two on industry, in *The Brass Check* on certain phases of journalism, and in the last two, dangers and tendencies in education.

SISMONDI, JEAN CHARLES LEONARD DE (1773–1842). His real name was Simonde. Eminent Swiss historian; lived in Geneva and for a time in early life in Italy. In his *New Principles of Political Economy* he advocated the idea that more attention should be paid to the use of wealth and less to acquiring it in books on economy. *History of the Italian Republics in the Middle Ages*, 16 volumes, and *History of the French*, 29 volumes, are among the great scholarly histories of the world.

SKEAT, WILLIAM WALTER (1835–1912). English philologist who contributed more than any other man in recent times to our knowledge of English words. He was educated at Cambridge, where he became a professor of Old English. *Etymological Dictionary*, *Principles of English Etymology*, and a fine edition of Chaucer in six volumes are Dr. Skeat's major works.

SKELTON, JOHN (1460?–1529). English satirist of the clergy and court. His chief works *Why Come Ye not to Court* and *Colin Clout* had hosts of imitators; they were written largely in a short, tumbling, rimed meter. *The Death of Philip Sparrow* is a fine lament by a young lady for the death of her pet killed by a cat.

SMILES, SAMUEL (1812–1904). Scotch author of many biographies of leaders in industry, such as George Stephenson, an immensely popular work, Wedgwood, and *The Huguenots*. His inspirational work, *Self-Help*, was translated into many languages, and was followed by similar works on *Character*, *Thrift*, and *Duty*.

SMITH, ADAM. See under EDUCATORS.

SMITH, FRANCIS HOPKINSON (1838–1915). American engineer, artist, and author. Lived mainly in Baltimore. Besides many life-saving stations he built for the government a lighthouse off New London, Conn., the stone breakwater at Bridgeport, Conn., and the foundations for the Statue of Liberty on an island in New York harbor. His delightful romantic stories are *Colonel Carter of Cartersville*, *Caleb West, Master Diver*, and the *Romance of an Old Fashioned Gentleman*. See DICTIONARY OF FINE ARTS for his work as a painter.

SMITH, GOLDWIN (1823–1910). Born in England, educated at Oxford, where he was a professor of history from 1858 to 1866. Championed the North in the Civil War, and came to America to live as professor at Cornell, 1868 to 1871, after which he lived in Toronto, Canada, edited at times three journals, and wrote many books, including political histories of both the United Kingdom and the United States. *Canada and the Canadian Question* (1891) stresses his idea that Canada and the United States have much in common.

SMITH, SAMUEL FRANCIS (1808–1895). Author of *My Country 'Tis of Thee*, which in time became a national hymn, according to the author, "without my planning or seeking for such a distinction." Smith was a clergyman at Andover, Mass., and Boston. He wrote the hymn at Andover in 1831 or 1832, and it was first sung by the children of the Park Street church, Boston, on July 4, 1832.

SMITH, SYDNEY (1771–1845). English clergyman, wit, and one of the founders of the *Edinburgh Review* in 1802. As Peter Plymley he favored Catholic emancipation and also championed other causes later. He became known throughout England as a genial and witty conversationalist. Acted as rector in Yorkshire for 20 years, then at Bristol, and finally canon of St. Paul's, London, 1831–1845.

SMOLLETT, TOBIAS GEORGE (1721–1771). Born in Scotland, became a doctor, and finally an author of sea stories and satirical tales of life of his day. His best-known works are *Peregrine Pickle*, *Roderick Random*, containing some fine local color of the sea, and *Humphrey Clinker*, the account of the travels and comments of a choleric invalid doctor through England.

SNORRI, STURLASON (1179–1241). Icelandic historian; lawyer, president of supreme court of Iceland. Lived in Norway for a time, being forbidden by order of the king to return to Iceland, and put to death for disobeying. Snorri wrote the great prose *Edda*, the *Sagas of the Norwegian Kings*, and also a briefer form, *History of St. Olaf*.

SOPHOCLES (*sof'o-klēz*) (495–406 B. C.). Tragic poet of Greece, born near Athens. Served as a general in the Samian War. Wrote his plays for particular actors in many cases, and contributed to improvement of stage effects. Of his hundred or more dramas, these seven survive: *Antigone*, *Electra*, *Trachinian Maidens*, *Oedipus the King*, *Ajax*, *Philoctetes*, and *Oedipus Coloneus*. No early plays are extant nor any that show a decline of his powers.

SORABJI, CORNELIA (1866–). Indian author, graduate in law from Oxford; legal adviser in India. Her chief works are *Love and Life beyond the Purdah*, *Sun-Babies*, two series, *Tales of the Great Ones*, *Between the Twilights*, and *Therefore*.

SOUTHEY, ROBERT (1774–1843). English poet and biographer, born in Bristol and educated at Oxford. Became interested with Coleridge in a scheme for a democratic settlement in America, never carried into maturity. He and Coleridge married sisters. He traveled in Spain and Portugal, and in 1803 settled as a literary man at Keswick. Ambitious epics by Southey like the *Thalaba* and *Kehama*, his own favorites, are now seldom read. Besides he wrote many articles for the *Quarterly Review* and lives of Nelson and John Wesley which are still standard works. Some of his poems like *The Battle of Blenheim* and *The Holly-Tree* have survived in public regard.

SPARGO, JOHN (1876–). Born in England; lived in United States since 1901. Identified with numerous socialistic enterprises and plans for betterment of unfortunates; founded Prospect House Social Settlement, Yonkers, N. Y., member of the N. Y. Milk Commission; formerly member Socialist Party. Among his books are *The Bitter Cry of the Children*, *Socialists—Who They Are and What They Stand For*, *Karl Marx, his Life and Work*, *Social Democracy*, *Bolshevism*, *The Enemy of Political and Industrial Democracy*, *Ethan Allen at Ticonderoga*, *History of Potters and Pottery of Bennington*.

SPARKS, JARED (1789–1866). Historian born in Connecticut; Unitarian pastor in Baltimore; first professor of American history at Harvard, and president from 1849 to 1853. Sparks founded the *Unitarian Miscellany*, which became a literary power in New England. After 1826 he gave most of his time to historical research and writing, the voluminous results of which appear in his *The Life and Writings of George Washington* (12 vols.), *The Works of Benjamin Franklin, with Life and Notes* (10 vols.), *Library of American Biography* (first series, 10 vols., second 15 vols.).

SPENSER, EDMUND (c. 1552–1598). Greatest poet of the Elizabethan age in England, not including Shakespeare. Probably connected with the Spensers of Lancashire. Educated at Merchant Taylors' School, London, and Pembroke College, Cambridge; friend of the chief literary men of the day. Attached to the retinue of the Earl of Leicester; served later as chief secretary to Earl Grey de Wilton, the Lord Deputy of Ireland. Here a large estate was given to him, not far from Raleigh's, at Kilcolman; but his castle was burned in the Rebellion of 1598, and Spenser died soon after his return to England. Buried in Westminster Abbey. While still at Cambridge he became interested in the Puritan controversy, taking the side of the Puritans in his first work *The Shepherd's Calendar*, a series of 12 poems of varying meters and forms, in which both the ancient manner and contemporary material were combined. His exact relationships to Leicester, to some of the other members of the Court, and to some questions of the day are somewhat in dispute. In his great epic poem, *The Faerie Queene*, he sought to revive the best principles and ideals of the older chivalry, for the benefit of the youth of England; thus his moral purpose is strongly marked, as he admits in his prefatory letter to Raleigh. It is a poem of about 35,000 lines in six books, full of classical learning, picturesque incidents, and countless details; but the original design called for twelve books. Spenser's series of sonnets, the *Amoretti*, contains undoubted autobiographical elements; his *Epithalamion* is probably the best marriage hymn in English; his *Colin Clout*, *Mother Hubbard's Tale*, as well as the *Calendar* contain contemporary allusions, many of which are dark or obscure to modern scholars. Spenser was strong in moral, political, and ecclesiastical allegory, and so his works furnish problems for investigation, scholarly study, but also plenty of

causes for variant opinions. His *Four Hymns*, especially those on *Heavenly Love* and *Heavenly Beauty*, expound Spenser's notions of the ideal or Platonic philosophy. In devotion to his sense of right and duty, wealth of descriptive powers, and inventive genius as a poet, though lacking somewhat in restraint, Spenser is one of our greatest bards. He drew much of his inspiration from older sources, mainly from Chaucer, and in turn has influenced so many poets since his time that he has been called "The poet's poet."

SPIELHAGEN, FRIEDRICH VON (1829–1911). German novelist, educated at Berlin, Bonn, and Greifswald. Specialized in stories of his own age, some of which are *Problematische Naturen* and *Sturmflut*.

SPITTELER, CARL (1845–1924). Swiss novelist and poet; for many years a teacher, and for several a journalist. Among his great works are *Prometheus and Epimetheus*, an epic in simple but wonderfully effective language; *Extramundana*, moral stories in verse; *Schmetterlinge*, some short poems; *Olympische Frühling*, a long epic for which mainly he was awarded the Nobel prize for literature; *Die Mädchenfeinde*, reminiscent of his own youth, a story, and the delightful *Meine frühesten Erlebnisse*, an account largely of his childhood.

SPOFFORD, HARRIET PRESCOTT (1835–1921). Born in Maine, educated in Massachusetts and New Hampshire. Wrote romantic stories of life in New England, but with almost a French atmosphere of beauty and interest. *The Amber Gods and other Stories* (1863) contains some of her best work in narrative, much of which was printed in the *Atlantic* and in *Scribner's*. *New England Legends*, *Thief in the Night*, *Ballads about Authors*, and *In Titian's Garden* are among her numerous contributions. *In a Cellar*, *Knitting Sale-Socks*, *Circumstance*, *The Mount of Sorrow*, and *The Strange Passengers* are among her best single stories.

STAEL, MADAME DE (1766–1817). Born Anne Louise Germaine Necker, daughter of a celebrated financier, and married Baron de Staël-Holstein, Swedish ambassador at Paris, but separated from him by mutual agreement after 11 years. Known as a brilliant and entertaining hostess. Distrusted by Napoleon and finally ordered not to reside within forty leagues of Paris. The year before, 1802, her husband, having been recalled to Sweden, died with the wife in faithful attendance in his last days; they had three children. Madame de Staël finally settled at Coppet, France. *Delphine* (1802), *Corinne*, an account of travels in fiction form, but delightful reading, and *D'Allemagne*, are her chief stories. Spent some time in Germany, Russia, England, and Italy, where she met many great literary men, such as Goethe and Schiller, Sismondi, Byron, and the chief men of England.

STEDMAN, EDMUND CLARENCE (1833–1908). American poet and banker; born in Connecticut; lived mainly in New York. Known chiefly for his imaginative studies in Poe, *Victorian Poets*, *Nature and Elements of Poetry*, a *Victorian Anthology*, and an *American Anthology*. With George E. Woodbury he edited the works of Poe. The *Nature and Elements of Poetry*, written from the standpoint of a poet, is delightful and inspirational to a remarkable degree.

STEED, HENRY WICKHAM (1871–). British journalist and authority on foreign affairs. Became foreign editor of *The Times* in 1914, discussed the chance of an European war as early as 1913 in his *Habsburg Monarchy*, went on important missions to Italy for the government during the World War, edited *The Times* from 1919 to 1922, when he came into control and editor of *The Review of Reviews*.

STEELE, RICHARD (1672–1729). Born in Dublin, educated in London and at Oxford, which he left without a degree, rose to the rank of captain in the Horse Guards. Long a friend and schoolmate of Addison, he edited with him the *Spectator*, after he had conducted the *Tatler*, a small essay journal, into which were introduced some reports of news and papers on manners and morals. *The Funeral*, *The Lying Lover*, *The Tender Husband*, and *The Conscious Lovers*, his comedies, attained considerable fame as acting dramas. Steele was a favorite among his fellows, though impetuous and always in debt. The Sir Roger de Coverley papers in the *Spectator*, mainly Steele's conception, were largely composed by Addison.

STEELE, WILBUR DANIEL (1886–). American author of short narratives, many of which are mystery stories. Born in North Carolina; educated in art in Boston; lived in Massachusetts. Some of his best works are *Land's End*, *Isles of the Blest*, *The Terrible Woman*, *Taboo*. Won various prizes—second in O. Henry Award for the story *For They Know not What they Do;* tied with Julian Street for first for *The Man Who Saw through Heaven;* first in Harper's contest for *When Hell Froze;* first in O. Henry Award for *Bubbles;* and special O. Henry Award (1921) for maintaining the highest level of merit for three years in American short story writing.

STENDHAL (1783–1842). Pen-name of Henri-Marie Beyle, taken from the name of a town in Germany. Born at Grenoble; accompanied Napoleon on the Russian campaign, in the commissariat; took up his home in Milan after the fall of Napoleon. From 1821 to 1830 lived in Paris, then became consul in Italy and died there. His varied works are characterized by egotism and straining for effect, but they show great insight into character. *History of Painting in Italy*, *Racine and Shakespeare*, *Memoires of a Tourist*, *Journal*, and the novels—*Armace* and *The Red and the Black*—contain his best work.

STEPHEN, LESLIE (1832–1904). English man of letters; one of founders of the *Pall Mall Gazette*, and contributed to *Cornhill Magazine* and others. Celebrated mountain-climber. Married the younger daughter (died 1875) of the novelist Thackeray. Some of his best works are *Hours in a Library*, *History of Thought in the Eighteenth Century*, *Social Rights and Duties*, but he is equally well known as editor of the *Dictionary of National Biography*, the standard work in England, from 1882 to 1891. He continued to contribute articles to this till 1901.

STERNE, LAURENCE (1713–1768). Born in Ireland, educated at Cambridge, held a living at Sutton near York for 20 years, and then at Coxwold. Suddenly rose to fame as a droll and grotesque humorist with his *Tristram Shandy*, lengthened finally by 1767 to 9 volumes. This contains a great variety of scraps, stopping and starting of the story, puns, witty remarks, burlesque descriptions, and sentimental narrative. Somebody said Sterne did everything but print the text upside down, and evidently that did not occur to him. In the *Sentimental Journey* he narrated a tour across France to Italy. Some sermons and other works are not important. Sterne is one of our great original writers, though he sometimes mistook the coarse for the funny.

STEVENSON, ROBERT LOUIS (1850–1894). British essayist, novelist, and writer of short stories; came of a family of civil engineers and builders of lighthouses. Turned to literature with essays in the *Cornhill Magazine*, and described trips he made in *An Inland Voyage* and *Travels with a Donkey*. He met a Mrs. Osbourne of California in France in 1876, and two years later came to the United States, on learning of her illness. They married in 1880 and returned to Edinburgh, but Stevenson's health was always poor. They finally settled in Samoa in the south Pacific, on Christmas Day in 1889; and here he died and is buried. Of Stevenson's many volumes, *Virginibus Puerisque* is a series of fruitful essays for young people; *Treasure Island*, one of the best adventure stories, a glorified specimen of the blood-and-thunder type; *The Strange Case of Dr. Jekyll and Mr. Hyde*, the awful tale of a man who changed not only his form but his character, and this suggests the good and the bad in the same human being; *New Arabian Nights*, a collection of great short stories; *Kidnapped* and *The Master of Ballantrae*, two powerful novels.

STIMSON, FREDERIC JESUP (1855–). Lawyer and author; lived in Massachusetts, and often wrote under pen-name of "J. S. of Dale." Held several political offices, including ambassadorship to the Argentine, 1914–1921; professor at Harvard, 1903–1914. Besides valuable law books, he wrote delightful stories and novels. Among them are *Guerndale*, *The Sentimental Calendar*, *Pirate Gold*, and *In Cure of her Soul*. *Mrs. Knollys and other Stories* (1894) besides the fine title story, contains several others of no little human interest.

STOCKTON, FRANK RICHARD (1834–1902). American journalist and author of novels and stories, was born in Philadelphia; trained to be an engraver, but turned to editorial work in 1873 and finally to literature in 1880. *Rudder Grange*, a delightful and humorous novel, pleased grown-ups as his droll *Ting-a-Ling Stories* charmed the children. Stockton's great fame rests, however, on his numerous and clever short

stories found in such volumes as *The Lady or the Tiger and other Tales, The Bee Man of Orne,* and the novelet *The Casting away of Mrs. Lecks and Mrs. Aleshine,* in general plan not unlike *Robinson Crusoe.* Of his individual stories, some great ones are *The Lady or the Tiger,* a trick story of unsolved ending. *The Transferred Ghost,* a droll and highly original ghost story, *A Piece of Red Calico,* the trying experience of a man who tried to match a piece of cloth for his wife, *A Tale of Negative Gravity,* and *The Remarkable Wreck of the Thomas Hyke.*

STOWE, HARRIET BEECHER (1811–1896). Born in Litchfield, Conn., daughter of Lyman Beecher, and sister of Henry Ward and Thomas Beecher; married Prof. C. E. Stowe. Lived 18 years in Cincinnati and then at Brunswick, Maine, and Andover, Mass., where her husband was a professor. Mrs. Stowe wrote an account of the descendants of the Pilgrims, many magazine articles, *The Minister's Wooing* and *Pearl of Orr's Island,* which greatly influenced Sarah Orne Jewett, and her most influential story, *Uncle Tom's Cabin.*

STRACHEY (*strā'chĭ*), **LYTTON** (1880–1932). English biographer, educated at Cambridge. *Landmarks of French Literature* and *Eminent Victorians* gained attention by their trenchant and caustic wit and description. His *Queen Victoria* (1921), an attempt to portray a character without personal enthusiasm or undue bias, has set the fashion for writing biography in recent years. The object is for the author to detach himself from the influence of the subject, and to present all that is significant, be it favorable or not to the subject's reputation.

STRINDBERG, JOHAN AUGUST (1849–1912). Swedish author. Much of his work is colored by disillusionment following two very unhappy marriages. Yet he wrote many masterly works in drama, fiction, and poetry. Some of the best dramas are, in English titles, *Master Olof, The Father, Lady Julia, To Damascus* (allegorical drama in three parts), *Gustavus Vasa,* and *Gustavus Adolphus,* historical plays, *Easter* and *The Dance of Death,* the last his greatest diatribe against marriage. Some of his best stories are, *Swedish Fates and Adventures, Married,* for which he was prosecuted but acquitted, and the novels, *The Red Room,* influenced by Dickens, *The People of Hemso,* and *The Outer Skerries.* Despite his pessimism and personal bias, he exerted a profound influence on realistic European literature.

SUDERMANN, HERMANN (1857–1928). German author, first a journalist, and later a playwright and novelist. Some of his stories are *Frau Sorge, Es War, Das Hohe Lied,* and his plays, *Magda, Sodom's End, The Joy of Life.*

SUE, EUGENE (MARIE JOSEPH) (1804–1857). French novelist; in early life a surgeon in the Spanish Campaign and at the battle of Navarino. His two great works are *The Mysteries of Paris* and *The Jew,* which show both historical and socialist influences. He sat as a radical for a year in the Constituent Assembly, but with the régime of Napoleon III retired to Savoy.

SUETONIUS (*swē-tō'nĭ-us*) (1st and 2d cent. A. D.). Roman historian whose account of the *Lives of the Caesars* is interesting for its gossip and personal comment, more than as sober narrative. Parts of his *On Illustrious Men* are still extant.

SULLY-PRUDHOMME, RENE FRANCOIS ARMAND (1839–1907). French poet and in later life a philosopher; born in Paris; received Nobel prize in 1907. *Stanzas and Poems,* a collection of sonnets, *Justice, Goodfortune* are some of his verses, and many critical reviews make up his main writings.

SULTE, BENJAMIN (1841–1923). Canadian poet and historian. *Les Laurentinnes* and *Les chants nouveaux* are his main volumes of poetry; his histories of the French-Canadians and of Saint Francis of the Lake were popular.

SWIFT, JONATHAN (1667–1745). Born in Ireland of English parentage; educated at Trinity College, Dublin, where he became a D. D. in 1701. Much of his work is fiercely satirical, showing the spirit of an embittered man. Besides political writings and controversial works, Swift's best prose consists of *The Battle of the Books,* an imaginative and satirical account of the quarrel as to whether the ancient authors or the modern ones were greater; *The Journal to Stella,* the letters to a young lady to whom some argue he was finally married, but no proof exists; and his great work *Gulliver's Travels,* a merciless satire on the smallness and meanness of the men of our world. His *Modest Proposal* suggested that the Irish might find relief from the burdens of large families, and food for themselves, by fattening and eating their numerous children.

SWINBURNE, ALGERNON CHARLES (1837–1909). English poet who did much to introduce new metrical effects into verse, though he has often been criticized for sacrificing thought to language and music in poetry. Some of his greatest works are *Atalanta in Calydon,* a lyrical tragedy, *Poems and Ballads* (1866), *Song of Italy, Songs before Sunrise, A Century of Roundells,* and *Tristram of Lyonesse.* Two of his dramatic productions, *Bothwell* and *Mary Stuart,* attained some fame, as did his prose *Note on Charlotte Brontë* and *Study in Shakespeare.*

SYMONDS, JOHN ADDINGTON (1840–1893). English critic and poet, born in England; educated at Oxford; lived in Switzerland for his health during the last part of his life. Known as the interpreter of Greek and Italian literature, biographer of Shelley (near whom he is buried at Rome), Sir Philip Sidney, Ben Jonson, and Michelangelo. He made an accurate translation of the *Autobiography of Benvenuto Cellini, Sonnets of Michelangelo* in verse, a critical *Introduction to the Study of Dante, Studies in the Greek Poets,* and *Renaissance in Italy* (7 vols.), which today is considered his noblest work. Symonds combined accuracy and good style in writing.

SYMONS, ARTHUR (1865–). English poet and critic, born of Cornish parents in Wales. Besides critical works, he has published several volumes of poems, notably *Silhouettes, London Nights, A Book of Twenty Songs.* He also translated two novels of d'Annunzio and one of Emile Verhaeren. Some of his essays are *The Symbolist School in Literature, Cities, Spiritual Adventures, Studies in Seven Arts, A Study of Thomas Hardy, Studies in Strange Souls* (Rossetti and Swinburne).

SYNGE, JOHN MILLINGTON (1871–1909). Irish dramatist, born near Dublin, and educated at Trinity College. In 1907 he published *The Aran Islands,* a series of sketches, and later he became deeply impressed by the legends and poetic lore of old Ireland. In 1904 he became director of the Abbey Theatre, Dublin, but already two single act plays, *The Shadow of the Glen* and *Riders to the Sea,* had been composed. His other dramas are *The Well of the Saints, The Playboy of the Western World,* at first violently opposed by many of the Irish, now considered his masterpiece, and *Deirdre of the Sorrows.* Synge is considered a leader in the revival of interest in Gaelic lore.

TACITUS (*tăs'ĭ-tŭs*), **PUBLIUS CORNELIUS** (c. 55–120). Roman author of *History,* an account of the northern tribes in his *Germania,* a short but admirable biography of Agricola, and a *Dialog on Orators,* in which he quotes from early impressions of life and character of Romans in public life. Originally the *Histories* were in 12 books, but only 4 and a fragment or two remain, covering but the early year or two of the period of the whole, 69 to 97; the *Annals* cover a period of 40 of the 54 years from 14 to 68.

TAGORE (*ta-gor'*), **RABINDRANATH** (1861–). Hindu poet and critic, who at 17 was taken to England to complete his education, adding a perfect command of English to his native Bengali. His influence on thought of India and the whole world has been profound. After 1900 he spent much time teaching and meditating with his followers at a school founded by him. Tagore won the Nobel prize for literature in 1913, shortly after he visited England and made translations of several of his works from Bengali. Of these now available in our language, *The Gardener, Fruit Gathering, The Crescent Moon, The Post Office* (a play), *Nationalism, Glimpses of Bengal,* and the novel, *Gari,* are highly appreciated.

TAINE (*tān*), **HIPPOLYTE ADOLPHE** (1828–1893). French literary critic and professor of the history of art at the Ecole des Beaux-Arts. Studied science to perfect himself for a thorough and rational criticism. *Philosophy in Art, Ideal in Art, Notes on England,* and *La Fontaine and his Fables* are some of his critical productions; but he achieved a world-wide fame through his brilliant *History of English Literature* and his *Origins of Contemporary France.* In the latter he sought to prove that the French Revolution did not secure liberty for the individual, for in fact it did not confirm liberty but tended to destroy it instead.

TARBELL, IDA MINERVA (1857–). Born in Pennsylvania, and educated at Allegheny College, she was on the staff successively of the *Chautauquan*, *McClure's* and the *American* magazines, 1891–1915. Besides several works on Abraham Lincoln, and a *History of the Standard Oil Company*, she wrote *The Business of Being a Woman*, *The Tariff in our Times*, *New Ideals in Business*, and *The Rising of the Tide*.

TARKINGTON, NEWTON BOOTH (1869–). Born in Indiana, educated at Purdue and Princeton, he distinguished himself first by *The Gentleman from Indiana*, followed by *Monsieur Beaucaire* (later filmed and dramatized), *Penrod* and *Seventeen*, stories of young life that are clever and full of human interest, *The Magnificent Ambersons*, *Alice Adams*, and other novels, stories, and plays. Each of the novels named last won a Pulitzer prize award. Tarkington is a conscientious, finished, and discriminating writer.

TASSO, TORQUATO (1544–1595). One of the world's great epic poets, was born at Sorrento, educated in Naples, and lived mainly in Ferrara, where he enjoyed great honors, though the last half of his life was obscured at times by illness and mental fatigue, next to madness. He first won fame as an author by the pastoral drama *Aminta*, a brief work but charming and exquisite in plot and workmanship. *Gerusalemme Liberata*, modeled according to Virgil, centers in the attempt to free Jerusalem from the Turks. Godfrey of Bouillon is the hero, but later other persons of the story absorb much of the interest. Amida, a beautiful witch, is finally converted to the Christian faith through the hero's efforts. Clorinda and Arminia, two pagan women, are made beautiful, learned, and valorous, the objects of deep tragic regard. Tasso gave the world an epic which is magnificent and sincere as a work of art.

TAYLOR, JAMES BAYARD (1825–1878). Born in Pennsylvania, he became a great traveler, newspaper correspondent, poet, and novelist. Yet his best work is probably the translation of Goethe's *Faust*. *Views Afoot* gives interesting reports of his journeys in Europe: *Hannah Thurston* and *The Story of Kenneth* are his best novels; and *Home Pastorals* are among his best poetry. He died in Berlin not long after he had taken up his duties as United States ambassador.

TAYLOR, JEREMY (1613–1667). English divine and author, renowned far and wide for his eloquence and learning; served as chaplain to various nobles, but for 13 years lived in Wales. During this period, 1647–1660, he produced his great literary works, *The Liberty of Prophesying* (that is, preaching), a noble plea for toleration of the non-conformists, *Life of Christ*, *Holy Living* and *Holy Dying*. For music, eloquence, genuine piety, wealth of language and illustration, these works are still loved by many.

TCHEKHOV, ANTON. See spelling CHEKHOV.

TEGNER, ESAIAS (1782–1846). Swedish author, who won a great prize of the Swedish Academy in 1811 for his patriotic poem *Svea*. He became leader of the Gothic Club, the aim of which was to revive interest in old Icelandic literature. *The First Communion*, his romance *Axel*, and a romantic modern rendering of the old *Frithjofs saga* are his best works, the latter of which made his name known throughout Europe and made him bishop of Vexiö, a post he held for 22 years.

TENNYSON, ALFRED (1809–1892). English poet, who was born at Somersby, educated at Cambridge, became poet laureate in 1850, and lived to see his work the most popular poetry of his age. In 1827 he and his brother Charles published *Poems by Two Brothers*, followed by Alfred's own volumes in 1830, 1833, 1842, by which time his fame was established. The two early volumes were harshly received by most of the critics, but they contained some of his finest work like *The Lady of Shalott*, *The Lotus Eaters*, *The Palace of Art*, *Ulysses*, and *The Miller's Daughter*, a great collection for a young man of less than twenty-four. *The Princess*, a study in the conflict of the "heart and the head," was published in 1847, and his masterpiece, *In Memoriam*, in 1850, in which year he also married, after a long engagement, and was appointed Poet Laureate in succession to Wordsworth. *In Memoriam*, called forth by the poet's sorrow because of the death of his dear friend, Arthur Henry Hallam, in 1833, occupied much of his attention for fifteen years. It is one of the noblest tributes to friendship in all literature. In the last half of his life, the great masterpiece was *The Idylls of the King*, which took shape after he had become deeply interested in Arthurian romance. He chose the blank-verse epic form for the various idylls, but much of his lyric manner still persisted in the poems. For artistic finish, fine descriptions of nature in little details, and moral qualities Tennyson is unsurpassed among the poets of his age. Some of the shorter lyrics, like the songs of *The Princess*, *Crossing the Bar*, *Ode on the Death of the Duke of Wellington*, *Charge of the Light Brigade*, and *Locksley Hall*—the recital of the names show his great versatility—seem destined for a permanent place in our lyric poetry. Though Tennyson's dramas, on which he lavished great care and thought, are fine reading as literature, they lack the theatrical elements of successful stage plays. In 1884 he accepted a baronetcy.

TERENCE (c. 190–159 B. C.). Roman comic dramatist, said to have been originally a slave. His plays are clever in execution, full of interesting situations, and at times decidedly funny. Only six dramas are extant, of which the *Phormio*, *Andria*, and *Eunuchus* are perhaps the best. At last he went to Greece, where he studied and translated the dramas of Menander.

THACKERAY, WILLIAM MAKEPEACE (1811–1863). English realistic novelist, who was born at Calcutta, India, while his father was a civil officer there. He left Cambridge without a degree, visited Goethe at Weimar, studied art in Paris, and finally, having lost his money and having given up the law also, he settled down to write about 1837. After considerable journalistic writing and the publication of *The Yellowplush Papers*, *The History of Mr. Samuel Titmarsh*, distinguished for humor, pathos, satire, and good characterization, he turned to the *Book of Snobs* and *Punch's Prize Novelists*, both of them supreme in their way. In the latter, his *Rebecca and Rowena*, suggested by Scott's *Ivanhoe*, is as perfect a travesty as we have. *Vanity Fair* is his great gallery of life-like portraits, chief of which is that of Becky Sharp, adventuress *par excellence*, and that of her husband, Rawdon Crawley, who, despite his vices and weakness, rises once or twice to full manhood that is both heroic and pathetic. In the sequel, *The Virginians*, the same Becky has become a fat, world-weary, and not too cynical dowager, wife of a baron. *Henry Esmond* is a fine account of an orphan, and of another Becky Sharp in Beatrix Esmond, who refuses to marry her cousin whom she likes, and seeks fame and fortune instead, and at last the odd, but very convincing, situation of a love-marriage between Henry himself and his foster mother, the parent of Beatrix. *Pendennis*, the history mainly of a young man, who goes through the usual run of the time, and *The Newcomes*, thought by some the most tender and pathetic work of the great novelist, are his other novels of merit. Among other non-fiction, his *English Humourists of the Eighteenth Century*, has been greatly admired.

THAXTER, CELIA (1836–1894). American poet; lived in New Hampshire where her father was a light-house keeper. For knowledge of the sea in its lighter moods, her verses stand high, for many of them are exquisite marine paintings as well as sincere expressions of lyric emotions. *Drift-weed*, *Poems for Children*, *The Cruise of the Mystery*, *Idyls*, and *Pastorals* are her chief volumes of verse. *Among the Isles of Shoals* is a volume of delightful sketches in prose.

THIERRY, JACQUES NICOLAS AUGUSTIN (1795–1856). Eminent French historian, influenced by both Châteaubriand and Sir Walter Scott, and so he wrote good history which is as readable as a novel. *History of the Conquest of England by the Normans*, his greatest work, cost him his eyesight. Later he became partly paralyzed and had to labor through others, of whom his young wife, herself an author, gave material aid. The French Academy awarded him the *Prix Gobert* for fifteen years in succession. His other notable works are *Ten Years of Historical Studies*, *Narrative of the Times of the Merovingians*, and *Essay on the Formation and Progress of the Third Estate*.

THOMPSON, FRANCIS (1859–1907). English poet who abandoned the study of medicine at Owens College, Manchester, went to London, and lived in great destitution, until finally his poems were published through the kindness of Wilfred Meynell. *Sister Songs* (1895) were dedicated to the children of Mrs. Meynell. These with *New Poems* make up his small but exquisite output. Thompson was under the influence of older religious poets, expressly Crashaw. His *Hound of Heaven* and *The Daisy*, single poems, have been highly praised by the critics.

THOMPSON, JAMES MAURICE (1844–1901). Born in Indiana, served as state geologist for four years, and wrote nature studies. Now known only for his novels, chief of which *Alice of Old Vincennes* presents a fine picture of the early days in southern Indiana.

THOMSON, JAMES (1700–1748). Scotch poet, author of *The Seasons*, a poem which contains some fine nature pictures. His other long poem, *The Castle of Indolence*, is written in the form originated by Spenser, called the Spenserian stanza; is not equal to *The Seasons*, but both are prophetic of the romantic age of Wordsworth and Coleridge. Thomson was joint author of the *Masque of Alfred*, which contains the celebrated *Rule, Britannia*, for which Arne wrote the music.

THOREAU (*thō'rō*), **HENRY DAVID** (1817–1862). American naturalist and author, who lived most of his life at Concord, Mass., except for his course at Harvard, a trip to Canada, one to the west, and a few short journeys. Conceiving the idea that man could live very cheaply, if he would but adjust himself to simple wants, he built a hut on the shores of Walden Pond at Concord, and there he lived for two years, earning just enough to supply his needs and doing much meditating and writing. The result is *Walden; or, Life in the Woods*, one of our priceless nature books. The birds and animals knew him as their best friend; they would come to him freely, and the fish even in the water would allow him to take them into his hands. Thoreau knew Emerson and other great men of the day; for, though he was a recluse, he was not a misanthrope. After his death, several other works were published, and in his lifetime, *A Week on the Concord and Merrimac Rivers*.

THUCYDIDES (*thū-sĭd'ĭ-dēz*) (c. 460—c. 400 B. C.). Athenian historian of the Peloponnesian War. Much of the material was gleaned, tested, and confirmed by his own observations; thus he is an accurate and finished writer. For failure to bring up his ships while acting as admiral for Athens against Sparta, until just in time to help beat off the enemy, Thucydides was banished in 424, and he remained away for about 20 years. Tradition says his history was preserved and edited by another after his sudden death by violence in Thrace. Much of the interest lies in seven speeches or orations introduced by the author who informs us plainly that he is giving in his own language the substance reported to him. For carefulness, thoroughness, and literary interest, Thucydides is the prince of ancient historians.

TICKNOR, GEORGE (1791–1871). Born in Boston, educated at Dartmouth, and for four years in Europe, after which he was a professor of modern languages at Harvard from 1819 to 1835. His great literary work is the *History of Spanish Literature* (3 vols.), recognized as the best work of its type. Besides translations from the Spanish, he wrote accounts of Lafayette, W. H. Prescott, and *Lecture on the Best Method of Teaching the Living Languages*.

TIMROD, HENRY (1829–1867). American poet of German descent, born in South Carolina, ruined by the Civil War, and died in penury. Some of his great poems are *Katie*, *The Cotton Boll*, *Charleston*, and *Ode* on the Confederate dead of Charleston.

TOCQUEVILLE (*tŏk'vĭl*), **ALEXIS HENRI CHARLES MAURICE CLEREL, COUNT OF** (1805–1859). After an official visit for France to America, he wrote his *On Democracy in America*, which established his fame among the liberal party men of England. He sat in the French chamber of deputies and for a time acted as vice-president. One other book, *The Ancient Régime*, gained him as much fame as the first one, but his early death left much work unfinished.

TOLSTOY, LYOV NIKOLAYEVITCH, COUNT (1828–1910). Russian nobleman, writer, and philosopher. Lived most of his life at the family seat, Yasnaya Polyana, in Tula, after serving in the Crimean War and some time in travel. In the first period of his life, he was influenced by his disgust because of the materialism of most men, and by his attitude that one should not try to be wiser than nature. *War and Peace* and *Anna Karenina*, his great novels, express views on these and many allied topics. After 1876 he tried to carry out some new ideals of life, based largely on the natural religion within every heart, and freed from all supernatural elements. *A Confession* and *Master and Men* show his spiritual struggles, followed by *What I Believe In* and *A Short Exposition of the Gospels*. He adopted the dress of a peasant, and, except for his family, would have renounced all his estate. All his last works reflect the tragic struggles of mankind in the desire for both freedom and spiritual peace. Of his dramatic compositions, *The Power of Darkness* is a gripping study of peasant life; *The Fruits of Enlightenment* is a satire on polite society; and *The Living Corpse*, published after his death, reveals the mellowness of old age and kindliness toward the world.

TOLSTOY, ALEXEI KONSTANTINOVICH, COUNT (1817–1875). Distantly related to Leo Tolstoy. With two cousins he wrote much humorous poetry, and by himself some great lyrics, including a version of the lament for the dead in the Russian church service. His prose consists of the well-known historical romance, *Prince Serebrany*, and a dramatic trilogy.

TOTTEL, RICHARD (c. 1525–1594). Compiler and publisher of a *Miscellany*, now bearing his name, issued in 1557, which contains 211 poems by Wyatt, Surrey, and other authors. It is the gateway to the great Elizabethan age of poetry and drama, foretelling the influence that Italian was to have on English literature. Though many of the poems in this work are crude according to modern esthetic standards, they are notable as beginning a new style and new inspiration, a looking toward the future.

TRENCH, RICHARD CHENEVIX (1807–1886). British poet and scholar; archbishop of Dublin. Besides his poems, he is known for *English Past and Present*, *The Study of Words*, for many years a standard work, but now somewhat outgrown, and *Notes on the Miracles* and *Notes on the Parables*, two works of learning and practical value. An essay *On Some Deficiencies of our Dictionaries* was largely responsible for the impetus resulting in the *New English Dictionary*.

TREVELYAN (*trē-vĕl'yăn*), **GEORGE OTTO** (1838–1928). English historian, graduate of Cambridge. He held many political offices, but is now known largely for his admirable biography of his uncle, Lord T. B. Macaulay. Other works are *Early History of Charles James Fox* and *The American Revolution*.

TROLLOPE (*trŏl'ŭp*), **ANTHONY** (1815–1882). English novelist, born in London, and educated at Winchester and Harrow, but his youth was most unpleasant as his *Autobiography* reveals. He served seven years in the London Post Office as a clerk, and several more in Ireland as a surveyor's clerk in the postal service, but he gained much experience which is given us in his early novels like *The Warden*, *Barchester Towers*, and others of the "Barsetshire Chronicles," as the series came to be called. On official visits to the West Indies, Australia, and South Africa, he gathered material for tales and other books. Of his later novels, some of the best are *The Eustace Diamonds*, *The American Senator*, *He Knew He was Right*, and *Mr. Scarborough's Family*. Trollope is known for his skill in realistic details, his humor, and kindly view of life.

TRUMBULL, JOHN (1750–1831). Connecticut lawyer and judge, author of considerable poetry. His most famous works are *The Progress of Dulness*, and *McFingal*, a satire in support of the American Revolution, much in the manner of Butler's *Hudibras*.

TUPPER, MARTIN FARQUHAR (1810–1889). Born in London, and educated at Oxford, he was called to the bar, but never practiced. Instead he published many volumes of both prose and poetry, all of which was not notable, except his *Proverbial Philosophy*, a series of moral maxims in verse, which attained a prodigious vogue.

TURGENEV (*tōor-gĕn'yĕf*), **IVAN SERGEYEVICH** (1818–1883). Russian author, in turn a poet, dramatist, and finally a novelist. Much of his work shows the influence of his stay in Berlin, while at the University, and of French authors; lived abroad after 1855, after 1870 in Paris. Among his short narratives are *Sportsman's Sketches*, in which he sympathizes with the Russian peasants, *The Backwater*, *First Love*, *A Lear of the Steppes*; among his novels are *A Nest of Gentlefolk*, *Fathers and Sons*, *Smoke* and *Virgin Soil*. Though somewhat of a psychologist, he excels in throwing a poetic glamor over his realistic studies of common life; and for this he was censured by Tolstoy and other Russians and praised by the French and English. Much of his life was saddened by an unreturned affection for Pauline Garcia, the great singer.

TURNER, FREDERICK JACKSON (1861–1932). Born in Wisconsin, educated and a professor at the

University of his native state, and from 1910 to 1924 was professor of history at Harvard, after which he became director of research in *Americana* at the Huntington library at San Gabriel, Calif. *The Frontier in American Life* set forth his view that the frontier is all important in the historical development of any nation. *Rise of the New West* is another important work by Dr. Turner.

TWAIN, MARK (1835–1910). Pen-name of Samuel Langhorne Clemens. Born in Missouri, self-educated, became a printer, a pilot on the Mississippi, a miner in Nevada, a journalist in San Francisco, and lived at Hartford, Conn., from 1870 to 1900, and at last at Redding, Conn. *Life on the Mississippi* is a picturesque and accurate account of the old days of the river trade before the Civil War; *The Innocents Abroad* describes a trip to Europe, and *A Tramp Abroad* a second visit in 1880; *Roughing It* narrates his life as a gold miner; *Tom Sawyer, Pudd'nhead Wilson,* and *Huckleberry Finn,* the latter often called his best work, sublimate some of his experiences as a boy in the Middle West. Some other works are *The Prince and the Pauper,* a long story for children; *Personal Recollections of Joan of Arc,* a more serious work than his average, published under a pseudonym, for he said people would never take him seriously; *Adam's Diary, Captain Stormfield's Visit to Heaven,* and *How to Tell a Story.* His shorter sketches and narratives are not as well known now as they should be, including *The Celebrated Jumping Frog* and *The Double Barrelled Detective Story.*

TYNDALE, WILLIAM (c. 1490–1536). For a time he was a chaplain in Gloucestershire, but went to Hamburg and finally to Cologne, where he began issuing his translations of parts of the Bible—The New Testament, Pentateuch, and Jonah. His *Parable of the Wicked Mammon* (1528) was followed by the King's favor, which he lost after he issued the *Practice of Prelates.* He was eventually imprisoned, strangled, and burnt.

UDAL, NICHOLAS (1505–1556). English schoolmaster, translator, and author of the first extant English comedy, in regular five-act form, the *Ralph Roister Doister,* printed in 1566, but probably written about 1553. Udal evidently knew the Latin dramatists, Plautus and Terence.

UHLAND (*ōō'länt*), **JOHANN LUDWIG** (1787–1862). German poet, born and educated at Tübingen, after which he practiced law for a brief time. Became known after 1807 for his fine romantic ballads, artistic in form and beautiful in sentiment and in patriotic fervor. They were all collected with other lyrics in his *Gedichte* in 1815. He was also an able member of the Württemberg assembly and the Frankfurt parliament, wrote two dramatic works, and published scholarly works on the old French epic, northern myths, German folksongs, and other critical studies.

UNDSET, SIGRID (1882–). Norwegian author, educated in the Christiania mercantile college, and acted as a clerk from 1899 to 1909. From this experience she learned much of the uneventful and dull life of many working girls, as shown in her first story, *Fru Maria Oulie. Jenny* treats the love problem in an effective manner, *Kristin Lavransdatter* is a reliable picture of the fourteenth century, and *Olav Audunsson,* one of the thirteenth century. Mme. Unset was awarded the Nobel prize in 1928.

VAN BEERS, JAN (1821–1888). Belgian poet and teacher, known best for his historical poem *Jakob Van Maerlant,* and especially for his songs like *Blind, Young and Doomed,* and *At the Church Porch,* which in general sentiment and style resemble Longfellow's lyrics.

VAN DYKE, HENRY (1852–1933). American clergyman, author, and professor of English at Princeton; minister to Holland and Luxembourg, 1913–1917. He is known for his nature essays in *Little Rivers, Fisherman's Luck,* and *Days Off;* for several books of poems; and a group of fine short stories, such as *The Other Wise Man, The Blue Flower,* and *The Ruling Passion.*

VAN LOON, HENRIK WILLEM (1882–). Historian, born in Holland, educated at Cornell, Harvard, and Munich. Taught at Cornell, acted as correspondent in Belgium, being expelled finally by the Germans, and later was a professor of history at Antioch College, after which he joined the staff of the *Baltimore Sun.* Besides histories of Holland, he wrote widely-read books like the *Story of Mankind* and *Story of the Bible.*

VEGA CARPIO (*vā'gä kär'pyō*), **LOPE FELIX DE** (1562–1635). Voluminous Spanish author of romances, poems, and dramatic compositions, only the latter being especially important. His early compositions like the *Arcadia,* a pastoral romance, *La Dragontea,* a verse narrative of the last voyage and death of Francis Drake, and imitations of Tasso and Ariosto, show his ability to turn everything to account. He was not a very careful writer, but he left the Spanish drama an entity for the first time. Of his 500 dramas, the best are comedies of intrigué and every-day life, intended mainly to amuse.

VERLAINE, PAUL (1844–1896). French lyric poet, one of the Parnassian school. During much of his life he wandered about, sometimes in obscurity and sometimes in poverty, though after 1874 he lived mainly in Paris. *Sagesse* (1881), a volume of religious poems, reveals him at his best, converted from a bold pagan to a faithful Catholic. *Romances sans paroles, Amour, Bonheur,* and *Chansons pour elle,* are some of his numerous volumes.

VERNE, JULES (1828–1905). French novelist whose works predicted some of the scientific marvels of our own age. *Twenty Thousand Leagues under the Sea, Across Africa in a Balloon, Around the World in Eighty Days,* and *From the Earth to the Moon* are some of his best stories of adventure.

VERWEY, ALBERT (1865–). Dutch author and professor of Dutch literature at Leyden. Besides doing much to revive interest in native authors by his *Dutch Poets since Vondel,* he translated Shelley's *A Defense of Poetry,* Sidney's *An Apology for Poetry* and Shelley's *Alastor,* and wrote on Shakespeare's *Sonnets.*

VIAUD (*vyō*), **LOUIS M. J.** See LOTI, PIERRE.

VIGNY (*vēn'yē'*), **ALFRED DE** (1787–1863). French poet and soldier for 12 years. *Poems* and *Poems Ancient and Modern,* a rendering of *Othello* with modifications into French, *Stello,* a book concerning unlucky poets, out of which grew his drama *Chatterton, Les Destines,* and *Cinq-Mars,* a famous prose romance, make up his chief output.

VILLANI, GIOVANNI (c. 1275–1348). Italian who traveled much, read, investigated, and held various important offices in his native Florence after 1316. His *Historie Fiorentine,* begins with ancient times and ends with his death of the plague in 1348.

VILLARI, PASQUALE (1827–1917). Italian professor, statesman, and historian. His writings include studies in Savonarola, Machiavelli, *The First Two Centuries of Florentine History, The Barbarian Invasion of Italy, Art, History, and Philosophy,* and several works of criticism.

VILLON, FRANCOIS (1431–c. 1463). French poet and vagabond, graduate of the University of Paris, banished permanently from Paris about 1458. Villon afterward wandered about a great deal and was in trouble several times, being released by Louis XI from the prison of the bishop of Meung. His chief works are the *Petit* (*Small*) and the *Grand* (*Great*) *Testament,* of which his ballads, rondeaux, colloquial poems, and realistic verses are the best. Of several editions in French, that of Clément Marot, the poet is definitive (1533). R. L. Stevenson's story, *A Lodging for the Night,* is founded on incidents of Villon's life.

VIRGIL (70–19 B. C.). Greatest Roman poet, born near Mantua, educated at Cremona, Milan, and Rome. Later became a friend of Augustus, the emperor; of the great patron of letters, Maecenas; and of the authors, Horace and Gallus, the latter of whom he often mentions with great affection. From 37 to 30 B. C. he composed his *Georgics,* four books of poetry, dignifying the life of the countryman,—tilling the fields, tending the trees, rearing animals, and keeping bees, each of which is the subject of a book. His *Eclogs,* 10 in number, composed by 37 B. C., imitate the form made celebrated by Theocritus, with some contemporary material and events interwoven. The last eleven or twelve years, of his life were spent on his masterpiece, the *Aeneid,* which he left unfinished when he died suddenly at Brundisium on his travels. Though he commanded orally and in his will that this noble epic be destroyed because he lacked time to polish and complete it, Virgil's wish was overruled by Augustus, and the world was to profit by one of the great literary masterpieces.

VIZETELLY (*vĭz'ĕ-tĕl'lĭ*), **FRANK HORACE** (1864–1938). Anglo-American editor, linguist, and

scholar, editor of the *Standard Dictionary* and of numerous other gazetteers and biographical works. Among his own books are *The Preparation of Manuscripts for the Printer, Dictionary of Simplified Spelling, Idioms and Idiomatic Phrases, Prefixes, Bases, Suffixes, and Stems,* and several abridgments of the *Standard Dictionary.* Educated in France, he came to America in 1891, and connected himself with the Funk and Wagnalls Company.

VOLTAIRE (*vôl-târ'*), **FRANCOIS MARIE AROUET DE.** (1694–1778). The name Voltaire was an addition in 1718 to the original Arouet. He was educated under the influence of his mother, godmother, the abbé de Châteauneuf, and at the College of Louis the Great, where he received definite training in drama and acting. He early came under the influence of deism, and during an exile in England, came into contact with the free-thinking of Bolingbroke and others. On returning to Paris, he published his poem on Henry IV, which was censored, his *Charles XII,* was imprisoned for the second time for offending court circles, and then retired with Madame du Chatelet to his chalet at Cirey, where they lived till her death, 15 years later (1749). There he wrote his *Alzire, Mérope,* and *Mahomet;* his *La Pucelle,* a satire in verse, a work on metaphysics of little value, *The Manners and Customs of Nations, Zadig* and other oriental tales. Having become a correspondent of Frederick the Great, Voltaire spent three years at the court in Berlin, acting as literary adviser to the Emperor. From 1755 he lived at Geneva, where he began his anti-Christian works in 1762, among which is the *Treatise on Toleration.* Of his numerous works on philosophy, his plays, criticisms, letters, and tales, only the dramas and the tales now are greatly admired, *Candide* being one of the best.

WALLACE, LEW (1827–1905). American general of the Civil War, lawyer, and author; lived in Indiana. Served on military courts of inquiry and the court that tried those accused of conspiring against President Lincoln; was governor of the territory of New Mexico for three years, and Minister to Turkey (1881–1885). He is known now for three powerful historical romances, *The Fair God,* an account of the settlement of Mexico; *The Prince of India,* a tale of the Wandering Jew and empires in the East, and the classic, *Ben Hur,* a story of the days of Christ, which is dramatic, picturesque, and noble in its style and material, the subject of several spectacular dramas and motion pictures—the center of interest being the chariot race, so well known.

WALLER, EDMUND (1606–1687). English lyric poet, once said to be greatest of his age, who was a graduate of Cambridge, was banished from 1643 to 1651 for a part in a royalist plot, sat for years in Parliament, and was known as a commonwealth man and royalist in turn. Some of his best poems are *St. James Park, Divine Poems, Instructions to a Painter, To a Girdle,* and *Go, Lovely Rose,* the last two being about all that live today.

WALPOLE, HORACE (1717–1797). Afterward late in life Earl of Orford. Held important places in the government, but now is known for his Strawberry Hill, where he enlarged an old mansion into a Gothic castle, set up a printing press for fine editions, and became an enthusiastic antiquarian. His literary works are now forgotten save for *The Castle of Otranto,* one of the first Gothic romances of wonder and terror, the *Journal,* an attempt to rescue Richard III from ill-fame of the historians, and his *Letters,* which are among the best we have in English.

WALTON, IZAAK (1593–1683). English naturalist, author of *The Compleat Angler; or, Contemplative Man's Recreation,* which at the same time became a treatise on fishing and a work of literary art, full of quaint, shrewd, and religious lore. He also wrote biographies of George Herbert and Richard Hooker. Walton was greatly beloved by the clergy, among whom he lived for many years, making his home finally with the Bishop of Winchester.

WARD, MRS. HUMPHREY (1851–1920). She was born Mary Augusta Arnold, daughter of the great educator, Thomas Arnold, and married Thomas Humphrey Ward (1845–1926). Though some of her later novels like *The Marriage of William Ashe, Lady Rose's Daughter,* and *Canadian Born* were famous as novels of society and the times, her fame rests mainly now on her fine translation of the *Journal of Amiel* and her first great success in novel, *Robert Elsmere,* which was the story of a clergyman who finally surrendered his own original faith in favor of the "higher criticism."

WARNER, CHARLES DUDLEY (1829–1900). American author, born in Massachusetts, educated at Cazenovia Seminary and Hamilton College, and became a journalist chiefly in Hartford, Connecticut. He published a series of delightful and intimate talks known as *Saunterings, Backlog Studies, On Horseback;* wrote histories of Washington Irving and Captain John Smith; and edited the *Library of the World's Best Literature.*

WATSON, DR. JOHN. See MACLAREN, IAN.

WATSON, WILLIAM (1858–1935). English contemplative poet, first influenced by Keats and Tennyson, and later more profoundly by Wordsworth. *Collected Poems* (1902), *For England, Selected Poems, New Poems* (1909), and *A Hundred Poems* (1922) contain his mature work.

WATTERSON, HENRY (1840–1921). Born in Washington, D. C., and devoted his entire life to journalism, for several years in New York, Washington, and Chattanooga. Then he became attached to the Louisville *Courier,* which he later with W. N. Haldeman consolidated with the *Journal* and the *Democrat.* This new venture became a great power, especially in the South. He wrote a *History of the Spanish-American War, Compromises of Life,* and his autobiography, *"Marse Henry."*

WEBSTER, NOAH (1758–1843). American journalist and lexicographer; lived most of his life in Connecticut, mainly at Hartford and New Haven. Among his linguistic works are *A Grammatical Institute of the English Language,* in three parts devoted to spelling, grammar, and reading, and this was extremely popular for many years, the sales at one time being a million copies a year. His *American Dictionary* (1828) contained 20,000 words and about 35,000 definitions more than any previous work of this type; it engaged him for 20 years, and was brought down to date in 1840, with an appendix just before his death three years later. Many revisions and editions have since been issued. Other works are a *Philosophical and Practical Grammar, Dissertations on the English Language, The Rights of Neutral Nations in Time of War,* and John Winthrop's *Journal.*

WELLS, HERBERT GEORGE (1866–). English literary man, who received his education at the Royal College of Science, where he took honors in zoölogy. Wells is a voluminous author of books of criticism, fiction, short stories, novels and history. Those most frequently mentioned are *The Stolen Bacillus and other Stories, The Wheels of Chance, Tales of Space and Time, Kipps,* a novel of life of today, *Socialism and Marriage,* a Fabian document, *Mr. Britling Sees It Through,* a glimpse of the World War, *The Lost World,* an earlier romantic fantasy, and *Outline of History,* an attempt to give the spirit and essentials of the story of the world.

WEYMAN, STANLEY JOHN (1855–1928). Born in Shropshire, educated at Shrewsbury School and Oxford, he was called to the bar on the Oxford circuit, but turned largely to literature, his best works dealing with French history, such as *The House of the Wolf, A Gentleman of France, Under the Red Robe.* Later works are *Shrewsbury, The Long Night, The Wild Geese,* and *The Traveller in the Fur Cloak.*

WHARTON, EDITH NEWBOLD (1862–1937). Born in New York, the daughter of George and Lucretia Jones, she married Edward Wharton, a Boston banker. Her work is divided among grim stories something like the work of Hawthorne, such as *Ethan Frome,* and *Crucial Instances,* and her short stories; social novels of life in New York City, like *Fruit of the Tree,* and *The Age of Innocence;* and travel books like *Italian Villas and their Gardens,* and criticism such as *The Writing of Fiction.* For penetration, irony, and a fine sense of technique, Mrs. Wharton stands well toward the head of modern American novelists.

WHATELEY, RICHARD (1787–1863). English political economist, archbishop of Dublin, and writer, known for his vigorous opinions and strong views, but equally well for honesty and devotion to truth. Of his extensive list of titles, those longest recalled were his books on *Logic, Rhetoric,* for years used in our colleges, *Christian Evidences, Historic Doubts Relative to Napoleon Bonaparte,* a reply to Hume, and an admirable annotation of Bacon's *Essays.*

WHITE, GILBERT (1720–1793). English clergyman and naturalist who observed and recorded his impressions of birds and animals for many years. As early as 1771 he wrote to Thomas Pennant that he planned a work on his native Selborne, but this did not appear till 1789. He called it *Natural History and Antiquities of Selborne*, which still remains a favorite book. White had the interest of a poet, the kindness of an Audubon, and the keenness of a Darwin. Like Walton's *Compleat Angler*, this scientific book raised interest in nature to the level of interest in literature.

WHITE, WILLIAM ALLEN (1868–). Newspaper man and journalist of Emporia, Kansas, where he edited the *Gazette* from 1895. *What's the Matter with Kansas*, an editorial in his paper during the campaign in 1896, won him a national reputation. Twice later he won the Pulitzer prize for best editorials in given years. He was independent anti-Klan candidate for governor in Kansas in 1924, and from 1912 to 1916 a member of the Progressive National Committee. His *A Certain Rich Man* is a great novel of American manners; *The Court of Boyville*, humorous but striking pictures of boy-life; and *The Martial Adventures of Henry and Me*, an interesting account of his experience in Europe during the World War, in company with Henry J. Allen, later governor of Kansas and United States Senator.

WHITLOCK, BRAND (1869–1934). Journalist, author, and diplomatist, was born in Ohio. He served four terms as mayor of Toledo, declining to run a fifth time. During the World War he was minister to Belgium, becoming ambassador there in 1919, and he remained to February, 1922. Varied honors were awarded him, including thanks by a special session of the Belgian parliament. Some of his writings include *The Happy Average*, *The Turn of the Balance*, fictions, *Abraham Lincoln* (trans. into French by the author in 1918), *Forty Years of It*, *Memoirs of Belgium under the German Occupation* (1918), which was translated into several European languages.

WHITMAN, WALT (1819–1892). American poet of great originality and independence; lived in New York, in Washington, D. C., and for the last 19 years of his life at Camden, N. J. For a time he edited the Brooklyn *Eagle*, but had to leave because of his opposition to the extension of slavery, being put in charge of the Brooklyn *Freeman* shortly afterward. From 1863 to 1873 he was a clerk in a government office in Washington, but till the Civil War ended spent much time ministering to wounded soldiers. In 1873 he became partly paralyzed, and retired to Camden, where he lived in quiet. His less-known works today are *The Wound-Dresser*, a series of letters to his mother during his hospital experiences; *Drum-Taps*, a small volume, but it contains the tender and noble *When Lilacs Last in the Dooryard Bloomed*, an elegy on the death of Lincoln, *Democratic Vistas*, an essay, and two or three other short works. Whitman's great masterpiece, *Leaves of Grass*, appeared first in 1855 and was augmented from time to time. Though opinion has been divided, this work is certainly extraordinary, sincere, simple, but full of flashes of genuine inspiration and undoubted genius.

WHITTIER, JOHN GREENLEAF (1807–1892). American poet; lived much of his life at Amesbury and Haverhill, Mass. Engaged for a time in journalism, then in farming, and later lived in town, became deeply interested in the anti-slavery movement, acting as political organizer and lecturer on occasion. Disappointed of a college education and unhappy in love, Whittier tried to make up for his natural lack of advantages, yet his poetry is colored by a pensive though not a morbid melancholy. He was influenced by Burns, by his surroundings, friends, and devotion to noble causes to an uncommon degree. Much of his poetry was not intended for more than immediate use. Some of his volumes are *Voices of Freedom*, *Songs of Labour*, *Home Ballads*, *Snow Bound*, *Tent on the Beach*, and *Ballads of New England*. Possibly his best work occurs in ballads like *Maud Muller*, *Barbara Frietchie*, *Skipper Ireson's Ride*, and *Massachusetts to Virginia*. Yet his personal and religious poems take high rank, including *Ichabod*, *My Playmate*, *The Changeling*, *My Psalm*, *Trinitas*, *The Eternal Goodness*, and *In School-Days*. For years he was an associate of William Lloyd Garrison, supplying in his verse the complement of Garrison's oratory. Whittier in faith was a Quaker and had a profound influence on thought of that religious body. Whittier's *Snow Bound* remains the classic description of a good old New England winter.

WIELAND, CHRISTOPH MARTIN (1733–1813). German poet and novelist of the classic period or school. His early works were pietistic, his later ones lighter and more imaginative. *Hermann*, an epic poem, *Oberon*, an heroic poem, *Lady Joanna Gray* and *Clementina von Porretta*, the second founded on Richardson's *Clarissa*, *Idris*, *Combabus*, *The New Amadis*, all three poems, *Das Wintermärchen*, *Das Sommermärchen*, delightful poetic stories, and translations of 22 of Shakespeare's dramas make up his chief output. On later poets he had a profound influence.

WIGGIN, KATE DOUGLAS (1856–1923). Born in Philadelphia, educated in New England and California, she established the first free kindergarten of the western coast in San Francisco (1880). Her family name was Smith, of which her sister, Nora Archibald Smith, is well known; she married S. B. Wiggin, and after his death, George C. Riggs. Besides books on the education of children, Mrs. Wiggin gave to young life a series of interesting sketches, stories, and novels. *The Birds' Christmas Carol*, the Penelope Series, and *Rebecca of Sunnybrook Farm* are among her best stories.

WILDE, OSCAR FINGALL O'FLAHERTIE WILLS (1856–1900). British poet, apostle of art for art's sake, and dramatist. His early poems and stories are now hardly recalled, but some of his dramas are still occasionally revived, such as *Lady Windemere's Fan*, his first great success, *A Woman of No Importance*, and *The Importance of Being Earnest*. In 1895 he was sentenced to imprisonment for two years for offenses under the criminal law, and after his release he lived mainly on the continent, at times at least under an assumed name. His *Ballad of Reading Gaol*, written in prison, has been greatly admired, and his *De Profundis*, an apology for his life, has been called a great human document.

WILCOX, ELLA WHEELER (1855–1919). At one time a popular American poet of sentiment, born in Wisconsin, educated at the University of Wisconsin, but lived most of her life in New York and New England. *Drops of Water*, *Poems of Passion*, *Poems of Pleasure*, and *Song of a Sandwich*, humorous verse, are her main collections. *Laugh and the World Laughs with You* is a poem that gained no little attention. She wrote some prose stories and advice to married people under the title *Men, Women, and Emotion*.

WILKINS, MARY E. See WILKINS-FREEMAN, MARY.

WILSON, AUGUSTA EVANS (1835–1909). American author, born Augusta Evans at Columbus, Georgia; married L. M. Wilson of Mobile, Alabama. Of her many works which attained a great vogue, some now recalled are *Inez*, *Beulah*, *St. Elmo*, *At the Mercy of Tiberius*, and *A Speckled Bird*.

WILSON, JOHN (1785–1854). Better known as "Christopher North" in his own day, a Scotch author and professor of philosophy at Edinburgh University. He wrote voluminously for *Blackwood* after 1817, and after 1825 contributed much of the work under the title of *Noctes Ambrosianae*. As a critic he was harsh though honest. Tennyson, disliking his criticism, replied in a humorous poem in which he called him "musty" and "crusty" Christopher, and said the critic could be forgiven for the blame, but not for any little praise he grudgingly gave. Wilson was a type of the critic who measures all new work according to the moral and artistic standards of similar past performances. His own *Lights and Shadows of Scottish Life* are full of humor and pathos.

WISTER, OWEN (1860–1938). American author, educated at Harvard for the law, but practiced only two years in Philadelphia, his home city. He had previously spent some time in Arizona and New Mexico. *The Virginians* gives a vivid picture of the old life of the plains; while *Red Men and White* and *Lin McLean* added to our notions of the good Indian and the old-time horse thief. *Lady Baltimore* and *Philosophy 4* gained wide fame. Wister also wrote biographies of Grant, Washington, and Holmes, and some other critical works.

WOOD, MRS. HENRY (1814–1887). English lady, born at Worcester as Ellen Price, married Henry Wood, a business man and ship owner, and lived largely in France till 1866, when Mr. Wood died. In 1860 she published a temperance story, followed the next year by her *East Lynn*, and this attained a tremendous vogue, especially in melodramatic form. For

years the play was the most acted drama of its type. In all she wrote nearly 30 stories, most of which were well received.

WOODBERRY, GEORGE EDWARD (1855–1930). American poet, professor at Columbia, and critic. Educated at Harvard, professor at University of Nebraska three years, and at Columbia, 1891–1904. Of his many books, the biographies of Poe, Hawthorne, and Emerson attained a wide reading. Others are *The Makers of Literature, Ideal Passion, The Appreciation of Literature, Poems, The Torch,* and *The Inspiration of Poetry.*

WORCESTER, JOSEPH EMERSON (1784–1865). Eminent American student of language. His *Dictionary* (1860) was the first illustrated work of the type in English.

WORDSWORTH, WILLIAM (1770–1850). English poet, born at Cockermouth, educated at Cambridge by relatives after the death of both parents. After hesitation as to a career, having rejected the church, he traveled in Europe, published an account of his journey, and in 1795 met Coleridge, settled near him, and in 1798, they published jointly the *Lyrical Ballads.* This was a collection of romantic and nature poems, to which Wordsworth contributed most, especially the meditative pieces, and Coleridge mostly the romantic like *The Ancient Mariner.* This little volume ushered in a new age in British poetry. After a year of residence with his sister in Germany, Wordsworth settled at Grasmere, where he lived practically all his life. In 1804 on a tour in Scotland he began his friendship with Scott, whom he visited last in 1831. Having received a government post as distributor of stamps, some money owed his father's estate, and some income from his poems, he married his cousin, settled down, and lived an uneventful life, except that he became poet laureate in 1843. Wordsworth wrote many wonderfully fine nature and philosophical poems, but his last work especially was below his earlier lyrics. Among his best are *The Tinturn Abbey Ode, Solitary Reaper, Intimations of Immortality, The Happy Warrior, Prelude,* and some of the early lyrics and sonnets.

WRIGHT, HAROLD BELL (1872–). Clergyman and then a novelist, born in New York, lived in the middle West, and finally in Arizona. Most of his books, which were very popular, deal with problems of life, with strong social and sociological drift. *The Winning of Barbara Worth, That Printer of Udell's, The Eyes of the World,* and *When a Man's a Man* are some of his novels.

YONGE (*yŭng*), **CHARLOTTE MARY** (1823–1901). English lady who wrote about a hundred works, mostly novels, the profits of which were given to charity. She was a high church Episcopalian. Among her best known stories are *The Heir of Redclyffe, Heartsease, The Daisy Chain,* and several biographies.

YOUNG, EDWARD (1683–1765). English poet and clergyman after 1728, now known for his *Night Thoughts,* a series of poems on life, death, and philosophy. Other works are *The Universal Passion* and a tragedy called *The Brothers,* acted with some success.

ZANGWILL (*săng'wĭl*), **ISRAEL** (1864–1926). English man of letters of Jewish birth, and late in life a leader in the Zionist movement for the colonization of Palestine. Much of his life was spent as a teacher and then as a journalist and author of books on life in the congested districts of London. He is best remembered for his realistic stories in *Ghetto Comedies, Ghetto Tragedies, Dreamers of the Ghetto,* and for his admirable dramas like *Merely Mary Ann, The Melting Pot, The War God,* and *The Next Religion.*

ZOLA, EMILE (1840–1902). Born in Paris of part Italian and Greek and French ancestry. Known as an extreme realist. In an early series of dramas, he traced the ancestry and environment of a family, six volumes in all, but his great fame came when *L'Assommoir,* his story of drink, appeared. *Dr. Pascal, Germinal, La Terre* are powerful later fictions, followed by some idyllic works, criticisms, and a series of novels having to do with population. He was a strong advocate for Captain Dreyfus, and his *J'accuse* caused a prosecution—which was his object that the case might be reopened—but before the final judgment he took refuge in England, where he remained till the case was opened again. Zola suffered an accidental death from gas escaping from a defective flue, and Dreyfus was present at his funeral, he having been pardoned and recalled from Devil's Island where he had been confined.

ZORRILLA, JOSE (1817–1893). Spanish dramatist and poet, whose *Cantos del trovador* (1841) gave him great fame as a national poet. Later he adapted many older plays from Spanish and French authors, but always contributed some vital new element. From 1855 to 1866 he lived in Mexico, returning to find himself forgotten. Then he lived for years in poverty, but in 1889 was publicly crowned at Granada as the laureate of Spain.

ZSCHOKKE (*chō'kă*), **JOHANN HEINRICH** (1771–1848). German author who lived for 40 years in Switzerland. *Hours of Devotion* still remains popular among his 40 selected works.

AGASSIZ (*ag'a-see*), **ALEXANDER.** See under DICTIONARY OF SCIENTISTS.

ALBEE, EDWARD F. (1857–1930). Born at Machias, Me., of Revolutionary ancestry; he had a scant education and started in life as a helper in a circus. Going to Boston, he joined B. F. Keith in the vaudeville entertainment business. They adopted the slogan, "Cleanliness, Courtesy, and Comfort." Albee became president of the largest theatrical organization of its kind in the world, the B. F. Keith vaudeville circuit, and subsequently the Keith-Albee-Orpheum Corporation, controlling 700 theaters in the United States and Canada. Outside of his business interests, he found time to devote to many charities and worthy causes.

ALEXANDER, DOUGLAS (1864–). Sewing machine manufacturer. Born in Yorkshire, England; came to Canada at an early age. Admitted to the bar in 1886; after a short practice, he entered the Singer Company, became director, and in 1905, president. The Singer Manufacturing Company makes 80% of the world's sewing machines, turning out from its 9 factories, 1,500,000 sewing machines each year. It has 10,000 stores and 60,000 salesmen and sells machines in every corner of the world. Its largest factory is at Singer, near Glasgow, Scotland. The title of baronet was conferred upon Mr. Alexander by the King of England in recognition of services during the World War.

ALTMAN, BENJAMIN (1840–1913). Merchant. Born in New York City; attended the public schools, but did not advance beyond the grammar grades; received his first business training as a salesman in his father's small store; later he added to his experience in Newark and New York dry goods stores. In 1865 he opened a small store of his own on Third Street in New York City; an increase in business warranted a removal to Sixth Avenue in 1870; there he remained for 30 years, when he moved his store to Fifth Avenue, where it finally occupied an entire city block. John Wanamaker placed Altman first among the retail merchants of New York. His success was attributed to "a lot of ability and a lot of hard work." He took a constant interest in the welfare of his employees, was among the first to establish lunch rooms, rest rooms and medical service for them; he also established the Altman Fund to promote their welfare and to aid other New York philanthropic enterprises. He acquired extensive art collections which he bequeathed to the Metropolitan Museum, N. Y. Appraised at $20,000,000, they constituted up to that time the largest single gift to the institution.

AMES (*ēmz*), **EDGAR** (1868–). Shipbuilder. Born at St. Louis, Mo.; a graduate of Yale University. For twenty years he was engaged in harbor improvements at Seattle, Washington; since 1916 has been president of the Ames Shipping and Dry Dock Company. During the World War he built 25 steel ships for the United States government.

ARBUCKLE, JOHN (1838–1912). Coffee manufacturer. Educated in Allegheny, Pa. In 1871, with his brother, he established the New York coffee firm of Arbuckle Bros., and an independent sugar company, among the largest in the country. He built up a seagoing fleet, a lighterage business in New York harbor, a towing company between New York and Albany, and a wrecking concern which was his pet hobby.

ARCHBOLD, JOHN DUSTIN (1848–1916). Oil merchant and capitalist. Born at Leesburg, O.; went to Pennsylvania in 1864, where he became interested in the oil industry. President Acme Oil Company; officer or director in several enterprises; vice-president Standard Oil Company. He also acted as president and director in two educational and charitable organizations.

ARKWRIGHT, SIR RICHARD. See under LEADING INVENTORS.

ARMOUR, JONATHAN OGDEN (1863–1927). Capitalist, packer; born at Milwaukee, Wis. Before completing the course at Yale he was called to Chicago to assist his father; president of Armour & Company, packers, and Fort Worth Stock Yards Company; director several packing houses, banks, insurance companies, and car lines; American trustee of Insurance Company of Stettin.

ARMOUR, PHILIP DANFORTH (1832–1901). Merchant and philanthropist; born in Stockbridge, N. Y.; began a grain and warehouse business in Milwaukee in 1856. Seven years later he became head of Armour, Plankinton & Company, pork packers. In 1870 the main office was transferred to Chicago, and the firm name became Armour & Company. The business increased rapidly and at the time of Armour's death the company owned more grain elevators than any other firm in the world, employed 50,000 men, and sent goods to every civilized country.

ASTOR, JOHN JACOB (1763–1848). Fur trader and capitalist. Born in the village of Waldorf, Germany. At 17 with an elementary knowledge of the three R's and a little money in his pocket, he left home and made his way, first to London, then, a few years later, to America, arriving in New York in 1784. Beginning at first in a small way, by hard work, sharp bargaining, "giving the least and getting the most," he gradually built up a vast fur trade with the Indians, extending his business to the Pacific coast where in 1811 he founded the trading station of Astoria. The wealth thus acquired he invested in New York City real estate, which, later enormously increased in value, formed the bulk of the Astor fortune. At his death he was, by far, the richest man in America, having accumulated a fortune conservatively estimated at $20,000,000. The greater part of this he left to his son, William, the only notably public bequest being $400,000 for the founding of a library. This, developed by his descendants, became the well-known Astor Library.

ATTERBURY, WILLIAM WALLACE (1866–1935). Railroad president. Born in New Albany, Ind. At 20 he graduated from Yale; four months after his graduation, he began as an apprentice in the Altoona shops of the Pennsylvania Railroad, with wages five cents an hour. He advanced by successive steps until in 1910 he had become a vice-president. He was sent to France by the government during the War, in response to a telegram from General Pershing stating that he wanted the best railroad man available in the United States, to direct railroad transportation in France. By reason of his services with the A.E.F., General Atterbury received the D. S. M. from the United States, the Legion of Honor from France, and equivalent honors from Great Britain and Belgium. Upon the termination of the Federal control of the Pennsylvania, General Atterbury reassumed his duties as vice-president, and in 1925 was elected president. He has shown himself a master in his profession not only in the operation of a great railroad in the times of peace, but in the construction and ordering of transportation facilities in a foreign country to meet the sudden requirements of war.

AYER (*ār*), **FRANCIS WAYLAND** (1848–1923). Advertising king. Born in Lee, Mass., the son of a schoolmaster; attended district schools and was for one year at the University of Rochester. At 21 he went to Philadelphia where his father had opened a girls' school; there he found employment as an advertising solicitor for a religious paper; a few months later, he started in business for himself under the firm name of N. W. Ayer & Son, the firm consisting of himself and his father. During the remaining 54 years of his life, the business grew steadily until at his death it had become one of the largest, if not the largest, advertising agencies in the United States. He developed trade-marks, slogans, pictorial displays, and all the other methods by which the modern advertising business is conducted. Himself a man of unimpeachable honor, he did much to raise ethical standards among advertising men.

BABST, EARL D. (1870–). Sugar manufacturer. Born in Crestline, Ohio; attended Kenyon Military Academy and took the first part of his college course at Kenyon College; transferred to the University of Michigan, graduating in 1893 and from the Law School in 1894. Began the practice of law in Detroit; later moved to Chicago and then to New York. He has been identified with the National Biscuit Company and with the American Radiator Company; also with the American Sugar Refining Company of which he was president for some years and is now chairman of the Board of Directors. In his report for the year 1929, Mr. Babst states that during that year the company refined 1,257,842 tons of raw sugar and delivered over 800,000,000 pounds of Domino and Franklin

package sugars and about an equal quantity of sugar in bulk, for sale in different parts of the world. Mr. Babst is director in many industrial and banking corporations; during the World War, he was a member of the International Sugar Commission, representing the United States in the allocation of sugar supplies to the Allies. He is a trustee of Kenyon College and much interested in educational matters.

BALDWIN, MATTHIAS WILLIAM (1795–1866). Locomotive manufacturer. Born at Elizabethtown N. J. Was, for some years, a manufacturer of jewelry but gave up the business, declaring he "could not spend his life making gewgaws." In 1827 he began to build stationary engines; five years later he constructed for the Philadelphia & Germantown Railroad one of the first American locomotives used in actual transportation; it was christened "Old Ironsides," was built partly of iron, partly of wood, ran 28 miles an hour, weighed 6 tons and drew 30 tons. It ran between Philadelphia and Germantown on fair days, advertising that "On rainy days horses will be attached." After that Mr. Baldwin made only locomotives many of which he sold to the Federal Government during the Civil War. Outside of his business, he was interested in many benevolent projects. In 1824 he aided in the formation of Franklin Institute for the betterment of labor and in 1835 founded a school for colored children.

BALL, FRANK CLAYTON (1857–). Glass manufacturer. Born in Greensburg, Ohio. In partnership with four brothers he began the manufacture of glass at Buffalo, N. Y. in 1875; thirteen years later moved to Muncie, Indiana, and is the president of the Ball Brothers Glass Manufacturing Company, the largest in the world. With his brothers he has given over a million dollars to educational institutions and social uplift work.

BARNUM, PHINEAS TAYLOR (1810–1891). "The Great American Showman." Born in Connecticut; as a lad he kept store, tended bar, sold theater tickets, and did all sorts of odd jobs. He began in the show business when about 25 years of age by exhibiting a negress who was claimed to be 161 years old and to have been the nurse of George Washington. When at her death it was found that she could not have been over 80, Barnum advertised himself widely in a series of newspaper articles by protesting that he had himself been deceived. In 1842 he acquired the American Museum in New York, where he exhibited many monstrosities and freaks and provided a variety of amusements. There, for many years, the chief attraction was the famous dwarf, Gen. Tom Thumb, with whom Mr. Barnum toured the United States and Europe. In 1849–52 he brought Jennie Lind, "The Swedish Nightingale," to the United States for an extensive tour. Barnum's "Greatest Show on Earth" opened at Brooklyn in 1871 with a fully developed circus which soon had three rings. With this he toured the whole country, going to Europe also. Later he united forces with one of his keenest competitors forming Barnum and Bailey's Big Circus. He bought from the Royal Zoological Gardens in London, the huge elephant, Jumbo, which for some years formed the chief attraction of the menagerie connected with the circus. When Jumbo was run down by a railroad locomotive, the remnants were sent to the natural history museum of Tufts College, where, mounted, they may still be seen.

BEHN (*ben*), **SOSTHENES** (1882–). Born in St. Thomas, Virgin Islands, then under Danish control; educated in France and in Corsica. He served with credit in the World War, was with the A.E.F. in France until February 1919; was awarded D.M.S., and decorated by France. Early in life, Mr. Behn and his brother, Hernand, became interested in telephone operations; they acquired and modernized the Porto Rico telephone system, gained control of the Cuban telephone lines, the Mexican Telephone and Telegraph Co., the Chile Telephone Company, and many similar organizations. The great work of Mr. Behn's life has been the building up of the International Telephone and Telegraph Company, of which he is president, and his brother vice-president. It is now one of the largest organizations of its kind in the world. Its present activities, through associated branches, include furnishing telephone service in the Argentine, Brazil, Chile, Uruguay, Mexico, Porto Rico, Cuba, and Spain; it operates three cables between Florida and Havana; it controls the All American Cables, Inc. which provides cable service for practically all Latin America; it controls the Postal Telegraph and Cable Corporation (the Mackay System) which owns and operates a complete network of telegraph lines throughout the United States, with cables connecting the east coast of America with Europe and the west coast with the Hawaiian Islands, the Philippines, and China; it also controls a manufacturing branch with factories in many countries.

BENNETT, JAMES GORDON (1841–1918). Publisher. Born in New York City; educated chiefly in Europe where he attended the Ecole Polyteehnique in Paris. In 1861 at the outbreak of the Civil War, he returned to America and enlisted in the navy receiving a commission as lieutenant. At the close of the war, he began a thorough training in all parts of his father's paper, the New York *Herald*. In 1866 he became managing editor and six years later, on his father's death, assumed control. In 1869 he sent Henry M. Stanley to Africa to search for the missionary, David Livingstone. The result was an outstanding journalistic feat. Stanley found Livingstone in November, 1871. The detailed account of the achievement published in the *Herald* greatly increased its reputation and circulation. A scandal having arisen which made life in America distasteful to him, Mr. Bennett took up his residence abroad, but still, mostly by cable, remained in active control of the *Herald*. In 1883 in company with John W. Mackay, he established the Commercial Cables Company which broke the grip of the existing cable monopoly. Under Mr. Bennett's direction, the New York *Herald* was for many years the outstanding paper in the New World, especially noted for its news from all parts of the earth. To obtain this news no expense was spared. A separate issue of the *Herald* was published in Paris.

BLISS, CORNELIUS NEWTON (1833–1911). Merchant; born at Fall River, Mass.; after completing his education entered his stepfather's countingroom in New Orleans; member J. S. & E. Wright & Company, Boston (1866); established in 1881 the firm of Bliss, Fabyan & Company, dry goods commission merchants, New York; trustee and director of other financial enterprises; secretary of interior (1897–1899); vice-president chamber of commerce; member executive committee National Civic Federation.

BLISS, ELMER JARED (1867–). Shoe manufacturer. Born in Wrentham, Mass., educated at Edgarstown High School. At 26 he founded the Regal Shoe Company of which he is president and which has retail stores in many cities both in the United States and Canada.

BLOCK (*blok*), **PAUL** (1877–). Publisher. Born in Elmira, N. Y. He is publisher of a chain of newspapers,—in Pittsburgh, Toledo, Newark, N. J., Duluth, Memphis, and Lancaster, Pa.

BORDEN, GAIL. See under LEADING INVENTORS.

BOUCICAUT (*bū'sē kō'*), **JACQUES ARISTIDE** (1809–1877). Merchant. Born in France; self-educated; he became a peddler's assistant and achieved great success; in 1852, he founded, in Paris, the Bon Marche, generally considered the first department store ever established. It became very successful. For ten years after M. Boucicaut's death, the business was conducted by his wife, a very able woman. Then at her death in 1887 the business was turned into a joint stock company, the stock of which had been bequeathed by M. and Mme. Boucicaut to the employees of the store. The affairs of the business are managed by a board of three directors, each elected by the employees for a period of three years. All employees after a period of three years become part owners. The direction of the store has been very keen and effective.

BRADY, ANTHONY N. (1843–1913). Utility organizer. Born in Ireland; came to this country at an early age and began his career as the owner of a tea store in Albany, N. Y. From this start, he gradually branched out into the gas, tobacco, electrical and, finally, the traction fields. He acquired control of the gas interests in Albany and Troy, was active in developing gas lighting in Chicago, became interested in traction in Washington, Philadelphia, and Paris, and later, founded the Brooklyn Rapid Transit Company. By the time of his death he had established "the Bradys" in the financial affairs of the nation and acquired a personal fortune of some seventy million dollars.

BRADY, NICHOLAS F. (1878–1930). Utility organizer. Born at Albany, N. Y.; graduated from Yale in 1899. After graduation, he became associated with his father's interests in the electric light industry, and soon began to advance ideas of his own regarding general management and welfare work; he occupied various positions and on the death of his father succeeded him as president of the New York Edison and other companies. During the last years

of his life he was especially active in utility mergers and was a controlling factor in the consolidation of the Consolidated Gas Company of New York with the Brooklyn Edison Company which gave the new combine practical control of the field in New York City, Westchester, and Long Island. Mr. Brady gave freely to many welfare and charitable enterprises.

BUCKNELL, WILLIAM (1811–1890). Business man and philanthropist. Born in Delaware County, Pa.; left school at an early age, and learned the trade of wood carver; when about 25 began investing in real estate; he bought the outlying land in several cities, built homes, and took contracts for constructing gas and water works, accepting stock in payment. He made a fortune; later in life he became a broker in Philadelphia, acquired large interests in real estate, in railroads, and coal and iron mines. He early began the practice of setting aside one-tenth of all his earnings for charitable and religious purposes; toward the end of his life, his gifts averaged $1,000 a week. He gave $140,000 to the University of Lewisburg, later renamed Bucknell; $250,000 to Baptist missions and churches, and made many other donations.

BUDD, RALPH (1879–). Railroad president. Born in Waterloo, Iowa; specialized in civil engineering at Highland Park College (Des Moines, Iowa), from which he was graduated at the age of 20. The same year, he entered the engineering department of the Chicago Great Western Railroad and in two years had been made assistant engineer. He served several railroads in various capacities until 1909 when he became connected with the Great Northern, of which, in 1919, he was made president. In 1930 he went to Russia at the request of the Soviet to reorganize the railroads of that country.

BURNETT, JOSEPH (1820–1894). Manufacturing chemist and philanthropist. Born in Southborough, Mass.; at 17 he established with Thomas Metcalf a perfumery and extract manufacturing business from which he made a fortune. In 1854 he sold out his interest in this business, and established one of his own, under the name of Joseph Burnett & Co., manufacturing chemists. This succeeded so well that Burnett's extracts became known all over the world. Burnett gave generously of the wealth he amassed; he contributed large sums to his church and his town, and was the founder of St. Mark's School at Southborough.

BURROUGHS, WILLIAM SEWARD. See under INVENTORS.
